7886. May I ask who confirmed them?—I can show you the letter if we have it here.

7887. You do not pit yourself against Mr. Jones, do you?—Certainly not.

7888. Mr. Jones is a shipowner who sends ships to this port?—But Mr. Jones may be putting into his £310 charges for services that I put in another part of mine; I cannot tell.

7889. Will you kindly tell me, because you have put your whole figure there?

(Mr. Daldy.) Will my friend forgive me for interposing? Are not you comparing an average charge in Mr. Gomme's statement with a charge for a particular cargo which is specified in Mr. Jones's?

(Mr. George Wallace.) No, I am not; it is comparative port charges. I do not want to pursue the matter any further. Of course, we have only just had this table handed to us, and it occurs to one at first blush; there may be other matters afterwards.

(Chairman.) We accept Mr. Gomme's statement that he has had the figures confirmed.

(Mr. George Wallace.) I accept Mr. Gomme's statement as to *bona fides* absolutely.

(Chairman.) And that he has had the figures confirmed?

(Mr. George Wallace.) Certainly. I do not suggest that Mr. Gomme has made a mistake willingly for one instant. I merely say it is a mistake, and it makes the figures unreliable.

7890. Were you here when Mr. McKinnon Wood was giving evidence?—Yes.

7891. I referred him at Question 7387 to Question 3360 of your former evidence, and I quoted it, I think, accurately, and I think to-day you have also said that your point is that London's increase in trade is very great, but that it is not increasing relatively in proportion to the rest of the kingdom?—That is so.

7892. The inference which you seek to draw from that fact is that it is a want of development and attention to the docks?—To the docks and port.

7893. Then I went on to ask Mr. Wood if a table had been taken out for the trade of the docks of London?—Yes.

7894. Have you taken out a table showing that the trade in the docks of London and the India Docks Company has increased relatively to that of the rest of the United Kingdom?—No, I have not, because my business before this Commission has not to do with the London and India Docks Company so much as with the Port of London. I have been treating the Port of London as a whole, and not going into any one of its small details.

7895. That it is a want of attention and development of the docks?—And of the port.

7896. Can you show at all that the trade of the docks has decreased even in your relative proportion theory?

—I have not gone into the trade of the docks, because I have not the information to do so. *Mr. G. L. Gomme.*

7897. I beg your pardon. I am going to show you where you have it. Will you kindly turn to Appendix No. 14 of the 9th day?—Yes. *22 May 1901.*

7898. I am going to show you that you have been dealing with this matter—at least, I think I can. Will you kindly also turn to Appendix No. 8 on the 2nd day. That is a table handed in by Mr. Scott?—Yes.

7899. Will you turn to the figures in Mr. Scott's table—that is the first one there, for 1871?—Yes.

7900. I may say the reason that year is taken is this—because there was a different system with the East and West India Dock previous to that date. There is no distinction about foreign trade in the East and West India Docks' figures before that date, but will you take these figures from me and check them. The total foreign tonnage entering the London Docks in 1871 was 1,663,093 tons?—Yes.

7901. Will you turn to 1899 and take same figures. There it is, 4,281,389 tons?—Yes.

7902. That is correct?—That is so.

7903. Now will you turn to your own table?—Yes.

7904. Go to the foreign tonnage entering London. Go to 1871 again. It is 4,181,059 tons?—Yes.

7905. Now for 1899 it is 9,244,593 tons?—Yes.

7906. The London and India Docks percentage of the London foreign trade there would be 40 per cent. in 1871, and 46 in 1899. Would that be about right?—I will take it from you that that is right.

7907. Now will you take another figure in your same table—the foreign tonnage of the whole of the United Kingdom for 1871?—Yes.

7908. That, of course, has to be got by adding the London and the rest together?—Yes.

7909. For 1871 it is 16,455,342 tons?—Yes, I agree.

7910. For 1899 it is 36,225,876 tons?—Yes.

7911. Now may I put these figures to you—at the London and India Docks the percentage of the foreign tonnage of the United Kingdom in 1871 was 10·2?—Yes, I agree with that.

7912. That the London and India Docks' percentage of the foreign tonnage of the United Kingdom for 1899 was 11·8?—Yes, I agree with that.

7913. So that over that time, so far from its being in want of development and attention to the docks, the docks of my company have actually increased relatively to the rest of the United Kingdom?—It is so on these figures, certainly.

7914. They are your own figures?—No, they are not my figures indeed.

7915. And you have accepted Mr. Scott's?—I should like to point out that although that is so, the amount of shipping now in the river and not accommodated at the docks at all, is far in excess of the total shipping at the time when the docks were first instituted, and the fact that one particular dock company has retained this amount of shipping is not so much to the point as that there is a very large amount of shipping still outside the docks, which they could have obtained if there had been accommodation for it.

(Adjourned to Tuesday, 4th June, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## TWENTY-SECOND DAY.

*Tuesday, 4th June, 1901.*

### PRESENT

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTELTON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.  
Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. BALFOUR BROWNE, K.C., and Mr. GEORGE WALLACE appeared on behalf of the London and India Dock Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council.

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. R. W. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

Mr. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

Mr. CHARLES JAMES CATER SCOTT re-called and further examined.

*Mr. C. J. C. Scott.*  
4 June 1901. 7916. (*Chairman*.) I believe you desire to put in a statement showing the details of expenditure of the London and India Dock Company on maintenance for the year 1899?—Yes. Referring to Questions 6068 and 6666 I promised to put in certain details of expenditure on maintenance. These are the details I promised, and I think that completes all the tables I promised to put in. The items are:—General repairs, £10,718 18s. 6d.; machinery, £15,190 10s. 10d.; gear, tackle, vans, wagons, trucks, etc., £7,376 4s. 9d.; gas and water mains, etc., £1,997 0s. 2d.; roads, scavenging, etc., walls, fences, and gates, £8,674 7s. 7d.; maintenance of railways, etc., £7,461 8s. 1d.; bridges

and lock gates, £2,348 7s. 10d.; quays, pier-heads, jetties, moorings, and dry locks, £4,171 5s. 8d.; tugs, £2,320 15s. 3d.; derricks, barges, dummies, boats, etc., £1,390 12s. 8d.; oils and other stores used at engine houses, £3,119 17s. 2d.; engineers' foremen's supervision and office expenditure, £4,876 15s.; sundry small works, £2,422 16s. 1d.; special maintenance, all the items of which are separately ordered by Works Committee, £31,704 6s. 5d.; proportion of "new works" to be charged to maintenance, £5,451 17s. 1d.; amount of maintenance as shown in the accounts, £109,225 3s. 1d.

Alderman Sir MARCUS SAMUEL called and examined.

*Alderman Sir M. Samuel.* 7917. (*Chairman*.) You are chairman of the Special Committee of the Corporation of the City of London which was appointed to consider the subject of the inquiry by this Commission?—Yes.

7918. Will you be good enough to proceed with your evidence?—Before I commence with my evidence may I at once say on behalf of the Corporation that we entirely disclaim any hostility whatever either to the Thames Conservancy, the dock companies, the London County Council, or any of the bodies that have appeared before you. We are actuated entirely and solely by the hope and wish that we may assist the Royal Commissioners to the best of our ability in forming a scheme which will conduce to the good government of the port. We have no other object whatever, and certainly we have no hostility to any other body.

7919. With regard to the report of the Common Council, what will be convenient to you? Will you hand it in?—Yes, I will put it in, and then afterwards if the Commissioners wish me to refer to it paragraph by paragraph I will do so.

*The witness handed in the following Report.*

"Green, Mayor.

"A Common Council holden in the Chamber of the Guildhall of the City of London, on Thursday, the 28th day of March, 1901.

"Resolved and ordered, that the Special Committee on the subject of the Royal Commission on the Port of London be authorised to print, when prepared, their report on the reference to them from this Court.—(Signed) Monckton.

"To the Right Honourable the Lord Mayor, Aldermen and Commons of the City of London, in Common Council assembled:—We, whose names are hereunto subscribed, of your Committee specially appointed by your Honourable Court on the fourteenth day of March, 1901, to consider the whole question of the Royal Commission on the Port of London, and the City's action in relation thereto, do certify that we have duly proceeded therein. From time immemorial the Corporation of the City of London has been associated with the management of the Thames and of the Port of London; indeed, until the passing of the Thames Conservancy Act, 1857, it had been the sole authority for the conservation of the Thames. The Corporation still remains the Port Sanitary Authority, whilst markets for the whole Metropolis, including Billings-

gate Fish Market and the Cattle Market at Deptford, both on the Thames, are administered by that body. So recently as 1894, Parliament, in the Thames Conservancy Act passed in that year, continued to the Corporation its present representation of six members on that Board. The Board of Trade appointed a Commission, in accordance with the provisions of that Act, to report what dredging and other operations, if any, were practicable and expedient to improve the navigation of the Thames, and the Commissioners reported in 1896. The Conservancy Board considered this Report, and appears to have decided that, under the circumstances then prevailing, the maximum dredging recommended by the Commissioners was not immediately practicable; the chief reason apparently being insufficiency of funds. From the evidence which has been available to the Committee, it has become manifest that two main causes have operated for the lack of progress of London as a port: (1) Diversity of administration; (2) Inadequacy of funds. It has been forcibly borne to the minds of your Committee that there has been no one body which could take the initiative, or which had the powers of bringing the port up to the requirements of the age; and this will certainly be recognised, when it is remembered that the whole amount available to any public body for administering and improving the river and the approaches thereto has been a sum under £90,000 per annum. Recognising, therefore, that one body, possessing a complete power for river, port, navigation, shipping and other services, is absolutely necessary, we have arrived at the conclusion that such a body should be constituted. We are of opinion that the Board so created should be entirely independent of the control of any other public body, but that, inasmuch as very considerable powers will have to be entrusted to it, the leavening of a municipal element is desirable. Owing to the circumstances governing the custom of the Port of London, and contrary to the custom prevailing in every other principal port in the United Kingdom, no charge has ever been levied either on shipping (except to the small extent of  $\frac{1}{4}$ d. and  $\frac{3}{4}$ d. a ton respectively now taken by the Thames Conservancy) or on goods, for the general improvement of the port. The great progress which has been made in Liverpool is largely attributable to the fact that the Mersey Dock and Harbour Board possesses powers of levying dues on shipping and goods for the improvement of the port and docks; and your Committee recommend that similar powers should be conferred upon the proposed new authority, when constituted, and that those powers should be ample to secure such a revenue as would provide a guarantee sufficient to justify Parliament in constituting the capital which would have to be created by this authority a trustees' stock. The question of finance is one of such importance that this must necessarily be of primary consideration in constituting the new authority. As a sum of about two millions sterling will apparently be required for dredging the river, and the whole of the dock property will be benefited by such expenditure, and having in view the enormous outlay admittedly necessary to bring the docks entirely up to modern requirements, your Committee are of opinion that the new authority should have power conferred upon it to purchase the property of the dock companies, in so far as Parliament may decide. As the dock companies have no power to charge any dues upon barges using the docks, or upon goods except when landed or warehoused there, any successful improvement of the docks by private authorities under such circumstances is impossible; and your Committee cannot recommend that the powers of taxation, which should be applied for the benefit of the Port, should be given to any private company. Your Committee have not felt themselves called upon at the present stage to make detailed recommendations as to general matters, but it does appear essential for the successful development of the Port that the railway communications between the docks and the various lines trading to London should be greatly improved; and your Committee would recommend that all railways within the docks area should be owned by the new authority, which should have power to treat and conclude agreements with the various railways for the better serving of the Port and of the Kingdom. Your Committee suggest that no further sufferance or bonded warehouse should be created or sanctioned by the Customs, and that powers should be taken (but not necessarily exercised) for the purchase of the bonded wharves and warehouses by the new authority, with a view to ultimately constituting the storage of all bonded goods

a privilege for the benefit of the public. Your Committee are of opinion that no other but bonded wharves should be acquired, but that the warehouses taken over from the dock companies should be administered for the storage of public goods, with a view to reducing the charges now prevailing at the Port of London. Your Committee recommend the abolition of all private moorings in the Thames below London Bridge, and the fixing of such a fair rental to users of these moorings as may be considered necessary by the new authority. The provision of further accommodation in the Port of London is indisputably necessary. Your Committee recommend, among other improvements, that extensions should be made by way of stages on the principle of that already existing at the Gallions entrance to the Albert Dock, built upon piles on the borders of the deep water of the river, communicating with the land and with ample railway connection. Such construction would be effectual and cheap, and dispense with the necessity of quay walls, while providing (without cost of emptying locks) ample accommodation for the quick loading and unloading of vessels and barges. It follows, from the recommendations of your Committee, that the new authority should have the appointment of pilots, and the superintendence of pilotage, the fixing of their charges, the regulation of watermen and lightermen, and, in fact, the whole of the powers at present exercised on the Thames by the Thames Conservancy below Richmond, the Trinity House, and the Watermen's Company, and also those of the dock companies, and any other bodies having control over the river or docks, except the Port sanitary authority. Experience has shown that boards controlled by practical men using the Port are those which are most successful, and your Committee have borne this strongly in mind in suggesting the composition of the new authority. Your Committee are of opinion that the Corporation of London should remain the Port sanitary authority, it being very desirable in the opinion of your Committee that these powers should remain in the hands of an entirely independent body, with full authority to visit the docks, and all other places under the new authority with the view of enforcing precautions for sanitation. In view of the fact that by far the larger proportion of shipping using the docks is owned in the City of London, that the administration of the dock companies is conducted within the City area, and that the Corporation exercises a greater jurisdiction over the river and Port than that possessed by any other public body (the Thames Conservancy excepted), your Committee have come to the conclusion that the Corporation should be the municipal representative of the public interests on the new authority. In view of the numerous committees which it will be necessary to form, your Committee are of opinion that the new authority should consist of 40 members, appointed or elected as follows: Appointed—One-fourth (10) by the Corporation of the City of London, two by the Admiralty, two by the Board of Trade, two by the Trinity House. Elected—Two by the railway companies, two by the underwriters of Lloyds; and the remainder (20) by shipowners, merchants and others contributing dues to the new authority. There should be a tribunal of appeal constituted, with powers such as those possessed by the Railway Commissioners, to whom any such question affecting charges or preferences should be submitted, and by whom they should be decided, as between persons using the port and the new authority. Your Committee recommend that the Committee be authorised to arrange for evidence to be given before the Royal Commission on the Port of London in accordance with the following recommendations:—(a) That a public body with parliamentary powers should be formed to manage the river, harbour, and docks. (b) That the jurisdiction of such authority should extend from the tidal limit of the Thames at Richmond, on the west, to an imaginary line drawn from the Naze to the North Foreland on the east. (c) That such authority should be called the Thames River, Dock and Harbour Board. (d) That powers should be conferred on such Board to purchase the property of the dock companies, and such bonded wharves and warehouses as they may see fit, and to raise the capital necessary for that purpose; for the deepening of the channel of the river, and for the general improvement of the port and docks. (e) That full power should be given to such Board to impose such taxes upon all goods entering or leaving the port, and upon shipping, lighters, and barges using the river, as may be necessary or desirable to procure the income required to enable the necessary capital to be raised. (f) That such Board should be constituted on the general

Alderman  
Sir M.  
Samuel.

Samuel.*

4 June 1901.

principle of the recommendations in this report, and that it should be entirely independent of and free from the control of any other public body. (g) That Parliament should constitute the stock of the Board a trustees' investment. (h) That the Lord Mayor, for the time being, shall be the returning officer for the election of members. All which we submit to the judgment of this honourable Court. Dated this 1st day of April, 1901.—Marcus Samuel. A. H. Barber. T. Hastings Miller. J. S. E. Cotman. T. G. Beasley. \*Wm. H. Pannell. \*Edward Lee. R. Hanson. \*Fredk. P. Alliston. Alfred Brookman. C. Wallington. W. R. Pryke. J. W. Domoney. \* Except as regards the question of representation."

I will now proceed with my own evidence. I am an Alderman of the City of London, and was elected in the year 1891, and served the office of Sheriff in 1894. I am senior partner in the firm of M. Samuel and Co., of London, Samuel Samuel and Co., of Japan, and Chairman of the Shell Transport and Trading Co., Limited, of which my firm are the managers, owning 36 steamers with a registered tonnage of 90,000 tons, and am also director of the Alliance Marine Assurance Co., and I represented the shipowners on the Thames Conservancy from 1895 to 1898, when I resigned on account of pressure of other work. I am consequently intimately acquainted with the Port of London and many other ports, my company having piers and wharves of their own at almost every port in the East from Suez to Japan, including India. A Special Committee was appointed by the Corporation to consider and report to the Royal Commission as to the views of the Corporation for improvement and working of the port, and of this Committee I was elected Chairman. The report of this Committee, which was agreed to by the Court of Common Council on Tuesday the 16th April last, is the one I have handed in. The Corporation had the benefit, before arriving at its conclusion, of being able to study the large amount of evidence which has been placed before the Commission, and seeing that evidence is open to the Commission to draw their own conclusions and base their own calculations upon, the Corporation has not deemed it necessary to go at any great length into details, but it feels obliged to offer a few comments upon the evidence of certain individuals representing public bodies, and upon the detailed schemes put forward on behalf of other public bodies. I wish to call attention to the evidence of Mr. George Laurence Gomme, the Clerk of the London County Council, in giving his view historically of the control of the Thames by the City. Mr. Gomme falls into a mistake regarding the ancient authority of the City over the Thames. He says, "Whatever the authority under which the City Corporation exercised jurisdiction over the river prior to this stage (A.D. 1605), there would seem to be no doubt in the first place that that jurisdiction was not definitely theirs by statutory right." The incorrectness of this statement is manifest, since by the old Statute 17 Richard II., cap. 9 (A.D. 1393), the conservation of the Thames and the Medway is given to the Lord Mayor, whose jurisdiction is confirmed and extended by Statute 4 Henry VII., cap. 15 (A.D. 1487), and Statute 27 Henry VIII. (A.D. 1536). The legislative authority of the Lord Mayor over the river was further referred to, and expressly recognised by Proclamation of King Henry VIII., in the 34th year of his reign (A.D. 1543). Mr. Gomme falls into some very curious errors in seeking to prove from his figures that the whole of the charges levied in the port fall upon consumers of goods. He shows in the figures which he quotes that no less than £793,562 is levied as tonnage dues and other charges upon shipping entering the Port or Docks of London. Now, there is not a practical man who does not know that these charges come out of freight, and are a matter of contract between the shipowner and the shipper, and have not in the slightest degree any influence upon the price paid by consumers for their goods.

7920. Surely it is the consumer of the goods who pays in the end?—Surely not, my Lord. Let me put this to you. A shipper at Bombay ships wheat to London. He is guided not by the charges that prevail there, but by the competition of other wheat shipped, say, from Australia or from Russia, as the case may be, and I as a shipowner know, unfortunately only too well, that the buyer does not care a rap what charges I have to pay. I pay those charges out of my freight, and it does seem to me altogether wrong to say that that falls on the

consumer. It is a market price in competition. Therefore these prices are governed solely by the law of supply and demand, and I only consider it necessary to refer to this at all to show the danger of being guided by a statistician in framing a practical scheme. I must apologise to Sir Robert Giffen.

7921. (Sir Robert Giffen.) Will you let me put a question to you. Are you quite aware of the reputation of Mr. Gomme both as a statistician and as an economist?—But not as a trader. I have the highest admiration for Mr. Gomme's ability as a statistician, and so long as he keeps to that province he is quite an example, but the moment he attempts to apply his statistics in a practical way he fails utterly. The Corporation of the City of London has never once been justly accused of being in any sense or shape a political body. Its members, in connection with the discharge of their corporate duties, have kept their hands perfectly clean in this respect, and, so far as I am aware, no political issue is ever raised either at the election of the members, or at their business meetings; and the great importance of this will become manifest when the Commission consider the evidence given on behalf of the Bristol Corporation, the Witness, Mr. F. B. Girdlestone, clearly showing the mischief which had arisen from the fact of sometimes one and sometimes the other political body being in power. The London County Council, which is essentially a political body, in the scheme they have drafted base their plans, firstly, upon a committee of 30 only, of whom ten should be members of the London County Council, and only ten should represent the new ratepayers provided for by their scheme. We disagree with those conclusions, firstly, in the number of members proposed, because, seeing the number of dock directors superseded, the new works to be undertaken, and the numerous committees to be formed, we are of opinion that numerically a larger body is needed. We disagree totally with their conclusions as to the relative composition of the committee, and do not consider that one-third of the representatives of those paying dues, or, in other words, providing the funds for the scheme, is sufficient, and we consider that at least half the committee should be composed of practical shipowners and merchants. The next feature in their scheme provides that the Council shall retain the control of capital expenditure. This appears to the Corporation preposterous, as for the proper working of the committee they must clearly be independent from the control of any other body. We also dissent very strongly indeed from the London County Council's proposal to make the scheme dependent in any sense upon the rates. This would, in the opinion of the Corporation, remove one of the principal reasons for economy in the administration of funds, because if it were felt that the shipowners and merchants could, in case of a deficit, fall back upon the rates, one of the principal reasons for careful administration would be removed. There is another scheme put forward on behalf of the London Chamber of Commerce. The objection of the Corporation to this scheme is firstly, to its constitution. The number proposed is too numerous, and far too diverse to be a useful body; but it also appears to the Corporation impossible to separate the water area from all the other appurtenances of the docks, and I have already set forth the objection of the Corporation to any financial aid being rendered by any public bodies, because it is abundantly clear that it would be outrageous to burden the ratepayers of the City or the County of London only, seeing that the shipping and goods entering the Port of London supply an area enormously beyond these geographical limits.

7922. (Chairman.) Does this objection to any financial aid include any grant from the Government, as suggested by some witnesses?—I will come to that later. We only suggest that the Government should contribute simply as guarantors, to enable the money to be raised on the best terms. We do not suggest any direct grant by the Government. Up to the present, the only other scheme put before the Royal Commission is that of the dock companies, which is, of course, a matter of special pleading. It appears to us so improbable that either the Royal Commission would recommend or Parliament ever sanction the taxing of either craft or goods for the benefit of private companies, that I do not propose to treat this scheme very seriously. The London and India Docks Company suggest that they should be allowed to tax barges to the extent of £56,250 a year, and to levy dues on

See 3171

goods estimated to produce the sum of £177,833, but it is quite clear that if such a power were given to these particular docks, it would not only have to be given to all the other dock companies existing, but such as might yet be created, and if this were followed to a logical conclusion it would also have to be given to any body or bodies constructing jetties or quays. Nothing is more manifest than that the power of taxation should only be given to a single body, and then only upon conditions that the funds are carefully administered to the benefit of the port as a whole, any savings effected going ultimately to the reduction of charges on shipping and goods. We have only to make a brief remark to similar proposals put forward on behalf of the Thames Conservancy. The same arguments exactly apply against these, viz., that you cannot have a multiplication of taxing authorities, and that as it seems desirable that considerable addition to the jetty and quay space on the borders of the river should be provided, the authority controlling the docks can best judge what is necessary, and should have the power of providing it. I now come to the Corporation scheme, and in putting it forward it is most necessary to remember, as the report itself recites, the unique position occupied by the Corporation of the City of London. It is composed of 232 members, who are the elected representatives of the City area, in which practically the whole of the business of the port is conducted. Not only the dock companies themselves, but the leading shipping companies, almost without exception, are situated in the area of the City of London, as well as the head offices of the leading banks and insurance companies, and the City represents in value about one-eighth of the whole of the rateable value of the County of London, so that from whatever point of view it is looked at, they have an almost overwhelming interest on behalf of those whom they represent in the welfare of the port.

7923. Will you explain how the members of the Corporation can be said to represent the great business houses in the City?—The members of the Corporation are elected by the ratepayers.

7924. You tell us here that they represent the big houses in the City?—So they do. The big houses all have votes if they choose to exercise them, and the members of the Common Council are elected every year. They are distinctly representative of the merchants. It is almost needless to say that that interest has been the only one which has influenced them in drafting their scheme. And it must be borne in mind that the Corporation is the Port Sanitary Authority, and also the Market Authority for the Metropolis. As there appears to be absolute unanimity among every section of those who have given evidence before the Royal Commission, that lack of progress of London as a port has been from diversity of administration, the conclusion appears irresistible that a single body should control the future of the river, in so far as improving it for the purposes of navigation go, and of the docks and their extensions, as well as the construction of such further accommodation, either by way of jetties, quays or docks, as the new authority may deem desirable; and it is from the very fact that no single authority could be fairly held liable in the past for want of initiative that the Corporation has been largely guided in the determination it has come to as to the composition of the committee which it recommends. We dissent entirely from the view of the London County Council that the authority, when created—which will be one of the most important in the kingdom—should be subject to the tutelage of any other public body, but especially of a body elected on political lines and deeply tainted on the Labour question, which is one of vital importance to the prosperity of the port. The great success which Liverpool has obtained is largely attributable to its having been managed by experts who have had to bear the brunt of the taxation, benefiting if it is well administered, suffering if mal-administered. Such a body has every possible incentive to attract commerce to a port, because it is quite evident that the larger the ratio of goods and tonnage entering, the smaller will be the percentage of expenses; but London is differently placed from Liverpool, in that the latter port practically was left in the hands of its harbour board to form, whereas the new authority for London will have to take over much they were not responsible for creating, and it is almost inevitable that if, as I shall proceed to show, under the scheme of the Cor-

poration, a very large revenue indeed will be applicable to the diminution of rates on shipping and on goods, a body administered solely by the contributors to its rates might find internal dissensions among its members of such a character as would impair its utility, had it not a leavening of an element supplied by a non-political body contributed by a public authority. I hope that the financial proposals of the Corporation in suggesting that the Government should make the stock of the new authority a trustees' stock, will commend itself to the Royal Commission. As it appears impossible in equity to place any charge upon the London rates, either of the city or of the county exclusively, it is clear the power of taxation on goods and shipping to be given to the new authority should be unlimited, and with this, and the consideration that for every shilling expended good value will be obtained, the assets of the new authority, which the Corporation suggest should be called the Thames River, Dock, and Harbour Board, will be of such a substantial character that no exception could be taken to this proposal. But, inasmuch as the Corporation recommend that Government should be invited to contribute to the success of the port, and they are largely interested in having the approaches to their arsenal at Woolwich made of such a character that the deepest ship can get up there at any state of the tide, it would not seem unfair to suggest to the Government, seeing that they will have ample representation under the Corporation scheme on the new authority, that they should guarantee the payment of interest to bondholders, rather than by making a direct contribution in cash to the cost of dredging the river. The Corporation has been much impressed by the evidence given on behalf of the Customs, and it would seem that considerable economy could be exercised by classifying bonded goods and warehousing them according to certain schedules, and in specified areas. In the figures which the Corporation put forward to the Commission as helping them to form an estimate of what the actually constituted authority will receive as income, the capital expenditure involved in the acquisition of the bonded wharves and warehouses is expressly omitted, because it is evident that such property would only be acquired if it returned a fair income, and leaving this element, therefore, out of the calculation, the comparison of probable outlay for London as compared with Liverpool will show at a glance how much cheaper a port under proper administration London can be made, since it appears that, whilst Liverpool has only eight million tons, London has fourteen millions. Liverpool has spent twenty-four millions in making its port, whilst, excluding bonded wharves and warehouses, it does not appear probable that London will have to spend more than twenty-five millions to provide ample accommodation for the very much larger trade, and this twenty-five millions is made up by an approximate figure of about eighteen millions for the purchase of the docks, three millions for their improvement and extension, two millions for dredging, and a further two millions for the provision of jetty and quay space accommodation. The Corporation recommend that they should remain the port sanitary authority, and there is really no reason to change this. They efficiently perform the duties at their own expense, and command the confidence of the whole of London. I think you have it in evidence that the charges for the port and sanitary authority do not come out of the rates?

7925. Yes; we have had that already?—The question of taxing barges, or of how to tax them, is one that must be settled by the new authority itself. Now it becomes necessary to give the principal reasons which have actuated the Corporation in coming to the decision as to the composition of the Committee. The scheme put forward by the London County Council does not commend itself in vital respects to the Corporation nor to those who are engaged in the business of the port. In the first place, the members are (as has been previously stated by me) indisputably elected on a political basis, and in the second place, their scheme shows a determination to subject the new authority to their control, whereas it is absolutely essential that it should be entirely independent. The Corporation cannot help feeling that they would contribute an element which could not possibly be of any service, and which might well become dangerous, since certain members of their body were responsible for creating the labour difficulties under which the Port of London still suffers.

*Alderman  
Sir M.  
Samuel.*

4 June 1901.

Alderman  
Sir M.  
Samuel.

4 June 1901

7926. "They" being the London County Council?—Yes; I am speaking now of the London County Council. The Corporation, representing the mercantile community, must consider the opinions of its constituents, and these have been so freely expressed on the question of the labour policy of the London County Council that it cannot ignore them; but, unless we are to perpetuate the very troubles which have led to the non-progress of the Port, it appears inevitable that one body, and one body only, should be held liable if the future should not show a great improvement on the past. The Thames Conservancy have representatives of not only the Corporation and the London County Council but of the Riparian Counties, as well as many other constituents, and the result has been that no one authority could be held at fault because no one had supreme power. Although under the Corporation scheme the representatives of the Corporation will not have the supreme power of directing the business portion of the new board, yet through them public pressure might be brought to bear upon the board if they do not do their duty to the Port, and they only would be responsible—a very great incentive to keep them up to the mark; but apart from these very cogent reasons, it is a fact that upon no harbour board throughout the Kingdom is any county authority represented, and although the London County Council argue that they occupy a unique position as a county authority, this is not, in fact, so at all, since the creation of municipalities throughout the Metropolitan area. If the scheme of the Corporation is to be carried out, and half the representation of the new Board be given to the new ratepayers contributing its revenue, the municipal element must be very limited, and the arguments which I have recited will show that a compact quota contributed by the Corporation of the City of London, and by them alone offers the best solution to the problem of the constitution of the Committee. Fragments contributed by many would only weaken the new authority, and most undoubtedly, if the London County Council are granted any representation, some would also have to be given to the counties of Kent, Essex, Surrey, and Middlesex, and you would then swamp the elected commercial element by the co-opted municipal portion, a principle to which the Corporation is absolutely opposed. The unique position of the Corporation already managing the markets situated on the river, namely, the Cattle Markets and the Fish Markets, for the benefit of the whole of London, renders it quite natural that they should represent London on the larger body. It would appear that the only reason that the London County Council had representation accorded them on the Thames Conservancy was that they are the body charged with the purification of the river, and as the question of water is one which concerns the entire population of London directly, there is every reason why the County Councils should be represented upon the body constituting the authority for the upper river, and as the Corporation recommend that the Conservancy should be preserved, but reconstituted if necessary, for the management of the river above Richmond, its members would certainly not oppose the appointment of representatives of the London County Council on that part of the river management. But for the reasons set out at length in the evidence I have already put forward, the Corporation adheres to the recommendation that there should only be one public body represented on the new authority, and that in view of the immense interest centred in the City, and the fact that they are entirely free from political bias, that authority should be composed of representatives of the Corporation.

7927. Do those comprise all the reasons you have to give us why the London County Council should not be represented on the new Board?—I think so. I have another statement to make, and there may be a few additional reasons in that. I should like particularly to call the attention of the Commission to the specific recommendations of the Corporation: (a) That a public body with parliamentary powers should be formed to manage the river, harbour, and docks; (b) that the jurisdiction of such authority should extend from the tidal limit of the Thames at Richmond, on the west, to an imaginary line drawn from the Naze to the North Foreland on the east; (c) that such authority should be called the Thames River, Dock and Harbour Board; (d) that powers should be conferred on such Board to purchase the property of the dock companies, and such bonded wharves and warehouses as they may see fit, and to raise the capital necessary for that purpose; for the deepening of the channel of the river, and for

the general improvement of the Port and docks; (e) that full power should be given to such Board to impose such taxes upon all goods entering or leaving the Port, and upon shipping, lighters, and barges using the river, as may be necessary or desirable to procure the income required to enable the necessary capital to be raised; (f) that such Board should be constituted on the general principle of the recommendations in this Report, and that it should be entirely independent of and free from the control of any other public body; (g) that Parliament should constitute the Stock of the Board a trustees' investment; (h) that the Lord Mayor, for the time being, shall be the returning officer for the election of members.

Now we will deal with the scheme. The scheme of the Corporation being based upon the assumption that the revenue to be derived from the impost upon goods, on the same scale as in Liverpool, would render the Thames River, Dock and Harbour Board independent of rate aid, it has been found necessary to compile figures to bear out this contention, and I now put these figures before the Royal Commission. The figures are comprised in certain tables, which I will hand in.

The Witness handed in the following tables:

(Table showing calculation of charges according to the Liverpool tariff on foreign and colonial imports to the Port of London for the year 1899. See Appendix, 22nd day, No. 1.)

(Table showing calculation of charges according to the Liverpool tariff on foreign and colonial exports from the Port of London for the year 1899. See Appendix, 22nd day, No. 2.)

(Table showing calculation of charges according to the Liverpool tariff on exports of home manufactures from the Port of London for the year 1899. See Appendix, 22nd day, No. 3.)

(Table showing calculation of charges according to the Liverpool tariff on transhipment of goods at the Port of London for the year 1899. See Appendix, 22nd day, No. 4.)

(Table showing calculation of charges according to the Liverpool tariff on coastwise goods inwards and outwards, to and from the Port of London. See Appendix, No. 5.)

(Résumé of the five previous tables. See Appendix, 22nd day, No. 6.)

(Table showing the market value of the London Docks on the 23rd April, 1901. See Appendix, 22nd day, No. 7.)

(Table showing the revenue and expenses of the London Docks for the year 1899. See Appendix, 22nd day, No. 8.)

(Table showing computation of revenue and expenses of a port trust taking over the dock property and the river administration. See Appendix, 22nd day, No. 9.)

(Table showing composition of the trust debt; annual payment in respect thereof; and surplus revenue available for payment. See Appendix, 22nd day, No. 10.)

(A statistical table of the City of London coal dues 1880 to 1888. See Appendix, 22nd day, No. 11.)

(Table showing the apportionment between docks and river of the tonnage to London. See Appendix, 22nd day, No. 12.)

(Table showing calculation of charges according to the Liverpool tariff on foreign and colonial imports to the Port of Liverpool for the year 1899. See Appendix, 22nd day, No. 13.)

(Table showing calculation of charges according to the Liverpool tariff on foreign and colonial exports from the Port of Liverpool for the year 1899. See Appendix, 22nd day, No. 14.)

(Table showing calculation of charges according to the Liverpool tariff on exports of home manufactures from the Port of Liverpool for the year 1899. See Appendix, 22nd day, No. 15.)

(Table showing calculation of charges according to the Liverpool tariff on transshipment goods at the Port of Liverpool for the year 1899. See Appendix, 22nd day, No. 16.)

(Résumé of Appendices Nos. 13, 14, 15, 16, including reference to coastwise cargo. See Appendix, 22nd day, No. 17.)

I wish to say that we have dealt with this very broadly indeed. The position we have taken is that your lordship and your colleagues are a body of such knowledge and experience that beyond giving you as much assistance as we can, we must absolutely leave you to draw your own deductions; we do not presume to say what they should be.

7928. Still, those conclusions, although broad, are deliberate ones on the part of the Corporation?—Yes, absolutely; and those tables which we have got out at great trouble, and on the very best basis we could, are put forward as being correct. In the first place I would refer to Appendix No. 9, which shows that the income derived by the new authority, based upon those dues, would leave a surplus available for payment of interest on funded debt, for improvements, and ultimately for abatement of dues of £1,513,055. In Appendix No. 5 it will be observed that a charge of one penny per ton on coal coming coastwise to the Port of London would realise £31,397; but this being a purely nominal tax, I refer to Appendix No. 11, from which it will be seen that, in the year 1888, a duty was levied on this one article of consumption amounting to £607,063. It appears necessary to point out to the Commissioners—as in fact the figures themselves explain—that the dues which it is suggested should be levied upon goods would be applied for port and harbour purposes only, and would be levied—as in Liverpool—irrespective of any labour performed by the authority in respect of them. And, for the rest, I have taken the charges as actually levied by the dock companies at the present time; because, although similar charges are not shown as dock rates in Liverpool, as applied to ships, they are, nevertheless, paid by the receivers of goods. Assuming, for one moment, that the new rating powers sought by the London and India Docks Company were granted, a very large proportion of the goods coming into the port would escape taxation entirely; I refer notably to petroleum, which does not go into the docks at all, but which would yet produce an income of £25,108; to coal, which would produce £31,397; and to rice, which would produce £6,505. I mention rice particularly, because it is abundantly clear that steamers bringing full cargoes of rice would discharge entirely in the river, if, by so doing, they would escape any impost on their cargo, which the receivers would be subject to if the vessel entered dock. And this danger would also undoubtedly apply to many other cargoes when the river is deepened to 30 feet, and steamers can lie there safely at all states of the tide. And although there are very many reasons which point to the absolute necessity of the river and dock authority being one, this appears to me an overwhelming one; because, if many steamers elected to discharge at buoys in the river, the stream would become so congested that movement would be impossible; and it should, therefore, be a question for the supreme authority to decide which steamers should be allowed to discharge in the river, and which should enter the docks. In my opinion, it would not be practicable to allow shipowners to, themselves, elect which course should be followed. I should be very glad to give further explanation under that heading; I think it will transpire as I go along why I say this. It also appears to me that if the predictions of those who know the port and the trade best are fulfilled, the only possible solution of the difficulty of discharging more ships in a given time would be that all goods should be peremptorily discharged on to the quays, in order to turn the ships round.

7929. You would say, I suppose, that the accommodation at the quays and sheds at the present time is inadequate for this?—I think they are not adequate; I think they are quite inadequate. But the cost of doing that, seeing that it would be for the general good of the port, should not fall upon the shipowners, but should be charged upon the rates on goods, as already specified, and in diminution of existing charges to shipowners. It will be observed that the rates on tonnage in the Table placed before the Commissioners are exactly those that now prevail; but if shipowners are

to be relieved of the burden of the cost of placing and sorting goods upon the quays, and have other facilities provided for them in order to give their ships dispatch, there would be no complaint from them if the rate on tonnage were made 1s. 4d. per ton, in place of the 1s. now charged by the dock companies, and which would, in the case of the London and India Docks alone, give £70,000. It would, also, be quite possible, and even desirable, to impose some extra charge on the 7,913,998 tons (See Appendix No. 12) using the river only, and which at present pay only ½d. and ¾d. per ton. An extra penny per ton on this class of vessel would give £32,974. No charge on barges is included in any of these figures. I should like to say that we have not seen our way clear to recommend that any specific charge should be made on barges, although their regulation appears very necessary, and consequently, in view of everything, in the opinion of the Corporation, contributing in some sort to the revenue of the port, a licence charge might very well be levied on barges, which would place them under much better control than they appear to be at present. In support of the contention that it is absolutely necessary to deepen the river now, I could cite the case of our own steamer, the "Bulyasses." She was in London in April last, and is a vessel of 6,069 tons register, 410ft. long by 52ft. beam, and having a moulded depth of 32ft. As she had to discharge a cargo of oil in bulk she did not go into the docks at all, but was dry-docked at the Thames Ironworks Company, Limited. She had to bunker in the river, and it was with the very greatest difficulty that a berth was found for her at the buoys, where she coaled from barges alongside, but only to a depth of 22ft., which points to the necessity which exists for providing far better bunkering facilities than now exist in the Port of London. This steamer was three days taking in 1,200 tons of coal from barges. There are no public staiths at all either in the docks or on the river, whilst, unquestionably, if there were, coaling could be more expeditiously and more cheaply performed in many instances than is now the case. In my opinion, it would be ridiculous to allow each of the dock companies to have power to tax goods, as similar powers would also have to be conferred upon the Thames Conservancy for their purposes, and I presume on every dock company yet to be created. Otherwise, if vessels were to be allowed to go into any such new docks without paying similar dues the business of the existing dock companies would inevitably suffer. The same observations would apply to the building of quays or sheds, either by shipowners or private individuals. It amounts, in fact, to giving a monopoly, and it certainly appears to me that this power could and should only be given to a public body, which would apply the revenues accruing from the exercise of such monopoly in improving the port and reducing the charges. An alteration of the custom of the port is imperatively necessary. Under existing circumstances a steamer chartered, for instance, with a full cargo of rice might take from three to four weeks to unload. I put in, for the guidance of the Commissioners, a form of the Burmah rice charter, which is universally accepted, and which provides for the discharge to be according to the custom of the port.

(The witness handed in a form of the Burmah Rice Charter. See Appendix 22nd day, No. 18.)

In London this is held to be not more than 300 tons per day for rice, and a steamer, therefore, arriving with a cargo of, say, 6,000 tons of this commodity, could be detained by the consignees for twenty weather-working days, which, under modern conditions, is quite absurd. So that a shipowner is compelled to keep his ship a period of twenty days blocking the river or the dock, as the case may be, or to go to the expense of placing the whole cargo on the quay, causing hopeless congestion, and subsequently loading it into barges.

7930. At present you are giving your evidence on behalf of the Corporation of the City of London?—My Lord, I feel the difficulty of that. I am giving it on behalf of the Corporation of London, but, of course, these are instances that have come very prominently before me as a merchant and shipowner.

7931. At the present moment you are representing the Corporation?—Entirely; I should like to separate it if it were possible.

7932. We will take the evidence of the Corporation,

Alderman  
Sir M.  
Samuel.  
4 June 1901.

Alderman  
Sir M.  
Samuel.

4 June 1901.

if you please?—By all means, but it is very pertinent to the issue. This is really Corporation evidence.

7933. I think the question of the Rice Charter is not, because if so we should like to ask you, as a member of the firm of Samuel Samuel and Co., whether, as a matter of fact, any ship of yours with 6,000 tons of rice on board has been detained 24 days?—I should have to reply No, my Lord; but a steamer of 4,000 tons has been detained 16 days. I might state that is the case. The receiver is only obliged to take away 300 tons a day, and he can block the whole quay.

7934. We will limit ourselves to the evidence of the Corporation at present?—If, as has been recommended by many witnesses, the custom of the port compelled receivers to take their goods away within a reasonable time, a great deal of the congestion which now occurs from the prevalence of the custom referred to would be obviated. I do submit on behalf of the Corporation that that custom of the port should be altered. It does not now prevail in any other ports, and it is obsolete and quite unfit for to-day. In the answers to Questions 5,801 to 5,808, it was elicited from Mr. Scott that the jetty accommodation existing at the entrance to the Albert Dock and the Tilbury Dock had not been used by shipowners, and Mr. Scott suggested that this went to prove that such accommodation was not needed. I say that the existence of these berths was not known to shipowners generally, and had the Dock Company suggested that such berths could be used, and that shipowners would get quicker despatch by going there, they certainly would have been used. As a matter of fact, it is the Dock Companies themselves who practically allot the berths that ships shall occupy. The Corporation do not propose that any reckless competition should be entered into by the proposed authority with outside wharves and warehouses. The proposed rates would be levied on all goods, whether warehoused by the public authority or by private wharfingers, and would be in addition to the charges made for warehousing goods in the dock warehouses, just as much as in the case of those goods that went to the wharves. There is certainly room for a reduction in general charges on many classes of goods, and to this extent competition might prevail; but I do not suggest that anything like a monopoly of warehousing should be created for the proposed authority except for dutiable goods, if the new authority when appointed deem that desirable, and it is not contemplated by the Corporation to add to the existing warehouses already owned by the Dock Companies. These would, of course, be taken over by the new authority, leaving ample scope to the outside wharfingers to warehouse goods, for which many have created facilities in regard to handling and sampling which would not fail to secure to them the advantages they already possess in competition with the docks.

7935. Have you any evidence to give us on the subject of the adequacy of the street accommodation in the neighbourhood of the docks. Would you mind telling us whether the City Corporation have any control in that matter?—They have none, except at the St. Katharine's Dock.

7936. The London County Council, I believe, have the control?—As representing the general rates. The police, of course, control the traffic.

7937. But the street accommodation I mean—the facilities for approach to the docks?—Those are recommended from time to time by the local authorities, and then undertaken by the County Council. Within the area of the city, for instance, we have done very much in widening the streets; we have improved the approach to the docks; the London County Council have contributed their quota, but they have never originated it. The Corporation themselves have always done that, and I think that is the procedure throughout the Metropolis. The local authority recommend; the County Council provide the funds.

7938. Have you any opinion to give us with regard to the adequacy of the roads and the approaches to the docks?—I cannot help thinking that the docks immediately within the metropolitan area have very fair road approaches, and those that are farther away are covered in the recommendation that the railway accommodation should be improved. No road approaches would better Tilbury or the Albert and Victoria Docks; there are very good roads to those docks now.

7939. You have read the evidence of Sir Alexander Binnie as to the works that are being undertaken?—Yes; I have read it with some amusement, too, because the idea that the widening of Leadenhall Street, for instance, was done for the express purpose of improving the approach to the docks I look upon as quite special pleading, made with an object. We all want to see the communications in London improved, but I think it would be very wide indeed to say that the widening of Southampton Row, for instance, would improve the docks.

7940. That was not the only street he mentioned?—No. But if you ask me on the other way, the negative point, I say that a great deal that ought to have been done and might have been done has not been done. For instance, take Tooley Street; the approaches to the wharves on the other side of the river are disgraceful. But with reference to the docks, I really do not think the roads are bad at all. May I say the Corporation have done a work in that respect which has directly and immensely helped, namely, the construction of the Tower Bridge. That, of course, has not been done out of the rates, but out of the Bridge House Estates funds. That they did directly.

7941. (Sir John Wolfe-Barry.) I think you mentioned an estimate of £18,000,000 for the cost of the docks?—Yes; that is in Appendix 7.

7942. Is that estimate based upon the market price of the day?—The market price, plus 10 per cent. for compulsory purchase on the ordinary stocks of the company. That was the market price on the 23rd April.

7943. I see that it includes all the docks?—That includes the London and India, the Millwall, and the Surrey Commercial Docks.

7944. I suppose you take that as a somewhat approximate figure?—Yes, necessarily.

7945. Merely for the sake of discussing some figure?—That is all.

7946. I want to understand what you mean by Government creating this a trustees' investment. Do you mean by that that the Government are to guarantee any deficiency on income that might arise?—I suggest they should guarantee the interest, but I think it is quite immaterial whether they do or not. You have had in evidence that the Thames Conservancy (of which I was a member at the time) had a very much smaller guaranteed income, and not a trustees' stock at all, and they were enabled to get 107 for their 3 per cent. stock.

7947. That is a very different sum to £18,000,000?—Very different value. Here we seem to have an immense revenue to fall back upon.

7948. One would like to understand really what is the proposal of the Corporation with regard to guaranteeing stock so as to make it a perfectly safe investment. The County Council on their side propose that it should be guaranteed by the rates, which gives it a most distinct backbone, and naturally nothing can be said against that as a security?—Quite true.

7949. Do the Corporation propose anything as an alternative to such a guarantee as that?—Yes, they suggest that the Government should guarantee the stock. The improvement of London is a national matter. I think any business man having these figures before him would say that the Government would run no risk whatever. There is not the slightest fear of any extraneous help being required, but if it were, we put it very broadly indeed that the Government might very well do that.

7950. Is that the proposal of the Corporation?—Yes.

7951. I wanted clearly to understand what the proposal of the Corporation is when they say it is to be made a trustees' investment?—That is it.

7952. You mean that the Government is to be behind, or, as I have said, is to be the backbone to the finance of the whole thing?—If absolutely necessary.

7953. But do you think it is absolutely necessary?—I think as a matter of practice it would not be necessary at all. I do not think there is the most remote chance of the Government being called upon. We place it very plainly indeed—we do not mince the matter—that the power of taxation of goods should be unlimited.

7954. But that is a very different thing, is it not, to a guarantee by Government, because the taxation of

See 8125-28.

goods might be so excessive as to drive away trade?—I quite admit that. It is possible that it might, but it is most improbable. You have 15,000,000 tons to deal with. Of course, I am only speaking on this personally, because the Corporation have decided that the Government should be invited to contribute. Personally, I do not see the slightest need for it.

7955. Is there not a great difference between a Government guarantee and any financial scheme based upon the exercise of taxation by any such body as proposed?—In the one case it would not be at all an improper thing that the whole kingdom should contribute to the cost of London. It would be a most unfair and a most improper thing that the taxpayers of London only should contribute; that is what we are finding fault with. I put it very broadly indeed; so far as the London County Council are concerned it is one of the grossest betrayals of trusts by gentlemen representing the ratepayers that I have ever seen, to suggest that for the sake of getting power into the hands of that body the ratepayers in London only should be asked to guarantee this. Our position is this: We contribute one-eighth, and we say it is a most distinct wrong that we should be asked to pay. You have had it from several witnesses that the Port of London should stretch from Ipswich on the one side to Southampton on the other. You have had my friend, Mr. Douglas Owen, who suggested that Eastbourne and Brighton should be taxed; I say quite rightly. This Port of London serves the kingdom practically, and not London only.

7956. I hope you will not think that I am criticising the scheme in an adverse way. I only want to know what the proposal of the Corporation is?—That is the proposal of the Corporation. If, indeed, any guarantee is necessary, it is quite fair that it should be a national one; it would be most unfair that it should be a local one only. I put it as broadly as I can. Although we pay one-eighth of the rates, we have only two representatives on the London County Council scheme.

7957. I want to press you a little further on the point whether you do or do not propose that the Government should guarantee or not?—I say, yes, I do. It would be a matter of very great value indeed to Government that they should be enabled to get their large ships up to Woolwich. It would be an immense monetary saving, too.

7958. I suppose you would admit that it would make an enormous difference indeed in the amount to be paid for stock whether the Government stood behind it or not?—I think *prima facie* it might, but with such immense powers as this new body would have, for instance the raising of money on coal, which pays nothing at all at present, I cannot think there would be any difficulty in raising the funds.

7959. I think we gather that you propose to increase the rates on vessels in the river from their present position?—Yes. The thing is practically ridiculous; I have given you, if you will excuse me referring again to our own case, the steamer "Bulysses," of 6,069 tons, not paying sixpence.

7960. Whereas they now are free, you would subject them to a charge?—Yes.

7961. I also gather that you would increase the power of charging upon the ships in docks?—We are very careful in this to fulfil what we want to—that is, really to offer advice. We do not assume the position which must necessarily be left to the Commission.

7962. I think this is quite clear upon your evidence. You say, whereas they pay now one shilling you propose that should be 1s. 4d.?—I think, if I may put it broadly, it is this, that whereas a certain very large amount of goods and shipping escaped contribution at all, the proposals of the Corporation go really to the redistribution of the burdens.

7963. But you do not propose that there should be any modification of the terms under which the barge traffic is conducted?—Only to the extent of licences—that they should be licensed and brought under very much greater control. I think the state of things which exists, according to the evidence of the Dock Companies, now, that no one has control over those barges, should be remedied. That is absolutely necessary. But when you consider (and, of course, one has to look at this very broadly) that the carts going to the docks for goods pay nothing, and the exit of goods by water is only another cartage, it is a question which

bristles with difficulties, and we have rather avoided dealing with that matter, because I think it is one which would be better dealt with by the authority when it is constituted.

7964. We may take it, therefore, that you say that full power should be given to such Board to impose such taxes upon all goods entering or leaving port, and that upon shipping, lighters, and barges using the river?—As may be necessary or desirable.

7965. Do you draw a distinction there between using the river and using the docks?—There you see is the crux of our whole proposals. We say it must be one. I can see no other issue.

7966. Do you think there should be any charge made upon barges, even for the services which are rendered?—Not specifically in the docks; on the whole I think not, because you must get your goods away. If you adopt this scheme at all you are going to compel everybody to put their goods on the quay. You must enable them to get them away and everything will be paying; the goods will be paying, indirectly the barges will be taxed. I wish to say most distinctly that that is a question which with the immense mass of evidence you have before you it is better for you to deal with than for us to make suggestions about.

7967. You have said that no charge on barges is included in the figures you have given. Therefore, I thought you meant that the view of the Corporation was that no charge should be put upon barges in the docks?—I must say that is our view.

7968. You said, I believe, that you thought there could be no possible separation between the docks and the quays on the one side, and the warehousing business of the dock companies on the other?—Yes.

7969. Would you tell us why there could be no separation?—I do not see how you could separate them. There are certain goods that should be warehoused with the docks; it is natural. For instance in this new timber trade where the ship discharges in the docks, the sheds are specially adapted for that. The timber is only removed when it is required. Then take the case of ships bringing sugar to the docks especially now that import duties are levied. It is very desirable for the merchant to store these goods where they are landed.

7970. Is not that a question of physical fitness rather than a question of whether the two businesses as commercial undertakings could not be separated?—I am not prepared to say they could not. I am only speaking now of the desirability. You know this difficulty. Your Commission ruled, and I am not going to question the wisdom of it at all, that we should not go into the question of charges at all. That being so it closes a very important line of argument, at all events, that we could have used. We cannot get away from this—that the charges in London are far higher than they ought to be.

7971. I do not think that really touches the question that I was on?—It does, I think; it touches it very closely.

7972. Then will you please go on?—I am not proposing to give evidence, of course, in the face of the decision of the Commission.

7973. I rather wanted to get clear in my mind what is the difficulty that presses upon the Corporation in the possible separation of the business of warehousing and the ownership of the docks?—If I may say so, I would rather put it the other way—the reason that induces us to keep them. We say distinctly that a fair competition to a limited extent will be a most desirable element. Now the dock companies are in this position. I am not here in any sense or spirit of hostility to the dock companies, and I think the corporation think that as far as they can, trammelled as they are by great difficulties, they have done their best, but by their very necessities they have been obliged to make rates for warehousing which are grossly excessive, and that would do more to cripple the commerce of the port than anything in the state of things prevailing has done, and if in the hands of a public authority basing their rates on an equitable basis.

7974. I am afraid you are not quite grasping my question, which was, what is the difficulty of the separation of the two businesses?—The dock companies themselves have given you that. If you were to go

Alderman  
Sir M.  
Samuel.

4 June 1901

Alderman  
Sir M.  
Samuel.

4 June 1:01.

into the separate valuation of the waterway and the warehouse, I think you would be led very far.

7975. It may be a difficult question?—Very difficult.

7976. I really wanted to gather your views, because appearing as the Corporation of London, you urge that they could not be separated?—We do.

7977. And other people have urged that they should be separated?—If you ask whether there is any insuperable difficulty, I say that anything can be done. There are difficulties certainly, but these are technical questions, and I would rather you had this from another witness.

7978. I do not want at all to press for an answer if you have not made up your mind on the subject?—Quay space and wharves are, and should naturally be, worked together.

7979. What has been put before this Commission is that if there is a large public body created with practically inexhaustible powers, and they are competing for warehousing business with private individuals who own wharves on the river, that might be a competition which might be very disastrous to those who own private wharves on the river?—My answer to that is, that is only in appearance, because if the Commission see their way to recommend the course that the Corporation advised, namely, that they should be a public body, I am quite satisfied that there would be no attempt made to kill private wharves at all. We come on to the question of rates again here.

7980. Are you acquainted with Glasgow?—Yes.

7981. Do you not know the extreme jealousy that the Clyde Trustees have of any private effort at all?—The case is totally different. The Clyde Trustees profess to provide warehouses. We do not, and we say most distinctly that we do not intend to add to the existing warehouses. The private wharves are badly needed; they should be conserved and, perhaps, added to. We go so far as to say that we do not propose to add to the public existing warehouses.

7982. Your proposal then is that the new public body should take over the dock warehouses, which practically could do half the business of the port?—No; you have the dock company's own dictum for it that they do not do more than 25 per cent. of the goods that actually enter their docks.

7983. Forgive me, they say they do not do it on account of the sharp competition which now exists, but they could do a great deal more?—The wharves will always hold their own. Take an article like camphor. There are special facilities provided at special wharves, and merchants will send their goods there, no matter what the dock companies may do to get them. The same principle applies to a great variety of articles. Take the fresh fruit trade. The wharves serve very useful purposes, and they are absolutely necessary; they will always hold their own.

7984. Your view, therefore, is that the private wharves need not fear competition of that kind from a public body?—They need not fear a ruinous competition. I think their rates would be reduced, but as a public authority and advising for the good of the whole port, we also think that is very necessary.

7985. Supposing this public authority to impose a rate on traffic transported in barges, somewhat to the extent which has been suggested, do you think that they should have the power to do so, limited only by what they might consider as reasonable conditions necessary for the development of the port?—Yes.

7986. Would not that be a charge which would handicap the private wharfinger?—Not at all, because it should be a condition of this trust that they should, so far as possible, assign a certain amount of capitalisation to the warehouses that they take over. They should then add to their charges all such charges as would have to be paid by the merchants sending their goods away. That seems to me positively necessary. You could not, of course, allow goods to be landed at these public docks and escape the charges that they would have had to pay if they went to the wharves; that would not do at all. You would have to adopt it in your working account. For instance, assuming you did charge barges 3d. I say this, of course, without prejudice to the question of whether it should be charged or not—if you did in your working account you should show as part of your charge for warehousing goods the 3d. a ton paid by barges. In making up the charge that would be debited just the same as

your ls. a ton or any other article—an indiscriminate charge. But I do not suggest for one moment that the Corporation's view is that there should be a reckless and pitiless competition with the wharves; not at all. It should be based on a proper and fair working charge, but necessarily that would be less than the dock companies' charge, because they get no revenue from anywhere else, and they are compelled to base their charges on a tariff which is very disastrous.

7987. At any rate, you see there would be competition?—Certainly.

7988. Do you rely on public spirit that it should not be an unfair competition?—Absolutely, and I venture to say again that if the Corporation are the public body I am quite certain that would be the spirit which would govern them.

7989. (Mr. Ellis.) I want to press you a little further about this question of national guarantee. You understand it is not by way of criticism, but I want to get at what is in your mind. Will you give me the reasons which make you think that the Port of London should be dealt with in this way differently from Liverpool or, say, Glasgow?—For these two specific ports the answer is immediate—Yes. Because the Government themselves have very large works on the river—Woolwich Arsenal.

7990. That is one reason?—That is one reason.

7991. That there are national works on the Thames, but there are not such in existence either on the Mersey or the Clyde?—Yes, and furthermore that those establishments could be most advantageously added to if large ships were able to go there.

7992. Then your first reason is one which enters upon what I may call the national defence sphere, is that it?—Yes, fairly.

7993. You do not think that national defence enters into the matter on the Clyde or the Mersey to the same extent?—I cannot say it does not enter into it, but I am taking things as they are. There is a very large and important arsenal in London; there is not at present any either on the Clyde or the Mersey.

7994. Passing from national defence, what is your next reason?—That London serves a very much larger area of the Kingdom than either Liverpool or Glasgow. But there is another point.

7995. Let us take that point first. That is one of magnitude?—That is one of magnitude, and you have also this, that Liverpool is not rate aided at all, and we do not suggest that London should be rate aided. The difficulties of aiding London by rates, I think you will see. You have either to swamp your body by county representatives, which is very undesirable—

7996. Now you are passing to another point. Let us take one point at a time. Your first point is national defence; your second point is magnitude?—Yes.

7997. Then if Liverpool or any other place in the Kingdom were in future to increase, from that point of view you would allow the Government to come in?—In the shape of guarantors?

7998. Yes?—Decidedly.

7999. Your second ground is one of magnitude?—Yes, the area served.

8000. Can you suggest why the population living on the Clyde or the Mersey should be treated differently because it is smaller in number than that on the Thames?—No, I make no suggestions.

8001. This is a most vital point. The question will be raised in Parliament over and over again. If any proposition is made that the National Exchequer should come to the aid of London it will evoke the strongest criticism, and I want to get from you as an authorised witness on behalf of the Corporation the whole of the reasons in your mind. Now we pass from the second, which is magnitude. Have you any other?—No.

8002. Then the whole of your reasons why London should be treated in this matter differently from any other place in the United Kingdom fall under the two heads of national defence and magnitude of area and population?—And having direct representation on the new authority, that is to say, that the Government will have direct representation.

8003. But that follows the guarantee, of course?—Yes.

8004. That is not the cause of the guarantee; that is

the consequence. You strike that out, I understand. That was suggested to you by somebody else?—Yes. This is one of the cases where I am differentiating between the Corporation's view and my own; that is my difficulty. The Corporation desire that that should be put forward, and I am obliged to put it forward; it must not be taken as my own suggestion at all; I am acting here merely as the mouthpiece of the Corporation; the Corporation put it forward that the Government should be invited to contribute; they do not go beyond that. Like everything else it is a matter for the Royal Commission to decide for themselves.

8006. For the reasons which you have given to Sir John Wolfe Barry?—I apprehend those are the reasons; it is not my own suggestion.

8006. But you, the representative of the Corporation, put it forward as part of their scheme?—Yes, it is my duty to do so.

8007. Now, passing from that, I notice you commit yourself to saying, as a practical man, that shipping charges have not in the slightest degree any influence on the price paid by consumers for their goods?—Absolutely; but I have given you the reasons.

8008. I should like to have the reason?—I say in the broadest terms possible that the price of a given commodity follows the law of supply and demand. The question of taxes or charges has nothing whatever to do with it. Unfortunately the receiver in London does not ask what rate of freight a shipowner receives, or what he pays out of it. If he can purchase Australian wheat at something below the cost of Bombay wheat, or if he can buy Argentine wheat below the cost of either, he will buy it, and it is a matter of supreme indifference to him, as many merchants know to their cost, what they have to pay.

8009. May I take it from you, then, as a gentleman of great practical experience, that in your judgment, whatever charges were laid upon shipping, they would not in any way find their way to the commodity?—I cannot say that because, of course, there must be a limit. I think I can make that very clear to you. If you were to put such charges in London (almost inconceivable) as would render it cheaper for a merchant to land his goods at the nearest port to London and bring them round, to that extent, and to that extent only, you would cripple London; but the consumer would not pay any more; that would not affect the consumer, but only the carrier or the merchant. Suppose, for instance, under these charges (I have not gone into them in any great detail) you take petroleum; you charge 1s 4d. a ton; petroleum at present pays nothing, not a single farthing. I do not think there is any near port to London where you could bring it round for 1s. 4d. a ton. If you were to make it 2s. 6d. per ton, I think there would be. We come back to this: we are only in exactly the same advisory position as this Commission. It will be a question of the most serious moment when these detailed charges have to be framed, as to what can be and what cannot be legitimately borne by the different classes of goods. No doubt adjustments will be needed.

8010. As I understand, the basis of your evidence before us is really this report of the Committee of which you were chairman?—Certainly.

8011. I notice in the signatories to it that there are three reservations with regard to representation?—That is so.

8012. What was the difference of opinion?—That difference of opinion was as to giving any representation at all to the London County Council. But in a division in a full court, the report of the committee was carried by a majority of 28.

8013. There was a division on the subject, was there?—Yes.

8014. Can you give the figures?—The majority in favour of that was 28; I could give you the numbers, I think, if you wish.

ee 3322 8015. I think we had better have that; can you give me the minority?—I find I am unable to give you that offhand, but it can easily be ascertained if the Commission desire.

8016. At a meeting on April the 16th this report was adopted by the Corporation?—Yes.

8017. Practically in its entirety?—Yes. They added a recommendation that the Government should be invited to contribute.

4736

8018. That falls under the head that Sir John Wolfe Barry was examining you about; that falls under the head (g) "That Parliament should constitute the stock of the board a trustees' investment"?—Yes, I am obliged to say that that recommendation that it should be made a trustees' stock was adopted before the recommendation that the Government should be invited to contribute. It is open to Parliament, of course, to constitute anything trustees' stock.

8019. Then the scheme put before us by the City Corporation through your evidence to-day is to be found under the heads (a), (b), (c), (d), (e), (f), (g), (h)?—Coupled with the part as to the composition of the authority. And you will see that there are other recommendations which necessarily would come before you, although they have not been gone into by me. For instance, there is an important recommendation that there should be a tribunal of appeal constituted. We consider that very necessary indeed. I will go so far as to say that if the wharfingers themselves felt that they were aggrieved by the charges, it would be open to them to appeal.

8020. We may take it that this is the real scheme of the City Corporation with all the authority that attaches to that body?—Yes, absolutely. Every item in that was discussed.

8021. There can be no question raised hereafter as to what the attitude of the Corporation is now?—None whatever; it is very clear indeed.

8022. Then, on this, does the Corporation contemplate the introduction of a Bill by the Government?—Yes, they do. They certainly hope that the labours of this Commission, which have been so exhaustive, will not be wasted, but that the Government will legislate.

8023. My point is that it should be a Government matter in the opinion of the Corporation?—Clearly. It is impossible, I think, for any private individual. I may say, perhaps, that the Corporation has been grossly misrepresented here. To my knowledge the Corporation have had this matter before them for many years, but they have never been able to deal with the matter, because of the interests which must be assailed, and, therefore, it must be a Government matter.

8024. The Corporation petitioned against the London and India Joint Docks Bill last session, I think?—Yes, we did, in order to have a *locus standi*.

8025. And concurred in the steps taken by the House of Commons for the rejection of the Bill in order that a Commission should be appointed?—Yes.

8026. I presume we may take it that you have been careful in your evidence not to go outside your authority as representative of the City Corporation?—I hope so.

8027. Speaking broadly?—I have certainly tried to keep well within that line.

8028. It is of vital importance that when we refer to the evidence hereafter it should not be questioned?—I quite agree.

8029. You have felt that in giving evidence?—I have, and I have tried, as far as I could, to keep very strictly to the lines laid down.

8030. (Mr. Peel.) What was the amount of the representation which the minority suggested should be given to the County Council?—It never came to that. In Committee it was proposed that two members should be given.

8031. You knew, of course, that the London County Council had a scheme of their own?—Yes.

8032. And that that scheme was practically passed unanimously in the London County Council?—I have no record of that at all. I have ventured to criticise the scheme very freely. It is that, I think, that really led the Corporation to say they ought not to have any representation at all, because they failed to grasp the thing, and the idea of putting this great body that is to be created under tutelage seemed to us so preposterous that we at once said, if that is the idea of the London County Council, we had very much better not have them on at all. That is really what led to our exclusion of them.

8033. You have representatives on the London County Council?—We have four only out of a body of 103, although we pay one-eighth of the rates.

8034. No objection was made by your representatives to that scheme, I believe?—I am unable to say.

Alderman  
Sir M.  
Samuel.

4 June 1901.

Alderman  
Sir M.  
Samuel.  
4 June 1901.

8035. Do you think that this new body that you suggest would be able to raise this money as cheaply as it could if there was a rate guarantee?—Yes, I do most decidedly, and I will give you the reasons for that. Take the case of the Thames Conservancy, with a very much smaller income. You have that on record.

8036. Supposing it were shown that with the guarantee of the rates you could raise the money much more cheaply (and of course, that is the opinion of many people), would you then suggest advantage should be taken of that guarantee?—No, I say that any advantage that would arise from that would be more than neutralised by the idea that the merchants forming this Trust would have that in case of need they might fall back upon the rates. That would do away with one of the greatest incentives to economy.

8037. If there was such a guarantee you could not, of course, have that without representation of the body representing the ratepayers?—I think you would have to have that representation. But where are you going to draw the line? What about Kent and Essex and Middlesex and Surrey?

8038. You state that as regards the consumers. Of course London has got a great interest in the consumers in the management of the docks?—Yes and no. As I have said before, it is a question of supply and demand purely.

8039. Apart from that point of political economy—because they would have an interest in it, and because the ports outside London would also have an interest, and ought therefore to have representation, you would not give representation to the people within the London County Council area unless the others also had representation?—We may be very infatuated with ourselves, but the position we take is that we are representatives of the ratepayers; if not, what are we? In what possible way does the Corporation, elected annually, differ from the London County Council as representative of the ratepayers?

8040. But all over London?—It is quite immaterial. Because, although I am a ratepayer in the City, it happens that I have a domicile in another part of London, and so have all the members of the Corporation. I really think that if we want to get at the practical representation, an element contributed by the Corporation would fulfil every possible ideal that the County Council can. We represent one-eighth of the ratepayers of the whole county really.

8041. That is your contention?—Yes, that is our contention.

8042. Let me put one more question about the representation. The Corporation are to appoint ten members?—Yes.

8043. Are you going to give them free power to appoint whom they like?—They would be necessarily elected from a body of 232, and that is a great advantage that the Corporation have. It would be ten of their own members. The City Solicitor reminds me that in all probability there would be four aldermen and six commoners. I wish to put in to the Commission a week's work of the London County Council.

(Chairman.) I think we can hardly have that.

8044. (Mr. Lyttelton.) You say you wish one-fourth to be appointed by the Corporation of the City of London?—Yes. May I say that the Corporation have pointed out very deliberately they are a very large body; they are 232, and consequently the 10 who would be representatives would be elected from a very large and by a very large number. The London County Council are a very small body, numerically, about 103, I think.

8045. (Mr. Peel.) I think there are 120?—Yes. I have had some experience of them; I was on the Thames Conservancy at the same time.

8046. Now a question about railways. You suggested the new authority should purchase the railways. What do you confine that to?—The railways within their bounds, and forming the intercommunications.

8047. For instance, railways between Tilbury and the City; do you propose that these should be purchased?—No; but there are certain lines which belong to the dock companies now, although they are operated by the Great Eastern Railway.

8048. Then you confine it solely to those portions of the railways within the area of the dock companies?

property?—And the proper communications. I will tell you what was in the mind of the Committee—that they might do what is done so very largely and to such great advantage on the Continent; namely, issue through bills of lading from certain points by all the railways and through all the railways both for import and export goods, if they had proper railway communications. That is why we have suggested two representatives of the railway companies.

8049. That would be a matter for arrangement between the dock authority and the railway?—Certainly.

8050. But I mean as to the actual position and working of the railways?—The actual position and working of the railways should be confined, as I think we have made clear, to the lines within the area of the dock in so far as the construction of communications might be necessary.

8051. With regard to warehouses, would you give the new authority powers to construct, if necessary, new warehouses?—I think you would have to do that, certainly.

8052. It is not very likely that private enterprise would construct new warehouses in view of the competition of the new authority?—I think it is improbable that they would—not in view of the competition, but in view of the very great tendency of merchants to have their own wharves, and to take their goods away direct. The tendency is for merchants to take their goods away from the side of the ship as much as they can, and to take them to their own wharves straight away.

8053. So that if extra warehouse accommodation were required it would practically be the new authority that would do it?—Unless, of course, the wharfingers found it desirable to.

8054. They would hardly be likely to do that?—I am not able to say.

8055. (Rear-Admiral Hext.) When the Corporation considered the question of asking the Government to guarantee interest on the money, did they consider that they had some difficulty in paying it from the fact that the docks in London had to be taken over in their present state, and that at Liverpool and Glasgow it was not so?—No, that was not so.

8056. (Sir Robert Giffen.) I should like to ask you if you are quite satisfied that the docks would be obtained as a matter of fact for the price that you mention?—No, I have no data whatever as to that; I cannot say that at all.

8057. The dock companies and other people interested might make a great fight before Parliament?—Clearly.

8058. And possibly some other price might be determined?—Yes.

8059. And if it happened to be a higher price your calculations would be to some extent affected?—Only to this extent—that it might be necessary to make the dues higher. It would not affect the principles. There is an enormous margin.

8060. Now about the dues. Are you quite satisfied that the trade in London can bear an additional charge of about £900,000. I think that is what it comes to?—Yes, I hope I have made it clear that what we have suggested in effect is not an augmentation, but a readjustment of charges. I tried to make that clear. There are a great many goods which escape now which ought to pay; coal for instance. It is rather absurd that coal pays nothing. Petroleum pays nothing. There is not another port in the world where that state of things obtains.

8061. But in effect the trade as a whole is going to be charged £900,000 more than it is now charged?—No, because although you are adding charges in one way you are taking them off in another. This is one of the difficulties that we are faced with. In regard to the question of rates; it is constantly cropping up.

8062. If you get £900,000 more out of it somebody must pay that?—As far as is necessary; you will find it is not at all necessary.

8063. You think that £900,000 may not in effect be levied?—I think in effect it may not be necessary. You will get a readjustment of charges.

8064. With reference to the point—I suggested just now that you might have to pay more for the docks than what you have been calculating. It might be necessary to levy it?—It might certainly be necessary.

8065. So that that is a point upon which the Commission must somehow or other form a judgment of some kind—as to whether the docks can be obtained for that money or not?—Certainly. I do not wish to fence with you at all, I hope you will understand that, but I say this: we have not taken into consideration in any way the normal growth of the trade. I firmly believe, and I think everyone interested in the trade believes equally, that there will be a very great growth, and that growth will go far to meet any extra charges for improvements. All this is a statistician's question. It is a rule of three. If Liverpool with 8,000,000 tons has spent £24,000,000, what might London spend on 14,000,000 tons, and yet be a very much cheaper port? The conclusion that one draws is quite irresistible, namely, that there is gross mismanagement somewhere in London.

8066. In the estimates contained in Appendix 1 of the goods carried to and from London coastwise as regards coal I quite understand what you suggest. I suppose there are statements as to the amount of coal which comes into London?—These figures have been got out with great care.

8067. Can you give us any idea of the basis of the other figure—that there are 3,405,000 tons of other goods than coal which come into London coastwise?—That has been arrived at in this way. We are very much indebted to Mr. Douglas Owen, who has taken these figures out for us on the lines we have indicated, and he tells me this. We know that certain goods have been brought to London of which coal forms, say, 500,000 tons, and the rest is estimated. It is not very important.

8068. It is not important for your purpose as part of the total charge?—No.

8069. But you have no statistical data as to the actual goods coming into London?—Only by deduction of coal. There are coastwise 10,940,000 tons; coal is 7,535,000, other produce 3,405,000, being the balance.

8070. That itself is based upon the weight of cargo?—Yes.

8071. And you have nothing better than that?—There is nothing better obtainable; the Board of Trade do not publish coastwise figures except in that form.

8072. Do you think the Customs have any figures of that kind?—No, it does not go through the Customs at all. It does not affect the Customs. Perhaps under this new system of coal dues there may be some records kept of movements of coals, but at present there is none, because they are not dutiable.

8073. I should like to ask you about the election of members to the Corporation of London. Can you tell us how many electors there are of these 232 members?—I regret I cannot answer that personally. We could

See 9374. get it for you.

8074. I think it would be rather interesting that you should state it so that we can see what the number of persons directly interested is?—Yes. But you will certainly not lose from sight that they represent one-eighth of the ratepayers, whatever their number may be. That is the pertinent point.

8075. As a matter of fact, do the great houses, the insurance companies, the bankers, and other people take much interest in the elections?—Yes, and not only in the elections, but in membership. If I might mention some of the names that immediately occur to me there are Sir Joseph Dimsdale, who is a banker; Sir James Ritchie, who is one of the leading merchants; and Sir George Faudell Phillips. I know of my own knowledge that there are very many directors of the leading banks and insurance companies who are members of the Corporation. There is a very great difference in the position of the Corporation to-day and what it was, and I cannot help thinking that if they are entrusted with such important functions as these many of the gentlemen who take a wider interest still will enter it—not that I complain of its position as it is; I think it is fairly representative of the business of London as a whole.

8076. And you affirm, as a matter of fact, that politics do not enter into the question of the elections?—I affirm that as a most absolute fact. I can say that in the whole course of my career I have never been asked a single question as to what my politics were,

and I think I may go further and say that when I entered the Corporation I had no pronounced views at all.

8077. (Sir John Wolfe-Barry.) There is one question I omitted to ask you. The whole of your Committee are unanimously in favour of the concentration of the work?—Yes.

8078. Will you enlarge a little upon the reasons why you think that the sanitary authority should not be included in that concentration?—Yes, with pleasure. We think that the sanitary authority should be apart altogether from the trading body. This will be a trading body, and as a matter of fact the sanitary authority is constantly in conflict with, for instance, the steamers that throw their ashes into the Thames, but still more important, masters of vessels in dock that allow pollution. The sanitary authority ought to have free access to our docks and to everywhere, and they are constantly seizing goods, in fact, that do not comply with the sanitary regulations. I think that should be left in the hands of a public body.

8079. Those actions are rather *vis-à-vis* of the offender than of the dock authority?—The dock authority themselves might offend.

8080. At any rate, you think that the sanitary authority had better be left as an independent body?—I do.

8081. And the Corporation are quite prepared to continue their good offices in that direction?—Yes, and they have done magnificent work. If we have had no affliction of epidemics in London, I think it has been largely due to the Port Sanitary Authority and their medical officers.

8082. And without any charge on the rates?—Yes, it is done out of their corporate funds, and they are thoroughly willing to continue that.

(Mr. Scrutton.) I think, my Lord, it might save time in cross-examination if I asked a question or two as to the basis on which this evidence has been prepared.

*Examined by Mr. Scrutton.*

8083. I just want to ask a question or two as to the lines of which these schedules and figures have been prepared. In Appendices 1 to 5 you have worked out the yield which would be obtained from goods coming into London, if they were charged at the rate which goods coming into Liverpool are charged at present?—That is so.

8084. And the summary of what would be obtained from that tax is found in Appendix 6?—That is so.

8085. Imports and exports?—Yes, on the basis of 1899 figures.

8086. Showing roughly a revenue from that source, if that taxation were adopted, of about £900,000?—Yes.

8087. Now, turning to Appendix 9 you take first the gross revenue of the present docks as £2,313,000?—Yes.

8088. You add to that the £900,000 that you have obtained by the Liverpool tax on goods, and get the gross revenue of £3,212,000?—That is so.

8089. In that revenue you have not included any extra tax on ships?—No.

8090. Or any tax on barges?—No.

8091. Those are outside sources of revenue?—Quite.

8092. You take as the expenses against that the present expenses of the docks, £1,611,000, and then expenses for conservancy and police, and show a surplus available of roughly one and a-half millions?—That is correct.

8093. Turning to how that one and a-half millions is to be spent, will that be found in Appendix 10?—Yes.

8094. You assume that you can buy the dock property for its market value plus 10 per cent. on the ordinary stock?—Yes.

8095. Which would show an expenditure of £18,213,000; and you assume that £7,000,000 additional outlay is to be spent, allocated, as you point out, to dredging, extension of jetties, extension of docks, and so on?—Yes, and let me add that we have taken no increased revenue from that increased expenditure. For instance, a very large income would, I think, be expected from the use of the river when ships drawing

Alderman

Alderman  
Sir M.  
Samuel.  
4 June 1901.

30 feet could lie there. I think the chairman of the Thames Conservancy gave that figure as £10,000. My own estimate would be very much larger than that. I wish to point out that we have taken no credit for any increased revenue whatever.

8096. That shows a funded debt of £25,000,000, interest and sinking fund on which would be about £900,000?—Yes. Of course, that is a very liberal calculation for interest.

8097. Showing a large surplus for interest, which it would not be necessary to levy?—Yes, we think so.

(Mr. Balfour Browne.) My Lord, I have very few questions to ask, because a good deal of this, as your Lordship knows, is argumentative matter rather than matter of fact.

*Cross-examined by Mr. Balfour Browne.*

8098. Let me ask you one question about that sum of £900,000. Do I understand that those are the charges which are made at Liverpool upon the goods coming into London?—No.

8099. Is it not so?—Perhaps I do not apprehend your question. These are charges which would be made in London on the parallel line.

8100. Quite so; so that these would be additional charges to the charges that are levied to-day?—Substituted, we think.

8101. Am I right in supposing (I have not gone over these tables very minutely) that some of those charges would be upon goods that were carried from the docks in barges?—Yes, clearly—all goods indiscriminately.

8102. Really adopting the Liverpool cost in London?—Yes.

8103. You said you do not propose to treat the dock company's scheme seriously. Perhaps I may be forgiven if I return the compliment?—Quite.

8104. You do say one thing which I want a little further explanation about. You say, if it were felt that the shipowners and merchants could, in case of a deficit, fall back upon the rates, one of the principal reasons for careful administration would be removed?—Yes.

8105. Would not exactly the same thing take place if it were guaranteed by Government?—No, certainly not.

8106. Why not?—Because the Government only guarantee the payment of interest.

8107. And that would be exactly what the County Council would be doing?—I think there is a broad difference between the two.

8108. If the guarantee is in the one case the rates, and in the other case the taxes, where is the difference?—In the one case the Government have large representation, and if they found the members of the Trust squandering the rates they would very quickly clear them up.

8109. I suppose the London County Council would do the same?—They have not the same weight. There is no comparison between the Government and the London County Council.

8110. Now, with regard to the purchase of the docks, have you any experience with regard to the purchase of public undertakings at all?—We have put it very broadly; that must be left to the Commissioners.

8111. Did you ever hear of an undertaking being purchased upon the market value of its stocks?—With a sum for compulsory purchase.

8112. Did you ever hear of it?—Certainly.

8113. Where?—It has been done over and over again under Act of Parliament.

8114. Will you mention one case. It has not been done anywhere, I think you will find?—I will accept the correction.

8115. Do you know what is the ordinary principle? There is an arbitration going on downstairs to-day to transfer a waterworks to a public company. The ordinary principle is, altogether apart from the market value, to ascertain the maintainable revenue, to find out how that is secured, to capitalise by a certain number of years' purchase, and then on the back of that to put 10 per cent.?—Why should I discuss this

with you? We are not inimical. You ought to have the full value of your undertaking, whatever it is; I say that at once.

8116. Let me understand what it is to be, because I am not quite sure what you are going to purchase, and I should like to have an answer on that?—There, again, forgive me. We are not going to do anything. It is for the Commission to recommend.

8117. Will you look at your report? You say: "The new authority should have power conferred upon it to purchase the property of the Dock Companies in so far as Parliament may decide"?—Absolutely. See 7919

8118. What do you mean by that?—Absolutely what it says.

8119. Do you mean to say it should be allowed to purchase one dock?—Exactly as Parliament may decide.

8120. What is the proposal?—We have made none. We have enumerated that the London and India Docks, the Surrey Commercial, and the Millwall should be purchased, but we do not take the onus.

8121. You do not even suggest what should be purchased?—We do suggest that these particular docks should. But pray understand the position of the Corporation in this matter. In so far as we can be of help to the Royal Commission we desire to be, but we do not want to usurp for one moment their powers.

8122. Then one of the recommendations of your Committee is: "That powers should be conferred on such Board to purchase the property of the Dock Companies and such bonded wharves and warehouses as they may see fit." That is not "as Parliament may see fit"?—No; this body when constituted. See 7912

8123. As the authority may see fit?—Yes.

8124. Really, would you give the authority power to purchase what they chose of bonded warehouses?—They will have to get Parliamentary powers first.

8125. Further than that, in another part of your evidence you give them a monopoly on dutiable goods. You say: "The Corporation do not propose that any reckless competition"—I hope that will satisfy the wharfingers; it is to be gentle competition—"should be entered into by the proposed authority with outside wharves and warehouses. The proposed rates would be levied on all goods, whether warehoused by the public authority or by private wharfingers, and would be in addition to the charges made for warehousing goods in the dock warehouses, just as much as in the case of those goods that went to the wharves. There is certainly room for a reduction in general charges on many classes of goods, and to this extent competition might prevail"?—That is so. See 7954

8126. Then you went on to say: "But I do not suggest that anything like a monopoly of warehousing should be created for the proposed authority except for dutiable goods." So that you want to have a monopoly for dutiable goods?—We suggest that it would be a very great saving if that were done. In several bonded warehouses there is a very large Customs staff maintained.

8127. I do not think you follow me. You are seeking to have a monopoly of that trade in dutiable goods, and yet you are only to purchase such bonded warehouses as you see fit?—Those are suggestions only.

8128. But the suggestions ought to cohere and hang together, ought they not?—We are not charged with that.

(Mr. Balfour Browne.) My Lord, as I said before, it is mostly argument, and I do not propose to take up your time by cross-examining further.

(Mr. Lewis Coward.) I have no questions to ask.

*Cross-examined by Mr. Daldy.*

8129. With regard to the meeting of the Court of Common Council on the 16th April, you introduced the report of the Committee and moved that it should be agreed to?—Yes.

8130. Then Mr. Morton moved an amendment: "Except that the London County Council should, in the opinion of this Court, be represented on the proposed new authority"?—He did. That is Mr. Alpheus Cleophas Morton.

8131. Was there a division, and was the result of the

division 53 for and 81 against?—Yes, I think those figures are correct.

8132. (*Mr. Ellis.*) Those are the figures I asked about?—Yes, that is right.

8133. (*Mr. Daldy.*) You were speaking a good deal of the time of this meeting, were you not?—I am afraid that is so.

8134. Shortly before the vote was taken did Mr. Morton say: "In moving this Amendment No. 1 I do not desire to commit the Court to any numbers whatever. That will come on in No. 2. We are on the principle only"?—If you are reading from a verbatim report, I quite accept that.

8135. And did you say afterwards: "If there would be one thing more dangerous than another it would be to accept Mr. Morton's suggestion to leave the numbers till afterwards. I hope this Court will not agree"?—I did.

8136. Why was it dangerous to leave the numbers till afterwards?—Because the Committee had never suggested more than two. This is what was in our minds. If the London County Council were to have representation at all, we would much rather we defined what that representation was to be, than leave it open to any other body to indicate our views.

8137. It would be dangerous to indicate such a principle?—No—to leave the question as to the numbers open.

8138. You told us you served on the Thames Conservancy at the same time as the London County Council members were there?—I did. My Lord, this is as an individual matter again, because I represented the shipowners on the Board, and not the corporation. Therefore I must submit to you the question whether I must answer this?

(*Chairman.*) We must ask you, Mr. Daldy, to limit yourself to questions of fact. A question with regard to the constitution of this body is a question on policy, I think.

(*Witness.*) My difficulty is that I did not represent the corporation on the Thames Conservancy at all. I was elected by the shipowners.

(*Mr. Daldy.*) I think your Lordship puts me in rather a difficulty. A great many things have been said about the London County Council. For instance, it has been said that their motive was to get power into their hands, and it has been said that they are not suitable persons for it, and that kind of thing. If I am not to question those I wanted to show that the witness has made a different statement on another occasion.

(*Chairman.*) We do not want to limit you more than we are obliged, but we wish you to be careful.

(*Mr. Daldy.*) I will be careful, my Lord.

8139. Were those members who served on the Thames Conservancy, as far as your observation went, good business men, taking broad views with regard to the questions submitted to them?—Must not that be quite a matter of opinion? Shall I give the names of the gentlemen who did represent the County Council?

8140. I ask you if that is so, as a fact?—I really must decline to give an answer to that question.

8141. Did you in the course of your address in the Court of Common Council, and again shortly before the division say this: "Therefore I do desire to say for myself that having served some years on that body"—that is the Thames Conservancy—"I do not know a finer body of business men in the views they take—the broad views that they take of the questions submitted to them—than the Thames Conservancy"?—I say that certainly, but the unfortunate part of it is that out of 38 the London County Council were almost invariably in a minority of five.

8142. Then, although you gave this general statement to the meeting, you excepted those five members all the time?—I am afraid that is the construction it would bear.

8143. Now there is one question I should like to push a little further, if I may. It was objected that your proposed increase on the goods would fall on the consumer?—Yes. I say it would not.

8144. You said this: "There is no greater fallacy than the argument which has been put forward that

any increase on the goods will fall on the consumer. I wish to be polite, but I can only characterise that as 'rot'."—That is so, and I have given you the reason. You do not care what you pay for your loaf of bread or what the importer gets for it.

8145. You stopped me just as I was going on with the reading: "Several honourable councillors laugh"?—It is forcible, but perhaps not polite.

8146. You put down £900,000 a year as a possible charge?—Yes.

8147. I want to know on whom will that fall if it does not fall on the consumer?—On the shipowner and the merchant. I have not minced the matter. I have taken 1s. 4d. per ton on petroleum, which means 1-25th of a penny per gallon. On whom does it fall?

8148. Of course, a large quantity of goods coming into the docks are for consumption in the metropolitan area?—What are you going to call the metropolitan area?

8149. The Administrative County of London?—No. I do not want to use the same word that I used before, but I say, No, certainly not.

8150. May I take it that a small proportion of the goods coming into the docks are consumed in that area?—A considerable proportion.

8151. Of course, those are goods which to some extent must come there. They are required by the consumers?—Yes.

8152. They would not be so liable to be driven away to another port, and that kind of thing, if the charges on goods were increased in the port?—If the charges on goods were increased in the port to such an extent that it would be cheaper to bring them, say, *via* Dover, they would come *via* Dover; but, as I have pointed out, if the Royal Commission adopt the course which we have suggested of making this a trust, administered by those who pay the rates, they have every possible incentive to induce more goods to come, and no incentive whatever to drive them away.

8153. Will you concede me this—I expect you will—that if the increased charges have the effect of driving the goods away from the port, these goods which are required in the locality would be the last to go?—Yes, I think that is so, but I say under no circumstances does the consumer pay the extra rate. It is the merchant and the shipowner.

8154. So that the persons who receive these goods, the consumers, are the persons who would be the hardest hit by an undue increase in the charges?—No, I think not; the importer would have to take so much less for his goods, that is all.

8155. I was going on to suggest to you that it is extremely important that those consumers should be represented on the new body?—With all due deference, I say no.

8156. The total capital sum which you have mentioned, I think, comes to something like 25 millions?—Yes.

8157. But in that sum I think you have not included at least three of the matters which you propose in your report. You have included nothing in that sum for the acquisition of the railways within the docks?—I have not, but very largely they are comprised in the figures for the purchase of the dock, because the lines within the areas of the dock companies belong to the dock companies now, unless I am misinformed. They are only operated by the railway companies.

8158. Then you put nothing down for the purchase of the bonded wharves?—No; because, as I have said, they pay for themselves, if it is decided to buy them.

8159. Can you put in any figure for the money which would be required to purchase those?—I have not gone into that at all.

8160. Then, again, there is a figure for the private moorings. You have not put any figure for them?—I think it would be absolutely impossible. If in their wisdom Parliament separate the river from the docks, and you have a river-way of 30ft. with buoys available, the income from those moorings, if the Thames Conservancy continue to exist, and are not too tender, will be a large matter indeed.

8161. There was a reference to the financial estimate which you had made. It was referred to at the meeting?—Under what heading.

Alderman  
Sir M.  
Samuel.  
June 1901

*Alderman  
Sir M.  
Samuel*  
4 June 1901.

8162. I will read you the passage, if I may. You said: "As a matter of fact, the step recommended by the Committee will have the effect of cheapening the port very materially, and will not add to its burdens, because what we find is this, that the charges on a very large proportion of goods coming to London are far too heavy and exhaustive, and there are a very great number indeed which entirely escape taxation to even a single farthing, so far as the benefit of the port goes"—That is so.

8163. "It is that that we want to change. The financial estimate we have made we have had to make somewhat on the lines of the conduct of the business in Liverpool, and I should like the Court to realise for a moment how London compares with Liverpool," and so on?—We have now put that in in detail.

8164. Is that financial estimate that you referred to the paper that you put in?—No; only general deductions which we anticipated would work out, as in fact it has worked out.

8165. Then, if the Corporation proceeded upon that financial estimate, they were proceeding upon something which is not now before the Commission?—A rule of three sum.

8166. I want to get the fact from you. If the Corporation proceeded upon that financial estimate, they were proceeding upon a set of figures which is not before the Commission?—A set of figures which is before the Commission as I say, 8 to 24; 14 to 25.

8167. Can you give me the date when this idea of asking the Government to guarantee the stock, or bringing that proposal forward was born, so to say. We know it was not in the original report?—It came out in the general consideration of the subject.

8168. You are rather telling me how it came out. What I want to get is the date when it came into existence?—When the subject was considered as a whole. We have, as I have told the Commission, the advantage of having many of the leading bankers in the Corporation. We consulted them, and they told us there would be no difficulty in Parliament doing anything.

8169. It was not mentioned at this meeting on the 16th April, was it?

(*Mr. Lewis Coward.*) The Committee reported on the 1st April.

(*Witness.*) It was discussed very exhaustively in Committee for days between the 14th March and the 1st April.

8170. (*Mr. Daldy.*) The report of the special Committee which was confirmed by the Common Council did not at that time contain the recommendation of the Government guarantee?—You are drawing a distinction. It contained a suggestion from the first that it should be made a trustees' stock. It did not contain the suggestion, which arose from Mr. Morton, that the Government should be invited to contribute. I cannot see any harm in inviting the Government to contribute.

8171. Can you tell me when there was first a definite suggestion that there should be this Government guarantee?—In the Court itself.

8172. On the 16th April?—Yes.

8173. It took shape shortly after that, did it?—It took shape simply in that it was agreed to. There can be no possible harm in inviting the Government to contribute.

8174. Was there a resolution?—Yes; and it was accepted unanimously.

8175. I want to know the date when the Common Council resolved on this addition of the Government guarantee?—On the 16th April.

8176. On the same day they resolved in terms upon that?—Yes.

8177. I want you to be quite sure about it. I understand you to say definitely that the resolution of the 16th April was in express terms a resolution that there should be a Government guarantee of the stock?—It was not a resolution. The City Solicitor tells me it was an amendment that that should be added as part of the report.

8178. You mean there was a formal resolution, and upon that it was added to the report?—Yes.

8179. I want you to give me the date of the resolution of the Common Council, saying in express terms

that there should be this Government guarantee?—It would take the form of a resolution. As a matter of fact it was a suggestion of Mr. Morton which I accepted, and the Court adopted.

8180. It was expressly mentioned by Mr. Morton and accepted by you?—Yes.

8181. I cannot find it in the shorthand notes of the meeting, but I will take it from you that it was so. In speaking of the County Council you said that under their proposals the body would be under the tutelage of the County Council. That is the expression you used?—Yes. I call it tutelage. This great body could not raise a sixpence without the consent of the London County Council.

8182. That is all you mean is it?—Yes.

8183. You have strongly insisted in your report upon the unlimited power of charging ships and goods?—Yes.

8184. And you rely upon that fact as making your stock practically a trustees' stock?—That is so.

8185. You do not rely upon the Government guarantee at all?—No.

8186. But is "power" the right expression to use there. Must there not be a duty on the trustees, or the Port of London trust, or whatever you call them?—Of course, we come always to that same point. We are recommendatory. It is for the Royal Commission in the first place to advise, and for Parliament to frame the scheme. If they give power, I daresay they will impose duties. That is how we put it. If Parliament define the right to levy the charges they will also define the duties of administration.

8187. Then you would not give an unlimited power?—Always subject to Parliament.

8188. What is Parliament to say when it constitutes the administration. Is it to say that they are to have an unlimited power of charging?—I should say they will follow the recommendation of the Royal Commission.

8189. You do not give me any answer?—We are not really drafting the report. It is not my province to do that.

8190. You have made it a most important part, indeed a crucial part, of your recommendation that the power to charge on the rates of the Port should be unlimited?—Clearly. We do not wish to shirk that for a moment. We do, on account of the financial security.

8191. Without that the whole thing falls to pieces, does it not?—No, I should not say that.

8192. Well, it is somewhat crippled?—I have not the articles of the Mersey Dock and Harbour Board before me, but I think they possess exactly the same power. But the safeguard is, as I have told you, that the gentlemen who under our scheme administer this will have to bear the burden, and also it says there should be a tribunal of appeal constituted.

8193. Is the tribunal of appeal to control the charges of the port?—Supposing anyone interested was unduly or unfairly charged, they would certainly have a right of appeal.

8194. Would not that be rather like putting them under the tutelage of the Corporation?—It would be a judicial court of appeal, exactly like the Railway Commissioners.

8195. In your evidence to-day you have spoken two or three times of the funds being carefully administered for the benefit of the port as a whole. Do you mean by that the benefit of the persons trading in the port, or do you mean the benefit of the mercantile interest, and the benefit of the customers as well?—I mean the benefit of the traders of the port, because they constitute the vital element in the success of the port. If you get no ships here, the consumers would not get anything at all.

8196. I quite accept your view. The mercantile interest ought to be considered?—They are inseparably combined.

8197. So long as you concede that, that is all I want to ask you upon that point?—That is quite so.

8198. I do not quite follow you when you say that the Corporation is the market authority of the Metro-

polis?—I think that is so, especially so far as riparian authority goes. I refer particularly to the fish and the foreign cattle markets, which are exclusively under the administration of the Corporation.

8199. There is a matter which I should have asked you about the market. The shorthand notes of your meeting have been handed to me, and I see there is a note at the end. There was a proposal "that the Government should be empowered to contribute"?—"Invited," it should be. Of course, they would be empowered.

8200. "That the Government should be invited to contribute towards the cost of improving the river and Port, having regard to the national interests involved. (Lord Mayor.) Is that seconded? (Sir Marcus Samuel.) I will second that. (Town Clerk.) The Court will take that at once." Then the question is that Mr. Morton's motion, No. 4, be agreed to. That comes at the very end of the report of the proceedings?—Yes.

8201. I want to know how long after that it was that you had this resolution that you have told us about?—You have read the whole of it. Nothing else occurred.

8202. I put it to you as distinctly as I could. The resolution I was asking you about was a resolution that the Government should guarantee. That is a very different thing from this. This is, "Should be invited to contribute towards the cost"?—It is recommendatory. It is for the Royal Commission, again, to say in what form the Government should contribute.

8203. What I want to find out is when, if ever, did the Corporation pass any resolution to the effect that the Government should be asked to guarantee?—That is what I mean. You have the shorthand notes of the meeting, and you have read absolutely what covers the whole. Have you any question to ask on the labour question?

8204. (Chairman.) I think the danger would be if you put so much responsibility upon us, the Corporation are likely to lose some of the weight of the evidence which you give?—It has certainly not been my wish to minimise the recommendations which the Corporation have formulated, which are very clear.

8205. You take the responsibility of what you have said?—Yes, absolutely unreservedly.

8206. (Mr. Ellis.) On this question as to what took place at the meeting of the Common Council, it would be much simpler if the witness would hand in the authorised minutes for that day?—The City Solicitor shall do that. You shall have the minutes.

8207. Then we shall have them in an official shape. He will hand in a copy of the minutes?—Yes, he shall do so.

8208. (Mr. Daldy.) There is one answer which you gave which rather puzzled me. You said that this sum of £900,000 would be readjustment, and not augmentation?—Yes.

8209. Do you mean that if you were to take the present dock dues and charges and distribute them differently you would get an increase of £900,000?—I have endeavoured to enumerate some articles which at present pay nothing—coal and petroleum, for two. If those articles would bear some taxation, as Parliament may decide with regard to amount, it will enable the authority to reduce charges on other goods.

8210. (Mr. Lyttelton.) You do not readjust a charge if you create one?—You might readjust the existing charges on other goods.

8211. It would create one for petroleum and coal?—Yes, but what appears to us so very clear is that the port in one sense is too cheap a port—that is to say, that there is a very large amount of work done for nothing.

8212. (Mr. Daldy.) I think really we have got this, but I want to get it clear on the notes. I think you compare the Thames Conservancy stock, which was raised at £107 in June, 1895, and the County Council stock, which was raised in July, 1895, at £102?—Pardon me; I do not think I mentioned that.

8213. You had not that in your mind?—No. They are both excellent securities.

8214. You put the loan at £107 as being an example of the way in which the Conservancy could raise money?—The way in which money could be raised on the security of the port revenue.

8215. In June, 1895, on a three per cent. stock?—Yes.

(Mr. Daldy.) My Lord, we should like, if we may, to have an opportunity of considering these appendices that have been handed in in case we should want to ask anything upon them. We certainly do not want to trouble the Commission unless we think it worth while. Possibly if we find, after considering, that there is anything we want to ask we might communicate with the Commission.

(Chairman.) I am afraid we cannot promise the attendance of Sir Marcus Samuel again.

(Mr. Daldy.) I am in your lordship's hands, but to cross-examine on these appendices after five minutes' consideration would be really an impertinence to the Commission. If there is any important point upon which we wish to ask questions we will communicate with the Commission.

Cross-examined by Mr. Harper.

8216. You are proposing to this Commission, as I understand, that it should make recommendations to Parliament, based upon the report you present to it?—Yes.

8217. And you are suggesting that "powers should be conferred on such board to purchase the property of the dock companies, and such bonded wharves and warehouses as they may see fit, and to raise the capital necessary for that purpose; for the deepening of the channel of the river, and for the general improvement of the port and docks"?—Yes.

8218. You told the Commission a short time since that you saw difficulties in the way of separating the quays and waterways from the warehouses. Do you know that Mr. Malcolm told us that in the Surrey Commercial Dock they do it, and have done it for years in their accounts?—No.

8219. Are you aware of the extent to which the wharves take bonded goods?—Yes, very well.

8220. The figures are given in the table put in by Mr. Ryder on the third day of the proceedings. (See Appendix 3rd day, No. 1.) You may take it from me that the seven dock bodies show a total duty of £3,509,163; that the wharves show a total of £3,210,182; and that the total duties paid in London, including warehouses, are £9,068,887; so that the wharves do about one-third of the total business of the port in dutiable goods?—Yes.

8221. You have indicated, as far as I can make out, that you would only propose to take a wharf taking dutiable goods if you were sure that it would be a profit-earning concern?—Yes.

8222. How would you propose to ascertain that before you gave notice to purchase?—We only meant in the hands of the authority itself. On its merits it might or might not be. But what we have to consider here is the economical working of the port, and anybody who knows the way in which dutiable goods are handled knows that there could scarcely be a more wasteful process than maintaining Customs staffs at all the wharves.

8223. That would be an economy in the Customs Department?—It would be an economy in the administration, because each of the wharves or dock companies have to pay those charges themselves.

8224. Then you suggest the abolition of some of them?—Yes, or concentration.

8225. Abolition of some wharves and concentration of others?—Yes.

8226. And a destructive competition with those which you did not propose to buy?—No, not a destructive competition.

8227. Let us see. You are proposing to take power to enter into agreements to cheapen the cost of goods to the consumer, and to enter into agreements with the railway companies?—Yes.

8228. That would have a tendency, would it not, to divert traffic from the river?—Not necessarily.

8229. Not if you have land carriage?—No; I cannot follow that.

8230. Is not the great point of water carriage its cheapness?—I think you will find that we have carefully guarded that. We have made no suggestion that lighters should be taxed. We quite recognise that.

8231. You are suggesting, are you not, a body which consists solely, as far as the practical element is

Alderman  
Sir M.  
Samuel.

4 June 1901.

See  
8322-4.

Alderman  
Sir M.  
Samuel.

4 June 1901.

concerned, directly elected, of representatives of ship-owners and merchants?—Yes.

8232. Do you consider that there are no other classes interested in the port?—I consider that there are a great many, but our recommendations go on the principle that representation should go with taxation; those who pay the dues.

8233. Do you not consider that the indirect effect of some of your proposals would be to tax the wharfingers?—No, I do not. Your clients can certainly tell you that in a great many cases the wharfingers pay the dues for their customers, and would consequently be eligible for election on this Board. They are not excluded. I mean to say that they pay the dues on behalf of their customers. It is the most common practice in the world that the wharfinger sends his cheque both for the freight and any charges. Consequently he would be eligible for election, and as an elector.

8234. I am putting it rather as a class. Do you not think they are entitled to representation?—They do not pay anything.

8235. On the other hand, you are proposing, as I understand it, to take the dock warehouses?—With the docks.

8236. And to work those commercially?—Yes.

8237. With a Government guarantee at your back?—Forgive me; I have tried to define very clearly what the position should be in regard to that, that those warehouses should pay such charges as properly accrue by reason of the rates and by reason of the value of the warehouses, and that they should further pay such dues as would fall on the wharfingers to pay.

8238. Who is to decide what dues the wharfingers could afford to pay?—Only that they would have to pay to the public authority in common with the public authority itself.

8239. You are proposing in addition to that a kind of roving power to tax lighters?—No; we have not done anything of the kind. We say the new authority must settle if they should be taxed or not. Do you seriously suggest that if we had that in view we could enforce it?

8240. I suggest that you have no representative of the interests that would be most affected by that on your proposed Trust?—No; and I think there is an excellent reason for that. I think it is abundantly clear from all we have said—I wish to make it so—that in the opinion of the Corporation for what it is worth barges should not be taxed.

8241. You suggest that goods should be taxed?—Yes.

8242. That is generally for the improvement of the waterways and everything?—Yes.

8243. And that power to tax goods, of course, would fall on goods going away by lighters to the wharf?—And entering the docks.

8244. And I would suggest also upon such goods as came into the river?—Everything—absolutely.

8245. That would enable any such trust to get a revenue which it might utilise in reducing warehouse charges, might it not?—Certainly it might.

8246. And again the observation occurs that there are no representatives of the interests affected by that change?—That is so. They do not pay anything.

8247. Have you ever considered the question as to how far it would be possible to separate the wharves which take dutiable and non-dutiable goods, so as to enable you to take the proportion as appropriated to bonded warehouses, and leave the rest as appropriated to non-dutiable goods?—Yes, in the same way as you might buy licensed houses and leave out unlicensed houses.

8248. Take the case of a wharf which takes both dutiable and non-dutiable goods. If you take the wharf you take the quay space with it?—Yes.

8249. How is the owner of the part of the warehouse which is not bonded to get his goods?—If the new authority required it they must take that too.

8250. Then your suggestion goes further than you have already stated, because you are proposing to take over quays upon which there is a bonded wharf where any portion of the wharf is bonded?—Yes, they would be compensated.

8251. If you take Mr. Ryder's figures again you will find that there is a considerable number of wharves. There are 36 paying something over £3,000,000 in dues?—Yes.

8252. And not taking that upon which the heaviest duty is levied—not taking tobacco?—Yes.

8253. Tobacco is £2,000,000?—Yes.

8254. So that out of nine millions, two millions went for tobacco in the docks, and the docks were only left with about one and a half millions of other dutiable goods?—That is so.

8255. And you are dismissing all that industry without representation?—Yes, unless they pay dues.

8256. Do you suggest that the intermediate agent paying dues for the principal should go upon the dock trust?—If he figures among the persons paying dues.

(Adjourned for a short time.)

8257. (Mr. Harper.) Would you see any difficulty in allocating the funds, to be raised from the charge upon goods, to the improvement of the waterways independently of any other part of the business?—I have tried to explain the difficulty of that, and it does seem to me absolutely incontrovertible.

8258. I am not talking now of what has been done in the past; I am talking now of what a new authority, starting with a clean sheet, could do?—This is the difficulty which confronts one. How are you going to say which ship shall be allowed to discharge in the river and pay no dues?

8259. I do not think you follow me; I did not mean that. What I said was this. Supposing you are going to levy, I will say, 2d. per ton for the sake of argument, upon all goods coming into the river, whether they go to docks or overside in the river, or however they go. Is there any difficulty in your judgment, to a new authority, in allocating the whole of the monies to be derived from that to the dredging of the river and to the maintenance of the waterways in the docks?—I can see no difficulty in that.

8260. That would prevent, would it not, what I was drawing your attention to just before we adjourned—the chance of an authority appropriating a portion of the tax levied on goods towards the fostering of its warehousing at the expense of the private warehousemen?—It would have that effect, certainly.

8261. At the present time I think I am right in saying that the points at which dutiable goods may be landed are fixed by the Customs?—Yes.

8262. I think that is in the Customs and Inland Revenue Act of 1836, speaking from memory?—I cannot tell you, but the practice is that the bond is applied for and is granted. They become practically licences.

8263. You are not proposing to give the Customs any voice in this matter. You are not proposing any representation whatever?—No, we are not. It has been explained, I think, before, that the Customs are really represented by the Board of Trade. They are simply a branch of the Board of Trade.

8264. I thought they were rather a branch of the Treasury?—Or the Treasury, yes. I mean they are subordinate; they are not a department; they have no representation in the House, for instance.

8265. But you are suggesting a representation for the Admiralty?—Yes.

8266. Whose sole interest is in the Woolwich Dockyard?—And in the river generally. But the reason we suggested—that is, that the Admiralty representatives have shown themselves to be such splendid men of business on anything that they are put that we are very glad to have them. They are an element of great value.

8267. The Board of Trade, the Trinity House, then two representatives of railway companies?—Yes. Do you want to know the reason for that?

8268. Yes?—Because we think that co-operation between the railway companies and the Port Trust is a primary element of success.

8269. Which again would enable a port Trust by dint of those agreements, having first put the goods into their warehouses by a cheap agreement for carriage to get them away landward?—Yes, why not?

8270. I am only asking you. Then two underwriters of Lloyd's?—Yes, the underwriters of Lloyd's

*Alderman  
Sir M.  
Samuel.*

4 June 1901.

have a very great interest in the river. I should like to say that the underwriters of Lloyd's should be altered to one representative of the underwriters of Lloyd's, and one from the Institute of Underwriters. There is no more useful body of men than that. They know the dock rates in every port, and we thought they would be an element of great strength.

8271. And the remainder, 20 shipowners, merchants, and others contributing dues to the new authority?—Yes.

8272. You would include as eligible under that anyone who pays dues?—Yes, anyone would be eligible.

8273. You propose a Tribunal of Appeal. Has it ever occurred to you that the Railway Commissioners, which I think you suggest as a synonymous body, is not exactly a cheap tribunal?—I cannot answer that question. I have never had to go before them.

8274. You say, to whom any such questions—I do not know what they are—as to charges or preferences?—Preferential rates.

8275. That is as between people landing and warehousing goods of the same type?—No. The shipowner, for instance, might feel himself aggrieved that he was sent into the river when one of his competitors was allowed into the docks.

8276. Then you propose to subject the mere administration of the docks to a judicial body?—Yes, we should like, of course, being a business body ourselves, to see that as simple as can be devised.

8277. Charges or preference. Do you propose under that head to include the relative incidents of charges on or between lightermen or wharfingers and the owners?—No, we put it between persons using the Port and the new authority.

8278. Still it would come to the same thing—they would both be making claims upon you, and it would practically be making a fight between the two. Supposing you had a shipowner saying he ought not to pay a certain due, but that it ought to go over to the lighterman or wharfinger?—But the lighterman or wharfinger would not pay any dues at all under our scheme.

8279. You are taking the power to lay a tax upon the lighters?—Yes.

8280. And you are going to lay a charge upon the goods?—Yes.

8281. I pointed out how an authority might utilise that?—In that case it is quite clear that if the lightermen have to pay dues they would also have representation. It is only if they do not pay dues that they have none.

8282. And the lighterman, after he has had to pay his dues, may become an elector?—Of course he would.

8283. In regard to the tables that you have laid before the Commission concerning the charges at Liverpool; have you considered precisely what services are comprised within those?—We have said no specific services at all.

8284. I want to know are we comparing like with like?—Yes, I think so.

8285. Therefore in order to answer that I suppose you have to consider exactly what is comprised in the Liverpool charges, and exactly what you propose to do in London?—I have put that in the very plainest terms—that these charges are to be made irrespective of any work done.

8286. I will not refer to Liverpool because we have had that. Perhaps you will tell me what you propose to do in London?—We have defined it in our scheme. We propose adding to the docks to the extent of two million pounds.

8287. I do not mean that. What do you propose to do when a ship comes up? Do you propose to indicate the berth to which she shall go?—Yes, that is the main reason why we say there can be no separation between the docks and the river. The Harbour Master would indicate that.

8288. Do you propose to do anything more?—That would depend entirely on the nature of the work.

8289. What do you propose to do when the ship is once at her berth?—Assuming that the ship comes with a full cargo of grain, and no distinguishing marks, it would seem to me that when there are buoys in the river the Harbour Master should direct that ship to go

to a river berth, because she would not bring general cargo such as comes, for instance, with a P. and O. boat, coming from China and Japan. The goods would then be discharged into craft alongside, for delivery possibly to the wharf, possibly the docks.

8290. My difficulty is not as to whether she shall stop in the river, or go into the docks, but suppose she has got into the docks. You would not touch her any further if she remained in the river; you would leave her to discharge by her own appliances?—Certainly.

8291. Now she is in the dock, how is her discharge going to be effected?—By her own and the dock appliances.

8292. Is the use of the dock appliances comprised in the charges you propose to make?—Not in the specific charges which we have put. They are for the general improvement of the Port.

8293. Do you see any difficulty in appropriating your tonnage due to the improvement of the waterways and raising specific dues for such services as you rendered to the ships when they came into your docks?—Surely the whole of our report goes to that. We say the income must be general, and it must be applied as the newly-created authority should deem best for the general interests of the port.

8294. You want, as Mr. Scott very suitably phrased it, that it should be smothered up in the charges so that it would be impossible to tell how you were utilising any particular due?—It is immaterial; we only want to improve the port.

8295. You told the Commission you deprecated any reckless competition between the proposed authority and any outside wharves and warehouses?—Yes.

8296. You anticipate some competition?—Most decidedly, and it is very desirable.

8297. Can you name a single case in this country in which Parliament has granted to a body power to trade in competition with private traders already established?—I cannot; I have not gone into that question at all.

8298. Do you think it would be just to trade in competition without providing compensation for any injury that might be inflicted?—"The greatest good for the greatest number."

8299. I am asking you with regard to the interests of the people I represent. Do you think it would be just?—I premised my statement to the Commissioners by saying we were not hostile to anyone, neither did we wish to inflict any harm on anyone.

8300. I am only endeavouring to see how far it might work out when it gets through your hands, who are so desirous of being fair. You see, you might not be a member. Do you propose to place any limit on competition to avoid this reckless competition?—I define, of course, what would be only my own view; that is, that the public warehouses should bear only their proper proportion of rates and such charges as would occur to docks outside them, and then that the charge should be based upon an equitable footing.

8301. Who is going to settle what is equitable? Do you mean a trading authority such as the body you are proposing to establish?

(*Mr. Ellis.*) The witness says he expresses his individual opinion with regard to this.

(*Witness.*) That is so.

8302. (*Chairman.*) I was going to ask you whether you are giving us the views of the Corporation?—How can I, my Lord? We did not discuss it; it is quite impossible.

(*Chairman.*) Then, perhaps we had better pass on.

8303. (*Mr. Harper.*) May I take it, with regard to all the answers you have given me in cross-examination, that none of these topics have ever suggested themselves to the Corporation?—No; that would be going too far. It is obvious that such details as this could not be gone into on such a report as this.

(*Chairman.*) Is it necessary to go on with this discussion?

(*Mr. Harper.*) I think not, my Lord, under those conditions, but I should like to ask this question.

8304. I understand that the statement of the evidence you have given was prepared by the authority of the Corporation?—Certainly.

(*Mr. Ellis.*) We have got that clearly.

Alderman  
Sir M.  
Samuel.

4 June 1901.

Re-examined by Mr. Scrutton.

8305. In November, 1899, when the Dock Bill for levying charges on lighters was before Parliament, or was proposed, I think most of the interests concerned came to the Corporation asking for its support?—Yes.

8306. Did the docks come?—Yes, there was a deputation.

(Mr. Ellis.) What are you referring to now, Mr. Scrutton?

(Mr. Scrutton.) I am referring to a series of deputations that waited upon the Corporation from all the interests asking for their support for their various proposals.

(Witness.) Yes; there was a deputation comprised of the dock companies, the wharfingers, the warehousemen and granary keepers, and the London Chamber of Commerce. I may say we were approached by all those public bodies.

8307. The dock company came. And did Mr. Sydney Holland, their Vice-Chairman, put in a memorandum stating their case?—Yes.

8308. I see the first paragraph of that is: "The dock companies of London are in a very serious financial position. It is unquestionably unsatisfactory to have the docks of the Port of London managed by companies which cannot develop it as it should be, and which cannot meet the demands for capital expenditure commensurate with the size and importance of the port." That was the dock companies' case?—Yes.

8309. (Chairman.) Will you give us the date of that?—It is the 12th March, 1900.

(Mr. Scrutton.) And the date of the memorandum is November, 1899.

8310. Did the wharfingers also come to you?—Yes.

Sir HOMEWOOD CRAWFORD called and examined.

Sir H.  
Crawford.

See 8015;  
8206 7.

8321. (Chairman.) You are the City Solicitor?—I am.

8322. Do you wish to put in a document with reference to evidence which has been given to-day?—I put in formally the minutes of the Court of Common Council of Tuesday, 16 April, 1901. The Special Committee over which Sir Marcus Samuel presided as Chairman brought up this Report, in answer to a reference to them: "To consider and report on the whole question of the Royal Commission on the Port of London and the city's action in relation thereto, and recommending (*inter alia*) that a body possessing a complete power over river, port, navigation, shipping, and other services, should be constituted." Then the whole of the recommendations are set out. That report having been formally moved by the Chairman, Sir Marcus Samuel, the usual motion was put "to agree with the Committee in their Report." Mr. A. C. Morton moved to add the words, "except that the London County Council should, in the opinion of this Court, be represented on the proposed new authority." That was seconded by Mr. Matthew Wallace. The minutes of the Special Committee showing the division on the question of the representation of the councils of adjoining counties on the proposed authority being called for were submitted. Then the question was put, and the Lord Mayor declared the amendment to be negative, and on a division being demanded and granted there appeared for the affirmative 1 alderman, 50 commoners, 2 tellers, making a total of 53. For the negative

Mr. EDWARD PEMBROKE called and examined.

Mr. E.  
Pembroke.

8325. (Chairman.) You are the senior partner of Messrs. Galbraith, Pembroke, and Co.?—Yes.

8326. You are also chairman of the Shaw, Savill, and Albion Shipping Company?—I am.

8327. Will you kindly tell us whether you come here as representing Messrs. Galbraith, Pembroke, and Co. or the Shaw, Savill, and Albion Shipping Company, or the Corporation of the City of London?—I represent Messrs. Galbraith, Pembroke, and Co. and the Shaw, Savill, and Albion Shipping Company.

8328. You do not represent the Corporation of London?—No.

8329. You do not wish, therefore, to support the evidence given by Sir Marcus Samuel?—I approve a good deal of what Sir Marcus Samuel said.

8330. But you come here in your capacity as a partner of those firms?—Yes.

8331. On that understanding will you proceed with your evidence?—When I came to the City 55 years ago,

8311. And the Chamber of Commerce?—Yes, and many other bodies.

8312. Can you give me the date when the wharfingers' deputation came?—They were all on the same date, the 12th March, 1900.

8313. The Chamber of Commerce came?—Yes.

8314. And all asked you for support for their various proposals?—Yes.

8315. Thereupon the Corporation considered the matter between the various views put before them, and formulated their own scheme, which was laid before the Commission?—That was subsequently; the deputations were only with regard to the Dock Bill.

8316. After that the Corporation considered the various proposals made to them, and after hearing the various deputations, formulated their own scheme?—Yes.

8317. (Mr. Ellis.) As this point has been raised of those deputations, let us have it clearly. I gather these deputations came in March, 1900?—Yes.

8318. That was before the second reading debate in the House of Commons on the Dock Bill?—That is so.

8319. And this deputation had no relation whatsoever, and could not have, to the scheme that has been put before us?—None whatever.

8320. We understand that you are going to put in the authorised extracts from the Corporation's minutes of these proposals with regard to the guarantee and so on?—Yes. I hope the Commission will understand the Corporation wish only to act in a public-spirited manner.

(Chairman.) We shall be obliged if you will convey our thanks to the Corporation.

8 aldermen, 71 commoners, 2 tellers, making a total of 81, with a majority for the negative of 28. The original motion was then about to be put, whereupon Mr. Morton moved, and Sir Marcus Samuel, the Chairman, seconded and accepted a resolution to add the words, "and that in the opinion of the Court the Government should be empowered to contribute towards the cost of improving the river and port, having regard to the national interests involved." The question, as amended, was thereupon resolved in the affirmative.

8323. (Chairman.) Was the word "empowered" actually used there?—Yes.

8324. (Mr. Ellis.) They were going to empower the Government?—I must explain that. This was a notice of motion which was put down on the paper of business by Mr. A. C. Morton. Then without any discussion whatever Sir Marcus Samuel rose in his place and said, "I formally second that." There was not much consideration given to the strict verbiage, but inasmuch as that was the way in which it appeared on the notice it had to be put in that way. That was carried in the affirmative. Then appended is the division list, showing those who voted for and against.

(The Witness handed in a copy of the Minutes of Proceedings of the Court of Common Council of the City of London, Tuesday, 16th April, 1901. See Appendix, 22nd day, No. 19.)

Recalled 8374

and for many years afterwards, London was the favourite port with all shipowners, and commanded tonnage at the lowest freights current; now, and for some time past, all owners of tramp steamers, unless they have full cargoes of grain in bulk, do what they can to avoid having their vessels at London, owing to the large expense and delay incurred there. In order to regain the popularity of the port, I think it is very essential that a harbour trust, which should certainly include two or more experienced dock directors, should be promptly formed to have the entire control of the river below bridge, the docks, and, if possible, the wharves. The improvements required are on such a large scale, and so much money is indispensable, that the present system is altogether powerless to accomplish what is needed. More dock accommodation is imperative, and the river and docks must be adapted for large vessels. If quay space can be inaugurated satisfactorily down the river, it will, of course, relieve the docks to a certain extent, and be of much advantage. In our own

business my firm are agents for some liners, but we have chiefly to do with tramp steamers, and I must say that all the dock companies, as far as their capabilities go, do all in their power to assist us in every way, but their space is very limited, and as to discharging, we find that when they allow us to employ our own stevedores the work is done much cheaper and more economically. The dock labourers are paid by the hour and are not under control. To show the difference between London and Liverpool, I beg to give a comparison as to expense and time occupied by steamers from Rangoon with similar cargoes, and the same work being performed in each case.

*(The Witness handed in a Statement giving a comparison as to expense and time occupied by Steamers from Rangoon in London and Liverpool respectively See Appendix, 22nd day, No. 20.)*

8332. Have you any remarks to make on those tables?—I take out especially these Rangoon boats, because they bring the same cargoes sometimes to Liverpool and sometimes to London, so that I have the exact figures which were paid in each port and the time occupied by the ship. The first vessel was six days in port in London, and we paid £691 10s. 9d. At Liverpool she discharged 500 tons more cargo in two days less time and the expenses were £367 0s. 6., less. The other vessels are much the same. One was 11 days in London with a cost of £657 against three days in Liverpool with a cost of £379. The next one was seven days in London, including one Sunday. We paid £580 for that against four days in Liverpool with £385. The last one was ten days in London with £536 against six days in Liverpool with £310. Shaw, Savill and Albion Co.'s boats always come to London, and to the Albert Dock. They bring large quantities of frozen meat, so that they cannot use Tilbury Docks. In common with most other lines, the number and size of our vessels has increased largely, but the berth and quay accommodation has remained as it was, and our repeated requests for more room have always been met with the answer that there is none to give. We have had to curtail the dimensions of the steamers we are now building because the length of the boat must not exceed the dimensions of the lock which forms the entrance to the Albert Dock, and the depth of the vessels for loading purposes is limited by the draft of water available there. A single berth and shed on the south side of the Albert Dock is allotted to us for the discharge of our steamers. This is only 385 feet long, and only four of our fleet of 14 vessels can be accommodated there without overlapping our neighbours' berths. Our berth is practically continuously in use by us, and we often have two, and sometimes three, steamers arriving about the same time; the result is that we have to berth two vessels alongside of each other, to the great delay of the discharge of both, or to let one lie with her cargo untouched until the other vessel is emptied. The shed accommodation is inadequate to receive the cargo of more than one vessel. The berth is a considerable distance from the meat stores, and the frozen meat for the dock stores has to be loaded into trucks, and the handling and risk of damage, especially in the hot weather, are most detrimental to the cargo. The berth alongside the meat stores, I may say, is quite unsuitable for the discharge of our vessels, as it is in the narrow cutting between the Albert and Victoria Docks, where the water is too shallow and the width insufficient to allow of barges lying at either side. The dry dock accommodation is totally inadequate. There are two dry docks, but one is so small that very few of the vessels using the dock can be accommodated there; vessels have to take their turn, and delay is constant, involving much needless expense for demurrage of barges, overtime in working, etc., etc. Another difficulty we have to contend with is the dock getting blocked up with barges, which are permitted to drift and lie about the dock unattended in very large numbers. No one appears to have any control over them, and they cause great delay to work generally, and are a standing danger to steamers moored or moving to and from their berths. The depth of water at our loading berth is inadequate, our bigger vessels cannot be loaded to their mark, and at times they are on the mud when we believe them to be afloat, thus making it impossible to be certain as to trim and draft. The number of tugs owned by the dock company is quite insufficient, and many of those they have are very antiquated. Many more hydraulic cranes are required, also considerably improved railway

facilities, especially for the removal of frozen meat, but the most pressing need is for much greater shed and quay accommodation. In the interest of the community the trade of the port should be the first consideration, but shipping is hampered at every turn to the loss and detriment of shippers, consignees, manufacturers, and consumers, no less than of the shipowner. The defects are of a kind that would speedily be remedied by any corporation trust or other public body, whose chief consideration is the best interest of the community, the port, and the trade, and who are not fettered financially in the expenditure of money which may not yield an immediate revenue.

8333. Will you turn to the table you have put in. Did the £324 10s. 3d. on the "Bhamo" comprise all the expenses to which that ship was put on that particular voyage?—Yes.

8334. That includes town and dock dues?—Yes, I have put the separate items; it includes everything we paid at Liverpool.

8335. The master portorage, for instance?—Yes; it is all there.

8336. With reference to your statement that barges are permitted to drift and lie about the dock unattended, have you personal experience of that?—Yes; it is most atrocious at the Albert Dock, particularly. If the wind blows in a certain direction you have the place covered up with them.

8337. By unattended barges?—Yes; there are fleets of them. We had a steamer loaded for New Zealand, and she could not get out, and absolutely lost the tide on account of the barges blocking up the waterway.

8338. And drifting about without anybody in them?—Yes, they are all driven very much together, and if the wind is in one direction we have difficulty in getting out.

8339. (Sir Robert Giffen.) Would it be true to say that the difference between London and Liverpool is not a question of dock, or harbour, or light dues, but mainly a question of the expense of discharging?—You will see that we paid for overtime £163 on the first vessel for discharging on the dock quay.

8340. That was delay incidental to the deficiency of the port?—Entirely.

8341. Is there any such item of delay in the "Rangoon," the next vessel?—I think in that £378 there must be some expense for landing. The cost of discharging—the last item—includes a charge of the dock company for landing part of the cargo on the quay.

8342. Is it a charge of the dock company?—Yes. These vessels do not go to Shaw, Savill's berth. We have a berth at Shaw, Savill's for which we pay so much a year, but these go into the dock in the ordinary way. If we land cargo we have to pay the dock company's charge for landing on the quay.

8343. These are the dock company's charges for discharging?—Yes; to facilitate the despatch of the vessel.

8344. In all these cases?—Yes.

8345. (Rear-Admiral Hext.) You say that more hydraulic cranes are required. Evidence has been before us to show that there are a great many more in London than in Liverpool?—I read that. I am very sorry to say they are not at the Albert Dock. We have the greatest difficulty in getting cranes there, and very often, when our people have been using a crane, some other people have come and taken it away, and the dock people have been unable to order them to restore it. We have had great difficulty with hydraulic cranes there.

8346. With reference to the question of barges, could you recommend any remedy for the barges drifting about in these numbers and being uncontrollable?—It is a most difficult question. It seems to me if a man puts his barge into the dock he ought to be compelled to put a man into it to take charge of it. We have to keep men on board our ships to look after them.

8347. You are actually aware of cases where barges have been left entirely with nobody in them?—Any number of them.

8348. (Mr. Peel.) In this Appendix 20, as regards the London charges, there are a number of small charges—tally clerks, shipkeeper, water, tugs, and so on, which tot up to a great deal. Are those not charged in Liverpool, or are they included under harbour dues?—

Mr. E.  
Pembroke.  
4 June 1901.

Mr. E.  
Pembroke.  
4 June 1901.

I have given here the entire cost to be paid at each port. At Liverpool we put the entire cargo on the quay.

8349. As to all those small charges I have mentioned, there is no charge for them at all, is there?—No; not at Liverpool. The master porter covers all that.

8350. Were you asked about despatch in landing; I did not hear what you said?—The entire cargo goes on to the quay at Liverpool.

8351. Did you say that you were going to build some larger steamers, but you could not?—We have steamers building now which are 500 feet long, which is the longest that can get into the Albert Dock. We should like to have had them 25 or 30 feet longer, but it was impossible. We cannot use Tilbury Dock for these cargoes. The New Zealand mutton comes to a large number of consignees, and we are obliged to go into the Albert Dock where we can have it landed and sorted, and delivered to the different people.

8352. Do you find that there are not enough trucks along the lines to get rid of your cargo?—Yes, very frequently we are much delayed by want of railway trucks.

8353. (Mr. Ellis.) Just one question on your table. Can you assure us that you are comparing in each case like with like?—Yes; where the differences are I have given them. There is the exact statement of what has occurred, what we paid, and the time occupied.

8354. With reference to the last words of your statement. You desire that a public body should be set up which is not fettered financially in the expenditure of money which may not yield an immediate revenue. Will you amplify that a little?—I mean that it should not be a body that has to pay dividends to shareholders. The money should go, in my opinion, entirely to the work of the port.

8355. A public body would have to borrow money, of course?—Yes.

8356. On which it would have to pay interest?—Yes.

8357. Supposing there was a deficiency of income to meet all working expenses and the interest, where would you derive the necessary funds to make up the gap?—I am clearly of opinion that there should be a small charge on every ton of goods that comes into the port or goes out of it.

8358. You would increase the charges?—I do not think in the end that it would increase the charges, and we should get very much better despatch.

8359. You would increase rates—you would increase something?—Yes, I would tax goods that are not taxed at all now.

8360. You would find out some new source of revenue from those who brought the goods into the port?—Yes, all goods that either left the port or came into it I should put a tax upon.

8361. Supposing that were insufficient, have you any other reserve in your mind?—I cannot conceive that it can be insufficient. The amount of cargo is so enormous, and the rate could be made sufficient, and it would not bear heavily upon anybody, in my opinion.

8362. You have not contemplated, because you think it is unnecessary, falling back in the last resort upon either rates locally or taxes nationally?—No, I do not look upon rates as the proper contributory source.

8363. You do not look upon taxes, perhaps, as the proper source?—No, I do not. I think the port would be entirely self-supporting if a small tax was put upon goods that come in and go out.

8364. You do not think that the trade of the Port of London is so vital to the country that it is necessary to apply to the national Exchequer?—I think it is of the utmost importance to the country that London should remain the first port of the world, and it can be so, in my opinion.

8365. Internally?—Yes.

8366. From its own resources?—Yes; I have no doubt in my own mind at all about it.

8367. Then to that extent you do not quite fall in line with the Corporation's proposal that the national Exchequer should be appealed to?—As guarantors. I did not gather that it was contemplated that the national Exchequer would have to contribute.

8368. If one guarantees a thing, one may have to pay?—Yes; but I think if a large Trust with an important body in connection with it had the power to put a small tax upon goods, they could raise amply sufficient for all purposes.

8369. And you give us that very useful information from your experience as a trader of the port?—I do.

8370. You have long years behind you, and a great amount of business?—Yes, I have seen a good deal of it.

8371. You have no doubt whatever that there is no necessity for either rates or taxes?—No; that is my opinion. It would be a great advantage, of course, to have a Government guarantee; no doubt the money would be found somewhat cheaper.

8372. Do you put it in this way? If you put a charge you could make a balance sheet without going to the exchequer or rating?—I do.

*Cross-examined by Mr. George Wallace.*

8373. I wish to ask you a question or two on your charges at London and Liverpool. I think you told one of the Commissioners just now that the despatch in Liverpool was a charge which fell upon the goods?—The Liverpool people make a charge on goods. This is all we pay to Liverpool.

8374. That is just for the labour of taking them out of the hold, and, if I may use the expression, dumping them on the quay alongside?—Exactly.

8375. And you are not concerned any more with them?—No.

8376. But the London charge includes more than that?—Yes, it does.

8377. The tallying, for instance, is another charge, I think, that is paid in Liverpool by the goods?—Yes, we have no special charge for that.

8378. It is quite sufficient. Somebody pays, and it is not you?—That is so.

8379. There is just another general question which arises upon nearly all these cases, I think. In the first case there is a slightly larger amount of goods apparently delivered at Liverpool—500 tons more?—Yes.

8380. Then as regards the others?—It is less at Liverpool.

8381. The difference is largely in favour of London?—Yes.

8382. The "Rangoon" is nearly 4,000 tons, and at Liverpool it is only just over 2,000 tons?—Yes; the only item affected by that is the charge for discharging.

8383-4. But except for the charge for discharging the London dues on the ship—that is, the dock dues—are much less than in Liverpool. The dock dues in every case are less in London than in Liverpool?—Yes, but we do not get the same accommodation for it. At Liverpool they allow us to put the entire cargo on the quay.

8385. They allow you to, but when the goods are on the quay you have to pay for them being there. In the case of the "Mandalay," is it actually more than twice as much as in London; it is 4,230 tons against 2,052?—Yes.

8386. So that when you say you are giving a comparison of similar cargoes they are not quite similar?—But I have given the quantity. If you look at the last one you have mentioned, you will see we only paid at Liverpool for discharging, £279 16s. 11d.; whereas at London we paid £274 17s. 11d. The other items are not affected by the quantity of cargo.

8387. Of course, you know perfectly well that discharging is labour charge?—Yes.

8388. You say you bring large quantities of frozen meat, so that you cannot use Tilbury Docks. In point of fact, frozen meat does come to Tilbury?—It does. We are connected with ships that go there—Australian vessels. But we find it is very difficult, and we could not send our New Zealand vessels there because, as I explained, we have such a large number of consignees that we could not deal with them at Tilbury. I will first tell you this; we bring about one million three hundred thousand sheep a year. That represents a large quantity to deal with.

8389. The difficulty about the frozen meat is this—I

*Mr. E.  
Pembroke.*  
4 June 1901.

think Mr. Scott mentioned it—that there are a great number of marks in the cargo?—Yes.

8390. And they have to be sorted in an insulated place?—It is desirable to do so. We sort a great deal of general cargo in a shed. We have a dock company's shed, but it is not insulated. Of course, we sort on board the steamer as far as we can.

8391. You cannot do much sorting on the steamer, I suppose?—We do the best we can; we endeavour to sort it.

8392. But it is not satisfactory, is it?—No, it is not.

8393. And that is really the reason, I take it, why you find Tilbury inconvenient?—Yes.

8394. But there are insulated barges?—Yes, but it is not satisfactory bringing them so far.

8395. In your statement, take the "Mandalay," the last two items: discharging in London, £274 17s. 11d., and discharging in Liverpool, £79 16s. 11d.?—Yes; if we land the cargo on the quay we have to pay.

8396. Notwithstanding that, does the discharging in both of those columns mean exactly the same thing, or not?—It means what we have to pay. It does not mean quite the same thing, because at Liverpool they charge the goods with landing them on the quay. At London if we land the cargo on the quay we have to pay.

8397. Does it mean in any way at all the same work done upon the goods?—No, it does not.

8398. And, except that you have given the same name to it, there is no similarity between the work that is done in each case?—I do not quite gather that.

8399. At London certain work is done for that £274 17s. 11d., and at Liverpool certain work is done for the £79 16s. 11d.?—Yes.

8400. The work that is done at Liverpool is not the same work at all that is done in London?—It is a different system. At Liverpool we go alongside the quay and put the cargo on the quay, and then we have done with it. The master porter does all the rest.

8401. But then the work that is paid for, if you like, by those two sums of money is quite different work?—Yes.

8402. The £274 may include the work that is done at Liverpool, but it includes a great deal more?—As far as the ship is concerned.

8403. If you like?—Yes; it includes more at London, as far as the ship is concerned.

*Cross-examined by Mr. Lochnis.*

8404. When you complain of the insufficiency of trade in the docks, do you refer exclusively to the docks on the north side of the Thames?—Yes.

8405. And does the other evidence which you have given with reference to improvements required also refer to the docks on the north side of the Thames?—I think the docks on the south side are quite insufficient. We have had steamers sometimes kept a week or more at Gravesend with timber, unable to get into the Surrey Commercial Dock—blocked.

8406. That was in the height of the season last year?—Not only last year, but every year.

*Cross-examined by Mr. Daldy.*

8407. May we take it that these four steamers that you have given are general average cases?—Yes.

8408. They are not selected in any way?—I only selected those steamers because they sometimes come to London and sometimes go to Liverpool with the same cargo.

8409. But you look upon them as fair average cases?—Yes.

*Cross-examined by Mr. Harper.*

8410. What is the difference in the discharging? Take, for instance, the first item in the case of the "Bhamo"?—I give you in detail, in the table, the charge on every description of goods.

8411. I notice there that rice and meal apparently average about 6½d. a ton at Liverpool and at London about 1s. 1d.?—London 1s. to 1s. 2d., and Liverpool about 6d.

8412. What is the difference in the services rendered at those two places? What more is done at London?—There is nothing more done at London for that shilling than there is at Liverpool for that 6d. I put the dispatch money at London at £163.

8413. With regard to the dispatch money, that would be balanced by the tonnage dues, which you do not bring into your account?—We have nothing to do with it.

8414. What is the difference in the cost of labour between London and Liverpool?—At London it is more expensive. At Liverpool they have got it more under control. The dock company do all the work.

8415. Do you discharge yourself for the 1s.?—Sometimes at London we discharge, and sometimes we employ the dock company.

8416. Is this 1s. the dock company's charge or yours?—That is the dock company's charge.

8417. Now, with regard to your suggestion of a Trust. You have no special preference for any body, I suppose. You would like to have a good representation of all commercial interests?—Yes. I should like to see it in the hands of a non-political body; one authority—with no bias for trades unions. That we have had great difficulty over.

8418. Do you yourself like the proposal to take over the warehousing or a portion of the warehousing?—I should like to see the entire thing in the hands of one trust, but it is such an enormous thing that one could scarcely contemplate it. I should like to see the docks and warehouses and the wharves all under one head.

8419. But that would be rather a large order?—Yes, it is too enormous a business.

8420. And you would not like to see them separate?—The dock warehouses from the water, do you mean?

8421. Yes?—No, I certainly should not.

8422. You have considered the difficulty that arises about having a trust with power to tax competing with private individuals?—That is a question for the Royal Commission to deal with. I should like to see the tax, and I am sure it would be done equitably.

8423. If the tax were applied to the improvement of the waterways that, as a shipowner, would suit you?—Yes.

8424. If the tonnage tax on goods were applied to warehouses only, and the warehouses were left to the natural effect of competition, that would suit you, would it not?—I do not think it would suit us to have the warehouses in the hands of another body than the water of the docks.

8425. You would prefer to have them all in one hand?—Much; most decidedly.

8426. There is no difficulty in keeping things separate and charging for the work done, is there?—At some of the docks I think it would be impossible to keep them distinct.

8427. You are speaking of St. Katharine's, I suppose?—And the London Dock, too.

*Cross-examined by Mr. Cranstoun.*

8428. It is the Victoria and Albert Dock that you chiefly use, is it not?—For our Shaw, Savill, and Albion boats, but our other vessels go where we can get them. The dock company select the docks themselves as a rule.

8429. You say that one of the difficulties you have to contend against is "the dock getting blocked up with barges, which are permitted to drift and lie about the dock unattended in very large numbers"?—Yes. That more particularly applies to the Albert Docks as far as my experience goes.

8430. And with better management you think that it would be avoided?—It is absolutely necessary that it should be avoided. It stops the work of the docks.

8431. It could be avoided?—I have no doubt it could be avoided. It is a question of cost.

8432. Do you know the powers the dock company has with respect to control over the barges?—Yes.

8433. They are tolerably severe, are they not?—But they do not exercise them.

8434. When a barge is adrift you know the dock company is entitled to fine the owner a sum of 5s.?—Yes.

8435. And they make a very large income out of those fines, do they not?—No, I do not think so. I do not think the fines are often exacted. I know we often send men to take charge of a lighter and move it away, and we generally get notice to say that if that lighter sustains any damage we are responsible for it.

See 8332.

Mr. E.  
Pembroke.  
4 June 1901.

8436. Do you know that there are hundreds of barges in the dock that are exclusively used by the dock company in their own business?—Yes.

8437. For instance, the Tilbury Lighterage Company have over 200 barges that are used by the dock company for their own work?—

(Chairman.) I think, Mr. Cranstoun, this is more a matter for your speech, which we shall have the pleasure of hearing later.

See 8465.

(Mr. George Wallace.) Especially as I am informed that we do not employ the Tilbury Lighterage Company at all.

(Mr. Cranstoun.) I have only one question to ask further.

(Chairman.) I do not think it will be necessary.

(Mr. Cranstoun.) It is only to show that the so-called congestion is largely caused by the barges employed by the dock company.

(Chairman.) I do not think it is necessary to go into that.

(Mr. Lewis Coward.) That question should have been put to the dock company's representatives.

8438. (Mr. Cranstoun.) With regard to your own ships, under the terms of your bills of lading are not the barges to be alongside as soon as you break bulk?—Yes, within 24 hours, and they cannot get there.

8439. And is it not a fact that by reason of that clause barges are frequently there for days before they are actually required?—No, it is not my experience.

8440. You do not know whether that is a fact or not?—I know it is not as far as we are concerned.

8441. Then it is probable that the lightermen are not aware of the exact time when they will be required?—They know, they look us up.

8442. But how are they informed. They come to the office and inquire when a vessel will be prepared to deliver?—Yes.

8443. Then are they told the particular hour when the vessel will be ready to deliver?—Yes.

8444. Is that a rule?—Yes.

8445. That you speak to from your own experience as being the fact?—Yes.

8446. On an average, how many barges at one time are around one of your ships when it arrives, for the purpose of taking delivery?—I could not tell exactly.

8447. Is it not a fact that there are as many as 50 or 60 barges at one time round one of your ships?—No, I should say not.

8448. What figure would you put it at?—I should think perhaps a couple of dozen.

8449. 24?—Yes, they are long ships.

8450. Is it not a fact that there are 40 or 50 barges waiting there?—I do not remember ever seeing so many as that.

8451. With regard to the exports, you claim the right to select the cargoes in the barges, do you not, for your ships?—We take it all. We take every ton. We do not fill our vessels for New Zealand; we generally have a third of the space empty, but every ton of cargo that comes we take. There is no selection.

8452. Do you not keep the barges there for days, sometimes as much as three weeks, before you take the cargo on board?—We take it very expeditiously.

8453. But for the purpose of convenient stowage, are not the barges sometimes kept there for as long as three weeks?—No; my remark about the barges unattended applied more to empty barges.

8454. You do not answer my question. My question is with regard to your export cargo. Are not barges detained there by you for your own purposes and your own convenience for as long as three weeks at a time?—No; I should say never.

8455. Do you not pay a demurrage to the extent of thousands of pounds every year?—I think the only time

we pay demurrage on craft is when we are delayed getting the vessel into dry dock. Then we have to pay for demurrage if we have ordered the cargo in and the ship is not there to take it. But we go on fixed dates, and we are obliged to work night and day to make up for lost time.

8456. And you claim three days' grace. You claim that you have the right to keep the barges there three days before you pay demurrage?—Yes.

Cross-examined by Mr. Scrutton.

8457. Take the case of the "Bhamo." What does two days' detention of the "Bhamo" mean?—£60 a day.

8458. Then besides the difference between £691 and £324 it means it is £120 better for you to get her out two days earlier?—Yes. We take less freight for Liverpool than for London.

8459. Now with regard to a question Mr. Ellis asked you as to your experience: You have been Chairman of the Chamber of Shipping of the United Kingdom?—Yes.

8460. And you are at present on the Committee of the Shipping Federation and of the General Shipowners' Association, and manager and part owner of the Public Schools line of steamers?—Yes.

8461. (Mr. Ellis.) On that, do we understand that you have come here at the request of those bodies?—No; in my own private capacity.

8462. You understand the object of my question?—Yes.

(Mr. Scrutton.) My Lord, Mr. Philcox is on the list to give evidence next, but will it be convenient to take the evidence of Mr. Cooper first?

(Chairman.) With reference to the evidence of Mr. Cooper and Mr. Philcox, it is with regard to the Deptford Cattle Market, I understand?

(Mr. Scrutton.) Yes, my Lord. They are here in consequence of the evidence given by Mr. A. S. Williams, at Question 2170.

(Chairman.) Will you be kind enough to tell us how their evidence bears upon our reference?

(Mr. Scrutton.) I do not think it does, but we were asked to bring these witnesses, because Mr. Williams has given an expression of opinion that the Cattle Market should be moved further down the river, which has occasioned considerable consternation in the trade.

(Chairman.) I fail to see how this proposed evidence bears upon our reference.

(Sir Homewood Crawford.) The attention of the Corporation was called to the evidence which has been given, and I was told that the Commission would expect to hear something with regard to it.

(Chairman.) I desire to say that the question of the removal of the Deptford Cattle Market is not a question with which we are concerned. I think you may take it, Sir Homewood Crawford, that we shall not deal with the question of the cattle market.

(Sir Homewood Crawford.) I should never have troubled your Lordship with it, but we understood you wished the matter to be cleared up, and therefore we prepared to do so.

(Chairman.) The Commissioners are anxious not to reject evidence, but shall we have the approval of the Corporation if we do not hear this evidence?

(Sir Homewood Crawford.) Certainly.

(Chairman.) We do not wish to receive it. Then you may take it that we will not have the evidence of the Cattle Market witnesses at all.

(Mr. Scrutton.) Then, my Lord, that will conclude the evidence of the Corporation.

(Chairman.) We are very much obliged to the Corporation for the evidence they have given.

(Adjourned to to-morrow morning, June 5th, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## TWENTY-THIRD DAY.

*Wednesday, 5th June, 1901.*

PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. BALFOUR BROWNE, K.C. and Mr. GEORGE WALLACE appeared on behalf of the London and India Dock Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council.

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. R. W. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

Mr. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

Mr. JOHN TROTTER recalled and further examined.

8463. (*Chairman*.) I understand you wish to make a correction with reference to the answer given to Question 7109?—Yes. It has been represented to me that my answer to that question was interpreted as meaning that the Millwall Dock Company did not feel that there was any grievance in regard to the amount of goods that come in in barges, and do not contribute to the expenses of the dock. Inasmuch as that is directly contrary to the opinion that is unanimously held by the Millwall Dock Company, I thought it right to ask to be allowed to come and explain the matter more fully. We do feel it a very great grievance indeed that in regard to export goods 90 per cent. come into the docks in craft and do not contribute at all to the expenses of the up-keep, and in regard to import goods nearly 60 per cent., and if this Commission were to report favourably on that point we should most unquestionably seek for powers to do away with this exemption. We hold exactly the same opinion on that point as has been put forward in the evidence of the London and India Dock Company.

8464. (*Mr. Ellis*.) What you really wish to say is that it does not depend on the decision of the London and India Dock Company; it depends rather on the decision that may be come to by the Commission?—That is so.

8465. (*Mr. Lewis Coward*.) If the decision should

be favourable, you would certainly promote a Bill?—We should certainly promote a Bill. The matter has been considered from that point of view by our board, and they are unanimous on that point.

(*Mr. Cranstoun*.) May I draw your Lordship's attention to a statement by Mr. Wallace yesterday. It is at Question 8437? Mr. Wallace said: "I am informed that we do not employ the Tilbury Lighterage Company at all." I think my friend must be under a misapprehension.

(*Mr. George Wallace*.) If my friend had not been in such a hurry, I was going to give your Lordship the exact facts with reference to that. What was put at the time was that there was an enormous number of barges in the dock which we employ for ourselves, and my friend said: "For instance, the Tilbury Lighterage Company." In point of fact the contract which my friend had in his mind was determined some time ago with the Tilbury Lighterage Company, but we do still employ the Tilbury Lighterage Company to do internal lighterage work in the docks. The barges which we employ for that purpose do not exceed at the Victoria and Albert from 30 to 40; at the East and West India from 12 to 15; and at Tilbury 4 or 6. The large contract that we had with the Tilbury Lighterage Company has been for some time at an end.

*Mr. J. Trotter.*

5 June 1901.

CAPTAIN GEORGE RAWLINSON VYVYAN, called and Examined.

8466. (*Chairman*.) You are the deputy master of Trinity House?—Yes.

8467. How long have you held that office?—Since November, 1898.

8468. You desire to give evidence as to pilotage and other matters which have been referred to before the Commission?—Yes.

8469. Will you be good enough to tell us what you have to say?—First of all I shall confine myself as far

as possible to answering a few of the allegations that have been made, and some of the questions. Then I will deal with what in my mind is the benefit that will arise in the Port of London if the work or most of the work that is now undertaken by the Trinity House is left to it. I see that in the schemes that have been brought forward before this Commission, it is intended to take from the Trinity House the buoying, the lighting, and the pilotage. I will endeavour to show that it will not be an advantage in any way to the Port of

*Capt. G. R. Vyvyan.*

Capt. G. R.  
Vyvyan.  
6 June 1901.

London that the Trinity House should be deprived of that work. I will deal first with some of the allegations that have been made before the Commission, and first of all I will deal with the difference between the London river, the Liverpool river, and rivers at other ports.

8470. With relation to pilotage?—Yes, with relation to pilotage and general expenses, but chiefly pilotage; I say there can be no comparison whatever between London and Liverpool as regards the pilotage duties. In addition to the pilotage above Gravesend, the length of the district from Dungeness to Gravesend is 87 miles, and the course has to be changed fifteen times. From the Middle Mouse, that is, the western district of the Liverpool inward pilotage, to the landing stage at Liverpool is 55 miles, 40 of which is one straight course at sea, and only four changes of course are required, whilst the outward pilotage at Liverpool is only 15 miles, and only three changes come under the pilot's directions. Or if you take in and out for London, disregarding the river, 174 miles with 30 changes, against total pilotage at Liverpool 70 miles with seven changes of course. I will hand in a paper showing the length of the pilotage waters in London, Liverpool, Glasgow, Hamburg, Rotterdam, and Antwerp, with the rate per mile:

*(The Witness handed in a comparative statement of the Pilotage Rates for steam vessels drawing 8 feet, 18 feet, and 28 feet of water at certain ports in the United Kingdom and abroad, the distance piloted, and the rate per mile. See Appendix, 23rd Day, No. 1.)*

That will show as far as the pilotage rates are concerned, London compares favourably with any of the British ports, and is very much below nearly all of the foreign ports. The average rate per mile briefly speaking is 2s. 10d. inwards and outwards from London, against 2s. 2d. inwards at Liverpool and 3s. 6½d. outwards; 4s. 8d. inwards at Hull and 3s. 7d. outwards; 5s. 4½d. inwards and outwards on the Tyne. Then at Antwerp it is 21s. per mile inwards and 13s. 4d. outwards; Rotterdam is 21s. 7d. inwards and 17s. 3d. outwards; and Amsterdam 23s. 6d. inwards and 15s. 7d. outwards. So that from that point of view, London compares very favourably with any of those ports that I have mentioned. When Mr. Alfred Jones gave evidence here he said that he could not see the necessity for having two pilots. It is at Question 4837: "I have never been able to understand why we should have to employ two pilots to assist a vessel during her run from Dungeness to London, whereas at Liverpool we have only one. No doubt this accounts for the pilotage at London costing double what it does at Liverpool." Of course I have shown that it does not do anything of the sort. Then with regard to the question of the two pilots I should like to state this as shortly as I can for the information of the Commission. Before 1864 the Trinity House licensed through pilots and the Cinque Port authorities licensed pilots to London Bridge (although but few accepted the licence beyond Gravesend). The through pilot from London Bridge became extinct in 1896, and there were only four of them for several years before that. There does not appear to be any objection if Parliamentary powers can be obtained to revive the practice, and no doubt as far as the outward pilot is concerned, it could be satisfactorily worked, as pilots leaving the docks are fresh to their work and leave the ship some time after she is in the open and free from difficulties. But as regards the inward pilot if he has charge of the inward vessel from the Isle of Wight or from Dungeness and has been on the bridge on look-out until he gets to Gravesend, he may not be in a fit state to commence the difficulties presented by a narrow navigable channel, beset by barges, small craft and the outward rush of traffic from the Pool, surrounded by vessels seeking shelter in the docks or in the wharves, and often enveloped in smoke and fog; and if at night dazzled by the glare from the numerous lights that line the banks of the river. No time is lost now in shipping the river pilot because the vessels must stop for the Sanitary Officer, and the ships will also stop at times for their choice of pilot. The cost is trifling if the shipowner is content to pay the bare pilotage, but if all the time he indulges in such luxuries as keeping the pilot to do all kinds of work that should be done by the master and crew of the ship or by watermen, he must expect to pay but should not in justice complain of dear

pilotage. At the same time, I do not think that much difficulty would result if powers could be obtained to license pilots as far as Tilbury or even the Albert Docks. The restriction of pilots to the river work was introduced in 1864 in consequence of application from the shipowners of London, who were then of opinion that a distinct body of men were needed for the service. So that the complaint to which Mr. Jones alludes was of something that was introduced by the London shipowners themselves. I will now deal with the question of the "Livonian," which is mentioned in the evidence of Mr. Becket Hill at Question 2269.

8471. Have you anything to say with reference to Mr. Becket Hill's statement that the pilotage is much heavier at London than at Liverpool?—That is what I am going to. The case has been traced and I should like you to hear what work was done in each river. I will take London first. The "Livonian" into London took her pilot at Dungeness to Gravesend, changed her pilot, and went into Tilbury Dock on the 19th October, 1900; the following day she left the dock, went to the cattle market, Deptford, and back to Albert Dock. On the 28th October she left Albert Dock and discharged her pilot at the South Foreland, having entered and left two docks and discharged her cattle at the Deptford Market. The distance piloted was 189 miles, which, inclusive of docking, putting pilot on board, and landing charges paid to pilots, is at the rate of 4s. per mile, the sea pilotage, 151 miles, being at the rate of 3s. 7½d. per mile, and the river pilotage, 38 miles, including docking, 5s. 10½d. per mile. That is what she did in London. Going to Liverpool she took her pilot to the eastward of Great Orme's Head to Liverpool, Castle Wharf, discharged her cattle on the 13th September, 1900, and on the 5th October discharged her pilot at the Bar Light Ship, being a total distance of 50 miles, the rate being 5s. 4½d. per mile, including shipping and landing the pilot. I think that disposes of Mr. Becket Hill's case. Now I should like to say a word about the pilots' incomes. That is referred to in Mr. Becket Hill's evidence at Question 2269: "In London the choice pilots will make incomes from £1,000 to £1,500 a year, which is more than we pay our best captains. That shows that the rate of pilotage is excessive." I will hand in a table showing the earnings of the pilots for the year 1900.

*(The witness handed in a table showing Earnings of pilots for the year 1900. See Appendix, 23rd Day, No. 2.)*

The average gross earnings are: At Cardiff, £390; Liverpool, £234; Newport, £380; the Tyne, £264; and at London, £405. Of 329 pilots there are only 15 who make over £900 a year, and that includes all sorts of work outside, extraneous to their pilotage work, which need not be paid for by the shipowner, and need not be done by the pilot, and it also includes pilotage right down to the Isle of Wight, which is outside the London district altogether. The highest earnings below Gravesend are: Inwards, £906 gross; outwards, £1,363 gross. In the river, £1,187 gross, above Gravesend. The lowest earnings below Gravesend are, inwards, £113; outwards, £146; and out of the 329 pilots 41 per cent. earn under £300 gross. Now, with your lordship's permission, I will deal with the delays, which are referred to in Appendix No. 3, of the sixth day. It is entitled a "Statement of Steamers of the Atlantic Transport Company and the National Steamship Company compelled to anchor in the neighbourhood of the Nore during the year 1900 on account of deficient draught of water," and was handed in by Mr. A. S. Williams. I will deal with it in the abstract. All complaints concerning delay are considered by the Pilotage Committee, on which a representative shipowner sits. The pilot is brought up and questioned, and if proved to be in default is punished or admonished. I do not think it is fair for anyone first to say that it is useless to make a complaint when on being pressed they have to acknowledge that they have never done so. As a matter of fact, only seven complaints of this nature connected with delays have been made to the Trinity House during the last five years. I am speaking now chiefly as regards delays owing to the conduct of pilots, and several cases quoted before you have been examined, but one case quoted by Mr. Williams requires comment. I am sure Mr. Williams would not intentionally be unfair, but the evidence given with regard to this vessel might leave a wrong im-

pression. It is the case of the "Minneapolis." In the statement handed in by Mr. Williams, the "Minneapolis," stated to have been detained aground 11 hours 45 minutes at the Nore on account of deficient draught of water, was put on shore at Shellhaven at high water in a thick fog to avoid collision. That is all I have to say with regard to delays.

8472. Then will you kindly tell us what you have to say as to the unification scheme for the Port of London from a Trinity House point of view?—No scheme of unification will be of much avail to London unless you provide the authority—whether it be a new trust or the Thames Conservancy—with additional powers for acquiring the necessary funds, particularly for the removal of wrecks and for the purpose of dredging the river where required to a reasonable depth. I should not call a 30ft. channel a necessary depth at low water. To provide such a channel you would make the whole community pay very largely for the temporary convenience of a few vessels. During the last year there have been piloted in London 34 instances of vessels drawing over 28ft., over 29ft. four instances, 30ft. two instances, 31ft. eight instances, 32ft. two instances—in all, 50. So that if you required a depth of 30ft. at low water you would in this last year have only benefited twelve vessels, and the difference of depth between 28ft. and 30ft. would involve a large amount of cost. But there is an aspect connected with the unification of the port authorities which I should wish to comment on at some length. I mean the work which is now done by the Trinity House as far as it relates to the guarding of the river and the pilotage thereof, which I will call the expert work of the river, and I wish to point out that in my opinion it will be to the benefit of the port as well as of the authority you may wish to recommend if you will allow such work to remain with the Trinity House for them to carry out as they are now doing. Leaving pilotage questions for the present, I will confine myself to the lighting and buoying. It is impossible for any legislature to create experience in expert matters. It is not in their power. They may create boards, and corporations, and dues, and levy them how they like, but it is not in their power to create experience in expert matters, and I hope to show that though such an authority may deal usefully and beneficially with matters such as docks, warehouses, dredging, barge traffic, wreck works, bye-laws for vessels, and other similar work, they will do well to entrust the expert work of buoying and lighting to the expert body already existing, and which must continue to exist, who are doing the work well at the present time and at an infinitely cheaper rate, with their established organisation and appliances, than could be done by any newly created local authority, however extended their powers may be. I will assume that the limits of jurisdiction of the new authority are below the present ones, and are those I have seen mentioned, that is a line between the North Foreland and the Naze, though I must not be held to agree with the proposal. If you fix it lower down you would have to deal with waters on which there is an immense traffic which is unconnected with London. I would, however, include in this limit Gunfleet, which is one of four pile lighthouses. This line being assumed, the area defined will include eight light vessels, twelve lighthouses, 114 ordinary buoys, and sixteen gas buoys; and this number will be very largely increased when the deep water channel is dredged. It does not include the three buoys which we maintain for the London County Council, or the spare light vessels or buoys which will also be required. I will for the moment assume that the new authority takes over all jurisdiction connected with this expert rival establishment such as engineering works and gas works. They will want steamers, not only at London, but towards their limit, to attend on the light vessels, watch and refill the gas buoys, and perform the various duties connected with the lighthouse service, including the personal examination by the expert officers, and they will have to create a staff of expert officials side by side with those already existing in the Trinity House, who could not be abolished, for the purpose of checking the changes in the sands and channels, and the instant correction of such changes. At present the London river has the advantage of three depôts, London, Ramsgate, and Harwich, and if an accident happens, or a sudden change of channel is discovered—as happened only last January off the North Foreland—the nearest boat goes out at an hour's notice, subject, of course, to tidal conditions rectifies the difficulty,

and supplies the material for the notice to mariners which is published by the Trinity House. I wish to impress on the Commission that all the lighting and buoying work is at present done for the Port of London at the cost of the General Lighthouse Fund, to which all ships contribute that trade to the United Kingdom, irrespective of whether their ports of arrival or departure are London, Newcastle, Glasgow, or anywhere else in the kingdom, or whether the ships are British or foreign. That is an important thing. So that this tax falls not on the Port of London, as erroneously stated by several of your witnesses, but on merchant ships generally. Up to April, 1899, the assertion made by those gentlemen would have been justified to a certain extent.

8473. (Mr. Ellis.) Will you kindly develop your evidence a little further with regard to the fund from which this is drawn. I think it would be of advantage to have it. You are pointing out that these charges are borne by a fund which is drawn not from the Port of London only, but universally, as it were. Will you amplify that in a sentence if you can. Do you understand my meaning?—Yes. I was going on to that. Up to April, 1899, these gentlemen would be justified in what they have said, for each light and each buoy was supported by a toll which was levied on the vessels which either passed or derived benefit from such sea marks, but that is all altered now, and with the exception of certain outports all lighting and buoyage is paid for regardless of the vessels' track by a toll for vessels doing that.

8474. That is all levied by Act of Parliament?—Yes. It is therefore incorrect to say that because a vessel pays the light dues of London, such charge should be regarded as part of the expenses peculiar to the Port, as she would have to pay just the same amount for a similar voyage to any other United Kingdom port; in fact, they may be said to have an advantage over Liverpool and Glasgow and certain other large ports, the approaches to which are marked by the local authority, which charges local dues. By the Act of 1898 no cognisance is taken of the ship's route, all lights and sea marks under the general local authority being maintained by a general toll, which is paid by all vessels trading with the United Kingdom, regardless of any particular port, the only distinction being that Home trade ships are charged a lower rate and sailing ships have a preferential rate over steamers or foreign-going ships, but it must also be borne in mind that these dues are now only levied for a limited number of voyages in each year, ten in the Home trade, and six in the Foreign. Does that answer your question?

8475. Thank you, yes. I have what I want?—Consequently, if you make London a local port as regards the lighting of the river, light dues would have to be substituted to pay for the sea marks now maintained by the general lighthouse fund, which will be manifestly to the disadvantage of the shipowner and to the port of London, as a ship trading with London would then have to pay both local and general lighthouse dues. Nor do I see how any contribution could well be made by the lighthouse fund towards the expense of the London river lights, the whole purpose of the Merchant Shipping Act of 1898 being against the principle of each light being paid for by the user on each voyage. Under the system which existed prior to the Act of 1898, it would have been possible to have made the Thames river lights a local toll, and in fact some were charged in this manner, but the present system of charges precludes this being done. Now, my Lord, I will deal with the pilotage question, still assuming the imaginary boundary. Are your pilots to be under two authorities? If not, they will have to be changed on crossing this line, and establishments will have to be kept up for providing the necessary changes, the Trinity House man giving place to the Trust man inwards, and *vice versa*. There is an obvious advantage to the shipping community in having the pilotage and the buoyage services under the same authority. A change which may become known to the pilot in charge of a vessel is at once communicated without any trouble, and it was by that method that a recent change just below the North Foreland was detected, which necessitated the removal of a gas buoy, and is now engaging the attention of the Admiralty, who have just completed a thorough survey in the vicinity. *Per contra*, a change becomes known to the buoyage authority, and is at once communicated to the pilots at their stations.

Capt. G. R.  
Vyvyan.  
5 June 1981.

Capt. G. R.  
Vyvyan.  
5 June 1901.

I think the advantage here is so obvious that it is unnecessary to dilate upon it. Then your expert difficulty will come in again. The Trinity Corporation have been for centuries past the governing body for pilotage for the Port of London, and also since 1808 for many of the principal ports of the United Kingdom. Their management has been from time to time subject to the strictest enquiry, and it is only necessary to state that it was found expedient to place the Cinque Ports pilots under the control of the Trinity House to show the appreciation of their efforts in instituting, directing, and maintaining a system satisfactory to the majority of shipowners and to the public generally. I am justified in saying that, owing to the absence of complaints. We have naturally no desire to part with functions which we have so successfully instituted, and (subject to the control of the Board of Trade) carried out, nor does the Trinity House see the necessity for the change, which does not arise from any public outcry in consequence of failure in those functions, but simply to satisfy the cry of a few individuals who desire to govern, and who apparently claim to possess a knowledge of technical subjects of all kinds, which it is difficult to understand how they could have acquired. The Port of London, surrounded as it is by dangerous sands, is in need of special protection, and no radical change should take place to jeopardise the safety of shipping using that port without mature consideration. The members of the Trinity House are men who are known to be possessed of knowledge peculiarly adapted by nautical experience, by long usage, and by the practice of the duties of buoying and lighting the channels, to perform the functions requisite in the supervision of pilots and pilotage, a supervision which would be difficult to obtain from any municipal body. From the evidence of some of the witnesses at this Commission, economy is put forward as an essential element necessary for the increase of trade in attracting shipping to the Port, and maintaining its supremacy. On that score the Trinity House stands pre-eminent, it being a body having duties of a kindred nature extending to the principal ports in the Kingdom. It already possesses the machinery for carrying on the work and is able by combination to conduct that work on the most economical lines. Under these circumstances, unless it is intended that the Trinity House still carries out the work I have alluded to, I fail to see how without great injustice and increase of expense you could adopt the system of unification in its entirety. But when you come to dredging, and particularly wreck work, that is quite another matter. I should like to see the powers of the Thames Conservancy largely extended in this line, as in my opinion the Trinity House is not the proper authority for carrying such work out within the limits of the Port, and it could be done more effectively by the river authority, given that the means and the plant were provided.

8476. (*Chairman.*) Do you wish to say anything more in relation to dredging?—No, my lord. I have covered that part of it—unless you wish to ask me any question.

8477. Will you refer to the table (Appendix No. 2) which you have put in of the earnings of pilots for the year 1900. It does not seem to be clear as to how pilots are paid, and by whom?—They are paid entirely by the shipowners.

8478. And is this return of earnings made up from their returns?—From their returns. It is handed in to the Trinity House.

8479. By the pilots?—Yes.

8480. You have every reason to believe it is reliable?—They are obliged to do it by Act of Parliament.

8481. (*Sir Robert Giffen.*) I think you mentioned, however, that the pilots sometimes did work beyond their proper functions as pilots, for which they were paid by the shipowners?—Beyond their compulsory functions.

8482. Would that remuneration be included in that return?—Yes, it is all included.

8483. (*Chairman.*) Have you any further statement to make before questions are put to you?—Do you wish to hear anything about compulsory pilotage; it is a big question?

8484. I should like to ask you whether it is not a fact that compulsory pilotage above Gravesend was recommended to be abolished by the Committee on the Navigation of the River Thames in 1879?—Perhaps I had better deal with that part of it.

In 1888 the Parliamentary Committee which sat on pilotage matters reported that they were strongly of opinion that the time had arrived when the exemption of the owner from liability for damage done by his agent when the ship is placed in charge of a pilot by compulsion of law should cease to exist. They said such exemption was indefensible and inimical to the safety of life and property at sea. The abolition of compulsory pilotage is a question that has frequently been before Parliament, and Sir Michael Hicks-Beach, in 1891, when President of the Board of Trade, said, in a deputation of shipowners, that the Board of Trade have never acted upon their powers for the abolition of compulsory pilotage upon a particular district, and that it was not his business to press upon the pilotage authority to abolish compulsory pilotage. He further stated that when the proposal was made that the liability of the shipowner should be done away with, it was rejected in 1899 mainly by the influence of the shipowners, although unanimously recommended by the Parliamentary Committee. A shipowner present stated he invariably found one very strong ground which has been always urged by careful shipowners against the removal of compulsory pilotage, and that is that if removed their own vessels would be run into by other vessels, seeing that three-fourths of the vessels entering the Port of London are not in charge of a pilot. The report of the Select Committee of the House of Commons on Merchant Shipping in 1860 was in favour of its abolition "in most ports of the Empire" with due consideration for existing interests. In 1862 the Merchant Shipping Act was passed, but no alteration was made. In 1870 a Select Committee reported in favour of its abolition in the Port of London. In 1879 the Thames Traffic Committee reported in favour of abolition in the Thames above Greavesend, and in the bills introduced into Parliament in 1881 and 1884, clauses were inserted to abolish compulsion, but failed to become law. The Elder Brethren have always been of opinion that passengers need legislative protection because they are not so well able to judge of matters relating to their own safety as officers and seamen are. They have stated that they would refrain from opposing the abolition of compulsory pilotage provided the necessary safeguards for navigation towards the port and a proper provision for existing interests are secured. It would be necessary in the event of its abolition to provide for a system of cruising at Dungeness and a tax of some kind made to meet the expense.

8484a. (*Sir Robert Giffen.*) Functions which the pilots discharge and which are paid for beyond compulsory pilotage are in the nature of pilotage—it is pilotage work, is it?—I am not sure whether docking work could be called pilotage work. I have said that such work might easily be performed by the captain in ships and by the crews. They are very largely carried on by pilots.

8485. But whatever it is, what the pilot receives goes into that account which you handed in?—It does, it is a monthly return of his gross earnings; whether they are earned under his compulsory pilotage or whether they are earned by the extraneous duties which the shipowner asks him to carry out for him.

8486. He would not be allowed to receive a tip of any kind from the shipowner beyond what he returns to you?—We should not know it if he did. On the other hand it is quite conceivable, and it has been stated that his returns to us are very much in excess of what he actually receives.

8487. How can that be?—It is very conceivable. The shipowner may make an arrangement with a pilot which is an illegal one. He is obliged to return his full dues, but he need not necessarily get them.

8488. Is it an offence if he makes an improper return?—Yes. Some years ago I was sitting in the Admiralty Court myself. The pilot told me after the case was over that he received £500 a year from his owners in quittance of all services, whether his pilotage rates were below that or whether they were above. As a matter of fact they were always above, but he was serving in compulsory waters, and whatever his pay was it was commuted for £500 a year. So that that pilot was absolutely the owners' servant.

8489. For £500 a year?—For £500 a year, but he returned a different amount.

8490. You have fifteen pilots altogether who have received upwards of £960 a year?—Upwards of £900 I think I said.

8491. Some of them, perhaps, may earn as much as £1,500. Is that so?—The highest is £1,363.

8492. Absolutely the highest figure of any pilot?—That is one man. That was the highest pilotage which was earned in the London district.

8493. How many over £1,000?—Eight; five in the Channel and three in the river.

8494. These are pilots engaged by the great shipping companies for the big steamers, I suppose?—Generally speaking, so; the P. and O., the British India, and the other large lines.

8495. This is a select class of pilots, the very pick of the profession?—Yes; they call them "choice."

8496. (*Rear-Admiral Hext.*) You are speaking for the Trinity House, not for yourself, I presume?—I am speaking for the Trinity House.

8497. Could you give the amount received per annum for pilotage on the river by the Trinity House?—I could hand it in later.

(*The witness subsequently handed in a Table giving particulars as to Vessels piloted between Gravesend and London Bridge in the year ending December 31st, 1900. See Appendix, 23rd Day, No. 3.*)

8498. The amount that the Trinity House received for one year for inward and outward pilotage, and the duties they perform on the river?—Yes.

8499. We were told in previous evidence that pilots took outward bound ships, and did not bring in inward bound ships, and that there were two pilots on the river, namely, one to Gravesend and then one from Gravesend to the sea?—Up to about 1888 the pilots could either take out or bring in vessels. That was done away with, as it entailed a great injustice on those pilots who had to cruise at Dungeness, because they had to cruise whether their work was done by the outward man or by themselves. It was easier very often to obtain an outward man to bring in an inward ship, and the pilotage Order in Council was strictly enforced and was made from Gravesend to sea, or *vice versa*.

8500. Therefore one pilot does all the outward work and another pilot does all the inward work?—Yes, one class of pilot.

8501. Surely that must be a very expensive mode?—Not more so. The inward pilots must cruise to pick up the ships; the outward pilots must live in London or Gravesend or the vicinity.

8501a. You have told us a great deal about the disadvantage of London, but compare it now, for instance, with Calcutta, where you have the most difficult pilotage in the world, and where one pilot takes the ship out and remains at the entrance for an inward ship, and is able to bring her in. Why should not London do something of the same sort?—The outward man would not cruise.

8502. Could it not be arranged? Would it not be a very much cheaper plan?—Some of our pilots come up from Dungeness or the Wight, and some of them come up from the northern channel.

8503. But that is their own option. They choose to cruise?—No, they are obliged to cruise at those stations. It is open to any outward pilot if they cruise (which they will not do) to bring in an inward ship.

8504. But why will he not do it?—It does not pay him.

8505. Surely it must pay him to get the return voyage?—These choice pilots have their time fully occupied and would have to take their turn. Take the case of a pilot belonging to the P. and O. Company.

8506. Do you know any port in the world where the same system is adopted?—At Liverpool they cruise.

8507. But where the outward pilot does not bring in an inward ship?—I think in most ports, Southampton, for instance, the same thing occurs—and Liverpool and Plymouth. It is the general custom, I think.

8508. It is only in England, I think. I have not heard of it in any other country?—It is a long time since I was in Calcutta; there are the brigs there still, I suppose?

8509. Yes; they have the brigs outside. Will you look at Question 1652, when Sir Dixon Hartland gave his evidence. He stated that the Yantlet Channel had been dredged in accordance with the advice of the Commission that was held on the Lower Thames but it had

not been buoyed, and the question was asked, "The Yantlet Creek channel having been deepened, can you explain why the Trinity House did not buoy it?" The answer was, "I do not know"—I am under the impression that Sir Dixon Hartland was wrong.

8510. If you follow the next question, you will see "Did they tell you why they did not buoy it?" He also says, "I do not know." But the fact remains, I believe, that the Yantlet channel was not buoyed?—Nor dredged, I think.

8511. They state distinctly it was dredged?—The Trinity House went into this question—the Lower Thames Navigation Commission appointed by the Committee in 1894, suggested the buoying of this channel; it never was absolutely officially before the Trinity House. It came before them in a private notice from Sir George Nares, who was one of that Commission, to my predecessor, calling attention to the new surveys of the river about to be published, and stating that the Commission had found a channel had opened south of the river, called the Yantlet channel, and suggesting it should be buoyed for navigation, with a light at either end. It was referred to our Committee for report, and the Trinity House took a good deal of trouble in obtaining evidence, and they came to the conclusion that they did not approve of the schemes; neither did the pilots; nor any of the superintendents. I am under the impression that Sir Dixon Hartland was wrong.

8512. Now, to go on to another question. Supposing the Conservancy dredge a channel, and they refer it to the Trinity House. Who has the responsibility of buoying that channel?—The Trinity House.

8513. In the case of the Conservancy actually dredging a channel?—May I correct my answer. The Trinity House, if it was outside the Thames Conservancy limits.

8514. I know you do not agree with this, but presume for the moment that the Thames Conservancy had dredged the Yantlet channel?—Not thoroughly dredged.

8515. Presume they had and had acquainted you with it, would you have the power of saying, "We will not buoy it"?—Yes.

8516. Then, in fact, there are two authorities on the river who might possibly be brought into direct contest with each other?—It is very unlikely. It never has occurred.

8517. I think you will find it is the case that the Yantlet channel was dredged, and that the Trinity House never buoyed it?—We never buoyed it.

8518. But it was dredged, I think you will find?—What we said was, that even if a 27ft. channel did exist at the Leigh middle, and was marked for night and day navigation, it would be of little use until a channel of sufficient width for deep draught vessels was made right up to Gravesend.

8519. Do the Thames Conservancy consult the Trinity House before they dredge a channel?—No.

8520. Then it comes back to the same point—that if the Conservancy dredge a channel the Trinity House are not compelled to buoy it, and therefore the channel may become useless?—It might be so, but I should say that the Thames Conservancy had the power of buoying themselves.

8521. Do you think the Thames Conservancy have the power of buoying?—Yes. They come to us as a matter of convenience, but they could buoy themselves.

8522. Would your pilots recognise their buoys?—They would have to conform to the uniform system of buoying.

8523. And therefore you would have a dual system of buoys in the river, presuming they adopted that course?—No, not a dual system.

8524. But two owners, we will say?—So we have now with the County Council. We work in harmony.

8525. (*Mr. Ellis.*) You work in harmony, but you have a dual system to that extent?—In that respect. We act as a sort of agent for the County Council. It is easier and much cheaper, and after some hesitation we agreed to do it for them.

8526. It is not two co-ordinate authorities?—No.

8527. It is an agency?—Yes. Before departing from that may I just read you the last recommendation of my committee appointed to deal with this subject: "In conclusion the committee"—that is to say, the Tri-

Capt. G. R.  
Pygman.  
5 June 1901.

Capt. G. R.  
Pyryan.  
June 1901.

nity House committee—"recommend that until the Thames Conservancy alter the depth of the channel below Gravesend the decision arrived at by the board and communicated to Sir G. Nares in their letter of the 2nd October, 1895, be adhered to, and that no steps be taken to establish the gas buoys proposed by Captain Weller at present."

8528. (*Rear-Admiral Hext.*) Will you look at Question 2166 with regard to the "Minneapolis" being grounded?—Yes.

8529. She was grounded to avoid collision by the pilot, was she not?—The pilot's report is here. This is the official report: "We suddenly ran into a fog; I had to hard-a-port to clear a barque. Before the vessel could recover herself from starboard helm she took the ground. It was then dense fog."

8530. When a vessel is put ashore like that by your pilot do you make a charge for removing a bank?—No.

8531. I see your claim is made there. The engineer proposed to carry out this work?—That was the Thames Conservancy business not ours. We immediately held a court of inquiry on the pilot.

8532. And the pilot was exonerated. Then you stated just now about the deepening of the river—that there are only a small number of vessels which would benefit by the increased depth of water obtained by dredging?—That is so.

8533. Surely that argument applies to all steamers drawing over 24ft. I am talking as a seaman?—I am in no way averse to the river being dredged. The question I dealt with was the difference between 28ft. and 30ft.

8534. But you would advocate dredging the river to the depth proposed by the Commission on the Lower Thames?—I am not quite sure what they did recommend.

8535. I think it was 30 feet to Gravesend?—30 feet at low water—it is not a question on which the Trinity House is an authority. If they can afford to do it certainly the deeper the river is, the better. But in the last year that would only have benefited 12 ships.

8536. You think it would only have benefited 12 ships?—Yes.

8537. It would not have benefited every deep draft ship coming up to London?—No; and not even those twelve unless they had happened to be there at low water.

8538. If you think that, you would not advocate the dredging of the river?—Not up to 30 feet.

8539. Up to what depth would you advocate it?—I should say 30 feet should be the limit unless they had plenty of money. It is a question of money. As the Thames is deepened so vessels might be altered, in which case the river ought certainly to be made sufficiently deep to admit all reasonable draught of ships.

8540. But as an expert of the Trinity House I am asking you to what depth you would advocate up to Gravesend?—I should not oppose the dredging of the river up to 30 feet at low water.

8541. But would you approve it?—I should think it is rather too much.

8542. Then what would you advocate?—I should think 28 feet at low water—springs.

8543. You stated just now that if the river was dredged there would be an increase of buoyage?—Gas buoyage.

8544. Why should that be?—If the river was dredged part of the scheme is that there should be a large number of gas buoys.

8545. I do not think that came before us at all in any of the evidence. I ask you more or less as a practical man. I cannot see why the channel being dredged should necessitate a larger number of buoys?—It was part of the Lower River Commission scheme that there should be gas buoys there and I think it certainly would have that effect. There would be a very considerable number of gas buoys. The tendency is to increase gas buoys all round England and certainly there would be a very large increase in the River Thames and there must be before many years are over in any case.

8546. But that would not be necessitated by the deepening of the river would it?—Yes, I think there would be a deep water channel which would have to

be lit at night in order that the deep draught vessels might be kept within its limits. I put the question to my committee. They thought that there would be as many as 30 to 40 gas buoys required with a 30 feet channel up to Gravesend.

8547. Going back to one answer you gave just now about pilotage at Liverpool and pilotage at London, virtually according to what I gather from what you said, Liverpool pays not only London dues but Liverpool dues?—Liverpool does not pay London dues, but general lighthouse dues.

8548. Does that include the pilotage to London?—Buoyage.

8549. I got rather confused just now in regard to what you said. You said that the great advantage of London was that there was so much service done which was charged to a general fund and not to London?—Lighting and buoyage—not applied to pilotage.

8550. And therefore Liverpool pays for the lighting and buoyage of London as well as the lighting and buoyage of the Port of Liverpool?—Yes, that is so.

8551. Why should the Trinity House allow Liverpool to do its own pilotage instead of doing it themselves, if they keep London. You say that the Trinity House does the pilotage of many of the great ports. Why should they have allowed Liverpool to do their own pilotage instead of carrying out the pilotage of Liverpool in the same way that they carry out the pilotage of London?—Pardon me, I did not say the great ports; I said the outports.

8552. Will you give us the reason for that?—That is by Act of Parliament 6 George III. They have rights over their own ports, and other large ports do their own pilotage. They are their own pilotage authority.

8553. Then why should not London have its own pilotage authority?—It has to some extent.

8554. Surely not; it has got Trinity House; Trinity House does the coasts, and so on. I am rather wanting to separate them?—They are separate. There is a London district pilotage. We have 37 Trinity outports of London, but London has a separate committee.

8555. Was Liverpool ever under the Trinity House?—Never.

8556. Have you ever had a port under the Trinity House which you have allowed afterwards to do its own work?—Yes. Newport and Gloucester in the Bristol Channel under the Bristol Channel Act of 1861.

8557. (*Mr. Ellis.*) I want to take you for a moment or two into the matter of pilots and pilotage. You have put in a schedule of fees or earnings on the voyage. I suppose you are satisfied with the *personnel* of the men that you get as pilots?—I think so. I should say that they are as good as any other pilots in the world; certainly as good as any other pilots in England.

8558. They are sufficient for the Thames?—They are submitted to a very rigorous examination.

8559. One of them gave us an interesting account of the examination at Question 4156. Has that system been in operation for a number of years?—There has been no alteration in this for many years. That is our system—first below the 14 feet up to 14 feet, and then beyond it.

8560. That system of examination has been found quite satisfactory for a number of years?—Yes.

8561. When you appoint a pilot after examination, do you hand him any copy of rules which he has to observe?—Certainly.

8562. I do not know whether Mr. Kent, when he was before us, put in a copy of those rules. I think it would be convenient to have the rules of the London pilots on our notes. Perhaps you would hand a copy in?—It is the Merchant Shipping Act of 1894 which is handed to him, and besides that there are some private rules.

8563. You used the word "private." Have you any objection to our having a copy of the Rules?—I will hand in a copy.

(*The witness handed in a copy of the Rules and Regulations relating to Pilots in the Port of London. See Appendix, 23rd Day, No. 4.*)

8564. Then I turn to accidents; of course the pilots were before us, and we had some evidence given us with regard to accidents on a question put by myself. Will you turn to Question 4271 and Question 4346. You see

both Mr. Davies and Mr. Rigden mentioned that they had had some accidents. Is there in every case a report made by a pilot to the Trinity House when he meets with an accident?—Invariably.

8565. How many reports had you during the year 1900 from pilots with regard to collisions; can you give me the figure approximately?—On an average about seven or eight a week.

8566. From 350 to 400 per annum?—The average number of collisions reported in the London District for the years 1897, 1898, 1899, and 1900 amounts to 402 per annum, there being 360 pilots.

8567. That includes large and small?—Yes, chiefly small.

8568. What was the nature of the small accidents—running down small craft or what?—Coming into collision with them and touching the ground.

8569. In how many cases approximately of the 400 or so did loss of life occur?—Very few—hardly any.

See 10783. 8570. Would ten lives be lost per annum, speaking from memory?—About two a year.

8571. Then on these reports what action, if any, does the Trinity House take?—The Committee examines and reports to the Board if any punishment is required.

8572. As regards the pilot?—As regards the pilot. I have here the form. This is a particular case, the "Minneapolis."

8573. The pilot reports on a schedule form?—Yes. I will hand in a copy of the forms.

(The witness handed in *Forms of Report used by Pilots in the Port of London. See Appendix, 23rd Day, No. 5.*)

8574. There are a series of questions, I see?—Yes.

8575. Is the conduct or misconduct, as the case may be, of the pilot the only subject of the inquiry?—By "conduct of the pilot" do you mean his technical conduct?

8576. I mean does the inquiry only touch the conduct of the pilot?—That is all.

8577. Supposing the pilot says for instance: "I was surrounded by so many craft; they were lying more or less derelict; they were not under proper charge." Does the Committee take any notice of that?—Certainly; it is part of their duty to ascertain and determine whether the pilot has acted in a seamanlike manner.

8578. Supposing they determine that a pilot had acted in "a seamanlike manner," and was in no way to blame, and let us assume for a moment that a death had occurred in consequence of this, do they make any representation to your Board?—Yes.

8579. Does the Board make any representation to anybody else?—No, unless in answer to complaints.

8580. It stops there?—We are final, unless, of course, there is an inquiry of the Board of Trade or the Admiralty Court.

8581. Does the Trinity House think it its duty in any case such as I have assumed, or attempted to describe, to report to the Board of Trade and suggest that a further inquiry should be held?—No. If it becomes obvious to us that an action at law is probable, we do not even hold the inquiry, because it would prejudice the case. We should hold an inquiry, but we do not give any judgment. If we were to find the pilot had been to blame it would prejudice the case, certainly.

8582. You see what I am trying to get at. I am trying to get at whether the Trinity House, as a public body, consider their functions entirely confined to the conduct of the pilot or not. Do they?—We always have the knowledge that the Board of Trade is behind us, and that it would be within the functions of the Board of Trade to ask us why we did this, or that, if it was contrary to what they thought was the reasonable course to take.

8583. You do not consider it your function in any way to suggest or initiate, having the Board of Trade behind you?—No.

8584. (Sir Robert Giffen.) Would it be the fact that any case that came before you of a pilot's conduct in grounding a ship would also be reported to the Marine Department of the Board of Trade?—No, not unless it emanated from them.

8585. Is not every casualty to a ship reported to the Board of Trade?—In that case the Board of Trade

would approach us, and in that case we should communicate to them the result of the trial.

8586. Is not every casualty reported to them?—I am not sure, but I think when there is loss of life or great loss of property—certainly not every trivial case. They would be innumerable.

8587. (Mr. Ellis.) Was the change that was to be made by the Merchant Shipping Act of 1898 in respect to the fund which you described to us made on any suggestion from your body, the Trinity House, at all?—Only so far that it was made on the suggestion of a select committee.

8588. But you concurred in it?—I personally was one of the committee. I represented the Trinity House.

8589. I am asking you as regards the Trinity House?—Not as a body.

8590. Of course, I may take it that this morning you are here supplementing the evidence of the secretary, fully authorised by the Trinity House?—Yes.

8591. We may take it that all you have said has been said on their behalf?—Yes.

*Cross-examined by Mr. Scrutton.*

8592. Within the last few years a rather important change has been made in the constitution of the Trinity House, has it not?—Yes.

8593. The Pilotage Committee had put on it by Parliament a representative of the shipowners and a representative of the pilots?—Yes, that is so.

8594. Perhaps you can give us the date?—1899.

8595. The Trinity House, I think, opposed that proposal?—Yes.

8596. They thought it was going to work badly?—They did not see any necessity for it.

8597. You gave evidence against it, amongst others?—Yes.

8598. Have your fears been realised in actual working?—I should not say it has resulted in any good.

8599. Has it resulted in the harm that you foresaw?—It has been a great deal of trouble to the pilots.

8600. Has it resulted in any harm having the shipowner and pilot on the board?—No, I do not think so.

8601. I think at that inquiry evidence was given that a number of other ports were adopting the same practice?—Generally where there was no nautical element on the board.

8602. I gather the Trinity House does not consider it part of its duty at all to attempt to put the law of compulsory pilotage in order?—No; it leaves it to the Legislature.

8603. It leaves it in its present chaotic condition?—We do not make the law—we carry it out.

*Cross-examined by Mr. Daldy.*

8604. If the channel of the river is deepened up as far as the Albert Dock entrance would that throw a good deal of extra work on the Trinity House?—No, I do not think so.

8605. There would be no alteration to be made in the buoys and lights; they would stand just where they are?—Do you mean from sea up to the dock?

8606. Take it from Yantlet up to the dock?—I have said a very large number of additional buoys would be required.

8607. Instead of what may be called maintenance work there would be a certain amount of new work to be done?—A little.

8608. In case of conflict between the Trinity House and the river authority it would be more serious if it were going on while this channel was being widened than it would in the present state of things?—Speaking under correction, I should think if there was any conflict between the London authority and the Trinity House, Trinity House would give way. It would be in their waters.

8609. That is not quite an answer to my question?—Only that I cannot conceive the possibility.

8610. I think that besides London, Southampton is the only large port in the country of which the buoying and lighting is in the hands of Trinity House is it not?—We buoy the Tees. We do not buoy Southampton Water except one or two gas buoys for them.

Capt. G. R.  
Pyman.  
5 June 1901

*Capt. G. R.  
Vyvyan.*

5 June 1901.

8611. But except Southampton—Southampton is the principal port is it?—We do not buoy Southampton except with one or two buoys.

8612. Then may I say that London is the only first-class port in which the buoying and the lighting is in the hands of Trinity House?—We buoy the Solent and the Tees.

8613. You said, as I understand you, that London had the advantage of getting its lighting and buoying done out of the General Lighthouse Fund?—Yes.

8614. I did not quite catch your evidence, but I think you said something very much like that. Do you say that London gets more advantage out of that General Lighthouse Fund in comparison with its shipping than other ports in the country do?—Than some other ports, Liverpool for instance; more than all local ports.

8615. But putting aside what you call local ports—by which I understand you to mean ports which do their own buoying and lighting?—Yes.

8616. Putting those aside do you say that London under the present arrangement gets a greater advantage from having its lighting and buoying paid out of the General Lighthouse Fund than it would if the General Lighthouse Fund were split up between London and the other ports *pro rata* to shipping?—Yes.

8617. To a substantial extent?—Yes.

*Cross-examined by Mr. Cranstoun.*

8618. In the case of collision with craft you say that a report is sent in by the pilot?—Yes.

8619. Is it always a written report?—The form is printed; his remarks are written, of course.

8620. It is a skeleton report that he fills up?—This is it; these questions are printed.

8621. And that is sent in within a day or two of the accident?—As soon after as possible.

8622. You say that when there is a prospect of litigation arising out of the accident you take no steps?—I do not say we take no steps.

8623. You hold no inquiry?—I will not say that we do not hold an inquiry. We do not adjudicate. We do not pass judgment.

8624. Then I misunderstood you. When there is a prospect of litigation do you hold any inquiry as to the pilot's conduct?—I think we should not until it was over.

8625. Who decides as to whether there is a prospect of litigation?—The solicitors.

8626. Your own solicitors?—No, the solicitors of the parties.

8627. Do you say that on all occasions you get a letter from the solicitor, say, of the barge that has been run down?—In all cases we get a letter or a personal application.

8628. And when you get this letter no inquiry is held?—We generally get information that there is going to be a trial and then we wait.

8629. But in hundreds of cases the trial never comes off. In the case of a pilot who is impecunious and would not be worth suing I may take it that no inquiry into his conduct is ever held?—I do not say that.

8630. But is it ever so. How long do you wait before you hold an inquiry?—It depends very largely on the delay that is occasioned by the solicitors—sometimes 18 months.

8631. This is a somewhat serious matter, and I wish to treat it seriously. There are cases in which the pilot is not worth suing, as you know?—I do not admit that at all.

8632. We will take the case of a pilot who gets, we will say, £125 a year as his gross earnings, and then he has deductions made from them. Do you think in that case, supposing damage was done to the tune of £1,000, it would be worth while suing the pilot?—They would get something perhaps.

8633. But do you know, as a matter of fact, that in scores and hundreds of cases they do not get a farthing—that the pilot is not worth suing?—I do not know about hundreds of cases; I know that it has occurred.

8634. I should mention here that we have had given in evidence fifty cases?—In what lapse of time?

8635. Will you look at Appendix No. 1 of the 16th

day? There the cases range from the 7th May, 1895, down to November, 1900. There is a great array of claims made against pilots which had to be abandoned, and in some cases the pilot was an undischarged bankrupt?—In all these cases has it been proved that the pilot was to blame?

8636. I do not know whether he was to blame or not, but the action was not proceeded with on the ground that the pilot was not worth suing. Litigation has arisen, and I want to know when the inquiry in these cases was made as to the conduct of the pilot. In some cases an action was brought. On the 18th January, 1896, there is one. The "Nellie" was sued, and the pilot was held to blame. It was abandoned against the pilot. Costs £140 were paid by the plaintiffs in addition to bearing the damage and their own costs of action. Then there is another case immediately following: "Abandoned; pilot no money." Then there is another: "Settled for £10." Then another: "Abandoned; pilot undischarged bankrupt." That is 7th October. Then the 20th February: "Abandoned; pilot impecunious." There are two cases of that kind. Then the next one: "£16 only recovered from pilot under a committal order." That is upon pressure being brought to bear. I need not go through all these cases, but I want to know when was the inquiry held in these cases by the Trinity House as to the pilot's conduct?—When a complaint is made an inquiry is held.

8637. You have said it is not always held?—Unless we know that there is going to be litigation.

8638. In all these cases there was not only going to be litigation, but there was litigation. In those cases were inquiries held?—Were they brought to the notice of the Trinity House?—I presume that they were. The pilot would make his report to you in each of these cases.

8639. (Mr. Ellis.) You remember I asked you specifically the question whether in all cases the pilot made a report?—Yes.

8640. And I understood you to say, yes?—Yes. So I am advised.

8641. (Mr. Cranstoun.) What I want to understand is this. If litigation is threatened, or if it goes on, the Board stops; it makes no inquiry?—That is so.

8642. So that in all those cases no inquiry was held?—I should not say that. Inquiry might have been held afterwards.

8643. There are cases here in which the pilot is an undischarged bankrupt?—Yes.

8644. Did the Board not know that they were employing a man who was an undischarged bankrupt?—We are not advised that the fact of a man being a bankrupt incapacitates him from being a pilot.

8645. May I take it that you know that undischarged bankrupts are employed?—Yes. One case is present to my mind which occurred just recently.

8646. On the 31st January there is the case of a pilot an undischarged bankrupt?—Yes.

8647. You have an absolute power, have you not, to withdrawn a pilot's licence at any time you choose?—Yes.

8648. And in the case of an undischarged bankrupt acting as a pilot, who is the only person to whom the barge has to look to for damage, you were not advised to withdraw his licence?—We have taken legal advice on this question, and we act on it.

8649. The advice was that you could still keep the undischarged bankrupt on with his licence, although he might occur liability in the course of his duty. Would you yourself, in your official capacity, object to an undischarged bankrupt being kept on as a pilot?—I have said just now we have taken legal advice on this subject.

8649A. I presume you have the case that was laid before counsel on that point?—We have the case that was legally stated.

8650. This is a case of an undischarged bankrupt incurring liability. You have the case, have you?—Yes, we know of it.

8651. And the opinion?—Yes.

8652. (Chairman.) Could you supply us with a copy of the pilotage rates?—I will do so.

(The Witness handed in a Table of the Rates of Pilotage in the Port of London. See Appendix, 23rd Day, No. 6.)

Mr. JOHN MCEWAN called and examined.

Mr. J.  
McEwan.

5 June 1901.

8653. You are a member of the firm of McMeekin and Company, importers and exporters, and wholesale dealers in tea?—Yes.

8654. You desire to give evidence on behalf of the tea trade, so far as it bears on the subject of the Inquiry of this Commission?—Yes.

8655. With regard to your evidence, we wish to tell you that we are prepared to hear you so far as matters of fact are concerned which you know of your own knowledge, but we understand you desire to hand in certain statistics dealing with the growth of the tea trade, which you say are, to some extent, merely approximate. We are not prepared to take statistics which you tell us are merely approximate. Those statistics, we think, should come from the bodies directly concerned. Further than that, we do not wish to hear general views with regard to the tea trade, but any complaints you may have to make so far as regards the working of the trade with which you are concerned, we shall be pleased to hear. On that understanding would you like me to ask you some questions?—Yes.

8656. You have had 24 years' experience in connection with the tea business in London and elsewhere, and have personal knowledge of the working of the tea trade in other ports of the United Kingdom, particularly in Glasgow and Manchester?—Yes.

8657. You have also had personal experience of the handling of tea in such large centres of tea business as Calcutta, Colombo, Melbourne, Sydney, Montreal, New York, Moscow, Odessa, and Hamburg?—Yes. May I explain that my statement of evidence was prepared in November last, before I knew what would come before the Commission, and the statistics I proposed to give you were designed to present tea separately to you as a very important article coming under your reference with regard to dutiable goods.

8658. That you will refer to later in your evidence?—Yes. The statistics I was prepared to submit are all official figures abstracted from the books of the Custom House and of the Board of Trade, but they are in such a form as to show the state of things with regard to the tea trade in London.

8659. You tell us that the statistics are merely approximate?—So they are merely approximate, but I bring them up to show to you the position of the tea business under existing conditions, and they bear upon how it may be affected by any change.

8660. Will you tell us whether you have any complaint to make as to the dock facilities or accommodation?—No, I have no definite complaint. I have been asked to give evidence with regard to the tea trade, and I wish to point out what seems to me to be the advantages and disadvantages of the existing system, and what would go wrong if any change took place.

8661. If there is any reason to suppose that any proposed change will affect you individually or your firm, we shall be pleased to hear your evidence with regard to that, but a general statement as to the condition of the tea-trade in the Port of London I do not think comes within our reference. Do you say that London bears favourable comparison with many other ports?—For conducting transshipment trade in tea—London is in an exceptional position, the goods being absolutely free of expense save that of lighterage, and although dutiable goods. His Majesty's Customs take no control over them beyond safeguarding the revenue from the possibility of such cargo being landed in the United Kingdom without duty having been paid thereon. London bears most favourable comparison with many other ports owing to the absence of any dues or charges on tea in transit in this way, or upon tea arriving from abroad, and consequently it has always been a large transshipping port. The amount of tea thus transhipped within the port gradually rose from 76,784lbs. of the value of £7,678 in 1851, to 16,308,000lbs. of the value of about £830,000 in 1888; but thereafter it declined, till in 1894 the total was 6,953,000lbs. of a value of about £308,000. It has since further again gradually risen to 13,511,000lbs. of a value of £294,731 in 1899. I do not attribute the falling off in that class of trade to anything whatever connected with the Port of London, but to the ordinary commercial development of other nations and of the British Colonies. New trade routes have been opened up, and particularly the increase in the number of

steamships, induced by the opening of the Suez Canal, has given facilities for direct transit that renders London no longer necessary as the general tea *entrepôt* of the world. Then, again, the existence of six or eight trans-Continental lines of railway in North America, all more or less in competition with each other as to rates, has caused the United States and Canada to obtain a large portion of their tea supplies through their western sea-board, *via* San Francisco, Seattle, Tacoma and Vancouver, leaving Great Britain to supply, instead of all as formerly, only a small proportion of the requirements. Russia and Germany in particular, although the latter is only a small consumer of tea, have established lines of steamers sailing direct from tea-ports to Odessa, Hamburg, and elsewhere, and in addition to the Transpacific lines of steamers there are now regular sailings from the principal tea-ports of the East, *via* the Suez Canal, to New York. The reason why this transshipment business has not entirely ceased is that there are still many ports to which no direct steamers ply, and that London with its cheap system of transshipment and its constant large supply of tonnage, both inwards and outwards, is undoubtedly the best transshipping point. The increase shown in recent years arises from the fact that the teas of Indian and Ceylon production (formerly too costly for certain outlets), have of recent years fallen so much in value that they have largely displaced China tea in certain markets not yet sufficiently important to have direct steam communication. An example of how, for transshipment business, London is able to hold its own in competition may be cited. Tea from Calcutta or Colombo for Montreal may be shipped either on through bill of lading, *via* New York with rail transit thence, or *via* London with steamer transit thence. The total freight by the latter route is slightly less, but the difference is about absorbed by the extra insurance premium for St. Lawrence risk. The time occupied by the total journey is very much shorter *via* London, because of the better and quicker class of vessels available for both portions of the journey. For that particular port London would doubtless lose this transshipment if dues on tea cargo were payable in and out of port.

8662. Then have you anything to tell us about the special expenses in London. There is no complaint to make, is there?—Yes, there is very serious complaint. There can be no doubt that the great size of the Port and City of London entails expenses upon commerce which smaller places escape. For tea business the long distance for rail, lighterage or cartage, the frequent handling by men earning such wages as the standard of living and expenses in London call for, and the general high cost of materials, all operate adversely, but beyond those considerations tea entails heavy special expenses for handling through three causes: (a) The high standard that has hitherto been demanded and maintained as to the uniformity of all samples. (b) The ascertainment of weight to satisfy the requirements of the Revenue. (c) The irregularity of weights and tares. The first cause necessitates the opening, emptying out, bulking, and refilling of a large proportion of the tea imported from India and Ceylon. The tendency of modern times, where large quantities have to be quickly handled, and where values have fallen so much that slight differences in character make but little alteration in value, is not to insist so strictly upon bulking in London, and much of the bulking is done in the factories where the tea is made. If producers of tea could ship large lines of uniform sample in chests of nearly uniform net weights, and buyers would agree to accept samples drawn in the simpler manner followed in other countries, charges might be greatly reduced. The tea traders in London, however, as a rule, have in their methods been very conservative, and shown unwillingness to relax old conditions, while the producers have been slow to adopt improvements which would simplify the handling of tea, and therefore lessen the cost entailed. I have said that I saw no disadvantage under which tea suffers so far as the docks themselves are concerned, but when the tea comes to be warehoused in London it is subject to heavy charges which undoubtedly press hardly upon the producer, and must somewhat handicap the exporter. It has become the custom to talk in a rough-and-ready way about "dock charges," but where tea is taken overside on arrival there are no dock charges, properly speaking. The only expense until the tea is

Mr. J.  
McEwan.  
5 June 1901.

housed in the bonded warehouses is that for lighterage. The more correct term to use would be that of "warehouse charges."

8663. May I take it that the conclusion you have come to is that you do not consider the London warehouse rates are unduly high, but that they are higher than they would be if the system were less complicated in London?—Yes.

8664. But I understand you to say that you do not suggest any method of making it less complicated?—I do for certain classes of business. As far as I can gather the general belief is that the expense might be lessened under certain conditions—that is working tea for home business.

8665. Have you anything to tell us with relation to the quay rate in the bonded warehouses?—The quay rate does not come within my knowledge in my business. I pay no quay rates. The question of proposed rates I have tried to deal with. It would affect this transshipment business seriously if there were anything put on.

8666. Do you wish to say anything more about that?—From my own experience, and from accounts in my possession, I can show that, taking 2s. 6d. per package as the London rate, the same work is done in New York, Montreal, and Sydney, for, on the average, an equivalent of 8d. per chest, in Melbourne for 1s. 3d., and in Hamburg for 1s. 1d.; but the system is so absolutely different in its simplicity that there is no real comparison.

8667. Have you anything to say with regard to the rates on re-exported tea?—Tea which has to be re-exported has, as a rule, already borne the charges referred to in connection with tea for home consumption, and, in addition, has to pay a rate of 10s. 5d. per ton, which includes collection, conveyance to docks, wharfage, and portorage. It cannot be considered a very excessive rate in view of the work done, but of course when the charge has to be added on to the charges previously incurred as imports, it will be seen that a very material expense beyond that incurred in the case of transshipment, falls to be added to the cost of the tea, which undoubtedly would give a preference in dealings to ports where all those expenses are on a lower scale. The re-exporting trade of the port of London by 1884 reached a total of 45,185,000lbs., or about one-fifth of the total imports. It had, however, in 1899 declined to 31,571,000lbs., or about one-ninth of the total imports. The reason of the falling off is largely to be found in the increased direct trading facilities referred to in dealing with the transshipments, and here the expensive method of handling tea in the London warehouses has doubtless been a factor. I may point out that the average value of tea in London was, in 1870, 1s. 4-42d.; in 1880, 1s. 1-47d., and well over 1s. in 1884; but it had fallen in 1899 to 8-3d., and, of course, the working charges in London make an appreciably higher percentage on the reduced value. Another effect of the tea warehousing method followed in London which is somewhat restrictive of re-exportation business, is, that the handling necessitated by the weighing and bulking operations conducted as they are at present, causes the packages to suffer, and they have, before shipment, to be re-coopered, and in that condition they are frequently objected to by shipping companies, and in America particularly they are referred to as "In English order," a term synonymous with "bad order." If it were practicable to establish a bonded wharf in London directly under the control of H.M. Customs, in which tea could be temporarily warehoused without being brought to account and with a minimum of the elaborate operations previously referred to, such facilities might in time be freely taken advantage of, and put the port in a better position to compete with, say, tea warehoused in the Freihafen at Hamburg. If sampling facilities were given for tea so warehoused, it could be offered for sale abroad and very little cost incurred, and it could, if necessary, provided it had not been sold abroad, be ultimately moved into an ordinary warehouse for sale in London in the usual way. There is at present some provision of lower rates for tea actually entered at time of arrival as for exportation, but there is still a large margin for economising were my proposal of a Customs bonded wharf for waterborne teas adopted. Considering the question of the warehousing of tea in bond generally in London, I am of the opinion that it would be better for the trade of the port if all bonded tea warehouses were under a public trust, and the work done at the lowest possible

rates consistent with efficiency. Were this the case, merchants would have more confidence in the administration and in the proper handling of the goods than can be the case where private ownership has little in view but the obtaining of a maximum of profit for a minimum of service. At present certain of the warehouses are in the hands of firms who are themselves tea merchants, importing tea or taking part risks in the tea stored in their warehouses. The buyers of such teas have to accept the warrants issued by those who are in whole or in part proprietors of what they have sold, but still retain in their own custody, and it certainly would be preferable if the custodians of the goods were absolutely independent of either the sellers or the buyers. There is this to be said for the practice, H.M. Board of Customs allow those firms to hold in their own bonded warehouses their own teas, so that doubtless they have been satisfied as to general standing and character.

8668. (Mr. Peel.) What are the docks that are principally used by your business?—The docks into which tea vessels principally come are the Tilbury, the Victoria, and the Albert Docks. There is hardly any tea comes to any other dock.

8669. The bulk of it goes overside into barges, does it not?—That is not within my own knowledge. I should say, roughly speaking, that the bulk of it does go overside.

8670. Are those ports that you speak of with regard to transshipment mainly English ports?—They are not English ports at all. "Transshipment" does not relate to English ports.

8671. (Sir Robert Giffen.) You said that in 1851 the value of about 77,000lbs. of tea transhipped at the Port of London was £7,678, but are you aware that the value of tea at that time, or the value of any other article in the Customs, was not ascertained in any shape whatsoever, if you have taken the figures from the official statistics?—I have taken them from the Board of Trade statistics.

8672. That is a merely artificial value?—That is why I qualify it by saying that the figures were merely approximate.

8673. We have no reason to believe that it was in any shape the value of the tea at the time. It was an artificial valuation established about the year 1690, and there was no ascertainment of the values in the way that they are ascertained now?—That is interesting from a statistical point of view.

(Sir Robert Giffen.) I merely put the point to you so as to have on our notes that the thing was not allowed to pass without the question being raised.

(Mr. Balfour Browne.) I have listened to what this gentleman has said, and I think the only criticism he makes is with regard to transshipment, and, as your Lordship knows, there is no proposal to alter the charges with regard to transshipment traffic at all. Our Bill did not propose to do it, and we have not submitted any proposal to this Commission with regard to transshipment, so that the custom, practice, and charges would be precisely what they are to-day. With regard to rates, of course I do not propose to follow this gentleman into the question of existing rates at all.

Cross-examined by Mr. Harper.

8674. Where do you draw your samples from which you sell?—At the warehouses.

8675. The up-town warehouses?—Yes.

8676. Cutler Street?—All the warehouses.

8677. Is it not a fact that the great bulk of the tea trade of London is done through the wharves?—There are 21 bonded warehouses.

8678-9. You have probably seen the table which Mr. Ryder handed in on the 3rd day, Appendix No. 1?—Yes.

8680. I find there that approximately not more than 4,000,000lbs. of tea out of nearly 217,000,000lbs. imported into London for the year ending 31st December, 1899, was in the dock warehouses at the docks, and of that at Tilbury only 77,000lbs., and at the Victoria and Albert, 66,000lbs.?—Those statistics merely refer to small payments of duty.

(Mr. Harper.) Forgive me. They are quantities of tea imported into the Port of London on which Customs dues are received.

Mr. JOHN INNES ROGERS re-called and further examined.

8681. (Chairman.) You are chairman of Joseph Travers and Sons, Limited, importing and exporting merchants, dealing largely with Colonial produce?—Yes.

8682. You desire to give evidence as to the trade in which you are engaged in so far as it bears on the subject of this inquiry?—Yes.

8683. Will you proceed with your evidence?—I gave general evidence on behalf of the Chamber of Commerce before, but I am speaking now on behalf of my own firm.

8684. We wish you to speak to matters within your own knowledge?—Yes. My firm is a very old-established one, and they are very much interested in the dock question and the question of charges. In our last business year we paid in the Port of London £11,877 in dock and wharf charges for the imports, rents, and delivery of goods, together with sampling charges and the like. In addition to this we estimate that goods which were bought by us of other persons landed in this port had their prices raised to the extent of £21,000 by the landing and other charges paid upon them by others. Putting those two amounts together, we estimate that the dock charges paid in London on the goods we sell amounted in our last business year to £32,000. Any material increase in such large figures would be of vital importance to us. Most of our goods liable to these charges are lodged not in the premises of the dock company, but in the public waterside wharves along the Thames. The reason for this is that the charges at the public wharves in our trade are on the average about 10 per cent. less than at the docks. The wharves are also nearer the centre of business, and their system of delivery is much quicker than that of the dock. If it were not for the lower charges at the wharves we should in most cases prefer to store goods at the docks, in order to save the delay caused in lightering up and down the stream. The insurance is also less at the docks. I wish to point out that, although the wharfingers' charges are, to the extent I have named, in our experience lower than those of the dock, yet the wharfingers are subject to the heavy cost of lightering goods from the docks to their premises, which is a great addition to their expenses. If we were compelled, as would be the case if the dock company obtained and exercised the powers recently sought by them (to charge rates on goods lightered up to waterside wharves) to warehouse goods in the docks, we should presumably have to pay at least 10 per cent. more for the charges on goods transferred to the docks. I am not in a position to say what the exact proportions may be that are housed in the docks and in the wharves in our case, but I believe that the compulsory storing of the goods in the docks would involve our firm annually in an extra charge of several thousand pounds in the year. The probable result of the proposal to charge rates on lighters would be that we should be driven to warehouse the whole of our goods in the docks. Ours is only one typical case, for the same result would follow with other firms throughout the whole extent of the London business. The wharfingers are already at a disadvantage as compared with the docks in the charge the wharfingers have to bear for lightering their goods up the stream.

8685. Are you speaking within your own knowledge as to the wharfingers?—Yes, because we are wharfingers ourselves. Although, as I have said, the wharfingers are already at a disadvantage as compared with the docks, yet they are able to undersell the docks in our trade to the extent of 10 per cent. If in addition to the cost of lightering in itself the dock dues proposed were charged upon the lighters and any goods they contained it is my belief that a gigantic monopoly would be created in favour of the dock company at the cost of the wharfingers and merchants of London. In years past London was the European depot for many branches of the grocery trade which have now been to a great degree removed so far as exports are concerned from this port. I will hand in a table taken from the Customs Returns showing the Imports to the United Kingdom, and to London of certain articles in 1876 and 1899.

(The witness handed in a table showing the Imports to the United Kingdom and to London, of certain articles in the years 1879 and 1899. See Appendix, 23rd Day, No. 7.)

Such goods are now sent direct to ports like Antwerp and Hamburg. I am fully aware that there are other causes for this, but one main cause is the heavy nature

of the dock charges in London—when I say dock charges I mean of course dock and wharf charges—in-sufficient depth of water in the river and other general causes, which are rapidly destroying the character of this port as an entrepot for colonial and foreign trade.

8686. With reference to the London and Hamburg rates are you prepared to put in any specific instance comparing like with like?—No. I got up a comparison for the purposes of our own business to see whether it was best to send the goods to Hamburg or London.

8687. Have you any account sales?—No; they are taken from the dock books.

8688. Have you anything to say with regard to the shipping ring?—Yes. The shipping ring is a combination between various companies of shipowners to charge certain rates of freight and to allow at the end of a term—a year I think it is—a certain discount, 10 per cent. or 5 per cent. in some cases, to those who can guarantee that they have only shipped by that particular line. If they have shipped by any other line than the lines belonging to the combination they forfeit their discount.

8689. Is it in the nature of an agreement?—Yes, it is.

8690. Is it an agreement of which you are cognisant?—Yes, I have it in print.

8691. Are you prepared to put it in?—Yes, I think I can.

(The witness subsequently handed in a copy of claims made for discount by Messrs. Travers & Sons under the agreement referred to. See Appendix, 23rd Day, No. 8.)

8692. (Mr. Ellis.) Does this matter touch you in your own personal transactions?—Yes, it does. We have a branch at Singapore, and we suffer very much.

8693. You have arrived at this knowledge in the course of your own business?—Yes. It is my belief that the shipping ring has a very injurious effect upon the trade of London as British vessels, some of them subsidised by Government, it is stated, charge lower rates for shipment in some cases from ports like Antwerp and Hamburg than they do from London. Then I do not think the question of the depreciation of private riverside property (which, in my opinion would follow if the Docks charged the proposed rates on lighters), has been before the Commission. This is within my own knowledge. In addition to storing large quantities of goods at public docks and wharves of this port, my firm has two warehouses on the shores of the river at Bankside. That is for my own business. At these warehouses we receive a certain quantity of goods which we import and which are lightered up the stream. We also send down goods by lighter for shipment abroad and to the Colonies. For these water-side facilities we pay an extra proportionate rent for the convenience we enjoy as compared with inland warehouses. We have an inland warehouse and a waterside warehouse and the waterside warehouse costs us for the accommodation a third more. If the proposed dock charges were made on lighters, we should lose this advantage, and the extra rent we are paying would be confiscated for the benefit of the Dock Company. In our own case the loss might not be very serious, but in the case of the public wharfingers it would amount to many millions of pounds if they were deprived of the privilege of dock-free lighters which they enjoy by Act of Parliament. The general objections to the system of barging have been dealt with in the Chamber of Commerce evidence. I wish to add that in our own case we often have orders for comparatively small lots of goods for export. In these cases it is not practicable to fill a barge, and goods have consequently to be sent by land, which is expensive. In my belief, a system of collecting and delivering barges, propelled by steam, or other mechanical power, is required, to ply up and down the river and to deal with large or small quantities much as land carriers, such as Messrs. Pickford, Carter Paterson and others, do on land. I ought to say with reference to the evidence of one of the Dock Company's witnesses that my idea is not large barges because they are for small quantities of goods.

(Mr. Balfour Browne.) I think your Lordship has had this from this witness before. I find it under Question 1231.

(Mr. Rowland Whitehead.) Surely Mr. Rogers is entitled to explain what he meant by that previous evi-

Mr. J. I.  
Rogers.  
5 June 1901.

Mr. J. I.  
Rogers.

5 June 1901.

dence which has been commented upon in the evidence given by one of the directors of the Dock Company.

8694. (*Chairman.*) I think Mr. Rogers was telling us that he meant small barges?—Yes. The object of my remark was this. Mr. Scott as I understood, said that this pointed to thousand-ton barges, which would entirely destroy the use of the dock, but it is quite impossible for thousand-ton barges to go and land at small wharves along the Thames, because there is no depth of water or accommodation for such leviathans. Why I say "other mechanical power" is because by the present law they are only allowed to be propelled by steam. In our own case we find that sailing vessels with canned salmon from San Francisco take weeks to unload here as compared with days in Liverpool for a similar class of vessels.

8695. (*Mr. Ellis.*) If you are speaking now from your own knowledge, cannot you give us specific illustrations, the names of the ships and the dates?—I could do so, but it is constant. We had a case the other day.

8696. That is very vague. We must have in this Commission some specific data. Can you put in anything confirmatory of that afterwards?

8697. (*Chairman.*) Do you yourself wish to complain?—Yes.

8698. Will you kindly tell us why?—We import salmon into Liverpool, and we also import it into London in precisely the same class of vessels, and it always takes longer to get the goods in London than in Liverpool.

8699. (*Mr. Ellis.*) That you say from your own experience, do you?—Yes, it is constant. The system of delivering goods for home use at the docks is very dilatory. Our experience, confirmed by that of the leading carriers, is that it takes much longer there than at the wharves.

8700. I do not wish to interrupt, but I should like to say that a general statement has very little effect on my own mind. Cannot you give us specific instances?—It is constantly occurring in the course of business. When goods for export or to be sent coastwise have to be barged from the docks the company makes in every case far higher charges than for land delivery. This overcharge is much against the interest of the Port, particularly where exports are concerned. Then I go on to explain what I believe to be the root of the whole thing. The root idea of the dock arrangements in London is that goods have to be landed in a public warehouse and housed there. With this in view a consolidated rate is charged, which most goods have to pay directly they are landed on the quays.

(*Mr. Balfour Browne.*) Is not this going into the charges on goods—the 25 per cent.?

(*Chairman.*) I think we are bound to hear this because it touches on the system and method of rate, which is a fair question for the Commission.

(*Mr. Balfour Browne.*) If your Lordship pleases.

8701. (*Chairman.*) Please continue, Mr. Rogers?—This consolidated rate includes a number of services which are not required in a vast number of cases. For instance, it includes one, two, or three months' rent according to the nature of the goods. In former years the system of warehousing goods for comparatively long periods was very convenient, goods only arrived at certain times of the year, and were kept in the docks until wanted. Customs duties also were heavy, which rendered it desirable to keep goods in bond, in order to save interest on capital. In modern trade prolonged warehousing is quite unnecessary, but, while the system of business has changed, our dock companies have not moved with the times. In Liverpool the system is to have a low quay rate which includes the landing, weighing, and sorting of the goods only, and a short delay is allowed during which the goods remain on the quays or in the sheds under the protection of the dock company. It is my belief that the same system is wanted in London, and that with it the dock company would attract an immensely increased trade. Then I go to another point, Customs licensing. The use of private warehouses on the river would be much more extended were it not for the regulations of the Customs restricting the receipt of duty on dutiable goods to places licensed as bonded warehouses. It would be to the interest of the revenue to encourage the payment of duty as soon as possible after goods leave the ship's side, and not to compel the housing of goods, as is

now the case. Were it not for the Customs' regulations, we should, in our own case, import dried fruits and teas more extensively—that is, instead of buying them at the market here, in order to land them at our own wharves and thus economise in landing and housing charges. We should be prepared to pay for the time of all the officers required to properly safeguard the revenue, and also to pay the Customs' duties on the whole parcel at once. The goods in question have ultimately to pass through our warehouses, so that we have to store them uselessly at the docks and to go to quite unnecessary expense.

8702. Then do you wish to complain of the shortness of the Customs' hours?—Yes. I think, generally speaking, the hours of the Customs House ought to be lengthened by one hour. Of late years the Board of Customs has been most considerate of the interests of traders, and desirous of affording every facility compatible with the security of the revenue. In the following suggestion, therefore, I must not be thought to reflect on the Board; one obstacle is the Treasury; the other is the inheritance of an old and cumbrous system, difficult to modernise speedily. My firm, in common no doubt with the rest of the traders of London, has to complain of the shortness of the Customs hours, and of the dilatory way in which the work of the Custom House is performed. It is our constant experience, that when Customs papers for bonds, export, or for delivery, duty paid, have to be sent, as they all have, from the Custom House in Thames Street to a bonded warehouse, that it is impossible to rely upon the Customs officers taking these documents down in due time; that is, without considerable delay, and that we have to take the papers on ourselves for despatch, throwing needless work on our staff. In the Custom House itself the communication between the Long Room, where the first entries are made, and the seats for special offices for the different wharves on the ground floor is so slow and dilatory that our clerks, to ensure despatch, have also to take the papers themselves from one department to another. Clerks are often kept unnecessarily waiting at the entry seats for entries to be passed for free goods and delivery outside, and also at the various seats for the clearances. This is partly due apparently to the limited staff employed, but there is also apparently very little desire to expedite business, but rather to do the work in a routine way. The Customs hours are too short for the present system of business in this port, and the general closing hour (both for receipts of duties and for passing bonds, either for export or coastwise, or for entries of goods in ships for warehousing and delivery) should in my opinion be extended to 5 o'clock. All documents received up to that time at the Custom House should, without fail, be sent on by hand to the bonded warehouses, docks, etc., the same night, and not left to next morning as is now very often the case, even with the shorter hours that are worked. Considerable delay and inconvenience are caused in duty payments by the fact that the Customs will not accept cheques, which is the ordinary method of payment in business in London, for duties from anyone, unless those cheques are endorsed by a banker to the effect that there are assets at the bank to meet the amount. I consider that this system is really degrading, especially as it is applied often to amounts of a few pounds paid by firms who are in the habit of collecting hundreds of thousands of pounds for the revenue in the course of the year, without any remuneration whatever. I would suggest that the system of guarantee should be extended so as to meet these cases, viz., that a general guarantee should be given by some guarantee society to, say, one, two, or three thousand pounds, and that then, for a special list of firms, the Customs should accept the cheques of the guaranteed firms up to the amount guaranteed, without the banker's endorsement. A similar difficulty occurs with export bonds. Persons wishing to export goods on a general bond have to name a certain amount for which they hand in a guarantee or security, and this is, of course, so far quite right. Further, when the amount upon the bond is up to the limit of the security they can issue no fresh bonds, which is also quite right up to a certain point; but the Customs have an extraordinary system of retaining on the bonds all goods until they have been exported for one month. This often makes the bond full so that no fresh bonds can be issued on it, whereas the goods in question have left the kingdom long before. This system should be altered so that the various goods on export bonds should be written off directly the goods

are exported. As compared with the proposed closing times of the Customs, the present hours are as follows:—Free Goods for warehousing and delivery overside, 4 p.m.; export and coast-wise bonds, 4 p.m.; duties on goods for home consumption, 3.30 p.m. Difficulty also arises owing to the time limits up to which bonded goods may be delivered by cart from up-town wharves and warehouses, to be sent to the docks for export, which I show in a table which I will now hand in.

(The witness handed in a statement showing the time limits up to which Bonded Goods may be delivered by cart from up-town wharves and warehouses to be sent to the docks in London for export. See Appendix, 23rd Day, No. 9.)

I am of opinion that goods should be allowed to leave up-town stations for all docks up to 4 p.m., with the exception of those for Victoria and Albert, when the time should be 3 p.m. The remarks I have made refer to the hours for carted goods, the limits for goods sent by lighter do not require alteration. Considerable delay is often caused by the fact that the regulation that an officer should be waiting at the docks to receive bonded goods for shipment, is not carried out in practice. The carman, on reaching the docks, hands in his shipping bill to the searcher's office, or drops it into the letter box, and then proceeds to the shed where the vessel for which the goods are intended is loading. The goods are then received by the wharfinger and stowed in the shed until the ship is ready to receive the goods. The wharfinger advises the officer that his attendance with the papers is required, perhaps a day or two after the arrival of the goods. No wharfinger will deliver bonded goods unless they have first been examined by the Customs, and it is therefore somewhat preposterous that the goods, on arriving at the export dock, should have a certain percentage opened for examination by the Customs. This opening involves a dock charge of as much as 8d. per package, which is obviously unnecessary in the case of original packages of currants, raisins, and figs, or similar goods, or of tea, as any officer accustomed to the sight of such packages could not fail to tell by their external appearance what they contain. Then I should like to amplify the evidence with regard to some questions that were asked. When I gave general evidence on behalf of the Chamber of Commerce I was told that certain points would have to be amplified. Most of the points were dealt with by other witnesses, but I wish to deal with some which I do not think they touched upon. One point was with regard to the absence of canal facilities in London. I mentioned incidentally that in France a large amount of money had been spent in canals.

8703. I think that was in answer to Question 1247?—Yes, I simply wish to say this: The French Government have spent over 56 millions sterling between the years 1814 and 1891 on the canals of France, which are entirely free from tolls, and are (in my opinion) brought up to the requirements of the age in every respect. I will give you a table showing the gradations of expenditure by the French Government in the period I have mentioned, which table is copied from a Foreign Office Report (Miscellaneous), No. 362, year 1894, page 4.

Years.	Amount.	
	Currency.	Sterling.
	Francs.	£
1814-30	141,179,329	5,967,173
1831-47	341,246,125	13,649,845
1848-51	37,792,039	1,511,681
1852-70	238,791,789	9,551,671
1871-78	127,641,355	5,105,654
1879-91	515,971,538	20,638,861
Total	1,402,622,175	56,424,885

Then, with regard to the Watermen's Company, I was asked at questions 1229 to 1231 with regard to steam power only being allowed. I desire to call the attention

of the Commissioners to the fact that under a bye-law of the Watermen's Company, steamboats are the only vessels allowed to tow barges, lighters, and other river craft within certain limits. This obtains under bye-law No. 57 in the 1860 series, and reads as follows:—"That if any person towing or navigating any boat, lighter, barge, or other craft (except steamboats), exceeding the burthen of ten tons, between Vauxhall Bridge and the entrance to the Victoria Docks, shall at the time navigate, or have any other boat, lighter, barge, or other craft exceeding the burthen of 10 tons, attached thereto, he or they shall incur a penalty not exceeding forty shillings, and if two or more boats, lighters, barges, or other craft, exceeding the burthen of 10 tons, attached to each other, shall be navigated by separate persons, then each and every such person so navigating every such boat, lighter, barge, or other craft, exceeding the burthen of 10 tons, shall incur a penalty not exceeding forty shillings." Then I should like to refer to Questions 1195 to 1197, which were put with regard to an attempt to apply the North Atlantic clause universally in London. In the year 1896 an attempt was made by the London and India Docks Joint Committee to induce shipowners using the Port of London to insert a clause in their Bills of Lading which, if accepted by merchants, would have enabled the shipowner to discharge the whole of the cargo on to the dock quay, where his liability would end. The dock company could then have imposed rates on the importers of goods for the work of sorting on the quay and delivery to craft. The Merchant Shipping Act obliged a shipowner bringing goods to the Port of London to deliver goods into barges or lighters at his own expense, providing such barges or lighters are alongside the ship (with papers lodged) within 24 hours of the ship's report. If the shipowner for his own convenience lands the cargo on the quay, he must pay the cost of sorting and delivering into lighters such goods for which free delivery has been duly claimed by the importer. The dock authorities apparently find it advisable to make the charges for this work when paid by the shipowner, very much less than when paid by the importer of goods. This is simply in amplification of the previous evidence, but there is one point that I think is of importance. If the docks had the power which was proposed in 1896, of making the ships land all goods on the quays, they would charge a higher rate to the owner of the goods than they now charge to the shipowner.

Cross-examined by Mr. Balfour Browne.

8704. You speak of the "cost of lightering goods from the docks to their premises," meaning the premises of the owners of wharves?—Yes.

8705. And then you say that wharfingers are already at a disadvantage as compared with the docks in the charge that the wharfingers have to bear for lightering their goods up the stream. Are you aware that all the goods in the docks have to be lightered at the cost of the dock company?—They are lightered a very much shorter distance.

8706. Do you know the charges?—I do not.

8707. But as a fact do you know that the charges paid by the dock company are practically equivalent to the charges paid by the wharfingers?—I should think it was impossible. A large number of ships come into the docks and unload there.

8708. Do you know that it is quite the exception for a ship to load there, goods which are intended to be stored on that particular quay. They unload in that dock, and the goods have to be lightered away to other docks to be stored?—It may be so, but it is a very much shorter distance.

8709. You do not know the distance, do you?—No. It varies in every case.

8710. Are there warehouses at Tilbury?—No, not that I know of.

8711. Then if anything has to be warehoused it has to be lightered all the way up from Tilbury?—Yes.

Cross-examined by Mr. Harper.

8712. I understand you to complain that the present charges are somewhat heavy on tea?—Very heavy indeed.

8713. Am I not right in saying that there exists what is called a Tea Clearing House in London?—Yes.

Mr. J. I. Rogers.

5 June 1901.

*Mr. J. I. Rogers.*  
5 June 1901. Practically all the people interested in tea are members of that Tea Clearing House, are they not?  
8714. Are you a member of the Tea Clearing House?—Yes.

8715. And all tea importers are, I take it?—We are tea dealers, not importers.

8716. You would not suggest that of recent years the expense of warehousing or wharfing has decreased, would you?—No, I should not. The price of tea has decreased very much.

*Re-examined by Mr. Rowland Whitehead.*

8717. Although you have not come prepared to-day with the details to show the delay that occurs in London as compared with Liverpool, I suppose you would be quite willing to supply the Commission with any details required?—They occur in the course of business every day, and really we are so used to it that we keep no record of them. It always takes place.

(*Mr. Rowland Whitehead.*) My Lord, I should have liked to ask Mr. Rogers some questions upon two points. First of all I should have liked to ask him some questions with regard to the changes on tea. From the point of view of the traders, considerations of that kind are most important. I do not want to go outside the ruling your Lordship gave the other day, but may I explain how that evidence is relevant to your inquiry? Certain proposals have been put before this Commission with a view to the improvement of the Port. Those proposals involve an increased charge upon goods, and with all respect to your Lordship and the Commission, it does seem to the London Chamber of Commerce that the effect of that increased charge upon the traders inter-

ested is a matter which is relevant to this inquiry, and that the facts with regard to it ought to be placed before you before you adjudge whether the proposals are wise or not.

(*Chairman.*) We are entirely with you. Any evidence which we may get from a witness at first hand as to the tendency of any increase in the burden to smother or kill his particular trade, we shall be glad to hear.

(*Mr. Rowland Whitehead.*) That is what I understood. Now really if the present dock charges and rates are heavy, *a fortiori*, the addition of 1s. 6d. a ton would make the burden still more grievous.

(*Chairman.*) If the witness will give us any instance where the burden will hurt his particular trade, we shall be glad to hear it.

(*Mr. Rowland Whitehead.*) I wanted to get it quite clear. I thought your Lordship excluded that line of evidence.

(*Chairman.*) No. We do not want to argue. What we did say was that any question as to the reasonableness of a rate was not within our province, but any question as to the system, or the method, or the composition, or the incidence of the rate on the individual, we would hear.

8718. (*Mr. Rowland Whitehead.*) Then with your Lordship's permission I will ask this question. What would be the effect on your particular trade of the increased charge involved by the proposals of the Dock Company?—It would be very serious indeed. It would amount to several thousand pounds a year as far as we can gather. It would practically compel us to warehouse our goods in the dock.

Recalled 10122

(*Adjourned for a short time.*)

*Mr. J. B. Robinson*

Mr. JOHN HENRY ROBINSON called and examined.

8719. (*Chairman.*) You have been nominated by the London Flour Millers' Association to lay evidence before this Commission?—Yes.

8720. Have you heard our ruling as to the evidence we wish to take?—Yes, I have.

8721. Do you wish to give us some particulars as to the system of charges with reference to the working out of grain?—Yes.

8722. As to charges, I think you know that we have already said that we do not wish to hear anything of that nature except as to how far any proposed increase of charge may affect you in your particular trade?—That is what I wish to show, and I think I shall be able to do so.

8723. We shall have to stop you, I am afraid, if you touch on matters which do not come within the scope of this inquiry?—Of course, I am entirely in your lordship's hands in regard to that. I propose to offer evidence concerning the bad system of charges on goods imported into London as illustrated by some of the excessive dock charges on bulk and bag wheat. This evidence has been submitted to and approved by the London Flour Millers' Association. The members of the London Flour Millers' Association and the traders in foreign wheat import about 500,000 tons of wheat annually for the purpose of manufacturing into flour.

8724. Is there anything in the proposals of the dock companies which you suggest would have a bad effect on your trade?—The proposal to levy a fresh charge would undoubtedly have a very crushing effect upon our trade.

8725. Do you wish to say anything more about that?—I wish to say also that the existing charge, which is nominally a charge for working out, is really a very crushing charge in many cases on the whole of the grain trade.

8726. Do you wish to call attention to the system and method of that charge?—Exactly.

8727. Will you confine yourself to that, please?—Wheat is imported into the Port of London either loose in the hold of the vessel or packed in bags. Wheat shipped from ports on the Atlantic coast of North America, from Russian ports, and from Baltic ports is usually loose in the hold of the vessel. Wheat shipped from ports on the Pacific coast of North America, South American ports, Australian and New Zealand ports, or

East Indian ports is packed in bags. Probably about 80 per cent. of wheat imported into London comes in bulk, and has to pay the working-out charge, which we complain at the present time is crushing. It is the custom of the London flour millers to collect their wheat from the ship by means of barges. May I here say that the flour millers of the Port of London have to compete in price with the millers of other ports, and the competition is such that the margin of profit is small, and any additional charge must seriously injure the milling industry of London. The charge in London for obtaining delivery of bulk wheat from the ship into barges in bulk or by means of sacks is the excessive sum of 1s. 9d. per ton.

8728. (*Sir Robert Giffen.*) I think we should ask if that is a charge. We understand that goods are delivered over the ship's side free into barges?—We have to pay 1s. 9d. before we can get our wheat, wherever it goes in, and we maintain that that working-out charge of 1s. 9d. is not only a working-out charge, but it is an imposition on the goods. We say it is an unjust imposition. May I put in a table of charges for delivery to craft at various ports.

8729. (*Chairman.*) Is it from your personal knowledge?—I may say that I have been to Hull, and I have been to Liverpool, but we are not importers into Liverpool or Hull.

8730. Unless you have personal knowledge of those things as affecting your own trade we cannot take the figures?—I had this from the officials of the Mersey Docks and Harbour Board.

8731. Have you any personal experience of this in your own business?—Not in my own business.

8732. Then we cannot take it?—The charge in London is made upon all bulk wheat delivered into barges or landed on the quay, and in the latter case is additional to the high quay rates charged, whether the wheat comes from America, Russia, or any other country; it was not first imposed by shipowners trading with North America when they obtained the right of discharging their vessels in the docks, but it was the official charge made by all the dock companies of London for the working out and delivery overside of bulk wheat into barges. And now since the introduction of the "London Clause" into the North American bills of lading, the consignee is committed *notens volens* to

paying this charge to the shipowner, who does the work formerly done by the dock companies, before he can get his goods.

8733. (Sir Robert Giffen.) It is a charge to the shipowner?—In the North American bill of lading it is a charge you have to pay to the shipowner, but it was really originally a charge of the dock company which was taken over by the shipowners. I emphasise this point, as Mr. Henry Coke was examined by Sir Robert Giffen (on the fourth day's sitting of the Commission at Question 1362) in the same connection, and to my mind the impression conveyed by this part of the evidence was to the effect that the London Dock Companies do not make this charge. This is not the case. As I have stated, it is the official charge of the London Dock Companies or the American shipowners since the introduction of the "London Clause," and has remained the same since the year 1872, at which time all imported loose grain was filled into sacks by hand labour in the ship's hold, such sacks being hoisted on deck, weighed by hand there, then tied up and delivered overside to the barges. Even for those operations 1s. 9d. per ton, I maintain, was always an excessive charge; this is proved by a comparison with the charge at Hull. What I have said about the charge of 1s. 9d. per ton for working out from the bulk applies also to all beans, peas, lentils, dari, maize or Indian corn, tares, linseed, rapeseed, millet, when imported in bulk. The charge is even higher on barley and malt, namely, 1s. 11d. per ton, and for oats 2s. per ton. The total import of our grain into London amounts to about 1½ million tons a year. The quickest and most economical method of working out bulk grain from ship's hold into barges is to employ elevators to raise the wheat from the hold without sacking, weigh through automatic or semi-automatic scales, and deliver the grain loose to barges lying alongside. The cost of the power required for actually elevating the wheat or grain by bucket elevators is considerably under 15 of a penny per ton. The labour in the ship's hold and on deck is reduced to a minimum, and the speed of unloading immensely increased.

8734. (Chairman.) How do you show that this point is a matter which concerns yourself? It is an argumentative point?—I wish to show that 1s. 9d. is an altogether unreasonable charge for working out, and that the dock companies are able where they still do the work to obtain a very large revenue from all the grain that they handle.

8735. We have already laid down that we do not wish to go into the reasonableness of a rate. We will pass by that?—But I wish to show that they make a big profit from that, or they might if they did it in an up-to-date manner. I am of the opinion that the total cost of unloading bulk grain in this manner need not exceed 3d. or 3½d. per ton under favourable circumstances.

8736. This is pursuing the same subject; I must ask you to pass from that?—My Lord, we feel we have a very strong grievance against the Dock Company in the way they treat us.

8737. I think you must abide, if you please, by our ruling?—I am entirely in your Lordship's hands.

8738. Have you anything to tell us in relation to the proposed dues on lighters?—It would be a further imposition on the milling industry. Although the London and India Docks have withdrawn one Bill before Parliament this session (London and India Docks Lighterage Bill, 1901) asking for powers to charge one shilling per ton on wheat (among other goods) delivered into barges and lighters, and 4d. per ton upon the registered tonnage of such barge or lighter, in addition to the already excessive charge of 1s. 9d. per ton, they still suggest to the Commission that they should be empowered to make such charges. I am of the opinion that if the London and India Dock Company obtain and exercise these powers, of charging barges and lighters and their contents, the greatest harm will be done to the manufacturing milling industry of the Port—the total charge on wheat delivered into barges will be then about 3s. per ton, and as prices are already cut very fine in order to meet competition the tendency of this excessive charge would in my opinion, be to close the flour mills of London. Members of the London Flour Millers' Association—

8739. Do you represent them?—I do. Members of the London Flour Millers' Association owning large premises situated on the banks of the River Thames and

other waterways within the Metropolitan district, are of opinion that the imposition of this charge would cause a very large and very serious depreciation in the value of such premises, which were acquired, relying on the clause in the various Dock Acts, which gives free access to barges and lighters entering the docks for the purpose of delivering and receiving goods to or from vessels loading or unloading therein. I submit that if the docks of London were controlled by a body alive to the needs and conditions of the industries of the Port, the charges on imported wheat would be decreased to an amount that would be more consistent with the actual cost of labour, plus a fair profit for the finding of the labour, and the appliances used, and would also place the London flour millers on an equal footing with their competitors. The London Flour Millers' Association are of opinion that the Port of London should be administered by a public Trust solely for the benefit of the trade of the Port; that sufficient charges should be made without interference with the free water, to maintain the best and most economical conditions of commerce, and that any surplus revenue, should be applied to the reduction or surrender of the charges, and in no case to the relief of local rates. We think that for the benefit of the manufacturing industry of the Port of London and the centres it supplies, every possible facility and accommodation should be given to the importation of raw materials. Further that the Dock Trust if one is formed should own all the elevators and weighing apparatus employed in unloading grain vessels. That the weighing should be done by the dock authority, being an uninterested authority. Should the Commission see fit to report to Parliament in favour of the abolition of the exemption clause on barges and goods so often referred to before this Commission, the London Flour Millers' Association think that dues charged on goods coming into the Port should be to some extent *ad valorem* in principle, lower on raw materials imported for the purpose of manufacturing, than on manufactured articles, and that inward dues on goods delivered to water carriage should be less than on those using the quay. The London Flour Millers' Association are of the opinion that the monopoly possessed by the licensed lightermen of the Watermen's Company on the River Thames within certain limits, is most detrimental in many ways to the interests of the Port of London, and should be abolished.

8740. (Sir Robert Giffen.) Are you quite clear in your own mind whether it is the dock company or the shipowner that charges you for the delivery of wheat?—On all except the American wheat it is the dock company that charges us.

8741. But on all except the American wheat you are entitled by the custom of the port to have delivery to barges, are you not?—Yes.

8742. So that if you ask the dock company to unload and pay them it is a matter of choice on your part to some extent?—No, we have no option; we cannot help ourselves.

8743. But you say you have the option of delivering it into barges over the ship's side; you have just told me that?—We cannot get our wheat without paying the 1s. 9d.

8744. Whether it is an American Company or any other company?—Exactly. We have to pay 1s. 9d., that is for bulk wheat.

8745. Then have you no option to have it delivered over the ship's side?—Absolutely none.

8746. How is that?—It is the custom of the port.

8747. The custom of the port, we have been told, is quite different—that you always have it delivered over the ship's side?—It does not apply to loose grain; it is the working out, we pay the 1s. 9d. for. Our point is that out of that they make an enormous revenue.

8748. That is for the dock company and you to settle, but the statement has been made to us that the dock company simply get nothing out of it, but that it is the shipowner who gets it?—The London and India Dock Company surrendered their right of working out to the American shippers, and now they complain that they can get no revenue on the goods passing through their docks.

8749. However, you cannot give us any further information as to whether it is the dock company or the shipowner that gets the money?—It is the dock company that gets the money in all except the

Mr. J. H.  
Robinson.  
5 June 1901.

*Mr. J. H. Robinson,* American trade. In the American trade it is the ship-owner who gets it.

5 June 1901<sup>1</sup> 8750. And do you say that it is the custom of the Port of London in the wheat trade that there should be no delivery over the ship's side to the barge?—I say that we cannot get our wheat without paying the 1s. 9d.

8751. But you cannot give us any explanation of the circumstances further than what you have said?—I can only repeat that we have to pay 1s. 9d. before we can get our wheat.

8752. But we have had so much evidence to the effect that it is the custom of the Port of London that the barges come into the docks and take away the goods, and that nothing is charged for them. I wish to know how it happens in this particular case. You say there is a custom to the contrary effect?—There is a custom to the contrary on all loose grain.

8753. That you say?—I do distinctly.

8754. Can you explain how it arose in any way?—I cannot give you the detailed history of it, but it is a relic of the right which the City of London had prior to 1872 to work out the grain. In 1872 the dock company took over that right.

8755. That is all you can tell us about it?—Yes; but it is an undoubted fact that we have to pay 1s. 9d. all round before we can get our wheat.

8756. (*Rear-Admiral Hext.*) What services do the dock companies, or the American shipping companies, render for the 1s. 9d.?—They simply take the wheat from the hold and put it on to the barge.

8757. They discharge the wheat into the barge for you?—Yes, an operation which we can do from barges into our own premises for 1½d.

8758. Why do you not do it yourself?—We have no right to do so.

8759. I thought the dock company always allow you to employ your own labour?—Not in London.

8760. Then in reality this charge is for discharging the wheat into the barges?—Exactly.

8761. (*Mr. Ellis.*) As I understand, what you wish to convey to this Commission is this: that any addition to the 1s. 9d. (leaving that aside for a reason which has been explained by the Chairman) would be a burden which would place the trade at a disadvantage in London as compared with other ports. Is that so?—Certainly.

8762. Supposing any addition were made to the 1s. 9d., who do you suppose would bear the charge?—The miller largely. You see we come into competition outside London. England, roughly speaking, is supplied by three or four main ports.

8763. Would the miller put it on to his customer?—He would not be able to.

8764. Then it would all come out of the miller's balance sheet?—I believe so entirely.

8765. You are here as a miller?—Exactly, and to represent the whole of the London millers.

8766. Then that is your grievance—that you cannot recover the dues?—No, I cannot see how we can. We would come into competition with Liverpool and Hull just the same as we do now.

8767. Therefore speaking for yourself, and for those whom you represent, you wish us to infer that any addition would be a burden inimical to trade?—Distinctly.

*Cross-examined by Mr. George Wallace.*

8768. Can you tell in general terms how much flour comes to London by rail?—I have no figures to show that.

8769. Does a large quantity come to London by rail?—A very considerable quantity.

8770. From Liverpool?—No, I take it that it would be shipped round from Liverpool.

8771. As regards the grain that is shipped round from Liverpool, that would bear any charge just like any grain coming from anywhere else?—Not if it was discharged in the river.

8772. It is always open to you to discharge your grain in the river. You could get your grain discharged in the river to some extent?—Very seldom indeed. A

few of the Baltic steamers will discharge in the river, but the big steamers will not. I beg your pardon—did you say grain or did you say flour from Liverpool?

8773. I asked about flour first. Flour does come to Liverpool from America?—To some extent, but they have a charge of 2s. on flour, and perhaps 6d. on wheat, in dues. That explains why the flour is dumped into London.

8774. I will tell you plainly what I want to find out. You say that if there is a charge put upon grain in barges in London which is now fair, you would be hampered by Liverpool competition. It was with reference to that; I wanted to know how much grain came to London from Liverpool. You say it does not come by rail?—I do not say grain comes at all.

8775. Does flour come to London from Liverpool?—At times.

8776. Much or little?—Not very much, I think, but we come into competition with the Liverpool millers outside London.

8777. Where does your competition come. Where do you meet it?—All round the south coast, and I suppose even up to Birmingham and that district.

8778. Grain from Liverpool to the south coast?—Flour.

8779. Not grain at all?—No, not grain.

8780. To what extent does Liverpool compete with you in flour on the south coast?—To a very considerable extent. I could not give you any figures.

8781. Now with reference to this 1s. 9d. a ton. You are the merchant taking delivery of your grain from the ship—that is your position, I gather?—We are the miller, the consignee.

8782. Very well; I mean the merchant as against the shipowner. The ship has got to be discharged by somebody?—Certainly.

8783. And the 1s. 9d., as you have told the Commission, is the cost of taking the grain out of the ship and putting it into the barge?—I do not admit that. It is the charge for doing the work—a very different thing to the cost.

8784. It is too profitable; that's what you say?—Exactly.

8785. Now I am speaking on behalf of the London and India Docks Company only. Is there any compulsion by which the dock company is compelled to be employed to do that discharge?—You do not do it. The ship does it.

8786. Then the 1s. 9d. goes to the person who does it?—Certainly.

8787. That is the ship?—Certainly. Our grievance is that you gave the right over to the ship.

8788. Then that 1s. 9d. is not a compulsory dock charge in any shape or form?—It is, decidedly, with the exception of the North American bill of lading, and there we maintain you simply passed it on to the ship.

8789. I am afraid I do not understand you. You told me that my company does not do it and the ship does. How do you say that it is a dock charge at all?—It is a dock charge on all except American wheat.

8790. Give me any instance at all in which you have paid that 1s. 9d. to the London and India Docks Company; give me the date and the name of the ship?—We used to do that prior to the introduction of the North American clause. See 9904-8

8791. The North American clause was introduced how many years ago?—About ten or eleven years ago.

8792. Will you give us some modern history—something up to date?—They will bring a steamer of Russian wheat into a dock—

8793. Will you give me, please, facts and not hypotheses?—I have not anything before me, but I daresay I can find them.

8794. Will you give me the name of a steamer where you have paid 1s. 9d. a ton to the dock company?—I can do so. I have not the information here by which I can do it now.

8795. Remember what you have told us just now. Do you want to go back from it—that the dock company did not do the discharging?—The dock company do not do the discharging of American wheat, but in other vessels they do.

8796. What other vessels?—From any Russian ports

8797. Does the London and India Dock Company get any Russian wheat at all?—They used to do so.

8798. Since when?—I could not tell you.

8799. Ten years ago?—Since then, I should think.

8800. Long ago; give us some figures; you have plenty of assistance—one person telling you one thing and another another. Will you give me some particulars, please?—I have no particulars here to give you.

8801. That is a kind of general statement you have been giving in your evidence—with no particulars. Is that so?—It occurs every day that we pay these charges.

8802. To the dock company—you know what I mean?—Not on American wheat.

8803. Or on any wheat?—To docks other than your docks, but we should have to pay it to your dock if a Russian steamer went in there.

*Cross-examined by Mr. Scrutton.*

8804. Let me see if I can understand it. The North American clause applies to the wheat coming from North America; most of it coming into Tilbury?—Some of it to Tilbury.

8805. Now, never mind North America at all. Take Russian or Indian wheat. To what dock does Russian wheat come?—Mainly to Millwall Dock, now.

8806. Where does the Indian wheat come to. Is there any Indian wheat in bulk?—No; all the Indian wheat comes in bags.

8807. The charge you are talking of is only a bulk charge, I understand?—Exactly.

8808. Is there any place from which the wheat comes in bulk? Does the wheat come in bulk from the Plate?—No, that is in bags.

8809. From any other place?—From the Baltic.

8810. That is practically Russian. Anywhere else?—Those are the main places.

8811. Then it is a matter of the Millwall Dock where the Russian wheat goes that this 1s. 9d. is charged?—Yes, most of the Russian wheat goes into the Millwall Dock.

8812. Is there any common form of bill of lading in the Russian trade?—Not that I know of.

8813. Do you know what the obligation of the shipowner is as to where he is to make delivery. Is it at the ship's rail?—I do not know, but the custom of the port is that we have to pay the charge before we get our wheat.

8814. Who presents you in the Millwall Dock with the item of 1s. 9d. which you have to pay?—The dock company.

8815. The Millwall Dock Company?—Exactly.

8816. They present you with an item of 1s. 9d. a ton on the work, and you pay it to them?—We pay it to the Millwall Dock Company in that particular case.

8817. Is the Millwall Dock Company's work done by elevators?—Yes, certainly, some of it.

8818. Dock elevators?—Yes, pneumatic elevators.

*Cross-examined by Mr. Daldy.*

8819. You have said that the London Flour Millers' Association are of opinion that any surplus revenue should be applied to the reduction or surrender of the charges, and in no case would relieve the local rates. Will you just explain that? Are you assuming that

some municipal authority would carry out these improvements?—We had in mind then the possibility of the docks being taken over by some municipal authority and their making a profit from that.

8820. You do not suggest, do you, that there is any proposal before the Commission that it should be applied to local rates?—No, certainly not.

*Cross-examined by Mr. Harper.*

8821. As I understand, what you have been giving your evidence about applies principally to Millwall. Have they two rates—have not they 1s. 9d. for light grain and 2s. for heavy grain?—I say it applies to all wheat.

8822. But principally at Millwall?—No, the bulk of the wheat goes into the London and India Docks.

8823. The wheat in bulk?—Yes.

8824. I mean not in bags?—The largest quantity of wheat undoubtedly comes from America into the London and India Dock.

8825. That comes under the American bill of lading?—Exactly.

8826. And for that the shipowner gets paid. He puts it on the quay and is paid 1s. 9d.?—Not necessarily puts it on the quay. They put it overside into barges and they make a charge.

8827. Still, he gets 1s. 9d. on the bill of lading?—Exactly.

8828. With regard to that which comes in bulk and not under the North American bill of lading, you pay 1s. 9d. still, but then it is called a working-out charge?—And it is called a working-out charge under the North American bill of lading.

8829. Your suggestion is that that working-out is actually done at a very much cheaper rate than you are paying, and that there is smothered up in that some dock rate?—Yes.

8830. So that although you call it one thing, it is in substance another?—Yes; and we would rather have them under their proper names.

8831. Your view also, as I gather it, is that with modern appliances the actual cost of working out bulk cargo could be very considerably reduced?—Undoubtedly. I may say I am well acquainted with this, and I say the whole thing could be done for 3d.

*Re-examined by Mr. Whitehead.*

8832. Your flour comes into competition with the flour from Liverpool and other places?—Exactly.

8833. You would feel an additional charge of 1s. to 1s. 6d. a ton a serious burden in the conduct of your business?—Certainly.

8834. With regard to the unloading by the Millwall Dock Company, you can, if necessary, produce from your books any details as to the occasions upon which that has been done by the dock company, and you have paid them the charge?—Yes. May I say that they have put it in as an official charge in the Appendix to the fourth day's evidence.

8835. You say it is already in evidence that the Millwall Dock Company make that charge. Will you give the reference?—It is contained in a table put in by Mr. Duckham on the fourth day, Appendix, No. 6. "Rates on grain for working out, weighing and delivering overside 1s. 9d. per ton."

Recalled 9904.

Mr. STEPHEN CANNON called and examined.

8836. (Chairman.) You have been nominated by the Kent Millers' Association to represent them before this Commission?—I have.

8837. Will you be good enough to give us your evidence?—I am managing director of Cannon and Gage, Ltd., Millers and Corn Merchants, carrying on business at Erith Mills, Kent. I am also President of the Kent Millers' Association. My firm collect wheat, flour, oats and other corn from vessels discharging in the docks of London to the annual extent of about 12,000 tons of wheat, 5,000 tons of flour, and 2,500 tons of oats and other corn. These goods are

collected from the ship by craft and barged to the mills. In order to obtain delivery of these goods to craft my firm have to pay on wheat 1s. 9d. per ton, on flour 1s. 6d. per ton, on oats 2s. per ton. I may mention that the 1s. 6d. per ton for flour has since been increased to 1s. 9d. It is my opinion that 1s. 9d. a ton is a very excessive charge as it can be done for about 2d. by machinery. It costs us about 2d. to work it out of the barge into the warehouse. These charges on my firm amount to £1,050 on wheat imports, £375 on flour imports, and £250 on imports of oats and other corn totalling the sum of £1,675, making

Mr. S.  
Cannon.

Mr. S.  
Cannon,  
5 June 1901.

£1,737 10s., the total which our firm pays for working out, or for the whole of the Kentish millers £8,697 10s. During the session of 1900 the London and India Docks Joint Committee lodged a Bill in Parliament, to obtain powers to impose charges on barges and lighters, carrying goods to and from vessels loading and discharging in the docks. This Bill was rejected in May, 1900, and has again been lodged by the London and India Docks Company under the title of the London and India Docks (Lighterage) Bill, 1901. The second of these Bills is a modification of the first in some respects, but these modifications do not affect the trade of my firm, nor (so far as I can judge) that of the other members of the Kentish Millers' Association. The powers sought are to impose rates which in the case of my firm are equal to 1s. 4d. per ton, on the goods (previously mentioned) taken away from the docks in craft by my firm. If these powers are granted to, and exercised by, the London and India Docks Company, my firm will have to pay a sum of about £1,300 annually in addition to the present charges which will amount to a dead charge upon their business. The other members of the Kentish Millers' Association work altogether about four times the quantity of grain and flour that my firm do. This trade would therefore be burdened with a further charge of about £6,500 per annum, which would (in my opinion) have a disastrous effect, because mills situated in the vicinity of Liverpool, Bristol, Cardiff, East Coast and other ports, are enabled (by reason of their lower port charges) to send flour into Kent, and undersell the Kentish millers to such an extent that nearly half the mills in Kent are now closed. Those mills in Kent that are still working earn such a bare pittance, that if the London and India Docks (Lighterage) Bill, 1901, becomes law, and the dues mentioned therein are charged, it is probable that other mills in Kent will be closed.

Mr. F.  
Wingent.

Mr. FREDERICK WINGENT called and examined.

8850. (Chairman.) You are the managing-director of the firm of Wingent and Kimmins, Limited, millers, carrying on business at Chatham, Rochester, and Canterbury?—Yes.

8851. You have been appointed by the Kent Millers' Association, acting in conjunction with the London Chamber of Commerce, to offer evidence before this Commission?—Yes.

8851a. And you desire to give evidence as to the loss sustained by your firm owing to detention in the docks?—Yes.

8852. Do you wish to hand in a table illustrating this?—Yes.

(The Witness handed in a statement showing the Detention to Barges belonging to Wingent and Kimmins, Limited, sent to collect goods from vessels unloading in the London Docks during the months of July, August, and September, 1900. See Appendix, 23rd Day, No. 10.)

See 8921.

8853. Have you any remarks to make in connection with this?—I have only to say that we are seriously handicapped in carrying on our business in competition with millers from other ports by the delays that occur in the London docks, thereby increasing the cost of carriage of wheat and flour from London to us at Chatham.

8854. Will you give us any specific complaints that you have?—I put on that sheet a list covering three consecutive months. It represents the actual work that was done in that connection, and in the margin you will see the number of days occupied by the barges in the London docks. As a result I found that the barges carrying wheat were on the average just about three days beyond the day allowed, and the barges carrying flour were very nearly five days beyond the three days allowed to get to the ship and get their freight.

8855. We take it that this table comprises all the business which was done in this three months?—That is so. Entirely. The result of that is that the carriage is seriously increased, and I think if there were better facilities in the docks for loading the craft in reasonable time the carriage from the docks to Chatham might be materially reduced. I have put it at 10 per

Cross-examined by Mr. George Wallace.

8838. You say that nearly half the mills in Kent are now closed?—Yes.

8839. How long has that been going on?—For the last two or three years.

8840. Only the last two or three years?—Three or four probably.

8841. Or four of five?—Some of them have been closed four or five years.

8842. Or it might really, I suppose, run up to about ten years?—No, I should not think so much as that.

8843. To what do you attribute that—the American flour coming into England?—No; the competition with Liverpool, Cardiff, Hull, and the East Coast firms who have got warehouses on the Medway and on the Thames at Gravesend, and resident agents, and they undersell us with their flour.

8844. American flour or English flour?—Their own make of flour.

8845. Does it come out of American grain?—Probably out of American grain; I do not know what grain it is made from.

8846. So that they can mill it in Liverpool, or thereabouts, send it to London, and undersell you in Kent?—They do not send it to London; they send it to Rochester and Gravesend.

8847. Send it into Kent and undersell you there?—Yes.

8848. Though at present you get your grain in London without any dock charges at all?—We have to pay 1s. 9d. a ton for getting our wheat out of the docks.

8849. (Mr. Harper.) Does a vessel going to Rochester pay those dues?—No.

cent., but on going into it rather more carefully I think that if half the extra time were occupied in loading those craft only, the cost of carriage might be reduced 20 per cent. between London and Chatham. That is a very serious matter to us indeed.

8856. (Mr. Ellis.) Do I understand that you attribute this delay to the want of facilities in the dock?—I cannot explain why the barges are detained. I believe it is largely through want of facilities in the dock—sometimes want of quay-room, sometimes want of labour, I am told. But I am not at the dock to see the reason. All I know is that the barges do not come when they should, and that we have to suffer.

8857. I was rather wanting to ascertain whether you include the want of mechanical appliances in the dock?—I do think so.

8858. But you do not speak from much personal observation, I gather?—No.

Cross-examined by Mr. Lewis Coward.

8859. I see in your table you have first Millwall; number of days' delay six. Can you of your personal knowledge tell me to what that delay is attributable at all?—No.

8860. Then I see the next one at Millwall, "no delay," and the next, "no delay." You cannot tell in any case to what the delay is attributable?—No.

Cross-examined by Mr. George Wallace.

8861. Let me put one question upon that table. What is the point of giving the date of delivery order in the last column but two. What does that mean. Is that the date when the delivery order is given to you?—Yes.

8862. Who gives you that delivery order?—The wheat or flour factor.

8863. That is the representative of the buyer?—Of the seller.

8864. You cannot get delivery until your parcel has been sorted out for you?—He gives us the delivery in the case of wheat we have to get our craft alongside that ship in 24 hours.

8865. But you cannot get it until it has been sorted out for you. Is this in bulk or not?—Monthly in bulk.

8866. But if there are other people coming before you you may have to wait for your turn?—If there are not sufficient facilities it is so.

8867. I see that the American flour would all come in under the American bill of lading, of which we have heard?—Yes.

*Cross-examined by Mr. Harper.*

8868. Apparently the two longest instances of delay are the "Frank" and the "Warden Court"?—Yes.

8869. I suppose all this described as "quarters" in the second column is wheat in bulk?—Not necessarily. The American wheat is in bulk, certainly. All American wheat is in bulk.

8870. Am I right in saying that the whole of these instances of American flour and American wheat would come under the American bill of lading?—Entirely.

*Cross-examined by Mr. Cranstoun.*

8871. Then these goods are placed on the quay first?—The flour. But although placed on the quay, as it happens, there is more delay in getting the flour than there is in getting the wheat.

8872. You have told us that the barge is to be ready there when the ship is ready to break bulk?—In the

case of wheat it has to be ready within 24 hours after the date of the delivery order.

8873. If you got 24 hours' notice, would you be able to have a barge there in time?—Yes; we have to.

8874. But would that notice have the effect of lessening the congestion at the docks?—I am afraid I do not follow you.

8875. Are there numbers of barges there long before they are actually required?—Undoubtedly.

8876. If the bargeowner or lighterman had some notice when it was probable that his consignment would be placed in the barge, the congestion might be lessened?—Undoubtedly, and a great deal of time might be saved, and expense also.

8877. (Mr. Ellis.) Have you made any representations verbally or by writing with respect to these delays?—To the dock companies, do you mean?

8878. Yes?—We have not. I am sorry to say—I am sorry to be obliged to say—that the conduct of the dock companies, so far as my experience goes, is very arbitrary, and very one-sided, and it is utterly useless to make any representation at all.

8879. You really mean to assure this Commission that you have not thought it worth your while to write a letter?—That is so.

Mr. CHARLES JAMES BLACKBURN called and examined.

8880. (Chairman.) You have been nominated by the Colonial Wool Merchants' Association, acting in conjunction with the London Chamber of Commerce to represent them before this Commission?—Yes.

8881. You are the manager of the Wool Department of the Australian Mortgage Land and Finance Company, Limited?—Yes.

8882. Will you be good enough to tell us what you have to say?—My company was established in the year 1863, and my own experience of the wool trade extends over a period of twenty years. The following figures show the quantity and value of the colonial wool imported into London by my company during the five years ending 1899.

Year.	Number of Bales.	Value.
		£
1895	108,470	1,175,405
1896	89,099	1,099,209
1897	70,747	834,441
1898	72,962	938,220
1899	65,563	1,032,227

All these have been stored at the warehouses of the London and India Dock Company, and taking an average over the past five years my firm have paid in respect of dock and warehousing charges the sum of £19,200 annually. The actual amounts paid are as follows: 1895, £26,174 1s. 5d.; 1896, £22,041 14s. 2d.; 1897, £16,580 7s. 8d.; 1898, £16,725 19s. 9d.; 1899, £14,381 1s. 7d. During this period of five years the imports of Australasian and Cape wool decreased only 16 per cent., or by 423,000 bales, while the total production of Australasian and Cape wool decreased only 16 per cent., or by 262,800 bales. From the following figures it will be seen that the proportion of the production of Colonial wool, dealt with at the London Wool Sales, has decreased during the past five years from 63 per cent. to 52 per cent.:

Year.	Total production of Australasian and Cape Wool.	Imports into London of Australasian and Cape Wool.	Proportion sent to London.
	Bales.	Bales.	
1895	2,270,800	1,420,000	62 per cent.
1896	2,134,000	1,237,000	58 "
1897	2,108,000	1,253,000	59 "
1898	1,982,000	1,073,000	54 "
1899	1,908,000	997,000	52 "

I would call attention to the increase in the quantity of Australian wool, dealt with at the Wool Sales in Australia and New Zealand, and shipped either direct to the Continent or Liverpool, or transhipped in London for Yorkshire manufacturing centres or for the Conti-

ment. During the past five years the quantity of wool dealt with at the Australasian sales increased 7 per cent., or by 61,000 bales, notwithstanding that the Australasian total production decreased 18 per cent., or by 360,000 bales. Then I have prepared a table which shows the production and the proportion dealt with in the sale in Australasia as compared with London:

Year.	Total Production of Australasian Wool.	Quantity dealt with at the Australasian Wool Sales.	Proportion dealt with at the Australasian Wool Sales.
	Bales.	Bales.	
1895	2,001,000	850,000	42 per cent.
1896	1,846,000	897,000	48 "
1897	1,834,000	855,000	47 "
1898	1,703,000	906,000	53 "
1899	1,641,000	911,000	56 "

It will be seen that the proportion of the production of Australasian wool, dealt with at the Australasian Wool Sales, has increased during the past five years from 42 per cent. to 56 per cent., and that London is not holding its own against the markets established in Australasia and New Zealand. I submit that the present method of levying dock and warehouse charges is out of date, and grossly unfair. The method is retail instead of being wholesale. Merchants, brokers, shipowners, and insurance companies simply charge an exact figure for work done or obligations entered into. Dock charges are levied per bale of wool, and are assessed in a manner that bears very hardly on the trade. Bales weighing between 1½ and 3½ cwts. are charged a consolidated rate of 4s., and bales weighing between 3½ and 5 cwts. are charged 5s. Thus two bales apparently similar both in size and weight are landed. One weighs 3 cwts. 1 qr. 27 lbs., and pays 4s.; and the other, by being, as often happens, left on a wet quay an hour or two, absorbs enough water to turn the scale at 3 cwts. 2 qrs., or 1 lb. heavier. This bale has to pay 5s.; in other words, the charges are raised 25 per cent. I am of the opinion that upon the total weight of the bales we should be charged as elsewhere at per ton. Now I will show a comparison of the charges at London and Liverpool. For a bale weighing 400 lbs. of greasy wool the charges in London would be 26s. 2d. per ton; and for a bale weighing 300 lbs. scoured wool the charges in London would be 32s. 3d. per ton. The charges in Liverpool would be 19s. 1d. per ton. Australian wools are rarely sold in Liverpool, but a calculation has been made in an equivalent weight of East India bales. The work performed on a bale of wool does not vary. Some years ago sales were less frequent in London, and it was arranged that the consolidated rate should include the cost of twelve weeks' rent. This is now unnecessary, as, taking the average of the wools my company received for sale in 25 ships, the average period for which the bales are warehoused is 42 days.

Mr. F. Wingent.

5 June 1901.

Mr. C. J. Blackburn.

*Mr. C. J. Blackburn.* 8883. Are these changes within your own experience?—Yes.

5 June 1901. 8884. Have you anything to say with regard to the Dock Company bringing large vessels to their upper docks?—The Dock Company cannot at present bring large vessels to their upper docks, thus time and money are expended after the safe arrival of the ship and the further risk of transport undertaken. For many years it has been the custom of my company to contract by clause on bills of lading for the discharge of our consignments at the London Dock, contiguous to the wool warehouses, and in one year 27 out of 108 ships carrying wools for my company were discharged under this arrangement. The Dock Company were thus enabled to save lighterage or cartage on the wools mentioned but they declined in any way to mitigate their charges. This is not business, and strangles enterprise. Special rates should be forthcoming for special facilities. It must be borne in mind that the proprietors of private warehouses not having water frontage are thus at great disadvantage to the docks. They must of necessity cart or rail everything to their warehouses. In several instances the above arrangement fell through owing to the vessels being larger than the dock could accommodate, thus our enterprise was wasted. We have little complaint to make over a series of years, but in 1900 in the spring there was a good deal of trouble owing to dilatory discharge, and as mentioned in a letter addressed to the Dock Company no Landing Accounts were received for 471 bales ex "Samoa" (which arrived on the 22nd February) by the 22nd March notwithstanding that the wool had been actually sold on the 9th March. The management of the wool business at the docks, though capable of considerable improvement, is fairly good; the work is well done, and the space and warehouse accommodation allotted to the trade are admirable; considering the enormous turnover, complaints are very few, and most of these are small departmental matters. My experience of over 20 years' wool work tells me that there is a great want of elasticity in the methods in vogue at the docks, and a want of touch between merchants and the higher officials of the dock company, who are not acquainted with the needs of the traffic. It seems a monstrous proposition to put forward the theory that if you do not like the charges you can go elsewhere. Every effort should be made to conserve business existing and to encourage new, by exacting a fair price for fair work, and economising the labour bill wherever possible. The value of the wool warehouses should be capitalised, and rates fixed to net a fair return on the capital, but not to cover deficiencies in other departments. We cannot see why any person or craft should have the use of the docks or the services of the dock company's servants without payment. We suppose whatever charge be made it must come out of the merchants' pocket in the end, as goods are delivered free after sale. An ever-improving mercantile fleet, and keenly competing business community, always striving to do business on better terms all round, find the present dock system incapable of improvement; by its lack of means, they find the management too worried to expend their energies and experiences for the benefit

of the docks by overhauling rates and competing for business. The times have rolled over them, and they are resigned, for they can offer no inducement to attract fresh capital. It needs a dock trust, having the money to execute, as well as suggest reforms. I am of opinion that, as the buying power of the world concentrates in London, every effort should be made to induce goods to use the Port of London. The roadway from the dock gates is out of repair, and this makes it unnecessarily difficult to get heavy loads out of the docks for delivery. As the great cost on wool is the storing and then moving it from intermediate floors to top show floor, an endless lift or moving floor might with advantage be used. During the March sales on a busy day the passenger lift could only carry four men less than 50 per cent. of which it should have carried. Boys for light work might be largely employed in keeping gangways clear, and filling in loose wool after sale, as they are less expensive and quite as smart as men, if they can be employed continuously. There should be one or two strong gangs of pilers to perambulate the sale. What is lacking is the grasp of business which is so characteristic of our railway managers. They make the boot fit the man, not try to make the man fit the boot; in the boom which preceded the introduction of the McKinley tariff, wool-buying was against time, and the English railways covered themselves with glory by their grasp of the situation. High officials never left the wool till it was on board ship. What we want is a touch of the same quality.

8885. (*Sir Robert Giffen.*) Where do you get these figures of the production of wool and the quantity coming to London in bales? What is the source of your information?—They are taken from a circular issued by Helmuth, Schwartz, and Co., the highest authority in the trade.

8886. And, of course, they are liable to the observation that a bale is not a sound unit, because bales differ so much in weight?—That would apply in some cases, but all our bales are packed in a press, and the weight is uniform.

*Cross-examined by Mr. Harper.*

8887. The wool business does not affect the wharves, does it?—Not to any great extent.

8888. But it is a fact, is it not, that a great deal of the decrease would be owing to direct buying in Australia now?—That is so.

8889. Many Yorkshire firms send their buyers direct and ship direct to avoid you?—Yes.

*Re-examined by Mr. Rowland Whitehead.*

8890. As I understand you, the circumstances of the wool trade have been modified very considerably during recent years in London?—That is so.

8891. And has there been any corresponding modification either in the system adopted by the dock companies as affecting the wool trade or in the charges which they make to you?—There has been no modification.

MR. WILLIAM BAKER DANIELS called and examined.

*Mr. W. B. Daniels.* 8892. (*Chairman.*) You are acting manager of the wool department of the New Zealand Loan and Mercantile Agency Company, Limited?—Yes.

8893. And you have been nominated by the Colonial Wool Merchants' Association to appear before us on their behalf?—Yes.

8894. Will you be good enough to proceed with your evidence?—My Company has been for many years a very large customer of the London and India Dock Companies; as it has for the past five years paid on an average the sum of £9,400 per annum in settlement of charges incurred in respect of wool and other produce stored at the docks. I offer evidence with special reference to the excessive dock charges on Colonial wool and the bad system of management prevailing in the wool department of the London and India Docks Company.

8895. Now will you tell us about the various operations incidental to the storage and showing of wool?—The various operations incidental to the storage and showing of wool are charged for at so much per bale of wool, the rate varying at exactly marked gradations of weight, thus on a bale of wool weighing 3 cwt. 1 qr. 27 lbs. the

consolidated rate is 4s., but on a bale weighing 3 cwt. 2 qrs., or 1 lb. more, the charge is 5s. I am of the opinion that the proper basis for a tariff of dock charges is the actual weight. The freight is charged for on this basis, and if the dock charges were so made up, many anomalies constantly occurring under existing conditions would be removed. The Dock Company's consolidated rate includes 12 weeks' rent, but whereas this was a reasonable provision when the arrangement was first adopted the substitution of 6 series of wool sales for 4 series renders six to seven weeks the usual time that parcels require to be warehoused under normal conditions. When the tariff was arranged, due allowance was doubtless made for the 12 weeks' storage, but now that goods rarely rest in warehouses for this length of time, a proportionate reduction should be made in the consolidated rate.

8896. Have you anything to say on the question of delay at the docks?—The work of handling the wool at the docks has of late been performed in a very unsatisfactory manner. As a typical instance I quote the undue delay in producing wools available for the second series of 1900 sales when called for, for lot-

ting purposes, in consequence of which some 129 bales consigned to my company, affecting 19 separate interests, could not be sold in the sales for which they should have been available, resulting in considerable loss to the owners as the market receded. In connection with this matter the attitude taken by the dock company, regarding the representations made by my company, was not such as was reasonably to be expected from a business concern, apart from any consideration of the value of my company's business to the dock company. In furnishing landing and sale weights, and particulars of charges relative to several of the parcels referred to, undue delay occurred, for example, while the "Waikat" and "Rakaia" completed discharge on the 6th March, weight notes were not completed until 2nd and 4th April. In the case of certain of our wools shipped by the vessels named, as well as by the "Wakanui," sales of which were made on 21st, 22nd and 24th March, relative charges notes were not furnished—and then only after repeated applications had been made—until 3rd April, the formulation of account sales in consequence being unduly delayed. While it must be conceded that work at the docks during the year 1900 was interfered with by labour troubles, I consider that such a state of affairs as at times existed might have been avoided, had there been better supervision exercised in the Wool Department at the docks, and in my opinion, to ensure the proper handling of wool, there should be appointed a responsible and capable officer, who should be located at the docks, and that the direction of affairs there should be left less in the hands of "foremen"—as has of late been the case—who shift responsibility from one to another. Again, arrangements should be made for complaints being more promptly investigated and dealt with. The facilities, as regards floor space, lighting and showing wool at the dock warehouses, are ample for present requirements, and with proper organisation the dock company should be in quite a favourable position to handle wool.

*Cross-examined by Mr. George Wallace.*

8897. I think in the second series of the 1900 sales there was a very great glut of wool, was there not?—Yes; there was a good deal of New Zealand wool.

8898. And the market fell, did it not?—Yes, it subsequently fell.

8899. And a small quantity was sold in consequence of the fall of the market?—Yes, the withdrawals were unusually heavy, but not so much as regarding New Zealand wool.

8900. There was a great glut of wool which had to be dealt with?—There was no glut of wool, but the market was a bad one. The arrivals were not unduly heavy.

8901. But there was plenty of wool in the warehouse?—The wool was arriving and in the warehouse.

8902. And not going out. You really do not remember, do you?—Yes, I remember exactly, but I do not quite see your point. They had the wool, but we could not get it. The wool was in the warehouse and we could not get it.

8903. I am not here for the purpose of your finding out my point. We want the facts. In point of fact did the dock companies make you any payment on that account?—They have since done so. The new management have done so. The old management declined to entertain our claim.

8904. You said: "In consequence of which some 129 bales consigned to my company, affecting 19 separate interests, could not be sold in the sales for which they should have been available, resulting in considerable loss to the owners as the market receded"—That is so.

8905. And that claim has been paid by the dock company?—Yes, since my evidence was put in or rather since it was drafted.

8906. Will you kindly tell me when your evidence was drafted?—In November last year.

8907. So that it cannot be described as up to date, When was the claim paid?—Some time this year.

8908. What time?—I could not give you the exact date. Probably February or March.

8909. Or April?—Possibly.

8910. Or January?—No, I do not think so.

8911. Would you kindly give us something. You see you are coming here to give evidence. You should assume an attitude such as is reasonably to be expected from a business concern, and you cannot tell me when this claim was allowed or whether it was allowed, or anything about it?—I can tell you it was paid this year, since the new management came in.

8912. What do you mean by the new management?—New managers of the docks were appointed. The old managers declined to entertain it.

8913. Have they not got the same chairman that they had last year?—I am talking of the managers.

8914. The managers have not the sole control of the dock company?—Apparently they had in those days.

*Cross-examined by Mr. Harper.*

8915. Wool comes in large ships, does it not?—Yes.

8916. And goes to Tilbury?—Some of it goes there.

8917. Or the Albert Docks?—Yes.

8918. And is then barged up?—Yes.

8919. The London Docks are mostly used for the storage of wool?—Yes; it is barged up.

8920. Is it barged up by the dock company?—Yes.

8920a. In, I suppose, large barges?—Yes.

Mr. W. B.  
Daniels.  
5 June 1901.

(Adjourned to Monday next, June 10, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## TWENTY-FOURTH DAY.

*Monday, 10th June, 1901.*

PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTELTON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.  
Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

MR. BALFOUR BROWNE, K.C., and MR. GEORGE WALLACE appeared on behalf of the London and India Dock Company.

MR. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

MR. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

MR. T. E. SCRUTTON, K.C., and MR. J. B. PORTER appeared on behalf of the Corporation of the City of London.

MR. F. F. DALDY appeared on behalf of the London County Council.

MR. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

MR. R. W. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

MR. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

MR. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

8921. (*Mr. Lewis Coward.*) Before you begin will your Lordship allow me to correct two statements of fact that were given in evidence at the last sitting of the Commission. I will ask your Lordship to turn to the table which was put in at Question 8852 on the 23rd day. Your Lordship remembers that a statement was put in then showing the detention of barges belonging to a firm of Wingent and Kimmins, Limited, and two delays were attributed to the Millwall Dock Company, namely the "Ernest Albert" and the "Bethell." It was elicited from the Witness by Mr. Ellis that it was not his personal observation, but the facts are so totally at variance with the statement in that column that I will deal with it. The "Ernest Albert" was a barge belonging to the London and Rochester Barge Company. It entered the Millwall Dock, not on the 23rd June, as alleged, but at five minutes to four on the morning of the 29th June; it was loaded with 338 quarters of wheat ex "Breckfield" by 2.30 p.m., on the same day, and it left the dock at 3.45 a.m. on the 30th June the following day. With regard to the "Bethell," that was a barge belonging to the same company, namely the London and Rochester Barge Company. That vessel entered the dock at 4 p.m. on the 12th September, and not on

the 7th September as is alleged in the column. It was loaded with 350 quarters of wheat ex "Oceana" by about 8 p.m. on the 13th September, and was also loaded with 10 tons of nitrate, ex "Condor," on the 14th, and left the dock the same day at 4.40 p.m. Of course it was impossible for me on the spur of the moment when that was put in to cross-examine the witness upon it, but I am prepared to prove that now by a witness who is here.

(*Mr. Ellis.*) I was going to say that if evidence is contradicted, of course it must be contradicted by evidence; but I understand the Counsel to say he is prepared to prove it.

(*Mr. Lewis Coward.*) Yes, I am prepared to prove it. It is a little unfortunate that tables are prepared in that way.

(*Mr. Loehnis.*) My Lord, one thing I want to say about the Surrey Commercial Dock is this: There is only one delay alleged, that of the "Young George," from the 21st to the 24th September. The 23rd September happened to be a Sunday.

(*Mr. Ellis.*) You have looked into that and are sure about it?

(*Mr. Loehnis.*) My client has.

Mr. RICHARD KNOWLES SPENCER called and examined.

8922. (*Chairman.*) You are a director of the British Oil and Cake Mills, Limited, and are also manager of the Stewart Brothers and Spencer branch of that business?—Yes.

8923. Your firm are seed crushers, and you desire to give evidence as to the seed oil and cake trade in so far as it bears on the subject of this inquiry?—Yes.

8924. You are also chairman of the London and Rochester Barge Company, Limited?—Yes.

8925. Will you be good enough to give us your evidence?—The business of my firm (Stewart Bros., and Spencer, now amalgamated with the British Oil and Cake Mills, Limited,) was established in 1870, their mills being situated at Brambridges, on the Upper Medway. The tolls imposed by the Upper Medway

Navigation Company under Act of Parliament practically secures to the Upper Medway Navigation Company a monopoly of the water carriage over the waters which that company control. The tolls and rates for transport became unbearable to my firm, who sought for fresh premises in free water, and after considering sites upon both the Thames and Lower Medway, selected a position at Rochester, below bridge, on the banks of the Medway, where they were enabled to avail themselves of the free navigation of the Thames and Lower Medway, with the freedom of entry to the docks for barges necessary to the business. Barges trading between the Medway and the London Docks keep within specified water limits of the Port of London, and therefore are not classed as "vessels trading coastwise" upon which the London Dock Companies levy dues. In the year 1896 the dock companies attempted to levy dock dues upon

Mr. R. K.  
Spencer.  
11 June 1901.

such barges. My firm joined with others in a test action, instituted under the auspices of the cement trade section of the London Chamber of Commerce, which resulted in legally establishing the right, which had been in force for nearly 100 years, of free entry to the docks for barges taking cargoes to or receiving cargoes from vessels loading or discharging therein. The London and India Docks Joint Committee then lodged a Bill in Parliament to repeal those rights and enable them to legally impose certain rates and charges upon all barges and lighters and their contents entering or leaving the docks. The second reading of this Bill was opposed by the London Chamber of Commerce, negatived in May, 1900, and the Royal Commission on the Port of London appointed.

8926. I understand you are of opinion that the constituted to administer the docks in the interests of would be greatly improved by the abolition of the control of the companies at present exploiting the water and quays of the docks on the River Thames?—I am.

8927. And you think a public Trust should be substituted to administer the docks in the interests of commerce?—Yes. I desire to offer evidence on the subject of the control at present enjoyed by the Watermen's Company over the water carrying trade within certain limits on the River Thames. I have experience of this matter in the capacity of Chairman of the London and Rochester Barge Company. This company are barge and lighter builders and also have a water carrying trade upon the Thames and Medway. They have absorbed the firms of James Fox and Co., one of the oldest lighter barge builders in London, and of G. H. Ourel and Co., sailing barge builders of Rochester. Sailing barges, trading between the Medway (among other places) and the Thames and its docks, are manned by men who are skilful and experienced in the management of these craft, and while navigating to and from points outside certain limits of the River Thames, from and to points within such limits do not require to hold a waterman's licence. When these craft carry goods to and from places within the limits of the Thames over which the Watermen's Company possesses powers, they are compelled to submit to the presence of men holding the Watermen's Company's licence. Unnecessary expenses are incurred by owners of sailing barges, steam tugs and other craft, on account of the "boarding money" paid to Freemen of the Watermen's Company; while a demoralising effect must be produced upon such Freemen who are enabled to obtain a living by loafing upon the waters to secure this "boarding money" paid to them nominally for work which they are usually quite incapable of performing safely. I am of the opinion that the monopoly enjoyed by this company, facilitated the recent strike, and encouraged the men who were very well paid, to follow the lead of those responsible for its organisation, whereby heavy losses have been inflicted on manufacturers, merchants, wharfingers, barge owners and others interested in the water carrying trade of the Thames, and a further blow given to the trade of the United Kingdom in general and of London in particular.

8928. Now have you anything to tell us with reference to the effect on your own trade of the charges proposed to be made by the dock companies?—Referring to the first attempt of the Dock Company to levy the tolls upon barges trading between the Thames and the Medway, that would affect the Rochester branch of our company to the extent of about £1,000 a year. The present powers which the company are applying for would affect the same branch to the extent of £2,000 to £2,500 a year, and the effect on the company's business as a whole would amount to £10,000 to £15,000 a year. I can give you the figures if you wish.

8929. Have you any statement of those figures prepared?—I have not a statement here prepared in a form to put in, but I can go over them in a minute. They are very simple. I have some figures here, but they are rather in the rough.

8930. Tell us first, please, the capitalisation of the company to which you refer?—The nominal capital is £2,250,000.

8931. Is it all paid up?—£1,750,000 paid up.

8932. Do you publish a balance-sheet?—Yes.

8933. Will you tell me your gross income for the last year?—Off-hand I could not trust my memory.

8934. Then I think you had better put in the last year's balance-sheet of the company?—Certainly.

(The Witness handed in Report and Balance Sheet of the British Oil and Cake Mills Company, Limited, for the year ended June 30th 1900. See Appendix, 24th Day, No. 1.)

Mr. R. E. Spencer.

10 June 1900

8935. Now, will you be good enough to tell us what figures you propose to give us. Do you propose to give us a statement of the loss, or suggested loss, which would be incurred by your company per annum?—What the cost would be to the company. The Dock Company are going for powers to charge 4d. a ton on the barges' register. I will give you what the charge would be on 100 tons at 4d. a ton on the barges' register. A barge to carry 100 tons registers about 50 tons, so that would be 16s. 8d. dues per barge. Then they are proposing to charge 1s. per ton on oilseeds, which would be £5 on a 100-ton barge. That is £5 16s. 8d. for 100 tons. A considerable portion of the oil manufactured from seed is exported. On 100 tons or linseed there would be about 35 tons of oil. If that were sent on to the docks in one barge load there would be 16s. 8d. barge dues, and 1s. 6d. a ton on the oil, which would be £2 12s. 6d. The total figures together amount to £9 5s. 10d. per 100 tons. The Rochester Branch Mill has a larger capacity; but, taking a crush of 500 tons a week, that is practically £40 to £45 a week, and if you multiply that by 52 it comes to about £2,250 to £2,500 a year.

8936. Does that embrace all the loss?—No; that is only the loss on the branch which I particularly represent. We have other mills that draw from London, and I estimate that their output is four times more. Then we also sometimes draw from London supplies for our county mills, situate in Hull, Bristol, Gloucester, Glasgow, Leith, and Burntisland. I am speaking within the mark if I say that the total liability of the company under the powers that the dock company are now asking would be £10,000 to £15,000 a year.

8937. (Sir John Wolfe-Barry.) Will you tell us where the limits of the Upper Medway and the Lower Medway are?—The Lower Medway limits are about half a mile below Maidstone Bridge. The Medway navigation limits are scarcely, if you will allow me to say so, a point in this present inquiry.

8938. Are your premises on the Lower Medway?—Yes, but outside the limits of the Lower Medway Navigation Company.

8939. Then you say the Upper Medway Navigation Company have secured a monopoly of the water carriage?—Yes.

8940. Is that in consequence of tolls which they are authorised to take by Parliament?—Yes.

8941. At any rate it does not affect us in this inquiry?—No.

8942. You said that you thought that the conditions of the seed crushing trade would be greatly improved by the abolition of the control of the companies at present exploiting the water and quays of the docks on the River Thames, but you did not give any reason why that improvement might be anticipated?—The charges under the present conditions are very much heavier than they are for similar services at most ports. I can discharge seed at Rochester and bring it to London at a cheaper rate than seed can be discharged in London and delivered to London mills.

8943. Therefore what you mean is that you think that under a public Trust you would get lower rates?—I think under a public Trust the business would be managed, if I may say so, from a serving-commerce objective point, instead of from a dividend-earning objective point.

8944. You have not told us how many barges your company own. Can you tell us that?—We own 57 sailing barges and 22 dumb lighters.

(Mr. Balfour Brown.) Would you mind, sir, also asking him upon what tonnage he has calculated those losses, because without the tonnage it is impossible to make much of the figures?

8945. (Sir John Wolfe-Barry.) Can you answer that question?—I deal with 100,000 tons a year at the Rochester branch.

8946. Is that mainly in barges?—Yes.

8947. Is that mostly from the docks?—Yes, mostly from the docks.

*Mr. R. K. Spencer.* 8948. There is not much of your cargo discharged in the river?—Very rarely is it discharged in the river.

10 June 1901. 8949. What are the limits of freedom for the sailing barges?—I believe an imaginary line drawn from the Naze to the North Foreland. When the company tried to make sailing barges pay dues they relied upon a Treasury Minute which drew an imaginary line from Port Victoria, I believe, across to Southend. I cannot give you the exact bearings, but that Treasury Minute can no doubt be produced if you wish it.

*(Mr. Rowland Whitehead.)* My Lord, may I intervene? I think the witness is under a misapprehension. I think he is confusing the limits of the Watermen's Company with the limits of the Thames Conservancy. I am told that the Watermen's Company's limit is between London and Gravesend.

See 8986.

*(Witness.)* Quite so. I answered what I understood to be the question.

*(Sir John Wolfe-Barry.)* Perhaps you will be able to refer us to that?

*(Mr. Cranstoun.)* Yes. I have the Watermen's Company's bye-laws here.

8950. *(Sir John Wolfe-Barry.)* You alluded to the charges made by the freemen of the Watermen's Company for "boarding money." Is that boarding money paid for coming on board your sailing barges?—Yes.

8951. How much does it amount to per barge?—I believe it is 6s. per tide.

8952. *(Mr. Ellis.)* When were the mills to which you allude as having been put up at Brambridges erected?—I think in about 1805.

8953. As I understand, your old firm of Stewart Brothers and Spencer, which has now been absorbed, commenced its operations in 1870?—Yes.

8954. At those mills?—Yes.

8955. Have your old firm spent any capital on those mills since 1870?—We rented those mills.

8956. Were they enlarged?—They were enlarged under our occupancy and at our expense.

8957. And are those the mills to which the 100,000 tons per annum is attached?—No, the 100,000 tons per annum is attached to the Rochester mills—the new mills built at Rochester.

8958. Is the whole volume of trade with regard to which you desire to speak 100,000 tons?—No.

8959. I am speaking now of you in your capacity as manager of Stewart Brothers and Spencer. That is 100,000 tons?—Yes, that is so.

8960. And that trade comes from two places, does it—Rochester and Brambridges?—No. The Brambridges Mills are shut down; they are destroyed altogether.

8961. They are extinct, are they?—Yes, they are extinct.

8962. Then you carry on your business now at what you call the New Mills?—Yes, the Rochester mills.

8963. Do those belong to you?—Yes.

8964. And were erected by you?—They were erected on our own freehold.

8965. In what year?—1880.

8966. And during the last 20 years have you added to those?—Very considerably.

8967. Your volume of business has steadily increased during the 20 years?—Considerably.

8968. And it is in regard to that volume of business that the loss you spoke of attaches?—The smaller loss of which I spoke attaches to that. That is the £2,000 to £2,500 a year.

8969. Now I pass to the other capacity in which you come here, namely, that of a director of the British Oil and Cake Mills, Limited. That company absorbed your old firm?—Yes.

8970. Am I to take it that the 100,000 tons is in relation to the whole concern now?—No, only to my branch of it.

8971. Then the British Oil and Cake Mills, Limited, has a much larger volume of business than that, has it?—Twenty times, I should say, speaking roundly.

8972. Has your evidence relation to that larger volume also?—Yes, but only to the tonnage that passes through the London Docks, because the dock company are proposing to charge all lighters and all goods.

Therefore the lighters of the London Mills would be liable to those charges.

8973. I wanted rather, if I may, to ask as to your capacity, in order to gauge the value of your evidence. You speak to us in another capacity, that is as chairman of the London and Rochester Barge Company?—That is so.

8974. Your original capacity as manager of Stewart Brothers and Spencer's business has been absorbed in that of the British Oil and Cake Company?—Quite so.

8975. But you also have another capacity as chairman of this company?—Yes, a separate company entirely.

8976. And your evidence covers the whole?—Yes, it covers the two.

*(Chairman.)* Mr. Balfour Browne, I do not know whether you wish to cross-examine this witness. If so, I would make the suggestion before you begin to do so that as there seems to be a little confusion in the witness's mind, it might be convenient for you to ask on behalf of the dock companies as to this charge of 4d. being levied on empty barges, which I understand is not intended.

*(Mr. Balfour Browne.)* It is barges coming to take away goods from the dock, my Lord.

*(Chairman.)* It is for you, not me, to ask, of course.

*(Mr. Balfour Browne.)* I was not proposing really to take up the time of the Commission with cross-examining the witness at all. The only thing I should like, following on what Mr. Ellis asked, is to get the tonnage upon which the witness calculates the loss of £10,000.

*Cross-examined by Mr. Balfour Browne.*

8977. You said you thought about twenty times 100,000 tons. Would you give me the exact tonnage?—In mentioning twenty times 100,000 tons, I was referring to the business of the Company, not only in London, but its various branches. In dealing with the specific question it is only as affecting the position of the company as regards goods through the London Docks.

8978. You spoke of goods at Bristol, Gloucester, and so on. Upon what tonnage were you calculating that loss?—I was calculating on a tonnage of 500,000 and 600,000 tons a year.

*Cross-examined by Mr. Harper.*

8979. I understand you do not get much from the wharves?—No, not much from the wharves.

8980. *(Mr. Ellis.)* Do you, as a matter of fact, in the Company of which you are chairman, deal with a tonnage of 500,000 to 600,000 tons per annum?—No, so far as the Rochester branch is concerned; is it about 100,000 tons per annum.

8981. You calculated a loss; I do not quite follow you; if you do not deal with that very large amount of tonnage, how does the loss accrue to you?—It accrues to me in my position as director of the British Oil and Cake Mills.

8982. Does the Company deal with that tonnage?—Yes, and more.

8983. It does deal with 600,000 tons a year?—Yes.

*(Mr. Balfour Browne.)* I cannot understand, with great respect to the witness, because the total amount of seed and nuts dealt with in our docks is only 145,000 tons for the whole year; I cannot understand how he makes it, but I do not know that it would be very useful to pursue it.

*(Witness.)* I hope no mistake has been made in the figures.

*(Mr. Ellis.)* Are your figures correct?

*(Witness.)* I am afraid there is a mistake. I am very sorry. My own branch, Stewart Brothers and Spencer, deal with 20,000 to 25,000 tons a year, and the company deal with 100,000 to 120,000 tons a year.

8984. Let me have it clear. The figure of 100,000 tons must be struck out, and 20,000 to 25,000 tons substituted?—Yes.

8985. And the figure of 600,000 must be struck out, and what substituted?—100,000 to 120,000 tons.

8985a. Do you think now we have it right?—I believe so; I relied upon someone to copy correctly my figures and terms.

See  
3949.

8986. (Sir John Wolfe-Barry.) As the matter has arisen on Mr. Spencer's evidence, it might be convenient to point out the limits of the Watermen's Company. The Act of 1859 has been handed in by learned counsel. As I read it it appears that whereas the limits of watermen and lightermen by the Act of George IV., Cap. 75, were the River Thames between Yantlet Creek and Windsor, the Act of 1859 appears to make the limits all parts of the river Thames from and opposite to and including Teddington Lock in the counties of Middlesex

and Surrey to and opposite to and including Lower Hope Point, near Gravesend, in the county of Kent, and to all docks, canals, creeks, and harbours in or out of the said river so far as the tide flows therein. Is that right, Mr. Cranstoun?

(Mr. Cranstoun.) Yes.

(Mr. Whitehead.) The Commission have already had this in evidence at Question 3343.

Mr. R. K.  
Spencer.  
10 June 1901.

Mr. FRANCIS CARBUTT called and examined.

8987. (Chairman.) You are engaged in the rice trade?—Yes.

8988. You appear before us in order to give evidence with regard to that trade in so far as it bears upon the subject of this inquiry?—Only as far as my firm is concerned. I do not appear as a representative of the trade, but only as a representative of my firm. I am a director of Carbutt and Company, Limited, who have for the last 38 years carried on business as rice merchants and millers in Bermondsey. For the purpose of their business my company import rice into the Port of London, and take it away from the ships to their mills to be prepared for consumption. My company have expended large sums of money in building mills, wharves, and warehouses on the banks of the River Thames.

8989. (Chairman.) Where?—St. Saviour's Dock in Bermondsey, just below the Tower Bridge. It is just below Butler's Wharf. We have relied on the clause in the various dock Acts, which gives free access to barges and lighters entering the docks for the purpose of receiving and delivering goods to and from vessels unloading and loading therein.

8990. We have already heard the proposals of the dock companies. Do you tell us that if those powers are granted your company will suffer loss?—Undoubtedly, owing to the depreciation in value of their premises. I may say my evidence was prepared before the second Bill was brought in, in which they put only 1s. on rice; it was then proposed to be 1s. 6d., I believe. If the tax of 4d. per ton upon the registered tonnage and 1s. 6d. per ton on the contents of the lighters and barges receiving and taking my company's goods from and to vessels lying in the docks is imposed it will amount in the case of my company to the sum of at least £3,500 per annum, and, as I will presently show, much more. This will in the case of my company be a total loss, as no portion of this sum can possibly be recovered from the consumer, owing to the close competition of the Continental merchants with my company. The above-mentioned sum of £3,500 per annum will be augmented unless some method could be found by which the barge or lighter could be always full of goods leaving the docks. As it is impossible for barges always to carry a load equal to the registered tonnage, 4d. per ton on the registered tonnage would amount to more than this on the contents. For instance, should a barge of 100 tons be sent for 50 tons of goods the charge of 4d. on the registered tonnage would amount to 8d. per ton on the goods, which plus 1s. 6d. amounts to a burden of 2s. 2d. per ton on goods. This example of a 100-ton barge being sent to fetch 50 tons of goods is given as a specimen of the charges on imported goods; while, when the goods are re-exported, this charge would be still more oppressive, as frequently two or three tons are sent into the docks to an exporting vessel in the same barge used for the import traffic, which are of any size from 10 to 120 tons burden. I do not wish to say we put 2½ tons in a 120 ton barge. I wish to state that my company, as large manufacturers and employers of labour, would certainly object to any charge, however small, being placed on any of our goods entering the port, as such charges would handicap my company with regard to foreign competition, and I, therefore, wish to dissociate myself from the opinion expressed on this matter in the general statement of the London Chamber of Commerce. I consider that as free water was intended to benefit the Port of London, all goods which do not benefit the port itself, by being either landed or manufactured, might with advantage have a charge put upon them. This would only apply to trans-shipment goods, or to goods which were taken direct from the ship into railway waggons or lighters, and sent inland. The only rate charged on rice landed on the

quay of the dock on merchant's account is 4s. 2d. per ton (with a discount of 5 per cent. in some cases) called the "management rate." This includes four weeks' rent, and various working operations, as follows:—Landing at the dock where the ship discharges, sorting, externally for damage, classing sea damages, sampling, taring for average, weighing without numbering or rendering separate weights, marking weights on bags, delivery, and one month's rent. If my company's goods are merely passed over the quay and delivered into a barge, the full rate of 4s. 2d. per ton is charged, the same as if they had remained warehoused for a month, and the various labour operations described above had been expended upon the goods. My company would be thus compelled to pay for work which is often needless, in consequence of the joint committee imposing the one "Management Rate" of 4s. 2d. If this were divided up amongst the various operations, my company would be able to have such operations performed as are actually necessary, and only pay for the actual work done. In order to claim the free delivery of imported goods into their craft, my company have to lodge the necessary papers, and have their craft alongside importing vessel within 24 hours of the ship's reporting. The goods are then delivered into the craft free, sometimes over the side of the ship direct, but sometimes the shipowner (for his own convenience) has the goods landed on the quay, and thence delivered into the craft. For such delivery and landing into craft the dock company charge the shipowner 1s. 6d. per ton, in the case of rice.

8991. Is not that a charge for labour only?—I cannot tell you for what purpose it is. I know that that charge is made. If my company failed to lodge the necessary papers and have their craft alongside within 24 hours of the ship's reporting, my company could not claim free delivery; the goods would be landed on the quay, and the expenses of receiving on the quay and delivery to craft would have to be borne by my company, in which case the joint committee would charge their "Management Rate" of 4s. 2d. per ton. My company wish to point out that if their goods (rice) are landed on the quay and put into craft, on account of the shipowner, the dock company's charge for such work is 1s. 6d. per ton, whereas if the cost is borne by my company, the dock company's charge is 4s. 2d. per ton for precisely the same services.

8992. Is that the case—precisely the same services?—Yes.

8993. But you have already told us it comprises a variety of items?—I may not want those items done.

8994. But it is not for the same services?—I had a case where a ship came in and the goods were landed on captain's entry through the documents being late—

8995. You are going into rather vague statements now. Is this for the same services?—Yes, I think so, from my point of view. Continental merchants and millers would be further assisted in the very keen competition already existing by the imposition of the tax referred to, because the vessels in which they ship their goods usually unload in the river, alongside one of the large wharves (such as Brewers' Quay), and will therefore escape this levy, which only applies to goods discharged into lighters and barges from vessels unloading in the docks, whereas 99 per cent. of the ocean-going vessels in which my company's goods arrive unload in the docks. The imposition of this tax would add considerably to the cost of manufacturing goods, and put further obstacles in the way of my company competing successfully with Continental merchants and millers for the trade with the English coast ports. These Continental rivals have already a great advantage over

Mr. F.  
Carbutt.

Mr. F.  
Carbutt.  
10 June 1901.

us, in that they have their goods carried direct from the Continent to the English coast ports at a much lower rate of freight than we pay from London, and can get freights on through bill of lading to inland towns at a rate that it is impossible to get from London, either by rail direct or by steamer to nearest coast port and thence by rail. In framing any scheme for the control of the river, due regard should be paid to the creeks and inlets, which are apparently under no jurisdiction, and consequently never get cleaned out. The owners of property on such inlets would probably be glad enough to pay for cleansing these creeks, were they under the direction and supervision of some permanent authority.

8996. It would be convenient if you would specify which creeks and inlets you refer to?—I was referring more particularly to my own, St. Saviour's Dock. In the case of my company the St. Saviour's Dock, a creek in the Thames, is supposed to be under the jurisdiction of the Thames Conservancy, but all attempts to induce that body to improve its sanitary and navigable condition have failed. The appointment of a dock master to regulate the traffic of barges and vessels has to be undertaken by the owners of property on the creek, who have to pay his wages, although he is not allowed to act without the sanction of the Thames Conservancy. I am also of opinion that the restrictions with regard to men employed on barges should be removed by the abolition of the monopoly which is enjoyed by the Watermen's Company.

8997. (Sir Robert Giffen.) You would object to any tax, not merely to this proposed tax upon barges and goods in barges, but you would object to any tax upon goods coming into the river, as hindering you in your competition with foreign ports and mills?—Yes. I am speaking only of my own trade.

8998. Would that apply to the suggestion made by the Corporation for a general tax upon all goods coming into the river?—I am afraid if there was a general tax we should still have to bear it. I can remember a case when the dock companies and the wharfingers came to an agreement and put the rates for landing goods up, I think it was in 1889 after the dock strike, and we had to pay the charges ourselves; we could not recover from the consumers.

8999. There is no charge, however light, to which you would not object?—No.

9000. A charge of 1 per cent. *ad valorem* would be objectionable?—It means so much out of our pockets. As far as I am concerned you would be taxing us for the benefit of the Dock Company.

9001. Is that a general feeling amongst people in your trade?—Undoubtedly.

9002. That the goods coming into the port cannot bear any additional charge, however light?—We feel it so.

9003. How much would 1 per cent. *ad valorem* on your goods come to?—In the case of inwards and outwards only?

9004. Inwards and outwards separately?—Rice varies very much in price; it is sometimes 6s. and sometimes 18s.; so that it is rather hard to say, but I have taken a basis of 10s. a ton all round. I have worked it out at £5,000 a year.

9005. Both inwards and outwards?—Yes.

9006. How much inwards?—35,000 tons in and 15,000 tons out.

9007. And a charge like that, or any other charge would be so serious as to affect your trade very sensibly?—We think so. Our trade is not what it was by any means and it is hampered continually with all this competition from the Continent, and we find that every year there is more competition and profits get smaller and smaller.

9008. Would not a general charge have the effect of equalizing competition; that is to say, if you paid this £5,000 a year the people bringing goods from the Continent to this country would also have to pay it, and so things would be equalized?—If you could put it on all the outports as well; Bristol, Liverpool, Goole, Hull, Leith, Glasgow and so on, then we should be equal.

9009. But not unless?—Not unless.

9010. I should like you to explain a little more particularly what you said about your having a difficulty

in sending goods to inland points in this country in comparison with foreign ports sending the goods to the same points because the railway company give facilities?—The railway companies in a great many cases own the steamers, or have, I believe, an interest in the steamers that run to some of these outports. They quote very low rates from Rotterdam and Amsterdam to inland parts so as to get the carrying to their railways.

9011. And they put a place like London at a disadvantage?—Yes, I can give you some figures, if you wish.

9012. Yes, I think we ought to have them?—I will start with the sea freights: our freight from London to Goole is 7s. 6d.; from Rotterdam and Hamburg it is 6s. To Hull it is 10s., from Rotterdam it is 6s., and I believe it has been reduced to 5s. 6d. quite lately.

9013. You are giving the railway rate?—I am giving at present the steamer rates to show you how we are competing, first of all with the steamers. Newcastle is 10s., against 8s. 6d. from Hamburg, less 5 per cent. I have the railway rates here. When you come to small quantities, to Leeds it is 19s. 2d. from London; while from Amsterdam it is 16s. 3d., and from Rotterdam it is 17s. 1d.

9014. That is a case where the railways come in?—Yes. In the case of Halifax it is 20s. 10d. from London, against 19s. 2d. from Amsterdam and Rotterdam. Huddersfield is 20s. 10d., against 18s. 4d. from the other two ports, so we already have at least 2s. 6d., and sometimes more, sometimes 4s. a ton against us to compete with. These are on half-ton lots.

9015. You think that arises partly from the railway companies owning steamers which go to places like Amsterdam or Hamburg, and that they give good rates to enable the traffic to come?—That is my opinion. But I believe also that most of the London lines have conventions, and Hull and Goole are competing generally.

9016. What kind of conventions?—Conventions for keeping up freights.

9017. Between London and these places?—Yes.

9018. But you are not aware of any particulars; you have not tried any case?—I know that we cannot get the rates lowered in consequence, no matter whether it is a competing line or not.

9019. How is it that the shipping freights between London and some of these northern places are higher than from Hamburg and Amsterdam to the same places; can you explain that?—No; unless it is this: I only put this forward as a suggestion, I do not put it as a statement, it is that they get better return rates from the other ports than they do from London.

9020. (Mr. Ellis.) Can you give us some idea of the volume of trade you do at these mills?—Speaking quite roughly, we do from 40,000 to 50,000 tons a year.

9021. That is the trade in respect of which your evidence is given primarily?—Primarily. I am speaking of so much inwards and so much outwards, but then we have a great deal more outwards which I have not put down. If we bring in we must take out, and we bring in from 35,000 to 40,000 tons a year; of course that has to go out again, so that if you double it you get 80,000 tons.

9022. About 80,000 tons is the total?—Yes, in and out.

9023. You appreciate my question. That is trade in respect of which your experience is gained?—I am only speaking of my own trade.

9024. That is the trade your evidence relates to—rice?—Yes.

9025. Have you anything else in your mind?—No.

9026. (Sir John Wolfe-Barry.) With regard to what you said about the jurisdiction of the Thames Conservancy, are you aware that the Thames Conservancy has jurisdiction over all the creeks and navigable channels of the Thames?—I understand they have jurisdiction, but they will not exercise it as far as regards getting the place cleaned out and making it fairly wholesome and decent.

9027. You do not then want an enlargement of jurisdiction, but you want some power to compel the jurisdiction to be exercised?—Yes.

9028. Is it true that wharf property has of late years

depreciated on the banks of the river Thames?—I did not say so.

9029. I ask you is that your experience?—No, I should not say it had up to the present.

9030. Was it not the fact some 4 or 5 years ago that wharf property had depreciated?—I think you will have to go further back than that.

9031. Has it now recovered whatever depreciation it experienced?—I should say at present it is recovering.

9032. We understand by the evidence that the proportion of trade which is done at the wharves is increasing year by year?—Undoubtedly I should say so.

9033. That would seem to point rather to the property becoming more valuable?—It would naturally do so.

9034. With regard to rates to Leeds and Bradford, and places in Yorkshire, I suppose Hull is the natural port of those places from the Continent?—I fancy Goole is, and thence by canal.

9035. Goole and Hull have water carriage right into Leeds, have they not?—Yes.

9036. And the railway journey from Hull to these great consuming centres is very much shorter than it is from London?—Yes.

9037. It seems likely that these East coast ports being the natural ports for these manufacturing districts will always compete on somewhat more favourable terms than London can?—Probably, but still more so if we have a tax put upon us.

9038. It is a condition of things which is to some extent geographical, is it not?—Yes.

9039. Would you suggest that the rates should be so much lowered as to enable London to compete with places like Goole for Leeds?—It would be to our advantage undoubtedly, but I am not suggesting that at all; I am only objecting to further taxation.

9040. I thought that was rather the trend of the evidence; that there was a hardship upon wharfwomen in London that they could not send into Leeds as cheaply as people who send in *via* Goole?—You are referring to me as a wharfowner. I am speaking as a rice miller.

9041. But either way?—There is a hardship, but I daresay we shall have to compete against it as we have done in years past. My evidence was not brought forward to try and get things reduced.

9042. The same circumstances would be to the disadvantage of Goole and Hull in competing for the commodities which are consumed in London?—It may be to the disadvantage of Goole, but it would not be to the disadvantage of Rotterdam and Amsterdam.

9043. That is quite true; you mean that the freights from Rotterdam to London ought to be somewhat the same as they would be from Rotterdam to Goole?—They are about. I think they are a little higher, but very little; I have not the figures here.

9044. You think the freights are much the same to the two ports?—I should say about the same.

9045. Then there is not a great hardship there?—No, there is no great hardship if you put it that way, except that we get the competition both ways.

9046. Do you mean to say that Goole competes with the London freight?—No, I am not complaining of that. I am complaining of the continental ports.

9047. London, I suppose, will get the freight which is properly belonging to London for the neighbourhood of London?—Not necessarily.

9048. Are you talking now of the consumption of goods?—I am talking of the consumption.

9049. Do you mean that the goods will be manufactured abroad and come into London?—Undoubtedly.

9050. Instead of being manufactured in London?—Yes.

9051. (*Mr. Lyttelton.*) It seems to be generally agreed that certain improvements are required in the river?—I know nothing about that.

9052. And certain improvements in the docks?—I know nothing about that.

9053. Assuming that improvement is desirable and that it would cost money, is it your opinion that the merchants should contribute something to that or not?—I can hardly give you an answer to that, for this reason: that I consider the improvements that have been necessary in the docks should be done by the docks themselves. This is only a matter of opinion; I have no figures to support it. I consider that had the docks been managed properly from the time they were started they would never have had to come and bring this matter before Parliament.

9054. We have to deal with existing circumstances. Assuming it to be a fact that some improvements are required which would cost money, is it your opinion that merchants should contribute something to that cost or not?—Do you mean personally or as a matter of opinion generally?

9055. You are here to represent your company?—Personally I should object to it, but as a matter of opinion it might be right.

9056. That is the question I wanted to arrive at. Is your personal objection that you do not think you would be able to shift any part of the additional cost upon the consumer?—That is my own opinion.

9057. And that you would have to bear it all yourselves?—Exactly.

9058. Is it your opinion that you are unable to bear it, or merely that you dislike bearing it?—I think I am unable to bear it.

9059. What was the dividend paid by your company last year?—May I say that it is not a public company?

9060. Do you publish your accounts?—We do not.

9061. (*Chairman.*) You are a limited company?—We are a limited company.

9062. But you do not publish your accounts?—No.

9063. (*Mr. Lyttelton.*) I may ask it in a general form, perhaps. Is it your case that your company are unable to bear a further charge or that they dislike bearing a further charge?—We consider we are unable, because once that charge is put on we should lose a great deal of business that we are now pushing to the greatest possible extent in the way of these outports and consequently we should not only lose the amount of money that we have to pay for dues, but we should lose any profits which we should get on that trading.

9064. I think you must do yourself justice as to this. You told Sir Robert Giffen that on your calculation the charge would amount to £5,000 a year from your company. You do not put it to the Commission, do you, that you are unable to bear that charge?—Yes, decidedly.

9065. That you could not carry on a profitable business if you had to pay £5,000 a year more?—No.

*Cross-examined by Mr. Daldy.*

9066. Will you say where the Continental merchants and millers who would undersell you are?—At Rotterdam, Amsterdam, Hamburg, and Bremen.

9067. Most of the rice that comes into London is ocean borne?—Most of it.

9068. You say that it could come into those ports to be discharged and ground, and then sent to an English port cheaper than it could be in London if these charges were put on?—It is done now.

*Cross-examined by Mr. Harper.*

9069. When you quoted rates to some of the West Riding towns from London were you quoting rates by sea between outports and thence by rail, or thence by canal?—In the case of Leeds what I was quoting was water—that is, the Calder Navigation. In the case of the others by rail from the towns mentioned.

9070. Right through by rail?—Yes.

9071. I do not know whether you are familiar with the district and whether you have the ownership of the canals of that district?—No.

9072. And whether some of them are vested in the railway companies?—No.

9073. You are suggesting a tax on transhipped goods

*Mr. F. Corbett.*  
10 June 1901

Mr. F.  
Carbutt.

10 June 1901.

or goods which are taken direct from ship into railway wagons or lighters and sent inland?—Yes.

9074. How would you discover when goods from a lighter were going inland if they were taken away to go to a wharf?—They would not necessarily go to a wharf.

9075. I am speaking of goods going to a wharf. You do not propose to charge anything going direct to a wharf—you do not inquire further as to where they are going?—That is about what it comes to. I do not care where it goes to afterwards.

*Re-examined by Mr. Rowland Whitehead.*

9076. So far as your personal trade is concerned, that is the 80,000 tons about which you spoke to Mr. Ellis?—Yes.

9077. But of course you are not the only rice merchant and miller?—I am the only rice miller.

9078. The rice trade is of far larger dimensions than that?—There is more trade than that.

9079. May I ask you whether the case you put before the Commission is typical of the rice trade?

(Mr. Balfour Browne.) He is the only rice miller, therefore it must be typical.

9079a. (Mr. Rowland Whitehead.) I do not want to press it upon you if you cannot answer the question?—I cannot follow it—that is all.

9080. You said that if rice is landed on the quay and put into craft on account of the shipowner the charge to him is 1s. 6d. a ton?—So I understand.

9081. If these two services of landing on the quay and putting into craft, and only these two services, are performed for you, what is the charge?—4s. 2d.

9082. But you can, if you like, have further services in addition to this for that charge?—Undoubtedly.

9083. (Mr. Lyttelton.) Do you do so as a matter of fact. I suppose if you want to pay the 4s. 2d. charge on the consolidated rate you get all you can for it?—Undoubtedly.

9084. You would probably have the sampling and taring and weighing and marking done in the docks?—Yes, if we do land it there.

9085. You do not say you are in the position of paying 4s. 2d. when, in point of fact, you only get delivery and landing. You may, but you do not as a fact?—As a fact we never land a ton of rice at the docks if we can possibly help it. There was a case a little while ago when we were short of barges. We could not provide barges quickly enough to discharge the ship, and it was a case of whether several hundred tons would have to go on the quay or not. Had that gone on the quay we should have had to pay 4s. 2d., even though it was only for a day until we could get a barge there. The dock company would have shown no mercy, but had it been for the shipbroker it would have been 1s. 6d. In fact, in this case the shipbroker said: "We see you are in a hole; we will land as for our account, and you will only have to pay 1s. 6d."

9086. Have you, as a matter of fact, ever paid 4s. 2d. to anybody for these two services only?—No. Because

as soon as we got to the point where we have to pay 4s. 2d. we immediately said: "If you are going to charge us 4s. 2d., we do not want these things done, but we are not going to let you make all that profit out of it, and you shall do them." But we do not want them done; they are totally unnecessary charges put upon the goods for no purpose.

9087. (Mr. Rowland Whitehead.) As I understand, you object to a charge which involves that peculiar method of action?—Undoubtedly.

9088. And you would like to have an opportunity of paying for those services which you require?—Undoubtedly. I can get it all done at wharves, and that is the reason I go to wharves to land it.

9089. (Sir John Wolfe-Barry.) You say that Continental merchants and millers can unload their vessels in which their goods come either in the river or alongside one of the large wharves?—Yes.

9090. Is that done to any great extent?—Yes, there is a considerable quantity of cleaned rice which comes in to compete with us, for instance, at Brewer's Quay. I have not the figures here.

9091. Are there any wharves as large as Brewer's Quay?—Yes. The principal quantity of rice discharged is at Brewer's Quay; that is the only reason I instanced it, but there are plenty of ships discharging at other wharves.

9092. Take Brewer's Quay. Am I not right in saying that vessels of 2,000 or 3,000 tons can come alongside?—I should say so.

9093. That is done?—Yes.

9094. In that way Continental consignors would escape the charges which are proposed to be levied under the Bill of the dock company?—Undoubtedly.

9095. You would then be more seriously handicapped than you are now with Continental competition?—Undoubtedly.

(Mr. Balfour Browne.) Might I say with regard to the 4s. 2d. that of course the witness now admits he has never paid it.

(Witness.) I have never admitted such a thing.

9096. You have never paid it without getting the services?—Without getting the services.

9097. I was only going to point out that it could only apply to 1½ per cent., because 98-6 goes over without any charge at the present time. Therefore it could only be a very small percentage that it could apply to?—There is a great deal made of this 1½ per cent. The reason that it is not landed at the docks in my opinion is this difficulty of getting on with the dock company and always having to pay the full rates for things which are not required.

9098. (Chairman.) But things which are done?—Not necessarily done. I have had several thousand tons of goods landed where I got the rates split up and only got the work done that I required, and consequently saved the money for unnecessary work which could just as well have been landed by the dock companies if they made only the charge for the work actually done. I know a great deal has been made of this 1½ per cent., but it is not the fault of the trade; it is the fault of the dock company.

Mr. EDWIN TATE called and examined.

Mr. E. Tate.

9099. (Chairman.) You are a member of the firm of Henry Tate and Sons, Limited?—Yes.

9100. Who are sugar refiners?—Yes.

9101. You desire to lay before us evidence with regard to the proposals of the dock companies so far as they would affect the sugar refining industry in London?—Yes. Our refinery was built at Silvertown in 1887 on the banks of the River Thames, owing to our being able to bring raw sugar alongside our works at the cost of lighterage only, there being no charge made for goods discharged in the river or in the docks. If a charge, however small, were to be made on goods delivered overside in the docks or in the river, it would mean a considerable sum to our firm, seeing that we import over 100,000 tons of raw sugar a year, and it would very seriously cripple the sugar refining industry in London, which consists of Messrs. A. Lyle and Sons, Limited, and ourselves, the only two refiners left in the Port of London. I may say that Messrs. Lyle and Sons import

about 80,000 tons. We contend that inasmuch as our works were built alongside the river on account of the facilities and freedom from charges which were secured to the Port of London when the Charter was granted to the Dock Company, it would be most unfair to our interests were we now taxed with any charges. We fully appreciate the difficulties that the dock company have to contend with, and also the serious condition of the Port of London as compared with other ports, and we feel that these difficulties have been greatly aggravated by the change that has taken place in recent years in the quantity of traffic which now passes through the Port of London in transit to towns in England, and which is not warehoused or used as raw material in the port, but is transferred to barges and railway trucks for the purpose of through transit only. We feel that the Dock Company would be justly entitled in making a charge on goods delivered overside for this purpose, inasmuch as the Port of London does not benefit from such through traffic in the sense that was intended when

the original Charter was granted to the Dock Company. We hope that the earnest attention of the Commission will be drawn to the question of the monopoly which now exists in the river with regard to lightermen or watermen. We venture to suggest that this monopoly, which does not exist in any other river, should be withdrawn.

9102. Will you tell us when the firm of Henry Tate and Sons, Limited, was incorporated as a limited company?—I cannot tell you the exact date; it was about 1892.

9103. Do you publish a balance sheet?—No.

9104. Did you hear the question asked by Mr. Lyttelton of the last witness as to whether if it be the fact that money must be spent on the docks any of the cost should fall on the merchants?—Yes, I heard that question.

9105. Will you give your reply to that?—I think that the Port of London generally ought to bear that cost.

9106. Including the merchants?—Yes.

9107. (Mr. Lyttelton.) You say that you and Messrs. Lyle are now the only sugar refiners?—Yes.

9108. Were there more when you first knew the trade?—Yes; there were about 30.

9109. And they have died out?—Yes.

9110. Is the cause chiefly the foreign competition, or what is the cause?—Foreign competition, owing to bounties being given by foreign governments.

9111. (Mr. Ellis.) Just following up that matter, may we take it from you that the disappearance of these other sugar refiners is in any way connected with

the matter into which this Commission is enquiring, namely, the facilities of the Port of London?—I do not think it is. The matter that we are interested in is comparatively so small that it could not determine whether a refinery is able to exist or not.

9112. You quite appreciate the force of my question?—Yes.

9113. (Sir Robert Giffen.) Would you object to a small *ad valorem* charge upon sugar carried into the Port of London if there was a similar charge upon all goods coming into the port?—I would object to it unless there was a similar charge on all the ports in the United Kingdom. Our competitors are the foreigners, the Germans and the Austrians, and they send a large proportion of their goods to the ports on the east and south coasts.

9114. Most of the ports in the United Kingdom have such charges, have they not?—That I do not know.

*Cross-examined by Mr. Harper.*

9115. You speak about goods delivered overseas in regard to which the Port of London gets no benefit, because it is through traffic. Do you confine your suggestion to a tax upon goods which are, so to speak, delivered on a through bill of lading, and going away from London?—Yes.

9116. You do not propose to make any charge upon goods which go from the ship's side to a wharf?—No.

9117. I was under the impression that there was, at any rate, one other firm of sugar refiners in the trade, Messrs. Garton, Hill, and Co.?—Yes, you are quite right, but it is a different business altogether. They are not what we call sugar refiners.

9118. It is some branch of sugar refining?—Quite so.

Mr. THOMAS FRANCIS BLACKWELL called and examined.

9119. You are chairman of Crosse and Blackwell, Limited?—Yes.

9120. You desire to give evidence before us as to the effect of the dock companies' proposals, if carried out, upon the trade in which you are engaged?—I do.

9121. Will you be good enough to proceed with your evidence?—My company presented a petition against the Bill introduced in to the House of Commons by the London and India Docks Joint Committee, entitled, "A Bill to repeal exemptions from rates or charges of certain craft using the docks under the management of the London and India Docks Joint Committee, and of goods discharged or received by such craft, and to empower the Joint Committee to levy rates or charges thereon." The company are oil and Italian warehousemen, having their registered offices at No. 21, Soho Square, London. They are the owners of large works, and are manufacturers and exporters in a very large way, of all manner of preserves, provisions, jams, sauces, potted meats, syrups, and other articles of domestic consumption, and in the conduct of their business are very large consumers of sugar and other colonial and foreign produce, and for the purposes of their business they have very large consignments of fruits, sugar, and colonial and foreign produce, conveyed in ships and steam vessels, which discharge their cargoes in the docks of the London and India Docks Company, and which cargoes are thence conveyed to my company's works by lighters, barges, and other craft. My company are also very large exporters of manufactured articles and produce to the colonies and foreign parts, and such exports have to be conveyed by water from their works and premises to ships lying in the docks by lighters, barges, and other craft, and thence discharged into such ships. The articles and produce so conveyed from and to my company's premises to and from the said docks, include many of the articles described in the First and Second Schedules annexed to the Bill above referred to, and on which it was proposed to levy rates not exceeding 1s. 6d. and 1s. per ton respectively. The principal export factory of my company is situate in the Belvedere Road, Lambeth, and their premises at that place abut upon the River Thames, and consist partly of a large wharf, to which goods are brought, and from which they are sent for export, as aforesaid, by lighters, barges, and other craft, from and to the said docks. These premises in Belvedere Road are leasehold, and are held from the Ecclesiastical Commissioners for England for a term of 999 years, at a ground rent of £1,245, and

the sum of at least £40,000 was expended in building the premises and fixing the plant therein in the year 1882. This large outlay was incurred because it was considered that the premises were of special value, being on the river side. For the purposes of their business my company own a large number of lighters, barges, and other craft, which are daily employed by my company in going to and from the said docks, and conveying produce and goods of various kinds to and from my company's wharf, factory, and premises from and to the said docks for the purposes of my company's trade, and in respect of such lighters, barges, and other craft, my company has hitherto been entitled to exemption from payment of rates in accordance with the provisions of the Acts relating to the two companies referred to in the preamble of the Bill. My company has had a tabulated statement prepared giving the exact number of times the craft belonging to my company enter into the various docks each week, together with the total for the year. In the year ending the 31st December, 1899, the number of entries into the docks of the company was 919, being an average of rather more than 76 per month, and rather more than 17 per week. My company will be seriously and injuriously affected if the exemptions from rates and charges should, as was proposed by the provisions of the Bill, be repealed, and if the London and India Dock Company should be authorised, as was also proposed by the Bill, to levy rates and charges on goods discharged or received by lighters and craft using the docks, inasmuch as they would thenceforth be liable, in respect of their lighters, barges, and craft entering the docks of the two companies, and in respect of the goods discharged or received to or from on board ships or vessels lying therein to the payment of the rates and charges which the Bill sought to authorise the Dock company to impose. For the purposes of calculation I have treated the 919 entries of barges above referred to as separate barges. I have taken each barge as being of 50 tons burden, and this represents a total tonnage of 45,950 tons. At 4d. per ton per barge, the annual cost would be £765 16s. 8d. And taking the proposed charge on the contents at an average of 1s. 3d. per ton, the result would be £2,871 17s. 6d.; or together £3,637 14s. 2d. That amount of £3,637 14s. 2d. per annum which my company would have to pay, capitalised on a 5 per cent. basis represents a sum of £72,754 3s. 4d. The merchants and traders of the Port of London have ever since the establishment of docks in the River Thames been

Mr. T. F. Blackwell.

Mr. E. Tate.

10 June 1901.

Mr. T. F.  
Blackwell.  
10 June 1901.

exempt from the payment of any rates in respect of lighterage or in respect of goods discharged or received to or from on board ships or vessels lying in the said docks, and this exemption was specially conferred for special reasons at the time powers were conferred by Parliament on the two companies, and my company submits that no circumstances have arisen since the passing of the Acts relating to the two companies referred to in the preamble of the Bill which can to any extent justify a departure from the principle of exemption laid down by the provisions of those Acts. The imposition of such charges as those which were proposed by the Bill would, in my opinion, very seriously and injuriously affect the trade of the Port of London, and would have the effect of driving a considerable portion of it to foreign and other ports, while, owing to the decrease of trade that would ensue, I am satisfied that the dock companies themselves would derive no practical benefit from the change, and in all probability their revenue would decrease as the result of the change. My own company would, as far as possible, cease to avail themselves of the docks, and adopt other means of bringing in their goods free from the enormous burden that the change proposed by the Bill would entail. In my opinion the reason for the financial difficulties of the two dock companies is partly that they have over capitalised, and have a large accumulation of dead and unremunerative capital.

9122. (Mr. Ellis.) As I gather, your evidence is based upon a volume of trade of 46,000 tons more or less per annum?—Exactly.

9123. It is all based upon that?—It is.

9124. (Sir John Wolfe-Barry.) You say you might adopt other means of bringing in goods free from the burden that the charge proposed by the Bill entailed. What other means would you adopt?—It is possible to get them through other ports very often. For instance, we are able to ship to America via Southampton at cheaper rates than we can from London.

9125. (Mr. Lyttelton.) You say that the £3,637 14s. 2d. which your company would have to pay per annum

capitalised would represent £72,754 3s. 4d., which would be unremunerative?—That is rather an unusual way of estimating the effect of a tax, is it not? Just assume that a company was paying 20 per cent., and a small *ad valorem* tax or rate was put upon it, if you pursue this method would you say that some of the capital of that company became absolutely infertile?—I do not propose to push that point; I rather repeat that this sum of £3,637 14s. 2d. is practically an addition to our rental.

9126. (Mr. Ellis.) Do you withdraw the statements about the £72,754?—No, I do not. I only say that the £72,754 3s. 4d. is the capitalised value of that increased rental.

9127. (Mr. Lyttelton.) If I have capital in a business which I am pursuing at a great profit I do not cease to have a profitable capital because a small burden is laid upon me?—No, but it is an additional burden.

9128. You have taken the full amount of the tax, capitalised it on a 5 per cent. basis, and then written off £72,000 as if it were absolutely dead weight in your business. I should be glad if you would refer me to some precedent for that method of treatment?—I expressed that opinion in giving my evidence, though, perhaps, I should not quite put it in that form.

9129. You may, perhaps, withdraw that?—I can withdraw the statement as to its representing a capitalised value of £72,754 which would be unremunerative, but the £3,637 per annum would have to be paid as extra rent.

9130. (Sir John Wolfe-Barry.) Are the crews of your barges under the Watermen's Company?—They are.

9131. And you are compelled to have them?—Yes.

Cross-examined by Mr. George Wallace.

9132. When was your evidence prepared?—At the beginning of last year.

9133. You have not really, I suppose, paid much attention to it since?—No, I have not.

Mr. WILLIAM SARGANT called and examined.

Mr. W.  
Sargent.

9134. You are chairman of the London Metal Exchange?—Yes.

9135. I understand you desire to lay evidence before us with regard to the proposals of the Dock Companies in so far as they affect the metal trade?—Yes. I wish, in the first place, to explain the altered and altering conditions of the metal trade of the United Kingdom. Twenty-five or thirty years ago this country had an important position as a producer of metals. This is no longer. We now import largely, partly for our own consumption, but chiefly to re-export, either as raw material, or manufactured, or refined in some shape or another. Other countries are close competitors for such work, hence arises the absolute necessity of keeping down charges on carriage and working. I give the following figures to prove this position:—

	Tons.
Production of Lead in the United Kingdom in 1870	73,420
Ditto - - ditto - - ditto - 1899	26,000
World's production of Lead in 1876 - - - -	327,000
Ditto - - ditto - 1899 - - - -	800,000
Production of Tin in the United Kingdom in 1870	10,250
Ditto - - ditto - - ditto - 1899	4,400
World's production of Tin in 1870 - - - -	22,944
Ditto - - ditto - 1899 - - - -	71,000
Production of Copper in the United Kingdom in 1870	7,000
Ditto - - ditto - - ditto - 1899	600
World's production of Copper in 1870 - - - -	161,968
Ditto - - ditto - 1899 - - - -	428,724

9136. When you talk of "metals," what do you mean?—Tin, copper, iron, lead, quicksilver, antimony, and the ores from which they are made. Those are the principal metals. I do not speak of the fine chemical metals such as uranium or platinum, or anything of that sort. The trade of the Port of London has de-

veloped, and large sums of money have been sunk in the erection of works on the Thames on the security of Acts of Parliament, under which the waters of the docks are declared free, and lighters permitted to use such water without charge or hindrance, and receive goods from the import vessels without payment of any dues whatever, and although as a matter of policy it may be fair to allow a small charge to be made on the barges sufficient to recoup the expense of docking (said by the dock company to be £50,000 or £60,000 per annum) it is manifestly most unjust to give the dock authorities such new powers as would enable them to ruin or seriously cripple trades which would never have sprung up but for the recognised freedom of the water of the docks abstracted from the River Thames, on the conditions that it is now sought to annul. The margin of profit at which the business is carried on is, owing to Continental competition, extremely small, probably  $\frac{1}{4}$  to  $\frac{1}{2}$  per cent., and the imposition of the proposed charge would be specially onerous on metals and minerals of low value. The trade would practically be diverted to foreign countries, and thus many large industries, which at present afford employment to many thousands in London, would be destroyed.

9137. When you say  $\frac{1}{4}$  to  $\frac{1}{2}$  per cent. do you mean a net profit on the turnover?—Yes, on the turnover. The metal trade is cut exceedingly fine. I suppose no trade is cut so fine as the metal trade. The docks state that 142,000 barges, equalling 9,000,000 tons, enter the docks every year without paying anything to the dock company. 1½d. per ton on this would bring in £50,000 to £60,000 per annum, which they say they require, whereas the docks are proposing to charge, firstly, 3d. or 4d. per ton on the registered tonnage of the barge; secondly, 1s. per ton on metals, etc., and 1s. 6d. per ton on tea, wool, light goods, etc., on the contents of the barges. Although it may be fair to charge something on the barges, it does not follow that it is right to charge on the contents, bearing in mind that the dock company does not handle the goods except as ships' agents. Lead at the

present time costs 1s. 3d. per ton lighterage to bring from the ship to the manufacturers' wharf. If the docks carry out their proposal, in addition to the 1s. 3d. per ton, there will be a charge of 3d. per ton on the registered tonnage, equalling about 6d. per ton on the contents, plus 1s. per ton on the contents of the barge. Incidentally I should like to point out that the registered tonnage of barges is generally in excess of their contents. Barges registering from 60 tons to 120 tons bring to a manufacturer's wharf parcels of 50 or 100 tons, and take away from the wharf parcels of 10, 20, 30, or 40 tons. It is therefore contended that the 3d. or 4d. per ton on the registered tonnage equals an average of 6d. per ton on the contents. The proposed charge, therefore, on the barge and its contents would amount to on metals, etc., 1s. 6d. per ton; on tea, etc., 2s. per ton. Therefore the total charge from the ship to the manufacturer's wharf would be 2s. 9d. per ton, or more than double what it is at present. Galvanised iron is a London trade, competing not only with the Continent, but with other ports in the United Kingdom. The proposed extra charges would be about 2s. 6d. per ton—an imposition quite sufficient to transfer the trade from London to other places. Tin is largely traded for re-export to America and other places. Increased handling charges would either stop it altogether or transfer it to Holland or other Continental places. We would further contend that the charge proposed on metals (1s. 6d. per ton) is disproportionately high compared to the charge (2s. per ton) on tea and light goods. If tea is landed at a wharf or dock the charges are per chest or  $\frac{1}{2}$  chest, and amount on an average to 50s. per ton. An increase of 1s. 6d. per ton on 4s. for metals, etc., equals  $37\frac{1}{2}$  per cent., whereas an increase of 2s. per ton on 50s. for tea is only 4 per cent. This tends to show that if 2s. per ton is a fair extra charge for tea, etc., 1 $\frac{1}{2}$ d. per ton would be quite enough for metals (lead, iron, etc.), if indeed any charge whatever which includes a charge on contents can be considered fair. We should like further to point out that the charges proposed on metals, imported as they are into England and re-exported, cannot stand any increase of cost owing to the competition of Antwerp and other places abroad, and that the imposition of the proposed charges would absolutely ruin this trade in London, whereas the charges on articles such as tea and wool and light goods which are consumed in the United Kingdom and not re-exported would not be felt in the same way. The docks have contended that 1-144th part of 1d. in the pound would never be felt by the consumer. The use of this argument tends to show that the dock company have drafted their Bill considering mainly light goods such as tea, wool, etc., and ignoring the effect of its incidence upon the heavy and cheap metals, such as iron, lead, lead ores, etc. The effect of this, we believe, for reasons stated below, would be to absolutely ruin these trades in London. It may be perfectly true that 1-144th part of 1d. in the pound would not be felt on light goods, the value of which probably ranges from £50 to £200 per ton, and if you take 2s. per ton on an average value of £125 it is equal to only 1s. 7d. per cent. But with iron, lead, and minerals the case is absolutely different; their values may be stated to range from £2 10s. to £17 per ton, and if you take 1s. 6d. per ton on an average value of £10 per ton it is equal to 15s. per cent., or if, as is the case, the bulk of these metals is re-exported, the charge is incurred twice over (1s. 6d. in and 1s. 6d. out), and would therefore amount to 30s. per cent. To illustrate the effect this Bill would have upon trade it may be pointed out that to treat 15,000 tons of metal a capital of £60,000 would be required, which would earn at the present day but little over 5 per cent. per annum. £60,000 at 5 per cent. is £3,000. The 3s. rate mentioned (1s. 6d. in and 1s. 6d. out) on the tonnage equals £2,250. The point on which we want to lay special stress is that, while admitting it may be fair to the docks that they should be allowed to make charges on barge tonnage for docking barges in and out, yet there should be no charge on the contents. The proposed charges might slightly hamper the trade in comparatively expensive articles, but would be absolute ruin to the export metal trade. I may say that the statements I have made were carefully considered by our committee and sifted, and in putting them in this way it represents really the collective opinion of about 200 firms of fairly large importance all in the metal trade.

9138. Is that the majority of the firms in London?—

The majority of the metal firms belong to the Exchange, and we have about two hundred firms on the Exchange.

Mr. IV.  
Sav. cont.

9139. (Mr. Lyttelton.) As I understand it, your point is that by reason of the particular nature of the commodity with which you deal (metal) the tax would be much more heavy upon you than upon the owners of the lighter or other commodities?—Our chief point is that London is an optional port for people who sell metals. Instead of sending them to London they may send them to Holland, or they may send to Rotterdam or Amsterdam to be treated in the same way as they are treated in London. If you put a charge on in London you will simply throw the trade away to the Continent.

9140. You say that the margin is extremely narrow as between yourselves and all the competitors?—Yes, and there are so many clamorous competitors.

9141. I think I understand you upon that point. The second point, putting it quite broadly—I wish you to say if I rightly understand it—is that by reason of the particular character of your commodity you would be suffering much more severely from a tax than the owners of the lighter commodity would be?—Yes, that is our point.

9142. Do you put it that you, as a merchant in London, should be absolved from all payment in respect of improvements?—No, we have admitted that we think that the docks would be entitled to a small charge on these barges.

9143. Your point is that you would be sufficiently assessed if the tax was upon the barges and not upon the contents of the barges?—If the tax were about 1 $\frac{1}{2}$ d. per ton on the tonnage of the barges, that we consider would recoup the docks for any expenses to which they are at present put in handling the barges.

9144. In your opinion, would you be compelled by the operation of ordinary forces to bear a portion of that burden?—I do not quite follow that point.

9145. If the tax were made upon barges do you think that the barge owners could compel you to bear a portion of it?—Yes; we take it for granted that lightermen would come round to us in the long run, as it were, for anything that was imposed upon them.

9146. And to that extent you make no objection?—To that extent we make no objection. We think it is fair and equitable under the circumstances that they should be paid whatever it costs them to open the dock gates and for the men's time and that sort of thing. We think that that really was not included in the spirit of the Act of Parliament which gave barges free entrance to the docks, because the docks are put to expense as well.

9147. (Sir John Wolfe-Barry.) Am I right in supposing that the iron that you deal with is mainly manufactured iron?—The iron that I have referred to is mainly manufactured iron. There is a little pig iron which comes, but it is a low-priced commodity—50s. or 60s. a ton—and of course 2s. 6d. on that would come heavy.

9148. But the bulk of your business that you have alluded to so far as iron is concerned, I suppose, would be manufactured iron?—Yes; the sheets of iron come in to be galvanised, and are re-exported, and there are other things of that character.

9149. With regard to lead and tin and copper, is that unmanufactured chiefly?—The copper is mainly unmanufactured, and the tin is entirely unmanufactured. It comes in in the state in which it leaves the East Indies.

9150. When you say that galvanised iron is a London trade, do you mean that that galvanised iron has been manufactured in Great Britain?—Yes.

9151. And is sent here for shipment?—No. I mean that on the riverside there are works which buy the black sheets and galvanise them and export them, and that the same work is done on the Continent. It is also done at Swansea and various other places, so that it is a question of competition.

9152. But whether galvanising is done at one place or another it is British trade?—Not entirely. There is a great deal of Continental trade as well.

9153. Do you mean that galvanised iron comes in from the Continent?—Take this case. Suppose Australia wanted to buy 1,000 tons of galvanised iron sheets. The intending purchaser would send to Antwerp and get quotations, and he would send to London. Naturally if the London people are to get the trade, their

Mr. W.  
Sargent.

10 June 1901.

charges must be as light as possible, otherwise the Continent would get the order.

9154. I think I quite grasp your meaning—that the galvanised iron, so far as London is concerned, has been made in Great Britain?—This process of galvanising is carried on in Great Britain, and there are works in the Midlands that make the black sheets, and send them up to these various works.

9155. (Mr. Lyttelton.) Galvanising is a separate industry, is it not?—Yes.

9156. (Sir John Wolfe-Barry.) What I mean is that the galvanised iron that you talk of is a British trade that comes to London as a port of shipment. It is not galvanised iron imported from the Continent?—We do not import from the Continent, but we have to compete with the Continent in the execution of orders that are placed all over the world.

9157. You think therefore that any burden placed upon the galvanised iron trade would be a burden with respect to foreign competition?—Yes.

9158. (Mr. Peel.) Does the bulk of your cargoes discharge in the docks?—Yes, I suppose the bulk of them would. For instance, tin comes in from the East Indies in some of those large steamers, and the steamers come in the docks.

9159. I suppose your contention is that if a charge was placed on the goods in the barges as well as on the barges themselves that charge should, if possible, vary according to the value of the goods?—We do not go the length of proposing an *ad valorem* charge.

9160. I am asking you supposing it was suggested that a charge should be made would you prefer to have an *ad valorem* one?—No. I think it would be very troublesome and very difficult to carry out, but you can make a broad line of demarcation and say that goods that are worth 60s. a ton cannot pay the same charges as goods that are worth £200 a ton. If you were to have an *ad valorem* system the confusion would be so frightful that you could not manage the business at all.

Cross-examined by Mr. Harper.

9161. Are you a dealer?—I am a broker.

9162. And you deal with most of these things with warrants?—Yes.

9163. And you deal not only with metals imported to London but to other ports?—Yes.

9164. Is London in the ordinary acceptation of the term, a metal port?—It is a port in which there is a very large business done in metals. I suppose there is more business done in metals in London than in

any other city in the United Kingdom. There is a trade done, and the imports are very large, and the exports are large.

9165. Does a large proportion of it consist of transshipment of goods?—A very large proportion.

9166. Could you give me roughly in this very heavy class of goods what proportion has been dealt with by transshipment within the limits of the Port of London?—I dare say the transshipment business is between half and two-thirds.

9167. 50 or 60 per cent. of both exports and imports?—Very likely. If you want an exact answer I cannot give it you off hand. I am only giving it you roughly.

9168. Have you considered the question of transshipment with regard to the Dock Company's proposal?—We have considered it very much.

9169. That the Dock Company's proposal was to exempt them?—We consider that the Dock Company's proposal will kill it.

9170. Kill the transshipment trade?—Yes, it will kill the transshipment business.

(Chairman.) Can you point out to us, Mr. Harper, any statement which the witness has made which affects the people whom you represent?

(Mr. Harper.) The witness is pointing out a reason why a class of goods that goes to the wharves should not be taxed. I am pointing out to the Commission that he is making a case which cannot really be substantiated, because he is under the impression that the transshipment goods which form a large part of the London business will be taxed.

(Witness.) I did not see anything about exemption of transshipment goods in the Bill.

(Mr. Harper.) I have substantially made my point. I think.

Cross-examined by Mr. George Wallace.

9171. I see the statement of your evidence is dated October 17th, 1900?—Yes.

9172. And I gather that, like Mr. Blackwell, you have not been attending to the matter since?—We sent this statement in, and we awaited the summons of the Commissioners to give the evidence.

9173. And you were content to abide by it?—We could do nothing else that I am aware of.

9174. Have you in point of fact ever seen the Dock Company's Bill of 1901?—No, I have not. So that if in their new Bill they modify any of these points to that extent our opposition would be abated; or if they made it worse our opposition would be increased.

Mr. FRANCIS CHARLES HILL called and examined.

Mr. F. C.  
Hill

9175. (Chairman.) You also appear before us on behalf of the London Metal Exchange?—Yes.

9176. I understand you restrict your evidence to questions touching the trade in lead?—Yes; the manufacture of lead in the Port of London. If you will allow me I will make quite a short statement. My point is simply this: the lead trade in London is unique: it is like no other trade. The lead trade has come to London simply because the waterway of the docks is free. We do not land lead at the docks, simply because we cannot afford to pay anything practically for so doing. It costs us at the present moment with our own lighters 1s. 3d. a ton from Spanish ships, Australian ships, or American ships. This is pig lead and silver lead that I am speaking of, or lead containing silver and gold. When it is chiefly silver lead we desilverise it, sell the silver, and then turn it into sheet lead, lead pipes, white lead, tea lead, thin lead, and other products of lead—litharge—and if this charge were made in some cases it would come to about 5s. a ton in and out, and in lead ores, which only contain about 50 per cent. of lead 7s. 6d. a ton in and out, and in lead ores, which only contain about 50 per cent. of lead 7s. 6d. a ton. We should simply move our works to Antwerp. We are at the present moment declining to take lead ores from Australia, and they are going to other European smelting works.

9177. When you say "our works," you are giving evidence on behalf of the London Metal Exchange, I

understand?—Yes, but I also represent Locke, Lancaster, and W. W. and R. Johnson and Sons, Limited, who manufacture about 35,000 or 40,000 tons of lead per annum in four different places. I am director and secretary. I am also managing director of the London Smelting Company, who erected works some two years ago for treating between 15,000 and 20,000 tons of lead ore per annum, none of which can possibly afford a rate of anything like 2s. 6d. or 5s. or 7s. 6d. a ton. We see the justice of the docks wanting to charge on the barges themselves, and are perfectly willing to pay it. We think it is quite right that they should be recouped for anything they do, but we cannot understand why they should have a right to charge on the contents of the barge. If they do charge, we shall have to have this stuff dealt with in Antwerp, where the facilities are greater, I believe, than anywhere else. My evidence is simply against the excessive rate proposed to be charged on an article which cannot bear it.

9178. Is that all you desire to say?—Yes.

9179. (Sir Robert Giffen.) What is the average value of lead?—£12 a ton. To-day's price is £12 7s. 6d.

9180. And it is sometimes a great deal more, is it not?—Within the last six months it has been as high as £18, but it is 18 years since it touched that price before. You may take it that lead ranges from £10 a ton to £16, and that £13 is a very fair average price.

9181. What is the price of lead ore that contains silver and gold?—About the same. The value of lead

ore is about £7, and the silver in it is another £7, so you get about £14 a ton. The gold ores are much more costly, but they are very few and far between.

9182. And this article, you say, cannot bear a charge of 5s. or 7s. 6d. a ton?—No. On lead ores I make it out that it would be 7s. 6d. a ton, and on lead itself 2s. 6d.

9183. What would the charges in Antwerp be?—I do not know. I only know that we lose lead which goes to a great manufacturing place in Antwerp, for 6d. a ton. They will take it 6d. a ton below us, so that we are very near the departure line.

9184. (*Sir John Wolfe-Barry.*) Where is the lead manufactured in London chiefly used?—The white lead is used in London and in Australia. The sheet lead is exported to India, China, Japan, Australia, and some small quantities to South America, and it is used in England on English houses. The same remark would apply to lead pipes.

9185. Could you give us at all what proportion out of the total trade in manufactured lead is sent away?—There are three or four branches of it. With regard to pig lead itself, I should say about one-half possibly is exported, or perhaps not quite so much; I should think about a third of the white lead is exported, and of sheet and piping, about a half.

9186. Then a very large amount of the whole trade is manufactured here and re-exported?—Yes, it is, and that is why I am afraid we should lose it.

Mr. ERNEST GEORGE LEARY called, and examined.

9193. (*Chairman.*) You are a member of the firm of C. Leary and Company?—Yes.

9194. You have been nominated by the London branch of the Timber Trade Federation of the United Kingdom to offer evidence before us with special reference to the mahogany wood trade?—Yes.

9195. Will you be good enough to give us your evidence?—My firm have for the last 60 years carried on business as wood brokers. My evidence is confined to the subject of mahogany logs, of which some 30,000 tons, representing an average value of about £225,000, are annually imported into London. This timber is stored in the West India Docks, and for the labour in handling it the authorities controlling those docks charge the consignee a consolidated rate of 8s. 6d. per ton. For similar work in Liverpool the consignee is charged about half this rate, in Glasgow about 6s. 6d., and in Hamburg about 4s. 6d. per ton. We have notice from steamship companies that in addition to the 8s. 6d. per ton they will, in certain cases, charge the consignee extra for lifting logs weighing over one ton. This is in consequence of the dock company's lifting machinery being in such cases inadequate. A great portion of the dock company's machinery for handling mahogany is infirm and out of date, the supply of machinery also being insufficient for the trade. The storage accommodation at the West India Docks is inadequate for the size of the business, and consequently the work of landing the mahogany and preparing it for sale is frequently much delayed. If London is to hold her own as a mahogany importing centre, it is, in my opinion, necessary that the storage ground should be in the hands of a public body with the interest of the trade of London at heart, instead of in the hands of a private company whose first care is for its shareholders. It is impossible to get at evidence showing the profits made by the dock company on this mahogany business, but comparing their charges with those elsewhere the profits should be unreasonably large. I submit that the removal of existing restrictions as to persons available as lightermen would facilitate lighterage in London, and so help the mahogany trade.

9196. (*Sir John Wolfe-Barry.*) I gather that your complaint is want of facility for the trade?—That and the charges, on which I understand I am not allowed to say anything, is the principal objection.

9197. You say that in your opinion it is necessary that the storage ground should be in the hands of a public body. Is the storage ground insufficient?—Yes.

9187. If your views are right, not only would you lose it, but the docks would lose it, too?—The docks would lose it, certainly, but the docks have never had this trade in lead, not from any unwillingness of ours to give it to them, but we cannot afford a 4s. rate to land it. I had to pay 4s. a ton on lead. I do not know what they did with the lead, but they landed it, and I had to go and get it, and pay 4s. a ton for it.

9188. You think, therefore, that the imposition of this amount of extra rate would drive the trade away?—I am positive that it would drive the lead ore trade away, which we have just made provision for; and it would drive away a very large proportion of silver leads imported for conversion into what are known as market leads. That would go to Antwerp, no doubt.

*Cross-examined by Mr. George Wallace.*

9189. The same remark that Mr. Sargant made I gather you accept, namely, that this evidence of yours was prepared on October 17th last year?—Yes.

9190. And that you have not attended to the matter since?—Yes. I have read all the evidence up to about Christmas time, but I have not read the Bill you have referred to of 1901.

*Cross-examined by Mr. Harper.*

9191. Would a small impost of 2d. or 3d. on goods, in place of a lighterage rate, affect you?—Do you mean a general rate on anything that came into the river?

9192. Yes?—No, not a rate of 2d. or 3d.

9198. Is that why you think the trade is conducted expensively. I do not quite see what difference it is going to make to your trade?—The main thing is this. We are competing with Liverpool. In Liverpool mahogany can be handled for about half the cost, and so we are knocked out correspondingly.

9199. (*Chairman.*) We are quite willing to hear anything you have to say with reference to the incidence of any particular charge in your trade?—I do not quite understand what I am allowed to say, and what I am not allowed to say. I understood that the basis of the whole inquiry was the charges in London.

9200. Have you anything to tell us as to the incidence of any charge hurting your business?—I mean to say that these charges are driving away the trade of London, because mahogany can be handled cheaper elsewhere. We are losing our business here, and it is being developed in other towns. In Liverpool they have a public trust, and I think that is the reason on the whole why they are able to handle the goods far more cheaply. I think if we had the same kind of body here, we should have the same charge.

9201. Why do you think so? Will you give us your reasons?—Because I think the company here make a profit out of proportion.

9202. When you say "the Company," whom do you mean?—The India Dock Company here are the Company handling the mahogany. I think they make a profit out of proportion. I can send a cargo to Liverpool and have it handled at almost exactly half the charge; therefore I say that the extra profit here goes into the hands of the Company, and that they make too much out of it.

9203. Have you any experience of Liverpool personally?—Yes.

9204. And you say you do it cheaper in Liverpool than here?—Yes, at about half the price.

9205. (*Sir Robert Giffen.*) Are these the dock charges in the case of both Companies?—No, the Dock Company's charge here is a consolidated rate of 8s. 6d. a ton. Up in Liverpool the ground belongs to the Mersey Docks and Harbour Board. They let out the ground to the brokers, who do their own work, and they are able to do work at about half the expense and still make a very good thing out of it.

9206. Have you ever proposed to the Dock Company that they should let the ground to you, and let you do

Mr. F. C.  
Hill.

10 June 1901.

Mr. E. C.  
Leary.

*Mr. E. G. Leary.* the business yourselves?—Yes, and they have not received it favourably.

10 June 1901.

*Cross-examined by Mr. Lewis Coward.*

9207. I do not quite follow whether you complain of the want of appliances with regard to your timber?—Yes, that is part of my complaint.

9208. With reference to the Millwall Docks, have you seen the new appliances that are now at work?—No. I am only concerned for the mahogany trade here, and that trade centres in the West India Dock.

9209. And you do nothing in the Millwall Dock?—I do not say I do nothing, but the mahogany trade does not do anything. I am only giving evidence on the mahogany trade now. Other people will give evidence with regard to the Millwall trade.

*Cross-examined by Mr. George Wallace.*

9210. You say that the London system some way or another is driving the mahogany trade to Liverpool?—Yes.

9211. Where does mahogany come from?—All over the world: Honduras, Mexico, Cuba, Africa, Panama—anywhere in the tropics practically.

9212. You may not be able to answer the question, but is it not a fact that the stores of mahogany in London at the present time are very large?—Yes.

9213. About as large as they have ever been within your recollection?—I should say as large.

9214. And the Liverpool trade in mahogany has increased very largely?—Yes.

Mr. GEORGE TALBOT BURROWS COBBETT called and examined.

*Mr. G. T. B. Cobbett.*

9227. (*Chairman.*) You are proprietor of the firm of Cobbett and Company, who are importers of hardwood from American ports?—Yes.

9228. You have been nominated by the London Branch of the Timber Trade Federation of the United Kingdom to lay evidence before us with reference to the American hardwood trade?—Yes.

9229. Will you be good enough to give us that evidence?—I have been engaged in this trade for the past 30 years, and import some thousands of tons annually. The vessels engaged in carrying this hardwood chiefly unload in the docks under the control of the London and India Docks Company, and in the Millwall Docks. The steamers from American ports engaged in this trade, are discharged under what is known as the "London" clause. By the provision of this "London" clause in bills of lading, I am compelled to pay 6s. 9d. to 7s. per standard on the North Carolina pine for discharging the goods from the ship and delivery to craft. These charges are a recent imposition forced on consignees in the year 1887 by the concerted action of the various Atlantic transport lines, in inserting the "London" clause. The merchants on this side are compelled to accept this clause, and are thus deprived of the rights of free delivery, provided for by the Merchant Shipping Act of 1894, Chapter 60. When this clause was first introduced the dock companies performed the work of unloading ships, but shortly after the London and India Docks Joint Committee abandoned this work in certain docks, and it is now performed by the shipowners in those docks. Nearly all the wood from United States ports, unloading in the docks of the London and India Dock Company, is unloaded by the shipowners, who usually land the goods on the quay, sort them there, deliver them to barges, or to the dock company for delivery to land carriage. For the purpose of sorting the goods and delivering to lighters, the shipowners hire the quay from the dock company. Merchants desirous of collecting their goods from the ship by water, have to make proper application, and also have their barges alongside the steamer within 72 hours of the ship's report. If such an application is not made, and/or if barges are not alongside ship within 72 hours of ship's report, the dock company take possession of the goods, and charge their heavy consolidated rate of 9s. to 11s. per load of 50 cubic feet. In order to escape the burden of the Dock Company's Consolidated Rate many importers duly make application with their craft within 72 hours of steamer's report. The craft are frequently detained

9215. With African mahogany?—No, with mahogany generally.

9216. It has increased with African mahogany?—Yes, it has increased with African mahogany.

9217. The African mahogany trade has largely increased?—Yes.

9218. And that goes to Liverpool by Mr. A. L. Jones' boats?—Part of it does.

9219 (*Mr. Ellis.*) Do I understand that you wish to represent to us that the mahogany trade is being endangered in the Port of London by the charges that exist at present?—I should say it is being restricted. I think that is the fairer way to put it.

9220. You would not represent it as a declining trade, but a non-growing trade; is that so?—As a very slightly growing trade compared with other places where it is growing rapidly.

9221. You employ the term "restricted"?—Yes.

9222. It is being restricted by the charges?—Yes.

9223. And any further charges you would represent would endanger it?—I should say they would still further restrict it.

9224. But I gather that your evidence is confined, as you have told us, to the subject of mahogany logs to the extent of some 30,000 tons per annum?—Yes.

9225. Your firm, I presume, does not deal with the whole of that?—No, only with a part of it.

9226. But you are authorised to speak for the whole?—Yes.

in the docks some days before they can obtain delivery of goods. The Dock Company do not give notice as to the time when wood arriving by these American liners will be ready for delivery to craft. Large numbers of barges are thus sent into the docks and detained there for lengthy periods. This is a source of considerable expense to merchants who have to pay demurrage on these craft, while lying idle in the docks. It is asserted that the number of barges in the docks hinder the free movement of ships, and generally handicap the work of the London and India Docks Company. I am of the opinion that the number of barges lying in the docks would be considerably less if the London and India Docks Company or the steamship company were to facilitate overside delivery by giving some notice as to when goods arriving by American liners will be ready, instead of requiring them to be in the dock within 72 hours of the steamer's report, from which time they have to lie in the docks, awaiting the delivery of the goods. During this time they are an expense to merchants, and must considerably add to the number of craft lying about in the docks forming the alleged impediments to the movement of ships. Our lightermen will not quote for work to include risk of demurrage, but charge 10s. per craft per day extra for each day's detention. In consequence of this detention my firm frequently find it less expensive to take delivery by land carriage and pay the Dock Company's quay-rate, or to store in the Dock Company's warehouses and pay the Dock Company's heavy consolidated rate, than to pay a long bill for demurrage on craft. Assuming that the report of this Commission will decide whether or no the London and India Docks Company introduce a similar Bill, I wish to submit that if they obtain and exercise the powers of making charges on such barges and their contents, it will greatly add to the already considerable expense of obtaining goods from the importing vessel by water, and will further assist the London and India Docks Company, to obtain the storage of such goods under the consolidated rates already referred to. I have received numerous complaints from my customers complaining of the bad system prevailing in the Port of London, referring to the length of time barges are delayed in getting their cargo, by which they suffer loss. As an instance I have here a letter of November 1st, 1900, from Messrs. F. A. Christie and Sons, Timber Importers, Steam Saw Mills, Ipswich:—"Messrs. Cobbett and Co., Dear Sirs. "In reply to your letter of the 31st ulto. we received "only a short notice of the steamer's arrival, which "necessitated a special journey to London and a hard "day's tramp to fix a ready barge, for which we had

"under the circumstances to pay an excessive freight. The barge waited about a fortnight before she got any cargo, a portion of the stuff was badly damaged by being in error placed on the quay under a waterspout, some of the lines were short of the invoiced quantity, and altogether we reckoned that £25 would not cover us for the demurrage paid and these additional charges. Although this is our worst experience of London it is not a solitary instance by any means, and we have determined never to use London if it is possible to do without the goods, or unless impossible to get stuff anywhere else.—Yours truly, F. A. Christie and Sons." Then I have also a letter from Messrs. Henry Tolputt and Co., Limited, timber merchants, Steam Saw Mills, Folkestone, of November 14th 1900. "Messrs. Cobbett and Co. Dear Sirs,—Replying to your letter of the 31st October, we were consignees of two parcels of whitewood and Carolina pine, per s.s. 'Dania,' which we wished to take away by our sailing barges, the 'Excelsior' and 'George Smeed.' The barges arrived in Victoria Docks on or before December 13th. The former barge got a cargo after a few days delay, but the 'George Smeed' was unable to get any of our goods until January 1st, and finished loading January 3rd with part cargo. The masters of the sailing barges said that all the trouble would have been saved if the steamer had discharged overside into their sailing barges, instead of landing timber on the quay. It appears that the whole cargo was mixed up landing on the quay, and flour and other timber was put on top of our goods. The masters and mates of our barges also say that some of our goods were put into lighters and sent to Tilbury Docks. We had to pay the 'George Smeed' £15 demurrage, and after a lot of trouble we recovered about 100 pieces of whitewood and Carolina pine which we were short. These pieces, we might mention, should have been brought by the 'George Smeed,' and there was loss of dead freight. Apologising for not having answered your letter before, and trusting the information will be satisfactory to you, yours truly, Henry Tolputt and Co., Ltd." While the dock companies complain that the docks are crowded by barges the consignees complain that they have to send barges into the docks before they are wanted, that these barges are unnecessarily detained there, and in the opinion of consignees the crowding of the docks is largely caused by the dock company's own action in compelling consignees to send their barges into the docks days before delivery of their wood can be given. If the dock company's quay charges on wood were not so heavy, and if good facilities existed for delivery in railway trucks at a low rate direct from the quays, a great deal of hardwood would be taken that way instead of being removed in barges.

9230. (Sir John Wolfe-Barry.) You say that requiring the barges to be alongside within 72 hours produces a congestion of barges in the docks, and causes expense to the consignees?—Yes.

9231. What do you propose as an alternative. Do you suggest that the dock company should give some notice as to when goods arriving by American liners would be ready?—Yes.

9232. What do you propose as an alternative to the 72 hours' notice?—I should propose that they should write a letter to the consignee informing him that the goods are ready for delivery, and that he should send in his craft and that he should have 72 hours from the time he receives such notice.

9233. How would the dock company know when the particular cargo was coming out of the ship?—The dock company know when that same particular cargo, if it is for land carriage, is out of the ship.

9234. Is not that put on the quay?—The American liners discharge all timber on the quay.

9235-6. I thought you were alluding to that which goes overside?—No; no timber goes overside. The bill of lading says "the ship has the option of placing the within-mentioned goods on the quays." They exercise no option, but they always do it. We can get no overside delivery.

9237. Have you any suggestion to make as to the amount of notice?—I think we might have notice.

9238. From the time when the goods are on the quay?—From the time when the goods are ready for delivery. They occasionally keep goods for perhaps 14 or 21 days

on the quay, with your barge waiting outside on demurrage, before you can get the goods. Mr. G. T. B. Cobbett.

10 June 1901.

9239. Is that because they have to be sorted, or why do they keep the barges waiting?—Occasionally another steamer comes in and discharges on the same quay, and your goods are ungetatable, whereas they might have delivered them overside. But instead of putting them overside they often go to useless and unnecessary labour, and place goods on the quay when you have your barge alongside the steamer. It seems an absurd way, but they do it.

9240. Then you say that insisting that the barges should be alongside or in the dock within 72 hours places a burden on the consignee, because the barges are often kept waiting a long time; and at the same time it produces a congestion of the waterway of the dock, because the barges are there doing nothing?—Yes. I think I heard you ask a previous witness whether he was not aware that there were sufficient facilities in the dock. We have, within the last fortnight, made application to the Millwall Dock Company and to the Surrey Commercial Dock Company, to have certain timber piled under cover in those docks, but in neither case can we obtain the assurance that they will place such timber under cover, on account of their having no space available for it.

9241. (Mr. Ellis.) A previous witness spoke to us about mahogany. Does your evidence relate to any particular timber?—Not to mahogany, but generally to American lumber, that is, all sorts of American woods—United States woods.

9242. What is Carolina pine?—That is generally included in the term "hardwood."

9243. Of course, in this country, we do not classify it as "hardwood"?—No; it has never been quite decided which is which.

9244. You say, generally, American timber?—Yes.

9245. You referred to certain complaints, and you read a letter from Messrs. Henry Tolputt and Company, of Folkestone, dated November 14th, 1900. They refer to some barges which arrived in Victoria Dock on or before December 13th. I suppose that would be December 13th, 1899?—Yes.

9246. Was that a letter written to you in reply to a request for instances of detention?—I think it was.

9247. Then, taking the letter from Messrs. Christie and Sons, I see that letter does not particularise the names of the barges or the dates. It gives very little information except that the supposed loss was £25?—Yes.

9248. Can you supply us at all with the particulars which appear to be omitted?—I can get you the particulars, but I have not them with me.

9249. On the facts of this detention have you made any complaint to the Dock Committee?—We, no doubt, had considerable correspondence with the superintendent of the Victoria Docks.

9250. We may take it that at various times you have made complaints?—Yes, we have complained at various times—many times.

9251. And these two letters you wish to put in as illustrations?—Yes.

9252. Did you receive any explanation from the dock companies at any time of the facts dealt with in these particular letters?—No, nothing that I can recollect of a satisfactory nature.

9253. And these are the only two letters that you bring before us?—These are the only two I bring before you.

Cross-examined by Mr. George Wallace.

9254. You have told us that all your goods come under the "London clause" of the North American bill of lading?—Yes, practically all.

9255. I see, with reference to these two complaints which you have put in in your evidence, you say you have received complaints from customers?—Yes.

9256. These complaints that you have put in are written in answer to requests from you to the customer to formulate the complaint, were they?—No, not to formulate the complaint, but in order that their complaint might be brought before the Commission.

9257. You wrote and asked them for the complaint for you to lay it before the Commission?—Yes. I had

*Mr. G. T. B. Cobbett.* had a great deal of previous trouble with these gentlemen as to who was to pay these charges.

10 June 1901. 9258. So you do not put them forward as your own complaints, but complaints from your customers which you wrote for and obtained?—These two particular ones, but I can bring you plenty of my own.

9259. As regards one vessel mentioned, the "Dania," she is a Johnston liner, I think, is she not?—Yes.

9260. And bringing hardwood in this way, there are an enormous number of different marks?—There are a certain number of different marks.

9261. A very large number indeed?—You might say 25 in 25 different consignments.

9262. And they come out of the ship all mixed up anyhow?—I do not know that. They sometimes do.

9263. Different lengths, and different marks?—They are different lengths and different marks. The lengths have nothing to do with sorting them. They deliver them by mark, not by length, nor thickness, nor width.

9264. But the number of different lengths have to be sorted out for each bill, have they not?—No.

9265. Never?—Not in my recollection for my business.

9266. Do you mean to say that a man does not buy the timber by length—so much of so many lengths?—There are transactions of that sort, but they have never come under my notice in deliveries from the Johnston line.

9267. In these cases the ship takes cargo out of the hold and puts it on the quay for the purpose of sorting?—They take it out of the hold and put it on the quay. I do not know why.

9268. The ship does that?—I presume so.

9269. But you are coming here to give your evidence. Do you not know that the ship does every part of the sorting itself on the quay in these cases you have been speaking of?—That is so, I have been told. I believe so, but who employs the men I could not say.

9270. You come as an expert on the subject, but it is difficult to know the limits of your practical knowledge.

(*Mr. Rowland Whitehead.*) Surely my friend has received a perfectly fair answer from the witness on this point: that he has been informed of these facts; that he cannot know it, but he believes it to be true.

(*Chairman.*) I think that is quite sufficient.

9271. (*Mr. George Wallace.*) Have you had experience in discharging ships?—I have not discharged a ship myself for the last 20 years. I have previous to that.

9272. You have seen it done, I suppose?—Over and over again.

9273. If the ship does the discharging and puts the goods on the quay, and sorts them there, and sends the goods away from the quay, will you tell me what opportunity the Dock Company has of knowing when any particular parcel will be ready for discharge?—Because if the goods are for delivery by land carriage the Dock Company give you notice directly those goods are ready for delivery; whilst if they are for barges, and you have not your barge in time, the Dock Company comes round and inquires whether those goods have been cleared and if your barge is not there, they put them on full consolidated rates. They know immediately, because within five minutes of the time they put you on the full rate.

9274. Within five minutes of the time?—Yes.

9275. You know that fact from your own personal experience, this time, do you?—In our own personal experience we have argued the matter of a few minutes.

9276. Now remember what you want. You are now telling us about something that takes place if the goods are not cleared. You are suggesting that the Dock Company are in a position to give you notice before or at the time the goods are ready for delivery. How can they ascertain that. Let me ask you one question first. Does the shipowner himself know when the goods are coming up out of the hold; in what order they are coming up?—I do not know what the shipowner knows.

*Cross-examined by Mr. Loehnis.*

9277. You said you had made application to the Surrey Commercial Docks for shed room for your goods under cover?—Yes.

9278. A few days ago?—Yes.

9279. When was the cover required?—Within about a week. I am making no complaint of the Surrey Commercial Dock Company.

9280. (*Mr. Lyttelton.*) Has your evidence been about Millwall Docks?—I mentioned that the Millwall Dock Company could not give us room owing to their having so much stock they cannot find room for more.

9281. (*Mr. Loehnis.*) Is it not a fact that the under-cover trade has increased very considerably in the last few years?—Yes, undoubtedly.

9282. And the shed accommodation which was sufficient a few years ago, owing to the sudden increase in the trade, has not grown in the same proportion?—That may be so.

9283. You know that the Surrey Commercial Docks have been building a considerable quantity of sheds lately?—Yes.

*Re-examined by Mr. Rowland Whitehead.*

9284. You said you had made complaints in respect of your own business to the dock companies of the delay which has taken place in the collection of your traffic?—Over and over again.

9285. Have you any particulars of such complaint here that you can put before the Commission?—I think I could give you specific instances in the course of two or three minutes.

9286. Have you any here?—Yes. I have them here.

(*Adjourned for a short time.*)

9287. Have you now got the particulars you were speaking of?—I have obtained a few particulars. Might I mention that the learned counsel for the Dock Company who was cross-examining me, expressed his astonishment that I did not know who unloaded the ships. I have here a letter from the Johnston Line, which makes plain why I stated that. It is a letter of the 15th December, 1899: "Dear Sirs,—Replying to 'your favour of 9th inst., respecting pine lumber, ex 'Semantha,' we much regret any delay that occurred in this delivery, but would point out that the ship is 'not responsible for this.' We never know who is responsible, and that is why I was unable to say definitely. 'The method of delivery was as per usual, and there was no undue delay in loading your craft. With regard to the alleged shortage, we find we hold 'receipts for full quantity, but if you will ascertain from your buyers particulars of the alleged shortage we will make further investigation. Further, we would remark that the lumber was not buried under 'sacks of flour.'—Yours faithfully, William Johnston and Co., Limited." That was after very great delay.

9288. Now you are going to give us specific instances?—Yes. I give you a specific instance with regard to the "Dania." I should also like to mention that I understood from the learned counsel for the dock company that he was under the impression that I had invited complaints from the firm of Henry Tolputt and Co. I have the original correspondence that occurred long before then. Here is a letter from Messrs. Henry Tolputt and Co., Limited, of Folkestone, dated January 6th, 1900. They say: "Dear Sirs,—We have not yet received our goods"—those were ex the "Dania." "Meanwhile we return drafts 'with the needful subject to the invoices being found 'correct.' Then on December 13th, 1899, they wrote this letter: 'Dear Sirs,—We have two sailing barges in Victoria Dock, and no chance of getting the Carolina pine this week. This will entail demurrage. Has steamer arrived?' The steamer had been there for some days. They thought we had misinformed them. Then on December 12th they say: 'Our sailing barges 'Excelsior' and 'George Smeed' are in 'Victoria Docks, and will take our goods ex 'Dania.' That means they would take them when they could get them, which was a very long time. That shows that I was not inviting them to make complaints.

9289. The object of putting this in is to show that the letter you gave as an illustration of a complaint

is not the result of an inquiry which you made with a view of producing evidence, but is a continuation of correspondence which began in January of that year?—Quite so.

9290. And that was a correspondence which related to a consignment in which your firm were interested?—Yes, we were interested in it.

9291. Now I think you have some evidence to give with regard to particular consignments?—Yes, with regard to the "Dania."

9292. That is the consignment referred to in the letter of November 14th, 1900?—Yes.

9293. Have you any other instance you can put before the Commission?—I have a copy of a letter which we wrote to the Superintendent of the Victoria Docks on the 5th January, 1901:—"Dear Sir,—The ss. "Monterey" arrived in London about December 13th, and lightermen duly applied for 26 logs of ash, which they were unable to obtain. On the 2nd January you sent us a telegram, No. 115, as follows:—"Twenty-

"six logs ex 'Monterey' are ready for delivery. Please send your representative to me immediately." Yes—terday a representative from the South Devon Wharf Company called here and stated they could not get delivery of the logs, and would have nothing further to do with the matter. We replied that if they made immediate application for the logs they could get them, as we had now advice from you that they were ready for delivery. To this they now reply as follows:—"This is not the case, as it was only January 4th that the dock company stated they could not deliver—could only find four of the logs. They first stated they were ready, and then found they were not. As we have had this in hand for a month we think you should personally interfere." We should be glad if you would kindly give us an explanation of this "extraordinary state of affairs."

9294. I do not want to take you over a large number of cases, but I will ask you this; are those cases unique, or do instances of that sort of thing happen from time to time?—They happen constantly.

Mr. ALBERT SPICER called and examined.

9295. (Chairman.) You appear before us to give evidence with reference to the effect which the proposals of the Dock Company will have upon merchants and manufacturers owning or occupying property on the banks of the River Thames for the purpose of carrying on their own business, and not for the storage of the goods of others for hire?—Yes. I appear here in two capacities: one as representing the private Wharftowners' Committee.

9296. We will take that first?—In view of the appointment of your Commission, the London Chamber of Commerce convened a meeting of merchants and manufacturers owning, or occupying property on the banks of the River Thames for the purpose of carrying on their own business, and not for the storage of the goods of others for hire. This meeting was held at the offices of the London Chamber of Commerce on the 25th September, 1900, and a Committee was appointed, to consult and take action in order to represent the interests of owners of private wharves before the Commission. This Committee held meetings on the following dates: 8th and 22nd October and 7th December, 1900, and during December sent a circular to certain merchants and manufacturers which was as follows:—"December, 1900. Royal Commission on the Port of London. Gentlemen, With further reference to my circulars of the 4th, 19th and 29th of September last, I have again to draw your attention to the fact that the above Commission is now sitting for the reception of evidence; and that a general meeting of merchants and manufacturers owning property on the banks of the River Thames for the purposes of their own business, was held at the offices of this Chamber on the 25th September last, when a Committee was appointed, consisting of the following gentlemen:—Thos. F. Blackwell, Esq. (Chairman), Messrs. Crosse and Blackwell, Ltd., 21, Soho Square, W. and Soho Wharf, Belvedere Road, Lambeth, S.E.; J. Innes Rogers, Esq., Messrs. Travers' Wharf, and 10 and 11, Cannon Street, and Travers' Wharf, and 10 and 11, Bankside, S.E.; Dr. J. K. Crow, Messrs. Wilkinson, Heywood and Clark, 7, Caledonian Road, N., and Storers' Wharf, Poplar, E.; Albert C. Hill, Esq., Messrs. Pinchin, Johnson and Co., Pinchin's Wharf, Ratcliff, E.; Joseph John Bowley, Esq., Messrs. Bowley and Sons, Wellington Works, Wellington Road, Battersea, S.W.; and David Clark, Esq., Messrs. George Hooper and Co., Ltd., 4, Eastcheap, E.C., to consult as to the best means of representing their interests before the Royal Commission. This Committee has held three meetings and now wish to draw your attention to the fact, that they do not represent the public wharftingers, that is the owners of public riverside wharves and warehouses receiving the property of others for hire. It appears to this Committee that the interests of merchants, firms, etc., owning riverside property for the convenience of their business are not in all respects identical with the interests of the public wharftingers, and this Committee begs to draw your attention to the steps that they propose to take for the preservation and improvement of your interests as merchants or manufacturers and invites the expression of your support. I need hardly

say that they will welcome any suggestions that you may choose to offer. You will recollect that the appointment of the Royal Commission originated in an attempt made by the London and India Docks Joint Committee to obtain powers from Parliament to enable them to impose a tax upon barges and their contents entering the docks whether for imports or for export goods. The amount of this tax was to be 4d. per ton upon the registered tonnage of the barges and a further tax upon the contents thereof which was to be for some goods 1s. 6d. per ton and on the others 1s. per ton. This Bill was negatived on the second reading on the understanding that the present Royal Commission would be appointed, but within the last week or two public notice has been given by the London and India Docks Joint Committee of their intention to re-introduce this Bill during the present Session. Although the Commission are considering matters embracing a much wider area (see terms of reference enclosed) than this question of a tax on barges, still it will be one of the chief matters of consideration, and my Committee wish to point out the urgent necessity of concerted action on the part of merchants and manufacturers owning riverside property, in order to prevent the imposition of a charge of the kind, the effect of which would be disastrous. My committee would point out that riverside premises and warehouses are at present much more valuable than those situated elsewhere, mainly for the reason that goods can be collected from and delivered to them for and from vessels lying in the docks, by merely paying the cost of the lighterage, thus saving the heavy dock dues and cartage. The effect of the imposition of a tax on lighters and their contents would be to place them on almost the same level as premises situated in other parts of London, and my committee believe that this would cause an enormous depreciation in the value of riverside property. My committee also proposes to suggest that the Commissioners should inquire into the methods adopted by the Thames Conservancy in granting permission for structural alterations on riverside premises or their foreshores, and the system of charges and rents for such changes. I am instructed by my committee to ask you to express your approval of the steps they have taken in defence of the private waterside interests of the river, by appending your signature to the enclosed form, and also to express your opinion of the general situation, either by answering the appended list of questions, or by mentioning any other matters that you would wish to be laid before the Commissioners.—Yours faithfully, Secretary."

This circular roughly described the provisions of the proposal, "London and India Docks Joint Committee Bill, 1900," and mentioned the published intention of the London and India Docks Company to lodge a similar Bill this session. My Committee felt they could not represent this important riverside interest before your Commission without an expression of confidence from the private wharftowners, consequently such expression of confidence was invited by circular, and the appended signatures (49 in all) were obtained upon the following form:—"I/we, as merchants and/or manufacturers, owning or occupying riverside premises, for our own use, and not as public wharf-

Address .....

Date .....

To the Secretary, London Chamber of Commerce (Incorporated), 10, Eastcheap, E.C. This form was signed by firms as follows:—Wilkinson, Heywood and Clark; George Armstrong and Co.; F. and J. H. Stirling; John Fraser and Son; J. Bennet Lawes and Co.; John Leanton and Sons; Machonachie Bros.; Locke, Lancaster, and W. W. and R. Johnson; Alex. Duckham and Co.; John Knight and Sons; Duggan Neil and McColm; Burrell and Co.; McDougall and Co.; Snowdon, Sons, and Co.; Fletcher, Sons, and Fearnall; Ed. le Bas and Co.; Brown, Lennox and Co.; O. T. S. Parry; Thomas Smith and Co., Limited; Matthew Shaw and Co.; Dran, Ransome and Co.; C. C. Tuff; Bullivant and Co.; White, Tomkins and Courage; Anglo-Continental (Ohlendorff's) Guano Works; W. Moore, Limited; C. and G. Tuff; John Williams and Co.; Associated Portland Cement Manufacturers (1900) Limited; Clarke, Nicholls and Coombes; White, Palmer and Co., Limited; Manganese Brass and Bronze Co., Limited; S. Bowley and Son; Archibald R. Dawnay and Sons, Limited; T. and W. Farmiloe, Limited; Harrod's Stores, Limited; Colthurst and Harding; Charles Price and Co.; Cubitt Town Wharves Saw Mills; United Alkali Company; Roberts, Adlard and Co.; Lennox, Reynolds, and Fife; Hood and Moore's Stores; C. Barry and Co.; Carbutt and Co., Limited; E. Underwood and Sons; East India Products Co., Limited; J. L. Wade and Co., Limited; Frederick Braby and Co., Limited; Hovis Bread Flour Co., Limited.

I therefore claim to offer evidence on behalf of these merchants and manufacturers, owning property on the banks of the River Thames, as before described. The statement of my evidence has been submitted to certain of these merchants and manufacturers, and was approved of by 48 of them in the following form:—I/we, as merchants/manufacturers, owning and/or occupying premises on the banks of the River Thames, for purposes other than the storage of the goods of others for hire, hereby express our approval of the evidence to be offered by Mr. Albert Spicer on behalf of the private wharfingers committee of the London Chamber of Commerce before the Royal Commission on the Port of London.

Barry and Co.; Carbutt and Co., Ltd.; S. Bowley and Son; Archibald R. Dawnay and Sons, Ltd.; T. and W. Farmiloe, Ltd.; Harrod's Stores, Ltd.; J. Travers and Sons, Ltd.

If these powers, sought by the London and India Docks Joint Committee in the Bill before referred to are granted to and exercised by the London

and India Docks Company the effect will be to destroy certain trades that only exist by means of the free dock and river water rights, in conjunction with the occupation of waterside premises. These premises have all been built or occupied for their present purposes since the passing of the first Dock Act, and have a higher rateable value than inland premises by reason of the saving in dock charges and carriage effected by the owners thereof. If the powers hereinbefore referred to are granted and exercised by the London and India Dock Company, these waterside premises would probably depreciate in value to an amount equivalent to the capitalised value of the annual charge on the tonnage of contents of the barges taking goods to and from such private warehouses to the docks. In addition to this the injury done to British trade will be enormous and out of all proportion to the actual amount of the revenue that would be raised by this tax, large though the amount would be. I submit that it is necessary to the trade of the port that these lighters and craft should carry out the important work of collecting goods from ships in the docks. It would be impossible for ships to be unloaded if the bulk of the goods imported into London were left to the dock company to deliver without the aid of the lighters and craft.

9297. Is it proposed to do without them?—No, it is proposed to leave the lighters in.

9298. And to levy a toll?—Yes. We say make the charge in some other way. The locks are opened by the dock company several times in one tide, to give exit and entry to these necessary adjuncts to the trade of the Port of London; for the purpose of facilitating the exit and entry of ships at high tide, which would otherwise be hindered by such craft. The restriction with regard to men employed on barges, within certain limits of the River Thames, should be removed by the abolition of the monopoly which is enjoyed by the Watermen's Company.

9299. You now wish to offer evidence as representing the firm of James Spicer and Sons, on behalf of the paper trade section of the London Chamber of Commerce?—Yes. I am partner in the firm of James Spicer and Sons, who carry on the business of wholesale stationers and manufacturers of envelopes, cards, etc., with complete warehouses in the towns of London, Birmingham, Manchester, Glasgow, Melbourne, and Sydney (Australia), and Maritzburg (South Africa). The exports and imports of paper and raw material for paper making amounted, in the year 1865, to 100,000 tons per annum, while in the year 1899 they had increased to 1,000,000 tons. The imports of paper into the United Kingdom in the year 1899 were 265,270 tons of the value of £3,723,094. The imports of paper into the Port of London in the year 1899 were 137,030 tons, of the value of £1,698,321. Then the imports of paper-making materials into the United Kingdom in the year 1899 were 659,926 tons, of the value of £3,078,729; and the imports of paper-making materials into the Port of London in the year 1899 were 132,456 tons, of the value of £614,626. I give those figures because in the paper trade, apart from the rag trade, we import the paper-making materials. Therefore the imports of the paper-making materials give a very fair indication practically of the quantity of paper produced.

9300. Will you tell us where you get these figures from?—I get them from the Board of Trade Returns.

9301. And they are official?—Yes, they are official. The exports of paper from the United Kingdom in the year 1899 were 46,201 tons, of the value of £1,423,924; and the exports of paper from the Port of London in the year 1899 were 27,304 tons, of the value of £818,133. The value of exports of stationery from the United Kingdom in the year 1899 was £1,016,335; and the value of exports of stationery from the Port of London in the year 1899 was £558,971. The Board of Trade do not give the quantities in connection with stationery; they only give the value. So far as the paper trade is concerned London is a favourite port, by reason of its transshipment facilities, consequent upon the right of free delivery overside, and also of the free use of dock water. London is a very expensive port for other than transshipment goods, such as goods brought into the Port for home districts, or rather London districts and provincial districts served by London. Such goods have to be either landed at the docks and delivered to land conveyance or lightered from ships' side to a wharf, and there landed and delivered to land conveyance. In order to escape these heavy charges of the Dock Company and the public wharfwomen my firm own premises on the banks of the River Thames. My firm have invested large

Mr. A.  
Spicer.

10 June 1901.

sums of money in building such premises, relying on the clause in the various Dock Acts, which gives free access to barges and lighters entering the docks for the purpose of delivering and receiving goods to and from vessels loading and unloading therein. If these powers are granted to and exercised by them, my firm will suffer a heavy loss owing to the probable depreciation in value of the premises situated on the banks of the River Thames before mentioned, part of which are used by my firm for the purpose of their own business, and the other part let off to another firm for a bonded warehouse. In addition to this my firm will have to pay a very large amount per annum for this tax, as, except for very small parcels, the Dock Company's quay's rates are prohibitive. A large part of the export paper trade of this country is done in comparatively small quantities, as paper is one of those articles that follow other articles, such as food, clothing and other necessities; consequently it is very often associated with other branches of commerce in its earlier stages. London has been the distributing centre of a great deal of this trade, but competition with paper manufacturers on the Continent of Europe and America is now very keen. If the existing lighterage arrangements are disturbed and the London and India Docks Company obtain and exercise the powers sought by them, the paper trade will be still further handicapped in their competition with foreign manufactures. My firm being paper merchants, we are very often able, when compelled by competition, to make use of paper manufacturers on the Continents of Europe and America, and then distribute their goods to different parts of the world. This trade, however, is not of equal advantage to the country that it would be if the paper could be made here, and such trade again is much more uncertain, as gradually the manufacturers in the different countries from which we draw those supplies are anxious to do their own exporting direct, without the use of British merchants as intermediaries; consequently it is all important that the Port of London, both as regards its waterways and its quay and dock accommodation, should be so good as to be attractive to every class of vessel. A carman has to go to the Dock Company's office in the Docks to get his papers dealt with, and as the shed or warehouse from which he has to collect his goods is frequently situated a considerable distance from the Company's office, a serious loss of time occurs. I think some system should be devised whereby servants at the sheds should be in better communication with the offices. Delivery of goods from the sheds is very slowly carried out by the Dock Company. My firm's vans often have to wait many hours for delivery, clearly showing, in my opinion, that the Dock Company's system is bad and far behind the requirements of the present day. I am of the opinion that it is very important that the largest steamers should be able to come up the river without hindrance, and be able to discharge their cargo in the Port of London as expeditiously and economically as at any other port. To offer the utmost facilities to shipping is, to my mind, the most important. London being essentially a water carriage port, it is important that the present lighterage arrangements should be undisturbed, although, in my opinion, a low quay rate would attract more goods to make use of land carriage, and therefore lessen the number of barges and lighters in the docks. I agree with the proposals of the London Chamber of Commerce as to a dock and harbour trust, and I believe that, in order to administer the port, it is necessary that the authorities should direct their energies, not to the effort to make interest on capital, but rather to stimulate commerce in the best and most economical way. We think the time has now come when there should be a removal of all restrictions in connection with Thames lightermen, it being unreasonable that the great trade of the Port of London should be endangered by being in the hands of a close Corporation.

9302. Have you anything to complain of with reference to the incidence of any proposed rate on your trade?—What we say is that it will tend to handicap the business.

9303. You say it will tend to handicap it?—It will handicap it. The paper trade in this country is now in very keen competition.

9304. With where?—America, Norway, Sweden, and Germany. When I tell you that the whole of our paper-making material is imported either from Norway, Sweden, Germany, Canada, or America, you will see it

is natural that where they produce the raw materials they are also tempted to put up paper mills alongside the mills for producing the materials. Wood, which is now the great raw material, apart from esparto for better papers, is brought over here in a manufactured condition; it is converted from the pure wood into the wood pulp, and in that condition it is brought into this country, and the whole of our paper trade in this country is dependent upon getting the raw material not only at the lowest possible cost, but with the smallest amount of charges upon it. Every shilling a ton that is allowed to be placed upon it handicaps the trade and makes it better worth the while of those who are producing the wood pulp to put up mills alongside those wood pulp manufactories and produce paper as well.

9305. (Sir Robert Giffen.) Is there a very large manufacture of paper in Norway?—Yes, and it is increasing.

9306. Do you get wood pulp from Norway?—Yes.

9307. But they are taking to making the paper themselves now?—They are making the paper themselves in increasing quantities every year.

9308. I have been looking at the figures which you have given. I should like to ask you whether it would be a fair statement to say that on an average the price of paper exported from the United Kingdom is about £30 a ton. You have given 46,000 tons at a value of £1,423,000?—You must bear in mind that these figures are Board of Trade figures.

9309. But I wish to have your opinion as an expert in the trade as to whether that was a fair representation or not?—I do not think it is far out, for this reason: that the figures there represent all the better qualities. The lower qualities are very largely transhipped.

9310. The paper which you import comes in on a value of about £10 per ton?—That is quite right. As I say, those are not my figures, but the export of our papers includes all the writing materials, for instance; paper goes from one penny and a penny farthing a pound up to 1s. 6d. a pound. The paper used by Cabinet Ministers for their writing purposes I suppose would come out at 1s. 3d. a pound; it is used by others as well—all the hand-made papers. The export of paper has come to mean that we are exporting mainly the better sorts.

9311. Would it be a fair representation to make that the paper making materials which you import cost from £4 10s. to £5 per ton?—It is very largely wood pulp and esparto. That would be about right I take it for esparto and the sulphates, so that taken on an average I do not expect it is far out. It is not the mechanical wood. You have the three articles; you have the mechanical wood; you have the sulphates and you have the esparto. The £30 which you state would be perfectly fair for esparto and I take it somewhere about that for the sulphates.

9312. The £30 was an inference of mine from the total value imported and the total value stated here. I wish to have your opinion as an expert in the trade as to whether that is a fair figure?—I do think it is a fair figure. I do not think it is very far out when you take the raw materials.

9313. Would it be a true representation to say that on the average the raw material worth from £4 10s. to £5 per ton is converted in manufacture to an article worth about £30 per ton, or what is the relation between the two?—The Port of London is not the largest port for the importation of paper-making material.

9314. But I was taking the total import into the United Kingdom?—But you are omitting the whole of the cheap paper; I do not think, if I may say so, that it is quite a fair comparison.

9315. That is just what I wish to arrive at!—The great export trade in news is all cheap paper and that is very largely dealt with in the transhipment items.

9316. What I wish really to get at is some idea of the value of the manufacture of paper as distinguished from the raw material in this country—how much value is put into it by the manufacturing processes which it goes through?—Take esparto at, say, £5 per ton. Esparto paper is sold, of course, according to whether it is mixed with sulphates at 2½d., 2¾d., or 3d. per pound.

9317. How much a ton?—That comes out at about £30 a ton.

Mr. A.  
Spicer.  
10 June 1901.

9318. That is just the average value of the goods exported?—You go right away up from one penny a pound to 1s. a pound in gradations.

9319. Is there as much weight in the manufactured article as a rule as in the raw material. Do you convert the raw material weight for weight?—No. With wood pulp it is so, but that is a manufactured article as the manufacturer gets it. I am not an expert paper manufacturer, and therefore I give my answers on these matters subject to correction, but I have always been told that in converting a ton of esparto you get about one half.

9320. In any case the trade is a very important one, and represents a large employment of labour and capital in the United Kingdom?—Certainly; you see that by the figures. The whole import and export trade in 1865 was 100,000 tons, and for last year it was over one million tons.

9321. And the London share of the export trade is very large indeed?—Yes, as I have mentioned in my evidence, it is a sort of collecting, and London is the centre; it goes off in small quantities to a great many countries; therefore it is all important that London should be as attractive as possible to ships from every part of the world and going to every part of the world.

9322. On account of its position as a general distributing centre?—Yes. Paper is one of the last things that people use. They want clothing and food, but paper is the last of civilised wants, and it is the first thing that people cut off when they are hard up.

9323. (Mr. Ellis.) I want to ask you a question or two about the difference between transshipment and the other aspect of the port. You have used the expression that London is a favourite port?—Speaking for myself as an individual, I should be prepared to use the word "favourite," but I think that perhaps speaking as a representative of trade it would be better to say "good."

9324. You wish to infer that as far as transshipment is concerned, the things are satisfactory?—Yes.

9325. But for other than transshipment purposes would you wish us to infer the charges are already too high?—They are quite high enough, and I should wish to lay stress upon this, that the Port of London does not appear to be quite as attractive to shipowners as it used to be.

9326. I am coming to that in a moment, but will you keep strictly to paper for a moment, the sphere of your own individual evidence?—I do not consider it as good as some other ports.

9327. Does that opinion arise not only from the point of view of charges, but from the point of view of want of facility in the trade?—We do not consider the facilities at the London Docks quite as good as we do, for instance, at Hull. We get goods discharged more quickly.

9328. You wish us to infer that it is not quite up to date in that respect?—That is so.

9329. Most of your evidence is based upon this Bill, which, of course you are aware, is dead?—I know it is.

9330. You do not wish to leave us with the impression that your evidence is confined to a dead Bill?—No, most decidedly not. We want something done to make London the most attractive port. We realise that New York and Antwerp, and then in a less degree Hamburg and Amsterdam, are somehow or other coming into favour, and we know that the more they come into favour the more it will damage the general export trade of London, a great deal of which (apart from my trade) is done in small quantities, and for which this has been the great centre. We do not wish it to get into the minds of the rest of the world, as some people are beginning to think already, that London does not stand where it did a few years ago. I do not think it does. We are being hit all round, by America especially, and by Germany. Many other countries have been willing to look to England to be their exporters; they are not willing to look to England to-day. They are anxious to do their trade themselves. I was in America the year before last: the facilities they are giving to their manufacturers to accumulate knowledge which we here have built up and have acquired for ourselves at our own cost after a great many years' experience, the American Government is providing practically gratis for their people. All this is tending to make the export trade of London much more difficult; conse-

quently, I for one come and ask that this important Commission should do all it can to insist that London should be made as good as it is possible to make it.

9331. You wish to convey to us the desire that in some way or other something should be done to ensure that the docks of the Port of London should be so administered that commerce should be stimulated?—That is so. May I go a step further, and say what I should like to see this Commission doing, looking at it from a broad point of view? I should like to see this Commission say to the three great bodies, the City of London, the London County Council, and the London Chamber of Commerce: "Now go and meet together, and do not come out of your room until you are prepared to put before us a scheme for the future working of London." They could do it. They have the information, and it is simply cruel that for the sake of petty jealousies they should come with three different schemes, and ask you to thrash them out instead of thrashing them out before they come to you.

9332. Now I come to a practical question. You are a very considerable ratepayer, I presume, in London?—We are very considerable.

9333. You have already committed yourself to the proposition that there should be a Trust created. That Trust would, of course, have to borrow money?—Undoubtedly.

9334. On which it would have to pay interest?—Yes.

9335. You would have to meet certain expenditure?—Yes.

9336. Supposing there was any hiatus between the amount of its revenue and the amount of its expenditure, putting into the latter word interest or borrowed money, from what source would you fill the hiatus?—I believe it would be perfectly legitimate to make the whole of London pay for it. London would reap enormous advantages.

9337. Pay for it in what way do you mean?—By a tax on London; we should all get the benefit of it.

9338. I will ask you not to use the word "tax," if you please?—A rate, if you please, on London.

9339. You, as a considerable ratepayer, are quite prepared to bear your share?—Distinctly. If you will let me keep my trade, I am perfectly prepared to pay the rates.

9340. And improve the trade?—And improve the trade.

9341. And in your mind is recourse to the rates in the last resort a better method than going to the Chancellor of the Exchequer?—Distinctly. If you will make London a really good port, we shall not object to the rates. We know it must be paid for, and it must be assessed fairly on the London ratepayers, and we shall all gain by it.

9342. And you think that that opinion (which comes with great weight from you) is shared by a large portion of those among whom you mix?—I think it would be by those engaged in business of any size, who have had the opportunity of watching the progress of events, and of seeing what is happening in their respective trades.

9343. Do you think you can speak for the commercial mind of the City of London?—I should not like to say that, because I have never had an opportunity of discussing it.

*Cross-examined by Mr. Daldy.*

9344. You say London is a very expensive port for other than transshipment goods, such as goods brought into port for home districts, or rather London districts, and provincial districts served by London. I want to ask whether, supposing some such charge as the dock companies propose were to be put upon your goods, you would be able to recover it from the consumers, or whether it would fall upon the consumers in the case of goods which are consumed in the London district, and the provincial districts served by London?—Of course if everybody had to pay it in London, so far as regards our English customers, unless we had fresh competition to meet from abroad, we should be able to get it from them. But the great danger in our mind is the trade with abroad. Looking at the present condition of the paper trade, and the fact that we are dependent upon abroad for every ounce of raw material, it is important not to put further facilities in the way of competition from that side.

9345. I was looking at it for the moment purely from the point of view of the consumer in the London district who is not a trader, and as I understand you to say, it would be in your power to recover to some extent such a charge from that consumer?—Except so far as we are prevented from recovering by competition from abroad. Of course these manufacturers from abroad go all over the country and sell against us. Naturally they would have to pay this as well, so that as regards the home consumer I think both of us would be able to recover it from him. But I want to lay special stress upon that. It is the peculiar position of the paper trade in connection with the foreign manufacturer.

*Cross-examined by Mr. Harper.*

9346. Do you think that your trade would be

hurt by a small tonnage rate on all goods entering the port?—I think it would still further handicap the trade.

9347. 2d., 3d., or 4d. a ton on paper?—But you have not talked about 2d., 3d., or 4d. a ton; you have talked about 1s. to 1s. 6d.

9348. I have not talked about 1s. or 1s. 6d. myself, if you will excuse me?—I maintain that anything would be a mistake at the present time.

9349. I am talking now of something levied in that way by a tonnage rate for the improvement of the waterways of the port?—I do not believe in that way.

9350. Would you sooner have a rate?—Much. I want the thing taken out of the management of the dock companies.

*Mr. A. Spicer.*

10 June 1901

Mr. GEORGE GOODAIR called and examined.

9351. (*Chairman.*) You appear before us in order to give evidence as to the import trade in frozen meat?—Yes.

9352. Will you be good enough to tell us what you have to say?—I am a partner in the firm of William Weddel and Co., 16, St. Helen's Place, London, E.C. I have been engaged in the frozen meat trade since its commencement in the year 1880. My firm imports about 25 per cent. of the total import of frozen meat into the Port of London. The frozen meat trade began with a small experimental shipment of about 20 tons, received at the Port of London in the year 1880, but trade has rapidly grown until the imports into the United Kingdom amounted last year to 4,800,000 carcasses of mutton, 1,600,000 carcasses of lamb, 711,000 quarters of beef, weighing in all 209,000 tons. The value of that is about £6,000,000; about three-quarters of it comes to London, say 150,000 tons. There are now 150 steamers specially fitted for the transport of frozen meat, of which 120 trade between the Australasian Colonies and London, the remaining 30 trading between the River Plate ports and ports in the United Kingdom (chiefly Liverpool). During the growth of the frozen meat trade in the past 20 years no additional dock accommodation has been provided in London for this special trade with the exception that arrangements have been made for a few of the steamers from Australia to discharge at Tilbury Dock.

9353. Do you mean to tell us that practically no additional accommodation has been made during the last 20 years?—I think I can say that none has. The result has been that during recent years, at the height of the season, there has been very frequently a block of steamers awaiting discharge in the Royal Albert Docks, or delayed in discharge, partly from the lack of barges and partly from the lack of storage. At the commencement of the trade the London and St. Katharine Dock Company provided all the necessary cold storage accommodation, but the rapid growth of the trade found the dock company's accommodation insufficient, and a number of stores were built for and adapted to the needs of the trade by others, both on the river side and in the neighbourhood of Smithfield Market. The London and India Docks Joint Committee ultimately built and fitted a warehouse with cold storage accommodation at the latter centre, in order to compete with the warehouses erected by others. The apathy of the London and St. Katharine Dock Company, as evinced by their failure to appreciate the importance of, and to provide suitable warehouse accommodation for, this new industry, was the cause of the erection of these competing cold stores, which, at the present time, secure two-thirds of the frozen meat imports of the Port of London. The whole of the warehouses specially fitted for this trade in the Port of London are capable of holding at one time 1,600,000 carcasses. Of these stores fifteen are situated within one mile from Smithfield Market. The warehouses, specially fitted for this trade under the control of the London and India Docks Joint Committee, are capable of holding at one time, 508,000 carcasses. I believe that the bulk of this trade could have been retained by the London and St. Katharine Dock Company. The want of sufficient cold storage accommodation at the docks, and the consequent adoption of the storage offered by the other warehouses, has greatly magnified the difficulties of discharge. It involves delivery from the ship into numerous lighters, which tends to impede the movements of steamers in the docks. The perish-

able nature of frozen meat demands the promptest possible discharge and transit to the cold store, and the ideal method would be for the steamer to discharge straight into stores alongside the ship, as it is now partially done in London, partially in Liverpool, and will be regularly done in Southampton when the new store there is finished. The chief and almost the only cold store owned by the London and India Docks Joint Committee (which I must say I also consider to be the best managed store for the storage of meat) is situated in an inconvenient spot for the discharge of the ships. It is situated just between the Royal Albert Docks and the Royal Victoria Docks, at what is termed the "Canal," but if steamers come alongside there to discharge into the store, it is found impracticable for barges to come alongside to receive their portion of the cargo, because the presence of these barges alongside the ship interferes with navigation between the two docks. An attempt was recently made to discharge steamers inside the Royal Albert Docks, at the point nearest to the store; but it was found that the depth of water at that portion of the dock was not sufficient to allow of the frozen meat steamers coming alongside. The scale of charges for the storage of frozen meat is much heavier in London than Liverpool, Manchester or Glasgow, notwithstanding that the trade at these outports is more intermittent than in London, and therefore much less likely to result in profit to store-keepers. The difference is chiefly one of principle. The position is practically that the London charges are 10 per cent. more than the charges at any other port in the United Kingdom. The current scale of charges for storage of frozen meat in London may or may not be remunerative to the proprietors of the stores. It is not possible for any outsider to form a reliable opinion on this point; the proprietors of the stores either do not issue a balance-sheet at all, or else their balance sheet does not contain any separate return of the receipts and expenditure connected with the storage of frozen meat, but I believe that cold storage is one of the most profitable departments of the dock companies' business. It has always been a matter of surprise to merchants why they had not captured more of it. With regard to minor matters, such as the control of men working at the discharge of a perishable article like meat, the rate of working from the steamers, protection from weather, efficiency of the dock companies' railway wagons, and difficulties about berthing steamers, the management of the London dock companies has all along failed to meet the requirements of the trade.

*Mr. G. Goodair.*

9354. (*Mr. Peel.*) I suppose there is quite sufficient storage accommodation now in London, taking the private owners and the dock storehouses together?—At the present moment London is not two days ahead of arrivals of frozen meat. We are working close up to the capacity.

9355. Your deliveries are made very rapidly?—Fairly quickly, but that margin is not sufficient.

9356. (*Rear-Admiral Hext.*) I presume this very large increase in frozen meat has decreased the amount of live cattle coming from abroad?—No; it has not affected it at all.

9357. Not at all?—No; it has established a new trade.

9358. Therefore the demand for meat must have enormously increased?—Yes.

Mr. G.  
Goodsir.

10 June 1901.

Cross-examined by Mr. Daldy.

9359. Are you able to say whether this deficiency in receiving frozen meat in London is shown by any difference in price at Liverpool, Manchester, or Glasgow?—A difference in the price of what?

9360. Are the wholesale prices ruling for frozen meat in Liverpool, Manchester, or Glasgow lower than they are in London?—They are, but not from any reason connected with discharge.

Cross-examined by Mr. Harper.

9361. There are a number of cold storage wharves on the river, are there not?—Yes.

Mr. JOHN KENT CROW called and examined.

Mr. J. K.  
Crow.

9367. (Chairman.) You are nominated by the Railway and Dock Rates and Charges Committee of the London Chamber of Commerce to offer evidence before us with special reference to the varnish and colour trade?—Yes.

9368. Will you be good enough to give us your evidence?—I am a Director and the General Manager of the firm of Wilkinson, Heywood and Clark, and a member of the Committee formed by the London Chamber of Commerce to represent the interests of the owners of private wharves, that is to say, merchants and manufacturers owning premises, on the banks of the River Thames (and canals within the Metropolitan district), for the purposes of their own business, and not for the purpose of storing the goods of others for hire. Previous to the year 1892 the premises owned or occupied by my firm were all situated inland, but finding themselves handicapped in their export trade by the difficulties attached to an inland position, my firm purchased the premises known as Storer's Wharf, Poplar, relying on the old-established rights of free entry and exit of barges to and from vessels lying in the docks. These premises are nearly three acres in extent and have a river frontage of 300 feet, enabling several barges and vessels to be moored alongside at one time. Since the purchase and occupation of these premises, my firm has expended considerable sums of money on the property; the net rateable value has indeed been increased from £953 per annum to £1,322 per annum, at which it now stands, showing that we have increased the value of the property by nearly 50 per cent.

During the last 12 months my firm have delivered and collected goods to and from vessels lying in the docks amounting to a weight of 8,000 tons. The levy which the London and India Dock Company propose would in our case amount to a loss of over £800 per annum, estimated on our last year's water traffic with the docks—8,000 tons. This £800 per annum would be a dead charge on our business, as we should be unable to recoup ourselves by raising prices of goods, owing to competition with other ports and the prices of foreign manufacturers. The loss to my firm would be represented by the capitalised value of the money necessary to raise £800 per annum, calculated on the basis of  $3\frac{1}{2}$  per cent. this would total to the value of £24,000 or £25,000. No corresponding advantage whatever would accrue to my firm to compensate us for the loss, and in addition the value of our premises would be correspondingly decreased, and reduced to a level in value with inland works. The oil and colour trade in London would be still further handicapped in the severe competition already existing between merchants

9362. I suppose the cargoes in the docks are barged to them?—Yes.

9363. Are they also barged to the uptown warehouses?—Barged and carted.

9364. Could you give me any idea as to the relative cost of barging and carting cargoes up, say, from the Albert Docks?—To the trade there is no difference, because the dock company practically include their cartage in their management rate, and the other warehouse keepers include their lighterage and cartage in their management rate. It is the same to the merchant in both cases.

9365. That is a management rate?—Yes.

9366. You cannot separate it at all?—No.

and manufacturers in London and merchants and manufacturers in the Ports of Liverpool, Glasgow and Hamburg if these extra charges on water borne goods are imposed. Owing to this competition from other centres, my firm are bound to supply certain lines of goods at prices which leave only a very small margin of profit. These are nevertheless necessary adjuncts of our trade, and are sold in conjunction with other lines of goods. If these charges on water-borne goods are imposed, my firm will be compelled to lose money on certain lines of goods in order to retain their customers for their general trade against the competition of other ports. I consider this proposed charge as contrary to the historic freedom of the port, and that in any case powers to enforce such a charge should not be entrusted to a Corporation working for its own profit. The rest of my evidence is purely my own personal opinion. I consider that the systematic and repeated attempts of the dock company to enforce such charges, which are contrary both to their charter and to the established freedom of the port, constitute an element of disturbance and uncertainty to those engaged in commercial pursuits in London. I am of opinion that this is distinctly prejudicial to the trade of the Port of London, and should be terminated. I am of the opinion that the Port of London should be administered by a public trust, solely for the benefit of national commerce; that sufficient dues should be charged to properly maintain the conditions of commerce; and that any surplus revenue should be applied to the reduction or surrender of such dues, and not be given as profit to shareholders, or applied to the relief of local rates.

9369. (Rear-Admiral Hext.) You refer to the competition of merchants and manufacturers in the ports of Liverpool and Glasgow?—Yes.

9370. Take Liverpool. Are you aware that in Liverpool all goods, whether they go into the docks or not, pay dues?—Yes, I am aware of that.

9371. And therefore in that case if you pay no dues in London you are working at a considerable advantage over Liverpool?—It is a slight advantage. I think there is an advantage of about 2s. a ton between us, or 1s. 6d., I am not quite sure.

9372. But you admit the fact that you are working at a considerable advantage over Liverpool?—Yes.

9373. And therefore there would be room for more competition?—The point that I wish to draw your attention to is the fact that there is very great competition in the oil and colour trade, and when any port has an advantage through its location over another that port will use it for cutting the prices.

(Adjourned to Wednesday next, June 12, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## TWENTY-FIFTH DAY.

Wednesday, 12th June, 1901.

### PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTLETON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D. F.R.S.  
Rear-Admiral Sir JOHN HEXT, K.C.I.E.

CECIL OWEN, Esq., *Secretary*.

Mr. BALFOUR BROWNE, K.C., and Mr. GEORGE WALLACE appeared on behalf of the London and India Dock Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council.

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. R. W. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

Mr. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

Sir HOMEWOOD CRAWFORD recalled, and further examined.

See  
8073-4.

9374. (*Chairman*.) I understand you wish to hand in a return of the number of municipal voters in the City of London?—Yes, I promised that I would hand in a return of the number of municipal voters in each ward of the City of London, together with the assessable value of each ward. The total number of municipal voters is 29,907, and the total value upon which consolidated and sewer rates are levied by the Corporation is £4,896,105. The return gives the details of the several wards.

(*The witness handed in a return of the Number of Municipal Voters in each Ward of the City of London together with the Assessable Value of each Ward, 1901. See Appendix, 25th Day, No. 1.*)

Sir H.  
Crawford.  
12 June 1901.

9374a. (*Sir Robert Giffen*.) These are the voters who elect the Corporation of London, are they?—These are the voters who elect the members of the Court of Common Council.

9375. (*Mr. Balfour Browne*.) I do not know whether your Lordship will allow me to make an appeal to my learned friend, Mr. Whitehead. I understand that my friend proposes now to call before this Commission twelve more witnesses. I quite understand that a great number of gentlemen want to be heard for their own particular trades, but I would appeal to my friend whether it is carrying it any further. We know, of course, that everybody who is going to be subject to the tax that we propose will object. That may be taken, without going into details, in each case. My friend Mr. Whitehead is far too good an advocate not to know that merely calling a number of witnesses to say the same thing does not carry the case any further. Of course, I quite understand that the Commission cannot shut out any evidence, and that is why I make the appeal to my friend Mr. Whitehead to cut it as short as he can. It is a very long inquiry.

(*Mr. Rowland Whitehead*.) The reasons for this appeal of my friend, Mr. Balfour Browne, I fail to understand. I am not conducting the inquiry. The inquiry is in the hands of your Lordship and the Commissioners, and as I understand it your Lordship and the Commissioners are calling the witnesses. I represent the Chamber of Commerce. With regard to the substance of what my

friend says, the point is this. There is a great variety of trades in the Port of London. I am not aware that we have called before the Commission any evidence that is unnecessary. Each of these trades desires to be heard before the Commission so that the Commission may understand what the condition of each trade is, and what the effects of the proposal may be upon it. The conditions of the corn trade and the grain trade are different from the conditions of the chemical trade, and so forth. It is, after all, with regard to the trading interest that the volume of the complaints which come from London is an important feature. What the traders representing the Chamber of Commerce desire to bring home to the minds of the Commissioners is the great amount of feeling that there is with regard to this proposal. I do not know how I can bring that before the Commission except by putting witnesses before you at the table. As I have said before, the whole matter is in your Lordship's hands, and if you do not desire me to summon witnesses, of course the Chamber of Commerce will acquiesce.

(*Chairman*.) We need not assure you, Mr. Whitehead, that we are anxious not to shut out any evidence which is brought before us by so important a body as the

12 June 1901. London Chamber of Commerce; at the same time, I think it is only fair to add that the statements that we have heard from these various traders as to their disinclination to help towards improvements which may be suggested in the Port of London have only a negative effect upon our minds.

(*Mr. Rowland Whitehead.*) Of course, your Lordship will understand that this has been entirely sprung upon me. My clients are not in the room, and I have not had any opportunity of discussing this matter with them. The observation which has fallen from your Lordship puts me in a very difficult position at the moment. I will communicate with my clients, and we will do all that we can to carry out the wishes of the Commission.

(*Chairman.*) The Commissioners will retire for a few moments and discuss the matter.

(*The Commissioners retired.*)

(*Chairman.*) The Commissioners have decided to proceed with the evidence of the witnesses on behalf of the London Chamber of Commerce as previously arranged.

ranged. With reference to my remarks this morning, I wish to observe that evidence to the effect that a trade opposes any contribution by itself to improvements of the port is merely negative, and is therefore not of assistance to the Commissioners in their task. The Commissioners, I would add, are ready to hear full evidence as to the conditions under which various trades are carried on in the Port of London. They suggest that as far as possible representative witnesses should be called for each trade and any duplication of evidence avoided.

(*Mr. Rowland Whitehead.*) I am obliged to your Lordship. I think your Lordship will find that the evidence of the Chamber of Commerce is framed on those lines. I do not mean to say that now and then there may not be an observation which may come within the evidence you have excluded, but I think the general lines of the evidence about to be given are exactly those which your Lordship has foreshadowed.

(*Mr. Balfour Browne.*) I think we should assist the Commission, at any rate, by cross-examining as little as possible.

Mr. DAVID FALCONER called and examined.

Mr. D.  
Falconer.

9376. (*Chairman.*) You are a partner in the firm of Falconer and Company, and you are a member of the Committee of the London Jute Association?—Yes.

9377. You have been nominated by the London Jute Association to lay evidence before this Commission with regard to the jute trade?—Yes.

9378. Will you be good enough to tell us what you have to say?—The jute trade came into importance about forty years ago, and has continued to grow steadily. It is estimated that the annual consumption in Europe alone is about 2,900,000 bales of 400lbs. weight each. For many years a large percentage of the imports came to London. This is no longer the case; most of the business has gone to other ports. The system of heavy dock and warehouse charges in London has been one cause of this diversion of trade from the Port of London. If the charges in London are increased by a tax on lighters or by increased dock charges, the Port of London will lose what remains of the trade. I will hand in a table showing the jute imports into London for the past eleven years.

JUTE IMPORTS into London from Calcutta and Chittagong for eleven years.

1890 -	-	-	-	-	750,260	bales.
1891 -	-	-	-	-	665,731	"
1892 -	-	-	-	-	410,062	"
1893 -	-	-	-	-	529,538	"
1894 -	-	-	-	-	486,159	"
1895 -	-	-	-	-	541,639	"
1896 -	-	-	-	-	614,718	"
1897 -	-	-	-	-	605,376	"
1898 -	-	-	-	-	553,730	"
1899 -	-	-	-	-	347,095	"
1900 -	-	-	-	-	466,925	"

9379. Are there any remarks you wish to make on that table?—No.

9380. (*Sir John Wolfe-Barry.*) You say that most of the business has gone to other ports. What other ports do you mean?—Dundee, Hamburg, Dunkirk, and latterly Tréport and some Mediterranean ports.

9381. Has the jute business in Dundee increased?—No, it has not increased for twenty years.

9382. Therefore you mean that the jute business generally has suffered through foreign competition?—In Great Britain.

9383. Taking Great Britain as a whole?—Yes, certainly.

9384. Is it a fact that the jute trade has grown very largely in India?—Very, it is very important.

9385. Is that a manufacturing business?—Yes, both spinning and weaving.

9386. Has that had any effect upon the diminution of the imports into London?—It has no doubt been a

great cause of a less supply coming to Europe, because India is now manufacturing and supplying a great many of the Colonial markets direct. But the reduction in London has arisen a good deal from the fact that the charges here were so heavy when they were increased some twenty years ago as to divert what came to London to be sent to smaller Continental ports. In consequence of these heavy charges that were increased some time ago and still remain, they now take small cargoes across to Dunkirk and Tréport and some of those smaller places that always came *via* London some twenty or twenty-five years ago.

9387. What I want to get at is, whether the great increase of the manufacture of jute in India partly accounts for the facts you have given us?—The increased trade in India is only an increase of the trade generally. I can give you figures as far back as 1867 which show almost throughout, with the exception of the last two years, an increase notwithstanding the enormous production in India which has been required for local uses and for other places. The imports into Europe commencing in 1867 totalled 1,800,000 bales, while in 1897-8 they reached 3,500,000 bales. The last three seasons have been less, the crops have not been so good; they averaged 2,500,000 bales. This year they will reach about 3,000,000; last year was a bad year with only 2,100,000 bales imported into Europe.

9388. Is that manufactured jute?—No, that is raw material in bales of about 400lb.

9389. The great mills that one sees on the Hoogley are for the manufacture of jute, are they not?—Both for spinning and manufacturing. They make it into bags and cloth.

9390. So far as it is manufactured in India it would be imported not in the way you lay before us now, in bales, but in the shape of manufactured goods?—Yes, but there is only a small percentage of that which comes to Great Britain.

9391. Is it consumed in India?—It is largely consumed in India, and it is shipped to South America and also California, and the Cape, and Australia, and other places. The consumption in Calcutta alone is estimated this year to reach 2,500,000 bales against roughly 2,900,900 bales for the whole of Europe.

9392. (*Mr. Lyttelton.*) You say that the system of heavy dock and warehouse charges in London has been one cause of this diversion of trade from the Port of London, what are the other causes that you have in your mind?—Naturally people began to see that it is cheaper for them if they can possibly get it direct.

9393. That is the same; that is only showing the same thing in another way. When you say that the heavy charges are one cause you have in your mind, have you not, some other cause?—Undoubtedly, that is to say, the people wish to take their supply the cheapest way they can.

9394. If you have no other cause in your mind, of course I take your answer?—I have no other cause than that which I have given.

9395. (*Mr. Peel.*) I suppose other fibres have during the last twenty years been substituted in the manufactures in which jute was largely used?—No; there is no other fibre which can be substituted for jute, because there is no other fibre so cheap. It is the cheapest fibre that exists.

9396. None of these fibres come from the West Indian Islands?—No, you get jute on an average at £12 a ton; you could get no other fibre at the price. That is why you get your bags so cheap. Of course they do not last, but they do for the purpose. There is no other fibre so cheap, therefore it cannot afford a big tax.

9397. (*Sir Robert Giffen.*) I suppose there is no jute manufactory in London and the neighbourhood?—Yes, there is one mill at Stratford.

9398. It is not a large one, is it?—No, possibly consuming 80 to 90 tons a week.

9399. I suppose some of the raw material that came to London went on to Dundee and other places?—Yes, and it does well at certain seasons of the year when they cannot get full cargoes, but as a rule Dundee imports direct.

9400. And it is generally a transshipment trade, is it not?—Yes.

9401. That is to say, the goods are taken overside from the ships in the docks or the river and put on to coasting vessels to go to Dundee?—Yes.

9402. What charges are there upon that trade in London?—Only lighterage. You send your lighter alongside the import steamer and deliver it to the coasting vessels.

9403. There are no dock charges upon the goods?—Not payable by the buyers of the goods. The buyer

sends his lighter in alongside, the import steamer collects his goods and takes them to the export steamer.

9404. Your statement is that the trade has been diverted by the heavy charges for lighterage. Is that so?—No. Originally, many years ago, it was the custom to warehouse very largely and supply from the warehouses; that is to say, before steamers became so numerous as they are now, and a great deal of the trade was carried by sailing vessels. They arrived very much about the same time and the goods were warehoused. I am speaking now of 20 to 25 years ago. The charges for warehousing became so heavy that people avoided warehousing in London, preferring to send goods to other ports if they could get there direct. Therefore the trade was diverted from London because you could get cheaper warehousing room elsewhere.

9405. Still that change, such as it was, took place before the beginning of this table that you have submitted to us, which commences in 1890?—I had not really the figures beside me to go back further.

9406. The diminution which we see here must have arisen from other causes and not from that change which you speak of, because that change which you have been telling us of took place about 20 years ago or so?—It began then, but it has increased.

9407. I suppose a great deal of the change has been the substitution of steamers for sailing ships, which are rather inimical to warehousing, I suppose, because the supply is more continuous?—Yes. Buyers can rely upon getting the jute more continuously.

9408. So that that is one of the causes of the change?—Certainly.

9409. And the question of the dock charges is one that belongs to a period of 20 years ago?—It was the first to give the trade what we call a blow. Any further increase we should consider our death-blow.

Mr. GEORGE BIRRELL called and examined.

9410. (*Chairman.*) You appear before us in order to give evidence with regard to the Covent Garden Branch of the green fruit trade?—Yes.

9411. Will you be good enough to tell us what you have to say?—The green fruit trade in London is carried on by 8 brokers in Covent Garden, of which I am one, and also by 4 firms in the City. Fully 75 per cent. of the foreign fruit steamers, bringing such fruit as oranges, lemons, onions, melons, pomegranates, grapes, etc., discharge at Fresh Wharf and Nicholson's Wharves, Lower Thames Street. These wharves are quite unsuitable wharves for the trade, which should be carried on at the docks. The Thames Street side approaches to these wharves are inaccessible for hours together owing to the block caused by the early morning fish traffic, and later on in the day by the fruit traffic. These wharves may be convenient for the City firms whose warehouses are situated within a few yards of the wharves, and whose goods are carried by porters direct from the quay side over the short distance through the streets to the warehouses. I am of the opinion that these two trades, that is, the fish and foreign green fruit trade should not be worked in the same small area. Brokers in Covent Garden have to collect their goods by van, and it is a common occurrence for vans to be kept waiting one, two, three or four hours without being allowed to get near the approaches to the wharves. The congestion is near worse in the summer months by the large amount of foot passenger traffic passing over Fresh Wharf to the pleasure boats to Margate, Ramsgate, etc. I have had my vans kept outside Fresh Wharf gates from early morning until mid-day before they were allowed to even go on to the wharf. I may say that for some time past now, rather than be put to inconvenience and loss of time by having my fruit landed by these wharfingers and delivered to my vans and carried by land, I have at considerable trouble to myself had my fruit put overside into barges and taken from the vessels lying at Fresh and Nicholson's Wharves to a wharf on the other side of the river in order to enable me to get an earlier delivery. Another bad feature of the system of the working of these London Bridge wharves, and which

further adds to the delay in delivery, is that through the desire of the wharfingers to secure as many steamers as possible, and to discharge their cargoes promptly, they often bulk marks together, but take no corresponding means to expedite delivery. This indiscriminate landing of cargoes and bulking of the marks is detrimental to the proper conduct of the trade, and adds further to the delay in delivery. I could instance many cases in which my vans have been kept on these wharves for many hours; sometimes, in the Malta potato season, until 1 o'clock in the morning. I am of the opinion that the bulk of this green fruit trade should be done by the dock company, and that it would be quite easy for the dock company to make such arrangements as would enable them to obtain and keep this growing trade. The docks complain at the present moment of so much cargo going overside into barges, which pay them no dues, but I am strongly of the opinion that a great deal more of the cargoes would be landed were better delivery given by extended dock working hours with greater economy in dock charges. I desire to detail certain points that are within my knowledge of the bad system prevailing in all the London Docks. The present working hours in the London Docks are from 9 a.m. to 12 noon, when an interval of half an hour, and sometimes one hour, for dinner occurs, with resumption of work at 1 o'clock until 5 o'clock p.m., in all seven to seven and a half working hours per day. I am of opinion that these hours are absurdly short, and should be extended to twelve working hours; say from 6 a.m. to 6 p.m., deliveries to be made without any intermission for breakfast or dinner. This could easily be arranged, and is rendered really necessary on account of the long distance vans have to travel to and from the docks. There is a great deal of formality to be gone through before a carman can take goods out of the docks. Much of this is in my opinion quite unnecessary, and the process is hampered with an amount of red tapeism that is altogether out of place in a commercial institution. I refer particularly to carmen's passes, of which one only should be necessary. In my own experience carmen have had to walk a distance of two miles to get their different passes signed, and as at some docks they have to get as many as five or six passes signed before they

*Mr. D. Falconer.*

*Mr. G. Birrell.*

Mr. G.  
Birrell.

12 June 1901.

See 387; 393

can get out of the dock gates, there is an enormous waste of time, which is, of course, an expense to merchants; the whole procedure being enough to mystify the average carmen. Another delay is caused by the necessity for waiting for the Customs clerk to clear the goods. It frequently happens that a carman has to wait some hours for this gentleman, as he will only clear goods when on his "rounds." There ought to be arrangements made by which Customs clerks can be on the spot, to clear goods on landing from ships. In the evidence offered by Mr. James Fleming, Surveyor General, Board of Customs, on November 8th he states that "all kinds of goods free or dutiable may be discharged from an importing vessel between 6 a.m. and 6 p.m., without the shipowner or merchant becoming liable to pay for the attendance of the Customs officers." I would merely remark that this does not in the least remedy the delivery to the merchants. I take great exception to the dock system of trollying and trucking packages, which means a lot of extra labour, and is quite unnecessary. At the London Bridge wharves there is no sign of such trucking to be seen; all fruit is taken out of the steward's hold by hooks, landed on the quays, and then put on the porters' backs, the packages being then carried away by the porters. To show that it is not necessary for such delays to take place I wish to mention my experience of the manner in which fruit steamers are handled at Cardiff.

9412. Do you know this of your own knowledge?—Yes, I went down there. A fruit steamer arriving at 4 p.m. did not wait until the next morning to commence discharge (as would be the case in the London docks), but started working at once, and by continuous working through the night the cargo was all landed by 4 a.m. The fruit was then catalogued, sold by public auction, and delivered by 4 p.m., so that within 24 hours the thing was done with. At Southampton the fruit steamers are discharged in a like prompt manner. When the New York steamers arrive, even as late as mid-day on Thursday, the fruit is landed, put on railway trucks, taken to Nine Elms—a distance of 80 miles—and delivered in Covent Garden sometimes as early as 6 o'clock the next morning, within 18 hours from the time of the steamer's arrival at Southampton. I should like to refer to a remark made by Mr. C. J. O. Scott in his evidence on November 8th to the effect that the London Docks had not fallen behind the times, and that they accommodated all the ships afloat, and of no ship could it be said that it could not go to the Port of London for want of dock accommodation. I cannot dispute that statement, neither do I see the point of it, as it is of no use taking steamers to the docks if the deliveries cannot be properly carried out. The space possessed by the London Docks should be used to advantage, and there is no reason why steamers should go to Southampton, Bristol, Cardiff, or other places, to discharge with such vast accommodation in London, practically not being used. The payment of dock labourers at 6d. per hour should be done away with entirely, and a system of piece work substituted generally, and for the green fruit trade a package or tonnage rate. Men paid by the hour simply loiter about in groups, and you see sometimes four or five men surrounding one package where one man could have done the work. The present pay of 3s. 6d. to 4s. per day cannot possibly attract anything but the most inferior kind of labourer. I roughly estimate the quantity of foreign fruits landing in the London Docks and London Bridge wharves to run into something like 10,000 to 12,000 tons weekly, so that if the trade increases as it has done, and I expect it to continue so to do each year, it is absolutely necessary that efficient preparations be made to facilitate the necessary deliveries.

9413. (Sir Robert Giffen.) You have mentioned that in some cases five or six passes are required by the carmen to get out of the dock gates?—That is so.

9414. Will you specify the docks?—The Albert Docks and the Victoria Docks. By the time the carman gets his vans loaded and gets the ship's clerk's pass and back to the ship and goes out of the dock gates he has had to get five or six passes.

9415. Is that the place where he has sometimes to walk two miles for his passes?—That is the place.

9416. Are there any other docks in the same position?—Victoria Dock is as bad as the Albert Docks. The

East India Dock and St. Katharine Dock are not so bad; but they are all bad; it is a question of degree.

9417. You refer chiefly to the Albert and Victoria Docks?—Yes.

9418. (Mr. Peel.) Why do you say that the wharves are so unsuitable?—They are so congested; there is so small a space; you cannot get your vans there; you are kept trotting about all day long to get near the wharves. I have had vans come down there and not be able to get a single package, and the men have been told to come the next day, and so on.

9419. You want to get the docks for the larger space?—Exactly, and with extended dock working hours; at present they are quite inadequate.

9420. (Sir John Wolfe-Barry.) I suppose it is extremely difficult to shift the centre of trade in London?—There would be no trouble to shift it. A great deal of that fruit trade goes to the docks already.

9421. Still all that can get to those wharves near London Bridge endeavours to do so; is not that so?—That is so.

9422. And efforts have been made to diminish the fish trade in the neighbourhood, but they have not been very successful, I believe?—That is so.

9423. The fish market at Shadwell has not been a great success, has it?—No, but I contend that they ought not to have the two trades running in so small a space; one blocks up the other entirely. It is an ordinary occurrence for vans to be kept trotting up and down Thames Street all day long, and to occasionally be summoned. That is not business.

9424. If Billingsgate was to remain where it is, and the green fruit trade were all anxious to get up to London Bridge, I do not see how you could avoid some congestion there?—I do not think they are so very anxious to retain the London fruit trade there. It was so some time ago, but now the condition of the trade is altered.

9425. Your business is almost all done by vans, I suppose?—Entirely.

9426. In what docks do you suggest the fruit trade should be carried on?—In one of the close handy docks, the London Dock, or the East India Dock, or the St. Katharine Dock, avoiding as far as possible the Albert and Victoria Docks as being too far away.

9427. You are anxious to avoid long van transit as far as possible?—Exactly; at present we spend four or five hours a day going to and fro.

9428. You say goods are delivered at Southampton; are they delivered by railway vans?—Yes.

9429. You do not have to send your vans to Nine Elms?—We do occasionally, but it is quite optional.

9430. Is any movement being made for the construction of any wharves on the Thames suitable for your trade in competition with Fresh Wharf and Nicholson's?—At Middleton's Wharf they are moving rather rapidly and giving more facilities.

9431. We may take it that the arrangement must be always more complicated in docks than at wharves?—We have one Custom House officer in one dock, and he cannot do more than one man can do.

9432. I mean with regard to passes?—At wharves a man gets one pass and it is done with; why should not that apply equally in the docks. The average carman is not a man of great education who knows where to go.

9433. Is not that almost a necessity in a dock dealing with all kinds of merchandise as contrasted with a wharf that is specially set apart for one particular trade?—Where these fruit steamers discharge it is only fruit they are taking in hand in one steamer; it is not a mixed cargo; it is entirely fruit from Spain, Italy, or the Mediterranean.

9434. But there is a great deal of other merchandise which is also in the docks which may be smuggled out with the fruit?—I do not see why one pass should not be given to the man and then let him go straight away with it.

9435. But does he not traverse the docks perhaps for a mile or two?—He has to leave his cart at the risk of being knocked about by locomotives and come a mile or two back; I say that is a scandal.

9436. Is there not a real difficulty in a large dock where there is a variety of merchandise and where any

See 647.

amount of smuggling might go on—a difficulty which does not belong to a wharf?—Do you refer to smuggling by a carman?

9437. Yes?—On his person or in his van or what?

9438. In his waggon. Would it not be quite possible for him to smuggle tobacco, for instance?—I believe there is such an operation as “wiping a man down” if he is supposed to have tobacco about his person at the dock gates.

*Cross-examined by Mr. Harper.*

9439. Do you claim to represent the green fruit trade?—I do.

9440. Are you nominated by the trade?—By the Chamber of Commerce.

9441. I ask you specifically by the green fruit trade?—No.

9442. You are in fact a broker in the green fruit trade who is nominated by a section of the Chamber of Commerce?—That is so.

9443. As a matter of fact you have never hit it particularly well with the proprietors of Fresh Wharf, have you?—I have hit it off still less well with the docks.

9444. As a matter of fact I think you have very recently been in litigation with Fresh Wharf?—I have been in litigation with docks and wharves all my life. That is why I am here.

9445. Bad as you say Fresh Wharf and Nicholson's Wharf are, as a matter of fact I think you try to take delivery overside and take it to another wharf?—I do now every package.

9446. At the present time?—Yes.

9447. Do you find it a cheaper way than taking it through Fresh Wharf?—I do.

9448. To what extent?—25 to 30 per cent.

9449. May I ask where you take it?—To South Eastern Wharf.

9450. Is that a railway wharf?—No, a Thames wharf; Messrs. Baxter and Hoare's.

9451. Just by the railway is it?—Yes, by the Borough Market.

9452. Do you cart from there?—Yes, to Covent Garden.

9453. Is that underneath the Cannon Street Railway Bridge?—Yes, the other side.

9454. You say you now find it 25 per cent. cheaper?—I do.

9455. Taking it wholesale?—Yes.

9456. From Fresh Wharf?—Yes, and Nicholson's Wharf too.

9457. On craft from the green fruit wharves?—That is so.

9458. (*Sir John Wolfe-Barry.*) If you discharge overside at Fresh Wharf do you then pay any wharfage dues?—No.

9459. Do you make fast to Fresh Wharf and take part of your cargo there and part overside?—No, the cargo comes alongside in the steamer and there it has to discharge on to the quay and to barges for the convenience of the wharf. The wharf discharges into barges at the quay. That is a matter of convenience.

9460. I would like to understand that a little more. Does a vessel come alongside Fresh Wharf?—Yes.

9461. Then is the cargo taken out on to Fresh Wharf?—Yes.

9462. Then put into barges?—Into our barges.

9463. And taken away to your other wharf?—South Eastern Wharf.

9464. Without any charge by Fresh Wharf?—That is so.

9465. (*Chairman.*) You tell us that the green fruit trade is carried on by 8 brokers in Covent Garden and 4 firms in the City. Did you consult the 8 brokers or 4 firms in the City before you compiled the evidence which you have put before us?—The 4 firms I have not because you have a witness here for them.

9466. The eight brokers in Covent Garden?—Yes.

9467. Have you reason to think they share your views?—They do entirely.

9468. All of them?—All of them.

9469. (*Mr. Lyttelton.*) I do not quite understand about these gratuitous services rendered by Fresh Wharf. You say you have been in litigation with Fresh Wharf?—I have had litigation on various matters—general irregularities.

9470. I only want to know your reason. It seems rather remarkable that they should give you access to Fresh Wharf gratuitously under any circumstances?—It is a choice of evils.

9471. It seems still more remarkable that they should do so if you have been in litigation with them. Perhaps you can give us the key to the mystery?—The question of charges is entirely the beginning and end of it. They charge us 5d. per case for landing cases of onions, and I contend that is a gross abuse of the privilege of wharfingers.

9472. That is not the question. Can you give me any explanation why you are able to get those services from Fresh Wharf for nothing?—According to the bill of lading the steamer is bound to deliver overside. The reason that Fresh Wharf do this work gratuitously is that they have no choice; the terms of the bill of lading make them do that.

9473. I do not understand you; will you just develop that?—It is simply that the terms of the bill of lading allow the merchant to take delivery overside at no expense to himself. If the wharfinger does that, he does it for his own convenience, getting his profit from the ship and not from the merchant.

*Mr. HARRY MICHAEL ISAACS called and examined.*

9474. (*Chairman.*) You have been nominated by the Green Fruit and Vegetable Trade Section of the London Chamber of Commerce to give evidence before us on the subject of the City branch of the green fruit trade?—Yes.

9475. Will you be kind enough to tell us what you have to say?—I am managing-director of the firm of M. Isaacs and Sons, Limited, and am also Chairman of the Green Fruit and Vegetable Trade Section of the London Chamber of Commerce. The London import trade of green fruit is carried on by four firms of fruit brokers in the City, of which my firm is one, and also by some firms in the London markets. The chief imports of green fruit come from Mediterranean ports; but a considerable quantity, chiefly apples, comes from the United States, Canada, and Tasmania. The average imports of green fruit into London amount to about 450,000 to 500,000 tons, with a value of about £4,000,000 to £5,000,000. Green fruit is usually imported into London in small steamers ranging from 600 to 1,000 tons burthen. The majority of the steamers discharge their cargoes at private wharves, Fresh Wharf and Nicholson's Wharf having the bulk

of the trade. The work of discharging at these wharves is satisfactory. An improvement has taken place during recent years, owing to the acquisition of improved appliances. I consider the work compares very favourably with that of Liverpool. Some fruit steamers discharge in the docks. The work is done satisfactorily, but it would be better if the working hours were extended. While the charges at private wharves and docks are about the same, the position of the private wharves is more convenient for the trade. The warehouses of the principal receivers in the City of Mediterranean fruit are situated close to the discharging wharves, and the goods are mostly carried by porters direct from the ship into the receivers' warehouses, so that, although the steamers discharge at the wharves, it is the exception for the wharves to warehouse the goods. As regards Atlantic and Tasmanian steamers, these occasionally discharge at Tilbury Docks, and the delay and difficulty in obtaining prompt delivery of these goods is great. It is not the rule for fruit by Mediterranean steamers to be lightered. It is nearly always landed at the place of discharge, whether it be at the wharves or docks. My firm are

*Mr. G. Birrell.*

*Mr. H. M. Isaacs.*

Mr. H. M.  
Isaacs.  
12 June 1901

also chartered owners of a large number of steamers employed in the fruit trade, and their experience is that the discharge in London compares favourably with the discharge in other ports of which they have experience. We find also that the expenses on the steamers are less, as will be seen by a *pro forma* account taken from the actual expenses incurred by a steamer, which I will hand in.

*(The witness handed in a Comparative Account of a Steamer, 391 tons net register, 14 feet 6 inches draught, discharging 6,000 cases of oranges at the Ports of London and Liverpool. See Appendix, 25th Day, No. 2.)*

On a steamer of 391 tons register (Norwegian s.s. "Cito"), which has been running on our account for some three years, the difference in charges is nearly £24 per voyage. In spite of this big difference in expenses of steamers, we find a disadvantage in having steamers to London against most other ports, owing to the difficulty in getting outward cargo without shifting to a coal port, also the dearth of bunkers as compared with most other ports. Liverpool and London are the two chief centres for the import of fruit. The freight to Liverpool from all ports where comparison is possible is 15 to 25 per cent. cheaper than London. The trade is one that necessitates work at high pressure, goods being of a perishable nature. The arrival of steamers is uncertain and irregular, and arrangements have to be made and sometimes changed at the last moment. The responsible heads of private wharves are easily approached, and negotiations are simple and prompt. Competition among the wharves has considerably improved their efficiency in the last few years.

9476. Have you any remarks to make upon the table?—No.

9477. Have you any personal experience of discharging at Southampton or Cardiff?—Yes.

9478. Did you hear the evidence of the last witness, Mr. Birrell?—I could not hear it very plainly.

9479. How, in your experience, does the discharging at London compare with the discharging at Southampton or Cardiff?—The experience that we have, where we can compare, is in the case of steamers coming in from the Atlantic discharging their cargoes. They are put direct on to the rails and brought through. The discharging takes place, I suppose, in about the same time. It is a question of prompt delivery on to the railway trucks.

9480. As regards promptness of delivery, how would you compare London with Southampton and Cardiff?—I should say it is prompter in Southampton and Cardiff, but the cases are rather different. Similar cases could not arise here.

9481. (Sir John Wolfe-Barry.) Do your fruit steamers carry whole cargoes?—Yes; that is, nearly all fruit—some minerals.

9482. I suppose the inconvenience with regard to outward cargoes from London is one that is difficult to cure?—There is no outward cargo to Mediterranean ports.

9483. How about coal?—Ninety-nine of our steamers out of 100 have to take coal out. We generally provide

them with sufficient if we think they are coming to London to take them round to the coal port.

9484. Then they go out light to the coal port?—They go round light.

9485. You are not in favour of your trade doing much at the docks?—No. We are quite satisfied. We think that the docks might do better.

9486. (Mr. Peel.) You have nothing to complain of about the length of the working hours at the wharves?—No. We work whatever hours we like at the wharves, and we have no inconvenience. We have occasionally at the docks.

9487. Do you find any difficulty in the bulking of the marks which we have heard spoken of?—I am afraid I did not hear what the witness said. We take all the goods that belong to us direct into our own warehouses.

9488. You charter your own steamers?—We have steamers, but we take that portion of the goods that belongs to us direct out of the steamers. The ship comes alongside the wharf, and the goods are carried direct from the ship into our warehouses. Generally nine-tenths of the cargo is dealt with in that way.

9489. You do not see much difficulty in the mixing of the marks?—No.

*Cross-examined by Mr. Daldy.*

9490. What size do your steamers run to?—600 to 1,000 tons.

9491. Would that be about the average?—That is about the average. They must be small steamers for the fruit trade.

*Cross-examined by Mr. Harper.*

9492. Southampton is a railway port and I take it that the Atlantic steamers that bring fruit bring small parcels, not complete cargoes?—Not complete cargoes, but they bring rather large parcels.

9493. And the railway company, having control of the port, put pressure on the railway?—Yes.

9494. The time of leaving the ship's hold at Southampton and delivery to you, is rather less than the time of leaving the ship's hold at London and delivery to you. Is that what you mean?—I cannot compare the ports at all.

9495. The processes are not entirely analogous?—No.

*Re-examined by Mr. Whitehead.*

9496. Do you take delivery of any fruit at all in the docks?—I do not quite understand the question.

9497. Do you get your fruit or vegetables through the docks at all?—No. Whatever comes into the docks we land there. We send our own staff down, and it is sorted and prepared for sale, and sold for delivery from the docks.

9498. Which do you find the most convenient course of business? To do your business through the docks or the wharves?—We prefer the wharves. We have our own warehouses there.

Mr. THOMAS ELBOROUGH, called and examined.

Mr. T.  
Elborough.

9499. (Chairman.) You are the managing director of Lawes' Chemical Manure Company, Limited?—Yes.

9500. You are nominated by the chemical trade section of the London Chamber of Commerce to give evidence before us with regard to the chemical trade?—Yes. I should like to say that I appear also as Chairman of the London Chemical Manufacturers' Association, which comprises the principal members of the trade in the Port of London.

9501. Will you kindly give us your evidence?—If the powers sought by the London and India Docks Joint Committee to enable them to impose the charges stated on lighters, barges and their contents entering and leaving the docks are granted to and enforced by them, the consequences to my company and to other manufacturers of chemical manures having works upon the Thames will be very serious, and the inevitable result would be to divert a considerable portion of the present export trade to the Continent. For some time past we

have had the utmost difficulty in retaining the trade, and in order to do so, our prices have been reduced to a minimum, our principal competitors being the Belgian makers, who have the advantage of lower rates of lighterage and freights. In London we have to pay 1s. 6d. per ton lighterage at present, which rate will, we are informed by our lightermen, have to be increased as the result of the strike, whilst in Antwerp the rate is only 80 centimes and in Hamburg only one mark. In the case of my company, the additional charges would amount to about £1,500 per annum, the whole of which would have to be borne by us as we have to compete with makers at other ports both in the United Kingdom and the Continent, and could not therefore levy any of these charges on the consumers. There is another point to which I would call attention, namely, that we have frequently to send 20 ton lots into docks in large lighters capable of carrying 80 tons; and to pay 4d. on the register of the barge as well as 1s. 6d. on the contents would be simply prohibitory;

our goods are frequently shut out from one vessel, and the lighter has to convey them to another vessel in another dock, so that in these cases double charges would be incurred, and as at present our margin of profit has been reduced to a minimum even where we have not to sell at actual cost, which we are constantly doing in order to retain the trade in certain markets, the result of the imposition of any additional charge must inevitably be to drive away a large portion of the trade from the Thames. We occupy waterside premises, which have been erected at great cost, and the value of these would be seriously diminished if these additional charges were imposed, as we could not afford to convey the goods to our premises and store them there, and would have to send cargoes to other ports where the charges are less, and distribute them from there.

9502. Now will you be good enough to tell us what you have to say with regard to the rights of the Watermen's Company?—We strongly feel the necessity for abolishing the exclusive rights of the Watermen's Company, which have resulted in our having to pay such high rates, and have caused us the greatest inconvenience and loss during the recent strike, master lightermen being unable to employ men who had not a licence, and we contend that whilst no prejudice would be caused by the abolition of the exclusive right, as masters would not, for their own sakes, entrust their valuable property to other than competent men, it would be a great advantage, and we should not be, as at present, at the mercy of a limited body of men. I am of the opinion that the present bad financial position of the docks is largely due to their past management. Their system has been to impose heavy charges, instead of adopting the best means for effecting economies by improved appliances and otherwise, and making the charges reasonable. To give one instance, for want of proper storage facilities the docks frequently engage lighters and make warehouses of these, a very expensive mode of working, and another cause for the difficulty merchants experience in obtaining lighters, and the high rate they have to pay for them. Railway communication with the docks, where it exists, is inadequate, and in the majority of cases, there is none at all. I am certainly in favour of a change in the management of the London Docks, but can express no opinion with regard to the constitution of the managing body.

9503. (*Sir Robert Giffen.*) Is your trade chiefly an export trade, or are you largely connected with imports as well?—We are connected with both, but our trade is largely an export trade. We import fertilisers, such as natural guano, from Peru and Damaraland.

9504. You are apprehensive about the charges proposed as affecting your export trade mainly?—As affecting our export trade mainly. Of course, with regard to the importation of this guano, if the charges in London, which are already higher than the charges in other ports, were further increased, the natural tendency would be for us to divert as many cargoes as we could to other ports, and distribute from there.

9505. Does your manufacture go on in the Port of London itself. Is it a local manufacture?—Yes, on the Thames.

9506. Does it give large employment for labour?—We employ, on an average, about 400 men.

9507. And the other firms whom you represent employ—how many?—I am not quite prepared to answer that question, but there are one or two firms that employ nearly, if not quite, as many men as we employ ourselves.

9508. And is there any indirect employment of labour

by people not directly under you who supply you with stuff?—Such as lightermen, do you mean?

9509. Where does the manufacture begin?—We have to import materials for the manufacture of chemical fertilisers from various parts of the world. Those are taken to our factory and dealt with there. They go through various processes according to the nature of them.

9510. Have you any raw material from this country, or is it all imported?—The great bulk of it is imported. We have some raw material from this country, such as sulphate of ammonia, which is produced here; but phosphates, which form the great bulk of our trade, are all imported.

9511. Then the number of workmen represented by your trade in this country is about 400 employed by your firm alone, and there is not much indirect employment besides?—No; I think not.

9512. (*Rear-Admiral Hext.*) For the materials that you bring into the Port of London for your use and also for your exports, do you generally use the docks, or otherwise?—We use the docks to a considerable extent, and at other times we discharge from buoys in the stream.

9513. When you say you use the docks do you mean you discharge overside into lighters?—Yes.

9514. You said just now in answer to Sir Robert Giffen that the charges in the Port of London were already much heavier than at other ports?—Yes, that is so.

9515. How do you account for that, when your goods come into this port free of charge. There are no charges on the goods?—I was referring then to the landing and warehousing of goods; not to delivery overside.

9516. Not as regards the Port of London?—No, not as regards the Port of London.

9517. (*Sir John Wolfe-Barry.*) Where is your wharf?—At Barking Creek.

9518. Have you factories at other ports—Hull, Plymouth, or Liverpool?—No; we have no factories there.

*Cross-examined by Mr. George Wallace.*

9519. Was the statement of your evidence made out with reference to the Bill of 1900?—It was.

9520. Not with reference to the Bill of 1901?—No.

*Cross-examined by Mr. Daldy.*

9521. When you say your goods are frequently shut out from one vessel, and the lighter has to convey them to another vessel in another dock, why are they shut out?—I should often be very glad if I knew why they are shut out. All that I know is that we arrange with the shipowners to send the lighters alongside a certain vessel. The next we hear is that they have not been able to find room for some reason or another and we have to remove them to some other vessel.

9522. You mean it is a defect of the lighterage arrangements of the dock, do you?—No, I did not mean to imply that. I am simply wanting to say what the effect would be if we had to pay on the register of the barge in the dock, and then from no fault of our own had to move that lighter into another dock and pay again on the register of the barge.

Mr. JAMES POWELL called and examined.

9523. (*Chairman.*) You have been nominated by the Railway and Dock Rates and Charges Committee of the London Chamber of Commerce to give evidence before us with special reference to the hide and leather trade?—Yes.

9524. You are a partner in the firm of T. J. and T. Powell, who have carried on the business of hide and leather merchants in London for the past 101 years?—Yes.

9525. Your own experience extends over 26 years?—Yes.

9526. Will you kindly give us your evidence?—I am Chairman of the Leather and Hide Section of the

London Chamber of Commerce. The South American hide trade formerly centred in London has been for some years past entirely lost to that port, being now carried on by foreign ports, notably Antwerp. The sole reason of this diversion of trade was the high dock charges ruling in London.

9527. I take it that your evidence is to the effect that there is in your opinion no possibility of recovering this trade to the Port of London unless and until a Dock Trust is formed to take the place of the dock companies?—Yes. The loss of this trade is not a merely local disadvantage, being driven to British outports, but is an Imperial loss—a dead loss to British commerce, having entirely gone abroad. The Chamber

Mr. T.  
Elborough.

12 June 1901.

Mr. J.  
Powell.

See 9559.

*Mr. J. Powell.*  
12 June 1901.

of Commerce made representations to the officials of the Joint Committee, and they listened to what we had to say.

9528. Did you make the representations, or the London Chamber of Commerce?—The London Chamber of Commerce.

9529. Can you give us details as to the representations. Can you give us the date when they were made?—They were carried on for some time.

9530. Have you any correspondence referring to it?—No, the London Chamber of Commerce have the correspondence.

9531. We want to have evidence as to your particular trade?—The present production of hides in South America that are exported to Europe is about nine millions. They used to come chiefly to London, and now I do not think 900 come to London. They have been driven away chiefly by the very high charges and the want of management in the London Docks. The hide trade requires special experts and special facilities for carrying on the business. There ought to be room for a floating stock of 200,000 properly assorted hides. That is the way the business is done in Antwerp now, and if the Joint Committee want to get that trade back they might arrange for those facilities, and let the large hide importers like Liebig's and others know it. Then I think they may recover a portion of it, otherwise I do not think there is any possibility of getting it back.

9532. (*Mr. Lyttelton.*) It is facilities that you particularly want?—Yes; expert sorters.

9533. Will you explain a little more fully the nature of the facilities which you say you do not at present receive?—The dock company want to be able to tell large importers like Liebig's and other people that they will do the business at the same rate as Antwerp, and then they want to appoint a sufficient number of expert sorters who would sort the hides into steers, cows, bulls, etc., of different weights, and make facilities for their being inspected.

9534. When the business was done in London had you any such facilities at the docks?—No; it was done in an old-fashioned way. I should think it has been lost nearly twenty years. It was gradually lost. But that is the system at Antwerp. They have special sorters there who understand the work, and there are large ranges of wharves there. Sometimes there are 200,000 stock there. The dock companies want the room, the capacity and space.

9535. (*Sir John Wolfe-Barry.*) Is Antwerp the chief competitor with London in your trade?—Antwerp, Havre, Hamburg, Bremen, Marseilles.

9536. Do your remarks apply to other ports with regard to the matter of facilities equally with Antwerp?—Yes.

9537. And you say London stands alone in not granting these facilities?—Yes.

9538. Do you put it that the physical conditions of the London Docks prevent their giving facilities, or is it due to any other matter?—I should have thought that it could be arranged. My view is that it could be arranged even now, but, of course, to get a lost trade back requires a great amount of energy.

9539. Then you think that Antwerp not only outbids London in the matter of charges, but also in the facilities afforded?—Yes; one quite as much as the other.

9540. (*Mr. Peel.*) Where do you mainly import your hides from?—The River Plate and Rio Grande. We do not import them ourselves. I merely speak for the trade.

9541. That is the South American trade?—Yes.

9542. And that particular branch of the trade has been lost?—Yes.

9543. But where do the hides come from?—Buenos Ayres, River Plate and Rio Grande chiefly.

9544. That is South America. I understood you to say that that branch of the trade had been lost?—They are sent now to Antwerp.

9545. But there is a large import into London from other places?—Yes.

9546. Do you know why this specific branch of the trade has been lost, and the others have gone on?—It is because this is a very large trade. It must be systematised much more than the others. For instance, there might be 13,000 Penang buffaloes offering at one time, but that is a mere bagatelle compared with this South American trade. It requires systematising.

9547. Does your remark apply to Hamburg?—Yes.

9548. And the French ports?—Yes, to Havre.

9549. (*Rear-Admiral Hext.*) Does any other port in Great Britain receive these South American hides direct?—Only a few; not the great bulk of the trade.

9550. And are many of these hides exported again from Antwerp to London?—Not many to London; to places like Barnstaple, Bristol, Hull; also to Liverpool, and by the Manchester Ship Canal to Warrington.

9551. From Antwerp?—Yes. That is what used to be done from London. They were sent by small trading steamers.

9552. And virtually London gets none from Antwerp?—Some proportion, but not many.

9553. (*Sir Robert Giffen.*) Is anything done to the hides at Antwerp beyond sorting and classifying?—Re-salting and warehousing.

9554. Then it is merely distribution?—Yes. It gets all those charges which London could get if it were laid out for the trade in the same way.

9555. Is it not the case that a large part of the wool trade also comes from Continental ports?—I believe it is.

9556. Is there not some reason connected with the subsidised shipping lines on the Continent?—Unquestionably.

9557. That is to say, that the Continental ports have lines of steamers running to South America which are subsidised, and they take away some of the trade?—Yes. They give them a bounty if they come direct there, but they will not give them a bounty if they come through London.

9558. So that it is not altogether a question of facilities?—No.

9559. (*Mr. Lyttelton.*) I see that in the statement of your evidence, after speaking of the loss of this trade, you say the "sole reason"?—That is a mistake. It See 553 ought to be "chief reason."

9560. Did you draft this statement yourself?—No, I did not draft it.

9561. Who did draft it?—The Chamber of Commerce.

9562. (*Mr. Rowland Whitehead.*) I think you could clear up a point which arose in the evidence of Mr. Scott. I was asking him a question with regard to leather. It is Question 6552. "You say that there is a difference in the rate of insurance as between the wharf and the dock." And he answered "Yes." Then I asked him in the next question: "Do you mean to say that that item of insurance would account for a difference between 9s. 9d. and 5s. 6d.?"—(A) No, certainly not; but the 9s. 9d. rate includes delivery in Tooley Street, for which we pay 5s. cartage." There is a difference in charge as between the wharf and the dock?—Yes. See 1167-67.

9563. Are the services performed at the dock the same, or different?—Precisely the same. They take them from the steamer, and deliver them into our warehouse or anywhere.

9564. But Mr. Scott makes some allowance for the item of cartage. He says: "The 9s. 9d. rate includes delivery in Tooley Street, for which we pay 5s. cartage"?—Both the private wharf and the docks would have to cart it, and there is no necessity in this world for them to pay more than 2s. cartage from Mint Street to Tooley Street. It shows a most extraordinary want of business capacity to pay 5s. cartage from Mint Street to Tooley Street.

*Cross-examined by Mr. George Wallace.*

9565. With regard to the question of charges, which you have just mentioned, you say you compare charges with those from Mint Street to Tooley Street?—Yes, 2s. is ample. I could get a thousand carmen to do it to-day.

9566. The Dock Company have to get it to Mint Street, have they not?—Yes; they charge 9s. 9d.

9567. What does the 9s. 9d. include?—It includes taking the cargo from the steamer to the warehouse.

9568. From the steamer, wherever it is?—Yes.

9569. (Mr. Rowland Whitehead.) I have enquired, with regard to the preparation of your statement of evidence. I understand that you wrote to the Chamber of Commerce, giving them the facts upon which your statement was based?—Yes, entirely; it is practically the same thing.

9570. (Mr. Lyttleton.) Owing to the exclusion of the question of the rates, it is quite fair for you to say that, but the bulk of the evidence you have given to-day has been with regard to facilities?—Yes, with regard to facilities.

9571. The matter of facilities is wholly omitted from your statement, which was drawn up by the Chamber of Commerce. What I want to know is, whether you, in your letter to the Chamber of Commerce, said anything about facilities, or whether you merely concentrated your attention upon charges?—They are so bound up with one another that you cannot separate them. We asked the Dock Company whether they would allow us to send a circular, saying that they would provide these facilities for the same charges.

9572. That is not quite the question. The questions are, of course, bound up together; but in this official document that we have before us, stamped with the Chamber of Commerce stamp, we have what purports to be your statement of evidence?—Yes.

9573. And in it there is not a word about facilities. Now, the first question I should like to ask you is whether you saw this statement at all before it was handed in to the Commission?—Yes.

9574-5. Then why did you omit all reference to facilities from it?—I did not know how much was wanted. I thought the shorter it was the better. We had that over and over so much with the Dock Companies that I supposed they would have that in their archives.

(Mr. Lyttleton.) The statement of a witness's evidence goes upon the notes, as a rule, subject to exclusions, and if it to be taken as worth anything it ought to have

the sanction of the witness, and it ought not to be absolutely different from that which the witness has in his mind, or at any rate, very much less than he has in his mind.

(Mr. Lewis Coward.) It would be much more valuable to have the witness's own views as expressed in the letter which he wrote in the first instance.

9576. (Mr. Rowland Whitehead.) This statement was prepared on the footing of a letter which you wrote to the Chamber of Commerce?—Yes.

9577. And when it had been prepared it was submitted to you, and you saw it?—Yes.

9578. When was that?—I could not remember the date at the moment.

9579. Was it last year?—I think it was.

9580. Since then the line of evidence which has been dealt with by this Commission has been somewhat modified?—Yes.

9581. And in view of that modification you offered evidence with regard to the question of facilities?—Yes.

9582. You do not withdraw, as I understand, anything from your proof as originally prepared on your instructions?—Beyond the alteration of the word "sole" into "chief."

(Mr. Harper.) May I ask the witness a question?

(Chairman.) Yes.

9583. (Mr. Harper.) Are you speaking of representations made to the dock companies?—Yes.

9584. Were those representations with regard to facilities?—Yes, facilities and charges.

9585. And you did not set out in detail in your statement what the representations were. Were they the facilities which you have been describing to the Commission?—Yes, the representatives of the hide brokers met the Joint Committee.

9586. Were you one of them?—No, I was not.

9587. The representation had reference to the facilities you have been describing to-day?—Yes; it was my fault that the facilities were left out.

Mr. GEORGE ROUSE called, and examined.

9588. (Chairman.) You are a partner in the firm of R. J. Rouse and Company?—I am.

9589. You have been nominated by the Cotton Brokers' Association to give evidence before this Commission?—Yes.

9590. And by the coffee brokers' section of the General Produce Brokers' Association?—Yes.

9591. We have here a statement of the evidence which you propose to give; have you read it?—Yes.

9592. Did you write it?—I did; that is to say, I did not typewrite it.

9593. You drafted it?—Yes.

9594. You say you represent the Cotton Brokers' Association and the coffee brokers' section of the General Produce Brokers' Association?—Yes. I am vice-chairman of the Cotton Brokers' Association, and I am chairman of the coffee brokers' section of the General Produce Brokers' Association. I am past-chairman of the London Produce Brokers' Association.

9595. I observe that you wish to refer to certain agreements, are they agreements that you know of personally?—Yes. Mr. Scott, in his evidence at Question 5676 says these agreements between the docks and the wharves do not prevent free competition.

9596. Are the agreements to which you refer the agreements which are mentioned at Question 5675?—Yes.

9597. On that understanding will you please proceed with your evidence?—I desire to offer evidence with respect to the high dock and warehouse charges on certain articles of produce in the Port of London. I illustrate this by a table, which I will hand in, showing the rates charged at London, Hamburg, Bremen, Havre, and Antwerp, on imported coffee and cotton, for the services of landing, working, weighing, delivery, and for rent.

(The witness handed in a Comparative Table of Official Port Charges on Coffee and Cotton at London, Hamburg, Bremen, Havre, and Antwerp. See Appendix, 25th Day, No. 3.)

I wish to say that in consequence of the keeping up of these ancient charges certain trades have been driven away from the Port of London, and I put in this table of charges in order to show what a tremendous difference there is between London and these other ports.

9598. (Sir Robert Giffen.) Are these charges that you have paid yourself?—Yes.

9599. Both in London and other places?—Yes.

9600. That you have paid yourself recently?—Yes; I will not say within the last month or two, but they are the actual charges. The absence of competition is the result of certain agreements between the dock company and the wharfingers to maintain the high level of warehouse charges. It may be true that there are certain wharfingers who are not concerned in these agreements, and who would compete with the dock company, but I am of opinion that these outside wharfingers are not those who have suitable accommodation and the required experience for warehousing and working valuable produce. In London we have a Cotton Committee for wharves so that cotton could only be sent to certain wharves; and with coffee it is the same; the trade would not buy from outside wharves. These high charges cannot but bear adversely upon the trade of the Port of London, although I have no doubt that there are some instances in which the trade has not been so affected up to the present time in consequence of the strong financial position of the London markets and other causes. I am of the opinion that to enter into these agreements has been very unwise policy on the part of the docks. I believe that a large proportion of the goods arriving in vessels discharging in the docks are taken away by barges, and that these goods, unless taken by merchants and manufacturers possessing private warehouses, must pass into the care

Mr. J.  
Powell.

12 June 1901

Mr. G.  
Rouse.

Mr. G.  
Rouse.

12 June 1901

of the wharfingers. By these agreements the wharfingers are allowed to charge less than the dock companies, and in spite of the fact that the merchants have to pay a higher insurance at the wharves these are generally preferred to the docks. I am of the opinion that these agreements have had a very adverse effect upon the dock company's business, and that their last 30 years' policy of combining with their competitors has been an entire mistake. A dock company has natural advantages for securing warehousing business which their competitors do not possess—the effect of their policy has been to throw the balance on the other side. I also believe that if low quay rates were quoted upon all goods, for merely passing them over the dock quay to land conveyance, it would largely encourage the general tendency to take goods away in this manner and so add to the revenue of the docks. Now may I go into the question of charges. I will just mention that we have represented many times to the dock companies that they have driven away the cotton trade from London and are driving it away.

9601. Are you referring to the table which you have put in?—I thought you would like to see the way in which the cotton trade has been driven away from London. I can hand in a yearly table of statistics to show how the imports into London have fallen off and how the exports have fallen in consequence of the high scale of charge. In 1889 (that is the year referred to by Mr. Scott as being the date of some agreements) the imports into London were 285,515 bales, and the exports 259,030, and the deliveries to the home trade 33,720. This has fallen gradually until in 1899 the imports into London were 66,998, the deliveries to export were 65,768, and there were only 900 for home consumption. In 1900 it was only 60,107 import, deliveries to export 50,316, and nothing for home consumption. The table for the years 1886-1900 is as follows:—

	Imports.	Exports.	Home Trade.
1886 . . . . .	250,381	230,820	95,720
1887 . . . . .	294,607	—	—
1888 . . . . .	223,990	235,200	19,510
1889 . . . . .	285,515	259,030	33,720
1890 . . . . .	178,874	157,410	36,610
1891 . . . . .	108,791	116,110	3,020
1892 . . . . .	119,445	119,650	2,030
1893 . . . . .	106,699	103,471	877
1894 . . . . .	111,027	108,067	1,200
1895 . . . . .	76,328	76,273	2,170
1896 . . . . .	87,849	82,747	3,640
1897 . . . . .	63,502	91,285	6,250
1898 . . . . .	49,937	52,857	1,300
1899 . . . . .	66,998	65,768	900
1900 . . . . .	60,107	50,316	—

I should just like to say what the charges for cotton are between London and Hamburg, because we have represented that in consequence of the low warehousing charges people are actually warehousing cotton in Hamburg and offering it here for sale, so that the warehousing trade is driven away by these charges.

9602. (Sir Robert Giffen.) Where does the cotton come from which comes to London?—Chiefly from India. There is a certain amount of American cotton passing through, but it is merely transshipment. The consequence of these charges has been that the actual quantity of cotton has been tremendously diminished in London. The trade does not come here at all, or else simply passes through.

9603. In comparison with Liverpool, it never has been a very large trade?—No, because Liverpool is close to the manufacturing districts. The actual quantity of East Indian cotton used in Oldham at the present moment does not amount to 100,000 bales a year. The trade has gone on to American cotton in England.

9604. But do not the steamers that come from India regularly now, bring cotton to London?—Yes; but it passes through over the ship's side; and not only that, but a great deal goes direct now. London has lost the warehousing trade.

9605. That is to say, the steamers from continental ports going direct to India have increased of late years?—Yes.

9606. And that would naturally take some of the trade away from London, apart from other causes?—Yes, it does as a matter of fact.

9607. And that may have happened apart altogether from the question of the relative amount of dock charges. There was this cause at work?—As a previous witness has said, that was the first blow. I once went to the dock people when Mr. Barber was Chairman of the Association and asked them to reduce the delivery charge by water, which was then four shillings a ton and 1s. 9d. for delivery to land conveyance, and they would not listen to it. They said they could not lower the charges because they had this agreement with the wharves. The consequence was that the people took it all overside.

9608. The consequence is that neither docks nor the wharves have the business now?—That is so.

9609. With reference to this comparison of charges I observe that you omit Liverpool?—I was not asked to put in Liverpool. I would have put in Liverpool with pleasure.

9610. Are you quite sure that in all cases you have compared like with like?—Yes.

9611. That you have not omitted anything in dealing with the foreign ports which perhaps ought to be considered?—I do not think so; I think it is right.

9612. For instance with reference to the French port of Havre, is there not a question which arises very often there, namely the question of ship brokerage, which imposes heavy charges upon the freight?—That is all included in the landing charges. The charge is compared with the actual charge in London.

9613. Are you quite sure of that?—Yes.

9614. Because I happen to be aware that there has been a great deal of correspondence at the Foreign Office with the French Government on the subject of these ship brokerage charges and that they had affected the freight very much in French ports?—What I mean is these charges here are simply charge for charge all the way through.

9615. The trade of the French port is affected by this particular charge that is outside of anything else which must be paid for by the trade in some form or other; so that if you have a landing charge that is nominally less, yet there are other charges in connection with the work which may have to be met either by the shipowner or by yourselves and which do affect the trade. I wish to know if you are quite sure that that comparison is correct?—Yes, I think it is perfect as far as I know. I do not know anything about the charge, because that would be borne by the ship.

9616. But that would affect the question of freight and other things?—To Havre, the stuff is carried in direct steamers.

9617. If the question of freight is affected, that becomes a charge upon the goods, and although nominally this particular charge may be less, yet it may not be better to do business at the port of Havre because there are other things to be considered?—All things being equal, these are the actual charges that you pay.

9618. But the question we have to investigate is whether other things are equal or not before we can express an opinion?—You want to know whether the port charges at Havre are dearer than in London?

9619. Besides this question of comparison of particular items of the cost of doing things, you have to compare the whole of the business, and this is an incomplete statement?—I will get you the actual amount if you wish.

9620. It is for you to submit the evidence, but I may call your attention to this point, that it is not necessarily a complete statement?—I believed it was a complete statement charge for charge.

9621. (Chairman.) Will you tell us where the figures in the table come from?—They come from various account sales.

9622. Of your own firm?—Yes.

9623. Are they all taken within practically the same time?—Yes.

9624. They all refer to operations of a year, for instance?—Yes.

9625. (Sir Robert Giffen.) Are they all your own?—I would not absolutely say everything, but they are my own.

9626. (Chairman.) Do they all refer to operations that have been carried on by your firm?—Yes.

(Chairman.) If we accept this table, Mr. Whitehead, it puts us in a position of some difficulty, because we feel it is impossible for us to check every item which is put before us. Merely asking questions would take such an enormous time that we think we can hardly trouble you to listen to us while we do so.

(Mr. Rowland Whitehead.) Of course, we are entirely in your Lordship's hands in the matter, but Mr. Rouse is here, and these, as I understand, are figures, whatever may be their value, of operations which he himself has made. What the value of the evidence may be would be a matter for argument hereafter, but I would ask your Lordship to receive it subject to any comment that may be made hereafter. It is direct personal evidence upon this limited point, namely, the charges for landing, weighing, sampling, and rent at the different ports.

9627. (Mr. Lyttelton.) Will you tell me the exact way in which you made it up. Your firm pays certain charges, and you receive certain demands for the charges?—Yes.

9628. Are these copies of those demands?—These are actually worked out by our people and by other export firms, and they have all been checked.

9629. Then I gather they are not all your own firm's operations?—To a certain extent they are.

9630. But we must have some precision about it. They are not all your own firm's, in the first place. These embrace the experience, according to you, of certain other firms?—Yes, of everybody—the regular charges.

9631. Where did you get them from. This is put before us, and you said just now they were all your own firm's operations?—Yes, exactly.

9632. Now it turns out they are not; they are not your own firm's, but they are someone else's. That is so, is it not?—Yes.

9633. What other firms?—Firms like Hayn, Roman and Co., and others.

9634. Is that the only other one?—I could name you a lot of them.

9635. In other words, this is not your own experience, but it is a collection of experiences from certain other people who are not called?

(Mr. Rowland Whitehead.) I am very loth to intervene in the course of examination, but I think, Sir, you are under a misapprehension. I am told that this is the fact; that these figures refer to transactions in which Mr. Rouse's firm have been engaged and also other firms, the charges being the same to all persons at the different ports, and that he has had his calculations checked by the other firms so as to make quite certain that the figures put before the Commission are accurate. He has been personally interested in all these transactions; that is what I understand to be the fact.

9636. (Mr. Lyttelton.) Is that so, Mr. Rouse?—That is so; we have had the transactions. If you ask whether I am particularly interested in every one particular thing here I should say not. But we have had these transactions; we have had the account sales, and these are the charges, and we have had these things checked by various firms.

9637. Let us take one example: Take the charge for delivery. Do you know what the service of delivery embraces in Hamburg for instance?—Yes, putting on board railway waggons.

9638. Do you know that from your own knowledge?—Yes.

9639. Have you been there?—No.

9640. Then how do you know that delivery embraces that?—Because we are charged in account sales.

9641. The only knowledge that you have is that you are charged a certain figure for delivery?—Yes.

9642. That is the only knowledge?—That is the only knowledge.

9643. You have never enquired what "delivery" means at Hamburg?—We know what it means; it means put free on board waggons.

9644. Have you ever enquired what "delivery" means at Hamburg. I put this to you for this reason. You have 5s. per ton in London for delivery?—Yes.

Mr. G.  
Rouse.

12 June 1901.

9645. Then you come down to 9d. at Hamburg and 5d. at Antwerp?—Yes. Antwerp is the lowest port.

9646. It occurs to one that there must be some reason for that sudden extraordinary disparity; and Sir Robert Giffen was pointing out a similar matter at Havre?—Yes.

9647. Now have you ever enquired specifically from any person entitled to give you information what that charge of 5d. at Antwerp and what that charge of 9d. at Hamburg in fact embraces?—The charge embraces the delivery of the goods.

9648. Have you made any enquiry upon the matter at all?—I do not exactly understand what you mean.

9649. I understand that you have simply taken "delivery" to mean what you as an English merchant think it does mean?—Yes.

9650. And that is the only source of your information?—Yes.

9651. You have not gone and made inquiries as to whether in fact your belief of what "delivery" means is correct or not?—The delivery must be a delivery whatever happens.

9652. I quite understand you?—The docks here charge so much for delivery per ton into the vans whatever it may be.

9653. You assume it must be exactly the same thing at Hamburg because it has the same name?—Yes, I do.

9654. (Chairman.) You told me that these figures on this table are extracts from the account sales of your own firm?—Most of them.

9655. Not all?—Not all of them.

9656. Where do the other figures come from?—From Hayn, Roman and Co., and other firms here who are large people in the coffee trade.

9657. (Sir John Wolfe Barry.) Do I understand that your impression is that at Antwerp the charge is 5d. per ton for delivery into railway waggons?—Yes.

9658. What is your impression of the charge of 6s. per ton land conveyance in London. What does that include?—That includes putting it into the land conveyance. The docks put it into a cart or barge.

9659. Would that be into a railway truck?—Yes, or barge which is run up alongside the warehouse.

9660. Or into a waggon?—Yes.

9661. A road waggon or a railway waggon?—Yes.

9662. Then you wish us to understand that the charge is 5s. in London as compared with 5d. in Antwerp for the same services?—Yes.

9663. And also you say that the charge in London is 6s. 8d. per ton for water conveyance?—Yes.

9664. What is that charge for?—That is for dropping it out of the window into a barge. Docks charge more for delivery by water than they do for delivery by land.

9665. You mean taking the coffee out of the ship or out of the warehouse and putting it into a barge?—Yes.

9666. They charge 6s. 8d. for that?—Yes.

9667. The table that you put in says that the charge is for water conveyance and for land conveyance. It does not say into a waggon or into a barge?—A land conveyance is a railway waggon or a cart.

9668. You use the word "conveyance" as meaning a vehicle?—Yes.

9669. Just as you talk of a cab being a conveyance?—Yes.

9670. Not the conveyance of things to their destination?—No.

9671. Then this table is meant to be entirely independent of the cost of conveying the coffee after it has been put by the dock company into what you call the conveyance?—Yes, it has nothing to do with the carriage.

9672. It has nothing to do with the transit?—No.

Mr. G.  
Rouse.

*Cross-examined by Mr. Harper.*

12 June 1901. 9673. Do you, of your own knowledge, know which wharves are outside those agreements to which you have referred?—No.

9674. Then I entirely fail to understand how you can express an opinion that these outside wharves are not those which have sufficient accommodation and facilities?—I have explained that certain wharves would not be allowed to have cotton.

9675. That is to say you would not allow them?—No.

9676. Then it is your own fault that you select wharves and keep to them?—There is a regular wharf committee to decide whether cotton can be warehoused at certain wharves.

9677. You yourself select where you will send the cotton?—Yes.

9678. You have not considered the outside wharves and do not know what facilities may be possessed by them, because you do not know which are the outside wharves?—I would not send cotton to a fish wharf, for instance, or to a green-fruit wharf.

9679. Take coffee. Do you know which are the particular wharves outside any agreements relating to coffee?—No; I can tell you which are in it.

9680. Then by exclusion you know which are outside it?—There are hundreds of wharves in London; I do not quite understand what you mean. The trade would not buy from an outside wharf.

9681. Is the cotton trade a large one in London?—It has been diminished by the dock company's charges.

9682. Is it a large one? There is no consumption in the neighbourhood of London, is there?—Only one small mill.

9683. It has all to go to Lancashire?—No, it goes mostly to the continent.

9684. May I take it that a good proportion of that means transhipment?—Yes, chiefly.

9685. And the quantity actually imported into London that goes into warehouses is relatively very small?—Very small.

*Cross-examined by Mr. Cranstoun.*

9686. With regard to this question of delivery to vans, can you tell me why more is charged for delivery to barges than for delivery to vans?—It is a thing I have never been able to understand.

9687. You do not know?—No. Perhaps the dock companies can explain it.

Mr. ALEXANDER FARQUHARSON called and examined

Mr. A.  
Farquharson.

9688. You are a partner in the firm of Farquharson Brothers and Co., who carry on business as timber importers in London?—Yes.

9689. You have been nominated by the London section of the Timber Trade Federation of the United Kingdom to lay evidence before us, particularly with regard to the soft wood trade?—I have.

9690. Will you please proceed with your evidence?—May I be allowed to say that every word of my evidence has been written by my own hand, and I speak only from my own personal experience as a timber importer. The members of the London section of the Timber Trade Federation of the United Kingdom represent a trade of considerable magnitude. This will be seen from the following figures:—The value of the import of timber and woods of all kinds into the United Kingdom in the year 1899 was £25,676,988. The value of the import of timber and woods of all kinds into London in the year 1899 was £6,971,944. The timber trade of London has for some years suffered great inconvenience from the inability of the existing dock companies to handle conveniently and economically the large import as represented by the above figures. I desire to draw attention to some of the facts connected with this inconvenient accommodation and the consequent hindrance to trade, damaging alike to the merchants and to the best interest of the Port of London. I also desire to submit certain facts which, in my opinion, are to a large extent the cause of the congested state of traffic, and consequent loss and inconvenience, and also to present to you some details of costs at the Port of London. The Baltic, White Sea, and Canadian imports, representing the deal batten and board trades, are centred almost entirely in the Surrey Commercial Docks. Concentration is in itself a desirable thing, provided it exists along with other facilities still more essential to the economic working of the trade. In my opinion these essentials are: first, quick despatch; second, relative lowness of charge. I shall endeavour to prove that in both of these respects the timber trade of London is very badly served. For the reasons which I will submit quick despatch has for years been an impossibility, and cheapness is unattainable. What do I mean by quick despatch? Those facilities which should exist for the immediate berthing of ships as they arrive, the reception of the cargo as quickly as it is discharged, and, most important of all, the immediate piling and storage of the goods directly the vessel is unloaded, so as to enable the importer to get quick delivery of his goods. From the method of working at the docks I submit that it is hardly possible to get this in London.

9691. When you say "the docks," do you exclusively refer to the Surrey Commercial Docks?—I am talking of the Surrey Commercial Docks, where the trade that I represent is centred. The import timber

trade is a season trade—that is to say, it can only take place from the time of the opening of navigation till the time it closes, a period generally extending from early May to the end of December. The Import of the year must take place within these months, hence it is that, in the hurry to get goods over before the season closes there is often a glut of arrivals. This has been very noticeable within the last few years, particularly so in the autumn of 1899 and 1900. At that time the steamers arrived faster than the Dock Company could find quay berths for them, and although the Dock Company did their best to relieve the pressure by providing barges for the steamers to discharge cargo into where they were unable to provide quay room, they were not always able to find craft, and the results were:—great delay in discharging, and consequent loss of time to the ship which the shipowner sought to recover from the importer in heavy demurrage claims; the docks crowded with barges, almost unnavigable because of these barges; the goods exposed for a great length of time to the chances of the weather; a loss of condition, and consequent deterioration in value; the rent charge (sometimes as much as 4d. per standard per week) going on all the while for the greater portion of the goods whilst so exposed. The heavy shortages owing to goods being lost off the barges in transit from the ship to the place of storage, and the intermixing of parcels that sometimes took place on the quays. In the end the Dock Company was obliged to refuse to receive steamers on arrival, and they had to lie at Gravesend waiting their turn to come up. What is the cause of this congestion, and who is to blame for it? I have heard it gravely stated by a dock director that the importer is responsible for it. If the importer would only import his goods in smaller vessels; if he would only arrange to spread his imports all over the season, and not crowd them in towards its close if, in fact, he would study the convenience of the Dock Company, and not his own, then all would be well. But such a condition of things is impossible, business must be conducted in such a way and at such times and seasons as are most suitable for it, and this the importer, and not the Dock Company, is best fitted to judge. In my opinion, the cause of the congestion must be sought somewhere else. I contend that the Dock Company, whether they know it or not, are not only the cause of this want of despatch, but are, themselves, the only persons responsible for it. Their antiquated method of working is, I think, at the root of the trouble. Thirty-three years ago, when I first came to London, timber was imported in sailing vessels, which discharged themselves leisurely by hand, taking from one week to four or five, according to their size, to deliver their cargo, which again was received by hand and put away as fast as it was received. Here we had a state of things where the merchant's goods were piled almost as quickly as they were delivered by the ship.

The receiving of the cargo and its being put away went on almost simultaneously; there was no interval, no break, in the continuity of the operation. The goods did not lie about on the quay till the Dock Company could find time and find men to put them away. With the advent of steam, some 10 years later, a change began. The vessels became increasingly larger, and the discharging of the cargo was done by steam power instead of by hand. A steamer could thus discharge in a day as much as a sailer could do in a week. It is manifest that the receiving and putting away of a cargo by hand cannot keep pace with its discharge by steam, and when vessels begin to arrive in any number in the docks the Dock Company finds itself unable to keep up with the deliverable power of the steamer and the whole of the machinery for the prompt and systematic piling of the cargo breaks down completely. Though the carrying and discharge of timber are almost entirely done now by steam, and have been so for the last 25 years, the Dock Company in that time has done nothing adequate to cope with this changed condition of things, although they have extended their docks. I mean nothing in the direction of rapid removal of the goods from off the quays to the piling ground in the rear. They still employ hand labour for this purpose, as in the days of sailers, and it is evident that unless some means are adopted for the clearance of the quays, as rapidly, or almost as rapidly, as they are covered with cargo, the present congested state of the docks, with all the delay, inconvenience and expense which this entails, must occur whenever the busy season returns. Now let me contrast the average rate of delivery by steam power with the average rate of piling by hand power. As I have said, it is this inherent inability of the latter to work in anything like the same ratio of speed with the former that is the source of the trouble. The average rate of discharge of a steamer may be taken at from 110 to 120 standards per day; a standard is 165 cubic feet. I will put in a table with reference to the rate of discharge of steamers, also a table showing the average time taken to sort and pile timber.

*(The witness handed in a Table showing the average number of Standards discharged per day from certain timber steamers in the Surrey Commercial Docks in the years 1899 and 1900. See Appendix, 25th Day, No. 4.)*

*(The witness also handed in a Table showing the average time taken to sort and pile timber from certain steamers in the Surrey Commercial Docks during the year 1900. See Appendix, 25th Day, No. 5.)*

It will be seen that on goods imported by my firm in 1900 the average time taken to sort out and pile 110 to 120 standards under cover by manual labour was five to six days, and for goods piled in the open, four to five days. I have no reason to believe that my firm's experience is exceptional in any way from that of the trade generally. A special committee appointed by the dock company admits the average period of delay in obtaining delivery of wood goods to be five and a half weeks for floorings and four and a half weeks for deals and battens. (See "Timber," October 13th, 1900.)

9692. Is that a newspaper report?—It is a report of the Committee appointed by the Dock Company. "Timber" is a trade journal. You will see how this compares with the figures I have given, where it took an average of nine to ten weeks to pile my firm's cargoes. But to take the Dock Company's own figures, their average date of preparing a cargo ready for delivery is from four and a half to five and a half weeks. Is it not unreasonable that it should be so, that in London, the capital of the country, the largest receiving and distributing centre of the wood trade in the world, where, if anywhere, one might expect the best methods, the most up-to-date appliances and equipment for receiving, handling and storing timber of any port in the Kingdom, in London you have the same antiquated methods in use to-day that existed 30 years ago? In an age of steam, of rush and hurry and bustle, the handling of timber has never changed, and men still carry the cargo upon their backs, deal by deal, piece by piece, as it was done in the days of the patriarchs. A wealthy corporation like the Surrey Commercial Docks might reasonably have been expected to show enterprise in the direction of employing machinery to transport timber. They have not done so, but have left it to a smaller and poorer competitor like the Millwall Dock Company, which handles only a very minor portion of the wood import of London, to step in and secure the patent rights in

this country and be the first to introduce machinery to the attention of the trade. In the case of the Surrey Commercial Docks, monopoly seems to have stifled enterprise. But this lack of enterprise on the part of the Surrey Commercial Dock Company is not the only disadvantage the trade suffers from. I am of the opinion that the Dock Company might do more to keep down charges and to handle goods quickly with the means at their disposal than they do at present. I refer to their method of engaging labour.

9693. Do you know this, as a fact?—In my experience as a timber merchant I have learnt it.

9694. You have been told so?—Yes, I have been told so.

9695. Do you state it as a fact?—It is a fact. I believe it is their practice in this respect to sublet to a contractor or contractors who distribute the work to be done amongst the different teams at work on the various cargoes, each team working for itself under its own captain or "boss." This employment of labour at second hand, besides adding to the cost, prevents the dock company from coming into immediate contact with the men, while the men themselves have no direct interest in the speedy handling and storing of the goods. The result is that the men, being their own masters, work when it suits them and leave off when it suits them, and, from their point of view, their interests are best served by not hurrying over the operation of piling, but by making the season's import last over the year if they can, so as to have no period, or as short a period as possible, of slackness in between. During 1900 I believe the dock company in common with other large employers lost the services of many of their men through the war, but I never heard what steps had been taken, if any, to fill their places, and the trade suffered from an insufficient supply of dock labour because of this. It is worthy of note here that no steamers were stopped for want of men, but this may be because the stevedores paid more money to get them. As regards the Surrey Commercial Docks, London is greatly hampered and is put in an unfair position for doing a country trade by the fact that the railways do not have direct access to the quays for their trucks. Goods arriving by steamer for country customers, unless in large quantities and under separate bills of lading, must be landed and piling charges incurred before delivery can be given, instead of going direct from the steamer or from the quay to the truck, and thence to their destination. Whereas in 1889 rent was charged only from date of landing return, that is, from the date when the cargo is completely put away and is ready for delivery, it is now charged from the date of ship's breaking bulk, on all goods landed under cover, and on all battens and scantlings whether piled in the open or under cover. This is a most radical change, one which has worked unfairly to the trade, and one which the trade has protested against by deputation before the Board of the Surrey Commercial Docks, but without success. I will hand in a copy of the memorial, and other documents showing the negotiations with the Surrey Commercial Docks Company.

*(The witness handed in documents showing the negotiations with the Surrey Commercial Docks Company, respecting the new charges instituted on the 1st January, 1899, for handling, storing, and distributing wood goods in the Surrey Commercial Docks. See Appendix, 25th Day, No. 6.)*

I take the opportunity here of stating that I have always found the dock officials most courteous and conciliatory, and within the limits of their system most obliging, but the trade feels that it is unfair that it should be paying undercover rent for goods, perhaps lying exposed in barges or on the quay, and, may be, suffering from the inclemency of the weather. They feel it unjust that they should be paying rent in some cases before the goods are out of the ship, and in all cases before the goods are ready for delivery. The gravity of this change in the time of dating the rent from can be conceived by the fact that last year it cost my firm over a thousand pounds for rent alone from date of breaking bulk to date of landing return. I will hand in a table showing the loss through shortage.

*(The witness handed in a Table showing the charge for rent and the loss through shortage on certain cargoes of timber discharged in the Surrey Commercial Docks. See Appendix, 25th Day, No. 7.)*

Mr. A. Farquharson.  
12 June 1901.

*Mr. A. Farquharson.* Last year my firm had three cargoes, namely, the "Baltic," the "Lady Salisbury," and the "Eol," where the goods lay on the quay from two to four months before ever being touched by the dock company. But this is not all. While the goods are lying idle as far as the importer is concerned, but lucrative for the dock company, the interest on cost is also accumulating. There is still another source of loss to the importers. I want also to refer to the almost invariable shortage of cargoes at the Surrey Commercial Docks.

9696. Will you tell us how this shortage arises?—That is a question I am unable to answer. I only know it does arise. With the barges knocking about in the transport of timber some may go into the docks. At any rate, there is a loss.

9697. Who do you suggest are to blame for the shortages?—I suggest that the people who have control of the barges are to blame for the shortages: that would be the dock company. In this respect, last year was by far the heaviest of any year I remember. In former years if a cargo showed a shortage on the dock company's landing return the loss was generally divided between the ship and the merchants. Now, and for some time back, owing, I suppose, to the increasing seriousness in these shortages, and the increasing delay in making the returns, the shipowner has declined this rough and ready way of adjusting differences, and has taken to tallying the goods out of the ship for himself, refusing to take the dock company's return as conclusive, with this curious result, that the importer pays freight on one tally (the shipowner's) and receives his goods on another (the dock amounting in value to £247 4s. 4d. The strangest part is the measure of the importer's loss, and how very serious this may be is shown in Appendix No. 7, where nine cargoes imported by my firm show a total shortage amounting in value to £247 4s. 4d. The strangest part of all is eight cargoes out of the nine were tallied over-side by the ship, and showed no shortage at the time. This is a very serious leakage, which the importer is called upon to bear, owing to the refusal of the dock company to take a responsible tally of the cargo over the ship's rail on behalf of themselves, the ship, and the merchant. The dock company alleges that it is impossible to take an accurate tally in this way, and I am very far from saying it is easy, but they decline to try, and the importer meantime has no recourse against the ship for shortage if the ship has kept a tally. (See the case of Hecksher and Son v. J. G. Drummond and Co., tried in the City of London Court, before Mr. Pitt-Lewis, K.C. (Deputy-Judge), on the 6th December, 1898, and reported in the "Shipping Gazette" of the 13th December of that year. It is referred to in Volume 12 of "Maritime Notes and Queries," published by Spottiswoode and Co., page 154.) But there is still another way in which the importer is made to suffer through these excessive delays in getting delivery of his goods, and though it cannot very well be set out in figures, it is nevertheless very real and very onerous. I refer to the financial position. While the goods are lying idle on the quays of the dock company the draft in payment of them is maturing, and the importer finds himself called upon to pay for cargo after cargo before he can get possession of his goods, and before he can get payment of that portion which may be already sold. These goods when they are deliverable are in many cases deteriorated in quality and lessened in value by their long exposure, and they can only be sold with an allowance to the purchaser because of this, and in not a few instances, and that generally with the most expensive, the purchaser refuses to take the goods because of their loss of condition. I think I have said enough to show that London is both a slow and an expensive port to land and store timber in. The importer is penalised on account of these delays:—(1) In the freight, for some shipowners decline to come to London in the busy season; (2) In the charges (which are very heavy); (3) In the pecuniary strain (which is sometimes intolerable). There is only one avenue of relief which is open to the timber merchant, and he has not been slow to take advantage of it. I allude to the "to arrive" overside business. The practice of selling goods for overside delivery to buyers' craft is already large and is increasing. I believe last year about a third of the annual import was taken delivery of in this way. The higher the charges and the greater the delays the more will this branch of the trade grow and extend. The buyer who can afford to buy in this

wholesale way gets his goods cheaper, quicker, and in better condition. The merchant can afford to take a smaller ratio of profit, as he gets a quicker return for his capital, and he has the great advantage of knowing beforehand what his goods are going to cost him. All this would be hindered—possibly stopped—if the Dock Company were empowered to refuse free delivery or to tax craft using their docks. From their point of view it may be a natural thing to wish to do, though a company which pays 5 or 6 per cent. on its ordinary shares besides (it is said) improving property out of revenue, cannot allege pecuniary necessity as a reason; but I put it to the directors as fair-minded men, since they have proved themselves unable in recent years to cope satisfactorily with that portion of the import which has been given into their care; since they have seen their quays choked and all their available craft laden for months with the goods they have had the handling of; since they have seen the deliveries paralysed and the trade dislocated by delays, what would have been the condition of the docks and what would have been the losses of the timber trade in 1900 had they had the complete control, and the sole handling of the entire timber imports of London? I think that the Dock Company instead of begrudging ought to be thankful for the overside deliveries. But for them the state of affairs would have been unbearable. I hope I have succeeded in showing that the Surrey Commercial Dock Company while it adheres to its present method of handling wood cargoes will never be able to give the importer quick delivery of his goods, and also that the importer, who is not responsible, is nevertheless made to bear, in addition to the delay, the expense and loss which it entails. It seems to me that at the Port of London, there is ample need of a public body which shall make the furtherance of the interests of the Port itself, and not the production of dividends, its chiefest care, and that while these interests are left in the keeping of private corporations, as at present, should the occasion arise when public and private interests conflict, it will be the former and not the latter which will suffer.

(Adjourned for a short time.)

9698. (Sir John Wolfe-Barry.) You say that from the method of the working at the docks you submit it is hardly possible to get quick dispatch in London?—That is so.

9699. Do you mean there is no cure for that at all and the trade must go away from London?—Unless that cure is to be found in mechanical appliances.

9700. Then the whole of your proposal is that mechanical appliances should be supplied by the Surrey Commercial Docks Company?—That would improve the condition of affairs, I believe, very materially.

9701. And that is the only solution that you can suggest?—I do not suggest that the timber trade is leaving the Port of London.

9702. But that is the only solution that you can suggest if this is the condition of things?—That is the only solution that occurs to me.

9703. The application of machinery for unloading or transporting timber is very new, is it not?—I believe it is.

9704. It is quite in its infancy?—I believe it has been tried in some ports of Sweden, though, of course, personally I cannot give any reference to them. I believe it has been tried there with success.

9705. But so far as Great Britain is concerned it is at present quite on trial?—As far as I have any knowledge it is on trial.

9706. Do you know the great timber ports of Hull and Hartlepool?—I do not.

9707. Then may I say, subject to your correction, that it has not been used there at the present time?—I cannot tell you.

9708. The only place where it has been used at present is at the Millwall Docks?—So far as I know it is at the Millwall Docks.

9709. It was tried there for the first time two or three weeks ago?—I have here the report of the trial of the apparatus. I will read it if you wish.

9710. All I want to gather is that it is quite a new thing?—I believe it is.

9711. And it is not altogether, may I say, free from difficulties on account of the question of sorting?—I cannot tell.

9712. But the question of sorting timber is a very important one, I suppose, when timber is thrown out rapidly from large ships on to the quay?—The question of sorting, of course, arises directly you begin to put the timber on the piling ground.

9713. Therefore in considering the machinery that has to be employed one must take note of the question of sorting, and it must be so adapted that it will not interfere with sorting?—It must be so adapted that the timber can ultimately be sorted.

9714. Am I not right in saying that since timber has been imported largely in steamships the timber trade has largely altered at all the docks?—Altered in what way do you mean?

9715. In this way, that a steamer requires that the cargo should be unloaded with greater rapidity to avoid demurrage?—It does.

9716. And, consequently, in order to meet that difficulty the timber is unloaded more or less pell-mell on the quay, so as to get quick despatch for the ship to get away?—Yes, for the unloading of the steamer.

9717. That is a condition of things which is pressed upon all timber ports, is it not?—It must press where steam is used.

9718. The condition of things which has been experienced in London has been largely due to timber coming in steamships instead of in sailing vessels?—It arises in that way undoubtedly.

9719. You say you do not know Hull or Hartlepool?—I have no experience. My firm do not import timber to any other port than London. I speak only of my own experience in anything I have said here.

9720. Then if we find that there is the same condition of things with regard to the difficulty at the other great timber ports, London is not peculiar in the difficulty that is experienced from the alteration from sailing vessels to steamers?—I should say not.

9721. And the result is, is it not, that larger quay space is required, so that steamers can go alongside and discharge their cargo with rapidity?—Larger quay space is desirable, but if that quay space be kept occupied with cargo for a great length of time, no amount of quay space in itself would overcome the difficulty that I speak of.

9722. But supposing the detention on the quay is reduced to a minimum, then a much larger quay space is still required for traffic conveyed by steamers than for traffic conveyed by sailing vessels?—I do not quite follow your question.

9723. I mean the demand for rapid discharge of the steamer is a demand which did not arise in the time of sailing vessels?—Not so much, undoubtedly.

9724. The Surrey Commercial Dock is largely increasing its dock capacity, is it not?—Yes, I have said so.

9725. It opened some portion of its dock one or two years ago?—Yes; a few years ago it opened a large new part, and more will be opened.

9726. At present the company is spending a large sum of money in extending its dock; that would be all in the right direction?—It would be.

9727. Is there not a railway at the Commercial Dock?—Practically there is no direct railway communication with the dock. It is in close juxtaposition, but not absolutely running along the quays.

9728. I do not know that the railway company has any access to the Surrey Commercial Dock?—It has, I think, access to one particular yard, but to the docks as a system it has no access.

9729. I see it is in close juxtaposition, but not absolutely running along the quays?—One railway is.

9730. Do you think that a large quantity of timber would go away by railway if the railways were extended?—Yes, I should think it would tend that way.

9731. The bulk of the timber from the Surrey Commercial Docks is carted, is it not?—Yes.

9732. To different parts of London?—Yes.

9733. Do you happen to know how much of it goes eventually on to a railway?—I cannot tell.

9734. Do you think any large proportion does?—I

should think a very considerable portion must go on the railway.

9735. You cannot tell us how much?—No, I cannot tell.

9736. If no large proportion goes by railway you would not get very much advantage by extending the railway lines into the dock?—If no large proportion went by railway; but I cannot answer as to that.

9737. I suppose the consumption of timber in London itself is enormous?—Yes.

9738. For all timber consumed in London I presume carting would still remain the most convenient plan?—In London it would.

9739. It would not be worth while to load it on the trucks and unload it again, either for London or the near suburbs?—I should say not.

9740. Now about the shortage. Who tallies timber into the ship?—Seeing that I am not there when the timber is loaded, I cannot definitely answer that question. I believe the mate of the vessel is responsible for the tally. The captain signs the bill of lading, and I am bound by his signature.

9741. Is there any proof, if there is a shortage, that the timber ever was on the ship, other than the signature of the mate of the ship?—Would not you take that to be a proof?

9742. I want to know whether there is any other proof?—I have no other proof.

9743. Has the merchant any other?—The merchant can have no other proof.

9744. I suppose the accurate tallying of a very large cargo of timber is a somewhat difficult and complicated thing?—It is not an easy thing.

9745. It is not proved therefore, is it, that if there is a shortage it is due to any dishonesty? It might be by accident?—We do not suggest dishonesty—very far from it. It might be an accident as you say.

9746. The timber might never have been in the ship?—I think that the presumption is the timber must have been in the ship.

9747. Is there a large percentage of cases of shortage in your own experience?—In my experience I am sorry to say almost every ship contains a shortage more or less, sometimes larger, sometimes smaller.

9748. Is the freight paid in proportion to the number of standards?—It is.

9749. Therefore the tendency of the ship would not be to under-measure the quantity of timber into the ship?—It would not.

9750. You say the present condition of things at the dock is very much against the interests of the trade, and the fact of carrying a large quantity in barges is a necessity of the trade?—Yes, it is growing into a very large trade with regard to this overside delivery of cargo into barges.

9751. We had from Mr. Malcolm that the quantity discharged overside into barges is increasing year by year?—It is. I may say here I am quite willing to take the dock companies' figures as to the proportion that goes overside and the proportion that is landed.

9752. Do you think that under these circumstances a moderate charge for services rendered in getting barges in or out of the dock would be prohibitory to that traffic?—I do not know what you mean by a moderate charge.

9753. I have only in my mind the proportion of charge laid before us of the expense of getting barges in and out of the docks?—We would prefer of course to pay no charge.

9754. That is natural?—Yes.

9755. What I meant is would it be prohibitory to the barge traffic?—It would depend of course upon the amount charged, and until I know what that amount is, I could not say.

9756. I will say a comparatively small amount. Do you think it is just that barges should go into a dock and put the dock company to expense and pay nothing for it?—I think if the barges have a right of free entry they are entitled to do so, and we are entitled to take advantage of it.

9757. It is one thing having free entry and another causing expense to another person?—Yes. As an

Mr. A.  
Farquharson.  
12 June 1901.

Mr. A.  
Farguharson.  
12 June 1901.

equitable charge, if the charge were a very small one, I should think that the dock company might be entitled to make it, but in the dock, as we are at present, and not knowing what that charge is going to be, of course I cannot commit myself to saying I approve of the charge beforehand.

9758. My question does not refer to a tonnage rate, but to a rate which would represent the cost of the services rendered by the dock company?—Those services are not very heavy.

9759. (Mr. Peel.) Have you any means of checking the shipowner's tally as he delivers from the ship at the dock?—The dock company themselves will supply merchants with officials at a fixed rate to check this tally without any responsibility as regards the Surrey Commercial Dock.

9760. But they will not allow you to have a clerk there, will they?—Yes, they will allow you to have your own clerk there.

9761. Do you do that?—Sometimes.

9762. Do you find when you have a clerk there and he checks the shipowner's tally that, as a rule there is no shortage?—I find that as a rule there is a very small shortage, or hardly any in fact, I may say.

9763. In every case the shipowner's tally may be right, but do you suggest that the timber is lost after it has been landed and before delivery?—I suggest that the timber is lost somewhere in the keeping of the Dock Company.

9764. Did you say that some of the timber goes overboard sometimes to the barges?—Yes, I did say so.

9765. Is this timber floating about in the dock?—No; timber going overside is put into the barge; it goes from the export port upon a separate bill of lading; it is separately placed in a particular part of the ship. It is separately taken out, and it is put into the merchant's craft.

9766. But is timber lost in that way, in delivery overside?—Sometimes it might be lost; a piece or two might fall over from the barge into the water.

9767. But in the case of the timber that is unloaded in the dock, and has to be sorted and piled, is the same trouble not taken to number the parcels?—The Dock Company do not tally from the ship's rail for themselves or for anyone. The tally they take is after the cargo has been landed and has been piled; then the pieces are counted by their own clerks.

9768. I understand; but these elaborate arrangements of sorting and piling apply to timber which has to go through the dock and to be placed on the quay. As regards timber which is put overside on the barges, what do you say?—Do you mean on behalf of the merchant or on behalf of the Dock Company?

9769. On behalf of the merchant. When it is put overside into the barge, these elaborate sortings and pilings are not resorted to?—Generally a separate bill of lading is prepared for one or two sizes of a specific quality—generally the same quality—and the mark would be the same mark; so that there is not the same necessity for sorting as would arise where you are taking delivery of a whole cargo consisting of a very large number of pieces with numerous marks and numerous qualities.

9770. We were told that a larger percentage of timber goes overside than is sorted and piled in the docks?—I think that more timber is landed into the keeping of the dock than goes overside into the keeping of the merchant.

9771. Apart from that question of the railway, is the Surrey Commercial Dock well situated as regards the convenience of the timber trade?—Yes, it is most decidedly.

9772. The larger portion of the timber trade in London, and for manufacturers employing timber, is carried on, I think, on the north side of the river, is it not?—No, I think not. I think the timber docks of the Surrey Commercial Company are very well suited for the requirements of the timber trade of London.

9773. (Rear Admiral Hext.) Do you own any barges of your own?—No.

9774. Have you any experience of the working of the Watermen's Company, or any opinion concerning it?—In what sense?

9775. Do you think they are an efficient body of men, and is it a good thing that they should have control over the lighters in the river?—I do not think that any one body like the Watermen's Company should have the control of all the lighterage of the Port of London.

9776. (Sir Robert Giffen.) I should like you to make clear what is the nature of the necessity for sorting the timber when it arrives. Are there many cases of ships with cargoes belonging to single owners?—In my case the cargo almost entirely belongs to my firm.

9777. To one person?—Yes, in my case.

9778. What is the necessity for sorting that arises in your case?—The necessity is very obvious. In a cargo of timber there may be three or four qualities: first, second, third, fourth. There would be a variety of sizes: 11in., 9in., 7in., 6in., 4in. Every size and every quality has got to be put by itself. That is the work that the Dock Company do and charge for as sorting and piling.

9779. And there are no means of loading the ship so as to obviate, to some extent, the necessity for sorting when the cargo comes out?—No, I am afraid not; I do not know of any means.

9780. We have been informed, I think by Sir Thomas Sutherland, that, in the case of ships of his company, they endeavour, as far as possible, to sort the cargo when it goes into the ships, so as to avoid difficulties of that kind when they unload?—I think his ships bring various cargoes, they are not wood cargoes entirely. Goods which are sold to go overside, that is to say, not to go to the Dock Company's keeping at all, are placed upon a separate bill of lading for that particular parcel. They are placed in a particular part of the ship at the time the ship is loaded. This particular parcel is placed by itself on the particular bill of lading, and it comes out of the ship, as a rule, by itself, and would go into the barge, as a rule, straightaway.

9781. Could not that system be made quite general, so that all the cargo would come out sorted from the beginning to some extent?—My colleague here suggests to me that where goods are arranged to go under cover a customer might put that class of goods under a separate bill of lading.

9782. So that to some extent a good deal of the necessity for sorting can be obviated by measures adopted at the time of the loading of the ship?—I should think so, but it never has been done as far as I know.

9783. Have you ever any cases of ships loaded with goods all of the same quality in a complete cargo?—I have had such cases.

9784. Then, of course, in that case there is no question of sorting?—There is no question of sorting.

9785. You spoke of a shortage in almost every case, when the dock company gives you delivery, as compared with the tally of the shipowner upon which you have to pay freight. Is there ever any case of a surplus, according to the dock tally?—I have to ransack my memory for a case like that. I think there may have been such a case once in my experience.

9786. If to some extent the tally of the shipowner was accidentally incorrect, the balance would be equal on both sides probably at the end of a time?—I have known this more frequently; I have known cases where the number of pieces, which have been returned by the dock company, agreed with the number of pieces which have been put on board the ship; but a shortage might arise in this way, that the standard quantity might be a short quantity, the cubic feet might be short, or there might be an overage in one particular class of timber, and a shortage in another particular class of timber. I have known cases like that, but they do not occur very frequently.

9787. Perhaps there is some difficulty with regard to the tally when the goods are put on board the ship; do you mean that?—When the goods are put on board the ship, to begin with, I believe (I am speaking from hearsay now, because I have never been there), the custom is for the ship to place a quantity upon an individual bill of lading into a specific barge, which is sent them by the steamer, and the mate, or other responsible officer of the steamer, has the opportunity of counting those goods in the barge before he puts them on board the ship and before he signs for having received them.

9788. So that tally when the goods are put on board the ship ought to be the best of all?—I can say it ought to be the best of all.

9789. (*Sir John Wolfe-Barry.*) As a mere matter of curiosity, could you tell me what is the derivation of the standard as 165 cubic feet?—It is called the St. Petersburg standard. St. Petersburg, the capital of Russia, is a very large producing place for wood.

9790. You do not know what the foundation for that very curious measure of 165 cubic feet is?—It is 120 pieces, 12 feet long, 11 in. wide, 1½ in. thick; it contains 165 cubic feet.

9791. Will you refer to question 2326? It will be useful to us to have your opinion on the suggestion made by Mr. Matthews that the tidal rivers or creeks in Essex, as the Colne, the Blackwater, and the Crouch, might be deepened, buoyed, lighted, and made to serve as transshipment stations so as to relieve the congestion in the Thames docks. You will see later on that timber is specially referred to by the same witness as capable of being dealt with in those now unused creeks?—This is the first time I have seen the matter, and, of course, I do not profess to be an expert.

9792. It would be valuable for us to have your opinion on the point?—If it would tend to assist the trade, I should say so, but I have not gone into it.

9793. Do you think it is a practical suggestion?—I cannot say.

*Cross-examined by Mr. Loehnis.*

9794. I want to clear up this question of shortage. In the first place, a merchant has a certain number of days for loading the vessel, under the charter party?—Yes.

9795. And he has not to exceed those days, or, if he does, he has to pay demurrage?—I believe so.

9796. Therefore his great object is to get the vessel loaded within the days' limit for discharge, he either has a certain number of days or he has to discharge according to the custom of the port, and if the number of days for discharge is exceeded he has to pay demurrage. Therefore it is to his interest to get the cargo into the vessel as quickly as possible, and to get the cargo out of the vessel as quickly as possible?—I should say so.

9797. When a vessel comes over here she delivers part overside, as a rule, into barges. Are the shortages of which you complain shortages shown by comparing the merchants' specification of what ought to be landed with that which actually has been landed, according to the dimensions and according to the qualities after the dock company has ascertained them?—The shortages represent the difference upon the bill of lading quantity and the quantity which has been returned by the dock company as having been landed.

9798. Do you not know, as a matter of fact, that there is practically always in every vessel a certain quantity landed "on account of whom it may concern"?—No, I do not know that.

9799. Frequently?—It has happened so.

9800. Very frequently. And is not that due to the fact that the shipper has himself delivered into barges cargo which ought, as a matter of fact, to be landed?—It would be so if it is so.

9801. And do you not know this as a matter of fact: that if you take the whole quantity delivered on quay during the year you get no shortages in the number of pieces?—I do not quite follow the question.

9802. Do you not know, as a matter of fact, that the dock company returns to the broker pieces as landed "on account of whom it may concern," which wipes out every piece of shortage shown in the returns?—No, those returns do not wipe out every piece of shortage shown in the returns.

9803. When you in your evidence stated that you had lost £247 worth of goods in what you called shortage, is it not a fact that in those cases there had been landed goods "on account of whom it may concern," which were afterwards appropriated by the broker amongst the various merchants who complained of shortage?—In any case where that has occurred to us we have deducted it from the shortage; that is to say, we have given the company the benefit of it.

9804. Take the first vessel, the "Queenmoor." Do you say that there was nothing landed in the case of that vessel "on account of whom it may concern"?—My clerk says there was. Mr. A. Farquharson.  
12 June 1901.

9805. Would not that be accounted for by the misdelivery of the ship into barges of the goods which ought to have been landed?—It might be so accounted for.

9806. May I take it generally that is the way in which the better part of the shortage of which you complain is to be accounted for?—I should say that would be so.

9807. Now I want to ask you about the way in which the business has changed. In the old days a sailing vessel brought a cargo practically under one bill of lading. It was one parcel of goods, or, at the most, two?—In the old days there were not so many bills of lading in use in a steamer as there are now.

9808. And is it now an ordinary thing to find a vessel coming to the Surrey Commercial Docks with a cargo of between 200,000 and 300,000 pieces of timber. It is not an unusual thing to have 200,000 to 300,000 coming, is it?—I cannot speak from my own experience, but I imagine that the number of pieces is much larger now, because the cargoes are much larger.

9809. Under twenty, thirty, or forty bills of lading?—In my experience we have had as many as thirty and thirty-five bills of lading, but there again it all depends on the size of the cargo; the bigger the cargo the more numerous the bills of lading, but the tendency has been that the vessel should come with a very large number of pieces carried under numerous bills of lading. That is the tendency in overside deliveries.

9810. And that makes the accurate delivery overside very difficult?—Yes, it tends that way.

9811. And increases the labour of sorting?—It cannot increase the labour of sorting.

9812. If you are getting 250,000 pieces it would, would it not?—I beg your pardon; you are talking now of delivery overside into barges?

9813. I am talking of both. No vessel practically ever delivers her whole cargo overside?—I have known an instance. It is occasionally so, but very seldom.

9814. Usually part goes overside, and part has to be sorted?—Yes.

9815. It has to be sorted according to quality and according to size?—Yes.

9816. And you sell on the specification of the dock company?—Yes.

9817. When you talk about mechanical appliances are you aware that Mr. Malcolm said, on the 22nd May, before this Commission, that this question of mechanical appliances had been considered by the Surrey Commercial Dock directors, and had been found impracticable?—I saw that in the evidence which has been given.

9818. Do you accept that—that they have considered it, and according to the best of their judgment have found that it would not work?—Certainly; I must accept it if they say so.

9819. And are the Surrey Commercial Dock directors, as far as the timber trade is concerned, gentlemen who are representative of all the various branches of the timber trade in London?—I should say so.

9820. And I suppose their interests as merchants, or as brokers, pecuniarily is greater than the timber trade should be a profitable trade than that they should earn their dock directors' fees?—Certainly.

9821. Do you not think, knowing the gentlemen who are the dock directors, that they have done that which is best in the interests of the trade?—First of all, the dock directors are not all timber importers; some of them are agents, and some of them are brokers. I have no doubt that they have given this question their consideration, and I do not challenge the decision they have arrived at, but the knowledge that they possess practically a monopoly of the trade may have influenced them in their decision.

9822. I only want to understand what your view is. Their own personal interest is that the trade should flourish?—Certainly.

9823. And that would also be the interest which they have as directors of the Dock Company?—But

*Mr. A. Farquharson.* some people have got to be shown their interest; they do not always see it.

12 June 1901.

(*Chairman.*) You will be careful, Mr. Loehnis, I hope, to limit your cross-examination to challenging statements which have been made by the witness. We have heard from your own witnesses with regard to the Surrey Commercial Docks and what they have done and what they propose to do. Will you please limit yourself to challenging statements which the witness has made?

(*Mr. Loehnis.*) If your Lordship pleases.

9824. The only figures which you have given are figures for 1900?—That is so.

9825. Do you think that 1900 is quite a fair instance to give of the Surrey Commercial Docks?—I could give the figures of 1899. I have given the figures of 1900 as being the most recent and as showing the gravity of the grievance.

9826. But that gravity is due, I suppose, to very exceptional circumstances which were existing in 1900?—There were exceptional circumstances existing in 1900. We had a larger import to begin with in 1900 than we had in 1899.

9827. Considerably larger?—I have not the actual figures before me, but I could believe it was considerably larger.

9828. Has the trade been growing in the last few years? Have the imports been growing from year to year?—Gradually growing. They vary. Some years there is a larger import, some years there is a smaller import. They go up and down according as the demand exists for timber.

9829. The Surrey Commercial Dock has been hampered in the last two or three years, has it not, by this extension of the building of the Greenland Docks. They have lost the use of one of their locks?—They have.

9830. And that was very noticeable last year?—I believe that has existed for some years.

9831. And it is since then that there have been these complaints about delay?—These complaints about delay have not arisen solely in 1900.

9832. Nobody has suggested yet that there were these complaints of being detained till 1898. I think that was the first date of the suggestion?—You mean the delay of the steamer?

9833. Yes?—Not to the same extent, certainly.

9834. Do you not attribute that partially to the fact that the Surrey Commercial Docks have been taking steps to benefit and accommodate the trade by their extension of works?—Yes.

9835. There was some inconvenience for some time as the result of that?—Yes; it must be so.

9836. Now about this question of rent that you have mentioned. Is not this the fact about the way in which rent is charged? Up to 1883 the dock company charged rent on all goods from the date of the shipping breaking bulk?—I could not say as to that as I have not the dock company's charges before me.

9837. You have said something which does not agree with it. Will you say if you can follow me? Up to 1883 they charged rent on all goods from the date of breaking bulk. In 1883 there was a depression in the timber trade and to ease and benefit the trade the dock companies said, "We will make to the trade a concession, that is to say, we will only charge them rent from the date of breaking bulk on goods under cover"?—It may be so.

9838. "And goods which are not under cover are to pay rent only from the date of landing"?—I cannot accept it or deny it.

Dr. RUDOLPH MESSEL called and examined.

*Dr. R. Messel.*

9855. You are the managing director of the firm of Spencer, Chapman, and Messel, Ltd., and a member of the London Chamber of Commerce?—Yes.

9856. You have been nominated by the chemical trade section of the London Chamber of Commerce to offer evidence before us on the subject of the chemical trade?—Yes.

9857. May I ask you whether you drafted the statement of your evidence yourself?—Yes; I dictated it.

*Cross-examined by Mr. Scrutton.*

9839. I want to ask you a question with reference to something put to you by Sir John Wolfe-Barry. The freight is paid on the standard and therefore if that was the only consideration the shipowner would not be aggrieved if he delivered a larger number of standards because he would be getting freight paid on a larger amount. That is what Sir John Wolfe-Barry put to you. Now I want to ask you this: is there also a clause in your bill of lading by which the statement made in the bill of lading is made conclusive evidence against the shipowner?—That is so.

9840. So that if the shipowner puts a quantity in his bill of lading on which he was to get freight he would also have to deliver that quantity without being able to dispute that he received it?—That is so.

9841. So that although he might get the freight on more standards he would have to pay the value of the quantity delivered short?—Yes.

9842. It is not to his advantage to put an extra quantity in the bill of sale because he would have to pay for it?—That is so.

*Cross-examined by Mr. Daldy.*

9843. The timber you have to deal with is mostly consumed in London and the London district, is it not?—Yes.

9844. If a charge were put on the lighters you would be able to recover that from the consumers, would you not. It would not fall upon you?—Would not that depend upon the amount of the charge?

9845. Do you say it would depend on the amount of the charge?—Yes.

9846. Say a charge of one shilling per lighter; what do you say to that. Could not you recover that from the consumers?—I should lose that off my profit. I should not ask my consumers to pay that.

9847. Could you not if you wished recover it from the consumers?—I told you I would not ask for so small a charge as that from the consumer.

9848. That is the only answer you give to the question?—Yes. I would lose it off my profit.

*Cross-examined by Mr. Harper.*

9849. In reference to something which Sir John Wolfe-Barry put to you, I do not know if you know Purfleet Wharf?—No; I do not.

9850. Where the Jarrah timber goes?—No, I am not in that trade.

9851. I was going to ask you if you knew whether there was a timber transporter there?—I have heard there is, but I cannot say personally.

9852. And that there has been for a long time?—I cannot tell.

*Re-examined by Mr. Rowland Whitehead.*

9853. In answer to Sir John Wolfe-Barry, you said that you look to mechanical appliances as if they were the sole remedy for the congestion in the docks. I do not know whether you had in your mind at that moment that in your evidence in chief you referred to the bad system of labour which exists in the docks?—I am afraid that I had not that particular bit of my evidence in mind.

9854. Would not an improvement in the system of labour be also a remedy which you would suggest?—I should suggest so.

9858. It is your own writing practically?—Yes.

9859. Will you kindly tell us what you have to say?—I am a member of the Board of Studies for Chemistry and Chemical Industry of the University of London, a member of the Council and Past Chairman of the Society of Chemical Industry, and a Fellow Member of the Council, and Past Chairman of the Chemical Society. My company are large importers of salt, and exporters of salt-cake and burnt ore, and other chemicals and

minerals. These goods are usually imported and exported in bulk by my company in small vessels chartered for their transport. Prior to the year 1874 my company's works were situated on the canal at Stratford, and the goods referred to were conveyed by lighters and barges between my company's works and the small vessels referred to, which loaded and unloaded their cargo in the River Thames and in the docks. In order to save the expense of such lighterage, my company erected works at Silvertown, on the north bank of the River Thames, and excavated the foreshore, in order that the small vessels conveying full cargoes might be discharged and loaded directly on to and from my company's premises. My company also import such goods as pyrites and copper ore, and bars, and export sulphate of copper and acids in large quantities from and to vessels unloading and loading in the docks and river. In all these branches of business my company have to meet severe competition from centres of industry using the home ports of Newcastle-upon-Tyne, Liverpool and Swansea, and also from the German manufacturing centres, sending goods long distances over their canal system to the ports of Hamburg, Antwerp, Rotterdam, etc. My company are handicapped by reason of the delays in the unloading and loading of vessels in the Port of London. We frequently send goods to such vessels in lighters which wait sometimes for many days before the goods therein are delivered on board, and this delay has caused orders to be cancelled, and the goods brought back to our premises; sometimes the delay is added to by the goods being "shut out," the vessel going away without them. I cannot definitely allocate the responsibility for such a state of things, but I am of the opinion that a bad system must generally obtain in the Port of London for it to exist at all.

9860. Will you tell us to what particular dock you allude?—Unfortunately I cannot tell you that. I am of the opinion that the multiplication of authorities controlling the Port of London is not conducive to the establishment and maintenance of well-ordered conditions of commerce; on one occasion my company lost several hundred pounds, by reason of an injury done to one of our barges in sitting on a pile outside the docks, as every authority, dock company, Thames Conservancy, and County Council repudiated liability.

9861. Do you mean that she grounded there?—Yes.

9862. Was she stove in?—She stove in the bottom, and it was supposed we should go to the Thames Conservancy. The Thames Conservancy, however, said it was a matter for the Metropolitan Board of Works on account of the sewer, and therefore we should go to the County Council.

9863. Surely you can tell me the particular dock where this happened?—I am sorry I cannot. I would have found it if I had known it was of any particular importance.

9864. When you tell me you deal in pyrites and copper ore, you must know where they go to?—I am sorry to say I do not. I believe it is the Millwall Docks, but as it is a question of evidence, I should not like to speak with certainty about it. I am of opinion that a thorough change in the administration of the Port of London is necessary, a thoroughly practical and representative body should be substituted for the numerous authorities at present controlling the river and docks.

Mr. HENRY BELLINGHAM SMITH called and examined.

9875. (Chairman.) You are a partner in the firm of Parker, Wellesley, and Co., carrying on business at 23, Rood Lane, London, E.C.?—Yes.

9876. You have been nominated by the Dried Fruit Trade Association to give evidence with regard to that trade before this Commission?—I have.

9877. Will you please give us your evidence?—For many years past it has been customary to discharge vessels (bringing cargoes of dried fruit to the Port of London) at riverside wharves, whenever the draft of the vessels permitted their coming up the river to the spot where the wharves dealing with this trade are situated. When the vessels are too large to come up the river to the wharves, the vessel usually lies in the docks, and discharges the cargo into river lighters, which carry

I consider that it is of the utmost importance that the river and docks should be able to offer economical and sufficient accommodation to the largest vessels. It is absolutely necessary that the present conditions of free water should be preserved, the absolute freedom of entrance into and exit from the docks for lighters, such as obtains in the river is a *sine qua non*. I am of the opinion that the Port of London should be administered by a public trust solely for the benefit of the trade of the Port of London, and that the present charges are amply sufficient, if properly adjusted and administered, to sufficiently maintain and improve the port. I am of the opinion that the privilege claimed by licensed lightermen of being the only persons allowed freedom to navigate on the River Thames should be done away with. It is an obsolete and irksome condition of things and thoroughly out of date, and is permitted in no other port or river of the United Kingdom.

9865. Will you tell me what length of experience you have of the Port of London?—Thirty-one years.

9866. (Sir Robert Giffen.) What are the principal countries to which you export your goods?—France, Italy, Greece, China, the Cape, and Belgium. We do a very large coasting business too.

9867. A large part of your export, then, would go by vessels having comparatively short voyages?—Yes, comparatively; Italy, for instance.

9868. From what docks do these vessels principally go?—I regret to say I do not know that. I sent my notes to the Chamber of Commerce to ask them if there was anything else required.

9869. The pyrites that come to you I suppose come chiefly from Spain and Portugal?—Yes.

9870. That would also come in comparatively small vessels?—No, they come in 1,000-ton vessels.

9871. But not very big vessels such as go into the Albert Dock and into the Tilbury Dock?—Yes. We have had cargoes to fetch from these docks, and I believe from Millwall Docks too. They sometimes unload in the River Thames, and sometimes they go to the docks. I believe the Millwall Docks are the chief docks to which they go. I really want to emphasise these two points: that lighterage is a very important matter for us, and that is the reason we have moved our works; and the other point is the case where we had to send from pillar to post where we could get no redress—nobody was responsible.

(Chairman.) But you cannot tell us where the pillar or the post is.

(Mr. George Wallace.) I will try to help your Lordship about that.

Cross-examined by Mr. George Wallace.

9872. Do you remember that you brought an action against the London and India Docks Joint Committee about this accident?—Yes.

9873. Do you remember the result of the action?—We lost it.

9874. And you lost it on this ground, did you not, that your lighterman was distinctly ordered by the officials of the Joint Committee not to leave his barge there?—Admitting all that, we were sent from pillar to post before we could get any redress at all.

the goods to the wharves. Some of the reasons for the removal of goods from dock control are as follows:—The scale of charges for landing goods at the riverside wharves are lower than those in force at the docks. The wharves have greater facilities than the docks for handling, examining, and sampling the goods, owing to the close proximity of the wharves to the fruit market. Vessels are discharged more rapidly at the riverside wharves than at the docks, the wharves possessing improved machinery, while the machinery at the London, St. Katharine's, and Millwall Docks is out of date. The management of the riverside wharves exercise more immediate control over, and pay greater attention to, the details of their business than the London and India Dock Company. Early and late work in unloading vessels is a great convenience to my trade.

Dr.  
R. Messel.  
12 June 1901.

Mr. H. B  
Smith.

Mr. H. B  
Smith.  
12 June 1901

which is done in a limited time and under great pressure. The riverside wharves give the utmost facilities for early and late work, while the London and India Dock Company raise great objections. The facilities given in the docks of Liverpool for rapid clearance of goods over the quay at a low rate have largely served to increase the trade of that port at the expense of London. I would say that the increase in currants alone in the Port of Liverpool owing to this facility is nearly 50 per cent.

9878. Do you know that from your own knowledge?—Yes.

9879. (*Sir Robert Giffen.*) During what time?—Since 1895 London has been stationary, while Liverpool has increased nearly 50 per cent. These are figures taken from our own books. With regard to the facilities given in the docks of Liverpool for rapid clearance of goods over the quay, there is a rather important point. It is a clearance which enables the wholesale dealers in Liverpool to take goods by van from the quay into their own warehouses or to deliver to railway vans for a very small—merely nominal—charge, whilst in London the docks require that the whole of the warehouse charges (I think 6d. per cwt.) should be paid under similar circumstances. The consequence of that is that the whole trade of the north of England and the Midland Counties has passed from London to Liverpool, and whereas the currant trade generally has increased in the whole of the United Kingdom, London is stationary, while Liverpool has increased nearly 50 per cent. I can put figures in with regard to that.

9880. (*Chairman.*) Can you put in a comparative statement for the last few years?—Yes, from 1895 to 1900. The figures are as follows:—

ARRIVALS OF FRUIT.

	LONDON.			LIVERPOOL.		
	Currants.	Valencias.	Sultanas.	Currants.	Valencias.	Sultanas.
1895-96	Tons. 29,885	Tons. 8,900	Tons. 9,078	Tons. 18,816	Tons. 4,154	Tons. 8,508
1896-97	24,201	8,068	8,934	19,362	3,796	8,056
1897-98	22,525	8,476	7,194	21,597	4,874	7,888
1898-99	29,121	8,896	5,096	23,788	4,563	6,220
1899-1900	28,794	9,102	6,898	25,514	4,660	9,082

The facilities given in the docks of London are in no way improved, while for goods that are taken away from the dock quay as quickly as possible, the dock charges are on the same scale as if the goods were warehoused. The fruit trade of London has been considerably diverted of recent years to Continental ports, owing to the high charges of, and delays in transhipment at this port. I have already pointed out that currants have gone very largely to Liverpool. Take another article, almonds. They have gone, as far as concerns the heavy weight trade in almonds, the Barbary almonds, the common sort of almonds, entirely to Hamburg, owing to the very heavy charges here. Ten to fifteen years ago the whole trade of these Morocco almonds was done in London; practically it has all now gone to Hamburg. The Continental trade in Spanish raisins 20 years ago was done entirely from London; there is nothing at all done now in that trade; it is all done at Hamburg and Antwerp and other ports. It has gone away entirely from London owing to the charges which it could not afford to pay. The date trade, which is a large trade of about 15,000 tons into the port, was entirely done from London within the last few years; it is now rapidly disappearing and going to Trieste, Hamburg, and New York. We have done hitherto the bulk of the New York trade; this year we shall do nothing at all; it has all gone. The charges and delays in delivery have sent the trade away from the port. The Australian trade, which used to be done from London, is now almost entirely done from the ports of production, that is from Smyrna and the Greek ports. Instead of the goods coming first to London and being loaded on to Australian ships, they are now sent direct by steamers from Greece and from Smyrna. Vessels of heavy tonnage engaged in this trade cannot get alongside the quays in the docks without lightering some portion of their cargo, and this causes serious delay and great confusion in delivery.

That is, a great portion of the cargoes have to be taken out and put into lighters, and are consequently landed without discrimination of marks, and all have to be sorted afterwards, causing great delay in delivery. Considerable time is also lost owing to the fact that vessels engaged in this trade can only enter the docks at high water, and consequently, if they miss an opportunity, they have to wait 12 hours before another opportunity occurs to enter the docks.

9881. What docks do you refer to?—The London Docks. They have to wait 12 hours for the tide before they can get in. At several of the dock quays the quay room is quite insufficient, and the work of discharging is hampered in consequence, very often in order to get a ship discharged quickly, bulk piles are made of the cargo, with the result that some importers are unable to obtain their goods for two or three weeks. In order to get the steamers away they make a bulk pile of the goods, and this has to be afterwards broken down, and it is two or three weeks before we can get samples or delivery of the goods.

9882. What have you to say about the proposed tax upon barges?—The tax upon barges and their contents, for which the dock companies have been seeking the sanction of Parliament, would have the effect of still further reducing the tonnage to this port, by increasing the expenses attendant upon the transhipment of goods, and would also add to the charges—already too heavy—upon goods handled for the home trade. The effect of the imposition of the proposed tax might compel importers to leave their goods to be warehoused at the docks which would be very prejudicial to my trade, for the reasons mentioned. I consider that the monopoly enjoyed by the Watermen's Company with regard to the licensing of the men employed in the navigation of barges and other river craft on the River Thames, is injurious to the interests of the Port of London, and should be abolished.

9883. (*Sir Robert Giffen.*) You would not say that the diversion of the trade in raisins, for instance, is entirely due to the dock charges in London?—I should say it is mainly due to that.

9884. But take such a case as you mentioned, of raisins going direct from Smyrna and other ports in the Mediterranean to Australia; is there not a sufficient cause for that, in the nearness of these places to Australia compared with London?—That is so to some extent, but London buyers are the cheapest buyers, and would be able to compete against any other buyers. Merchants here can buy cheaper than anybody else because they buy larger quantities. If we could get the facilities for discharging the goods here without any great cost, we should still do the business. The matter is so hampered by the heavy charges, and more particularly by the delays, that the trade has gone for that reason.

9885. You admit that you have to contend with a tendency to bring about a more direct connection between the producer and the consumer; but you maintain that as an intermediary you could still hold your own if you had greater facilities in the docks in London?—Yes.

9886. You do not deny that there is a natural drift of things away from you?—No, I should not admit that there was that natural drift. I should say rather that preference would be given to London in every case if the business could be done here upon equal terms. It is not the tendency because as a matter of fact Australian buyers who deal direct with Greece or Smyrna know very well that they will not be served so well as they will if they come to London. They are dealing in Greece and Smyrna with people that they do not know very much about, and they very often get badly treated. You may take it that in all cases if London could work on equal terms they would get the business.

9887. Why did the trade in Barbary almonds in particular go from London to Hamburg?—The Continental market is a very large one for Barbary almonds. It is the principal market. It used to be always done here. Particular vessels coming from Morocco came here or to Liverpool and the trade was done from these ports, but owing to the very large charges on almonds the Hamburg people have taken the vessels entirely from us.

9888. The vessels go direct to Hamburg now?—Yes.

9889. Have they taken the trade from Liverpool as well as from London?—I think so, but I cannot answer

for that because we do not do business in that article in Liverpool.

9890. If they took it from Liverpool where the charges are not high as well as from London, where the charges are high, there must be some common cause?—Liverpool was never a very large market for the trade. London was the principal market for the Barbary almond trade.

9891. Then Hamburg does the work of distribution which was formerly done by London?—Yes.

9892. Is there any special reason for London losing the New York trade at this particular time?—Principally I should say owing to the great delay in delivery. Last year that was accentuated considerably by the lightermen's strike. The delays were so monstrous that it put us to enormous expense. Also there is the great loss caused to the New York people; they have always imported some direct but now they are taking their total import direct and shutting London out altogether. Last year I think the lightermen's strike perhaps brought about that.

9893. Then that is a case of the trade going into the direct channel and not a case of London losing its position as an intermediary for the benefit of Hamburg or Antwerp or some intermediate place?—No, it goes direct to New York. Of course London stands very well for the trade. It is a long and dangerous voyage for a steamer to take right away from the Persian Gulf to New York. It is trade we could keep if there were not so much against us.

*Cross-examined by Mr. Lewis Coward.*

9894. You have made the statement that the machinery at the Millwall Docks is out of date. Will you alter that word "is" to "was," and I think I will not trouble you further? Is it quite fair to make that statement now?—I do not think it is quite fair that I should make that statement, because I must do that necessarily on hearsay, as I have no practical knowledge myself of any docks and wharves. I have simply taken the statement that the docks have very inadequate machinery.

9895. Apart from that, I do not know if you are aware that it has been given in evidence before this Commission only a few days ago that the provision now of machinery at the Millwall Docks quadruples the output, and that the witness who occupied the chair last but one before you paid a very high compliment to the Millwall Docks, as a smaller and poorer competitor, for putting in this machinery; so will you withdraw that statement?—I will withdraw it with pleasure.

9896. When was your statement of evidence drawn up?—Six months ago.

9897. How much more of your evidence is hearsay?—As far as regards the machinery I know only what I am told. I may say that I know also of the way in which vessels are discharged at the different places.

9898. How much more of your evidence is hearsay?—I do not think any more of it.

*Mr. H. B. Smith.*

12 June 1901.

*Cross-examined by Mr. George Wallace.*

9899. You spoke of high charges on transhipment. How much of the charges on transhipment are dock charges. Are you in a position to say?—Yes. For instance, if you take the article dates which are put upon the quay, there is a quay charge. I do not know exactly what it is now. I do not think I have the figures before me; but, at any rate, there is a fairly heavy quay charge, which immediately tells against this particular New York business that I am speaking of. The trade has now gone to New York.

9900. Are you bound to put your dates on the quay?—They can be taken ex-ship, but the difficulties are so great that we prefer to pay the quay charge in order to get facilities.

*Cross-examined by Mr. Harper.*

9901. I understand you put it on the point of lack of machinery; there is no question about your delivery from the wharves being better than from the dock?—Infinitely better.

9902. They can have it that that is bad labour, or some other mismanagement, or machinery, as you put it?—Yes.

(*Mr. Rowland Whitehead.*) Evidence has been given here to show that the Millwall Company have provided machinery for the removal of timber.

(*Mr. Lewis Coward.*) I beg your pardon. It is not confined to timber.

(*Mr. Rowland Whitehead.*) Mr. Lewis Coward expressly referred to a witness who gave evidence shortly before this witness. That gentleman was a witness with regard to timber.

(*Chairman.*) I think you are at one; the witness has withdrawn the statement.

(*Mr. Rowland Whitehead.*) I only want to brush aside what Mr. Lewis Coward said.

(*Chairman.*) Do you not think it is sufficient if the witness has withdrawn the statement made?

(*Mr. Rowland Whitehead.*) I should like to ask him one question, if I may.

(*Chairman.*) Very well.

9903. (*Mr. Rowland Whitehead.*) Are you aware of any machinery which has been introduced by the Millwall Company which is used by your particular trade?—No.

(Adjourned to Monday next, June 17th, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## TWENTY-SIXTH DAY.

*Monday, 17th June, 1901.*

### PRESENT:

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTTELTON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.  
Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

MR. BALFOUR BROWNE, K.C., and MR. GEORGE WALLACE appeared on behalf of the London and India Dock Company.

MR. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

MR. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

MR. T. E. SCRUTTON, K.C., and MR. J. B. PORTER appeared on behalf of the Corporation of the City of London.

MR. F. F. DALDY appeared on behalf of the London County Council.

MR. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

MR. R. W. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

MR. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

MR. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

(*Mr. Rowland Whitehead.*) Will your Lordship allow Mr. Robinson, who gave evidence at Question 8790 to bring certain particulars before the Commission? The question is with regard to the charge of 1s. 9d. for discharging a vessel of grain. The question put to the witness was: "Give me any instance at all in which

you have paid that 1s. 9d. to the London and India Docks Company. Give me the date and the name of the ship." Mr. Robinson promised to look up the particulars and put them before the Commission. He is here this morning, and can now put in the invoice showing that amount has been paid.

Mr. JOHN HENRY ROBINSON, recalled; and further Examined.

*Mr. J. H. Robinson.* 9904. (*Chairman.*) I understand you wish to put in some invoices and particulars with reference to Question 8790?—Yes.

17 June 1901.

9905. Will you kindly do so?—They are the working out of the ship "Polymitis" in the West India Dock this year.

[*The Witness handed in Copies of Accounts showing charge of 1s. 9d. per ton for giving delivery of bulk grain from "Polymitis" to barge. See Appendix, 26th Day, No. 1.*]

I have also the charge note for working out an American steamer in 1893.

9906. That is rather remote?—Just as your Lordship pleases. If you care to have it, here it is.

(*Chairman.* I think it is too remote.

9907. (*Mr. Rowland Whitehead.*) I understand the document you have put in refers to the present year?—Yes. It is the working out of a ship of 752 quarters of wheat in the West India Dock of the London and India Docks Company at 1s. 9d. a ton, £14 11s. 5d.

9908. What is the date of it?—The invoices are dated April 16th, 1901.

Mr. LEOPOLD BERNHARD SOMMERFELD, called; and Examined.

*Mr. L. B. Sommerfeld* 9909. (*Chairman.*) You are a stone and granite merchant, importing large quantities of material into London and all parts of the United Kingdom?—Yes.

9910. You desire to lay evidence before the Commission with reference to the accommodation provided for the loading of the material from the steamers into the railway trucks of the different companies?—That is so.

9911. Will you kindly give us your evidence?—I import large quantities of stone from the Channel Islands, Scotland, Plymouth, Belgium, and France, and I am hampered in my business by the scandalously inefficient accommodation existing for the loading of the material from the steamers into the railway trucks of

the different companies. The class of steamers usually employed in this trade are of a carrying capacity of from 300 to 1,000 tons, and therefore do not require very extensive accommodation; but even for vessels of this small class there is only the slightest possible accommodation. For instance, with regard to the Great Eastern Railway Company they have a wharf at Thames Wharf, Blackwall, and here they will only receive vessels not exceeding 140ft. in length, which limits the choice of vessels so much that it is almost impossible to obtain boats for this wharf, and frequently stone has to be first delivered overside into barges and lightered to the railway wharf, which is an absolute waste of something like 2s. per ton, there

not being the slightest necessity for this if vessels of the size usually employed in this trade could go direct alongside the wharf. In addition, at the Great Eastern Railway as well as many of the others, steamers costing from £10 to £15 per day have sometimes to wait four or five days or even a week for their turn, they having to wait while sailing vessels which may have arrived before them are unloaded. On the 6th January, 1899, I wrote to the District Goods Manager's Office of the Great Eastern Railway Company as follows:—"Dear Sir, Referring to my interview with you, the Midland Railway Company have given me permission for the steamer s.s. 'Count D'Aspremont,' which is 162½ ft. in length, to overlap their wharf. This vessel will therefore only occupy the 140 ft. of your wharf which you have available, and I am therefore sending her to you with broken granite, which kindly note. I am, dear sir, yours truly, L. Sommerfeld." To that letter I received a reply on the same day, which is as follows:—"Great Eastern Railway, District Goods Manager's Office, Hamilton House, Bishopsgate Street Without, London, E.C., January 6th, 1899. Dear Sir, I beg to acknowledge receipt of your letter of to-day's date. I sent my representative to see you to-day, and I do not know the result of the interview yet. It is true your vessel will only occupy 140 ft. of our wharf, but that 140 ft. we want not for one vessel only, but to work others at the same time as they turn up. When do you expect your vessel to be alongside, and I will see what can be done in this instance, but we cannot take vessels in of this exceptional length at Thames Wharf because it interferes so much with the general working of the place, and being a railway company we want to oblige all our customers as far as we can. Yours truly, John Farrow." Then I wrote again in reply to that on the 10th January. "Dear Sir, In reply to your favour of the 6th inst. I expect my steamer to arrive alongside your wharf during next week and I shall be glad to hear that there will be no hitch on her arrival. I do not quite understand your remark, 'It is true your vessel will only occupy 140 ft. of our wharf, but that 140 ft. we want not for one vessel only, but to work others at the same time as they turn up'; as you have always expressed your willingness to receive vessels of not exceeding 140 ft. in length, and I think it would be practically impossible, with your river frontage, for you to have more than one sea-going vessel alongside at one time. As the Midland Railway Company have given me permission for my vessel to overlap their wharf I quite fail to see what possible reason you can have to object. I am, dear sir, yours truly, L. Sommerfeld." Then I received a letter from the Great Eastern Railway Company, dated January 10th. "Great Eastern Railway, District Goods Manager's Office, Hamilton House, Bishopsgate Street Without, London, E.C., January 10th, 1899. Dear Sir,—Referring to your letter of to-day's date, our objection is simply this, that if we have a coal traffic to work at our wharf at the same time as you are doing your granite, and if you occupy so much frontage as this vessel will do, it puts an end to the working of one of our coal berths, and this brings about serious complaints and grumbling from our other customers. I cannot go into the question of what the Midland Company agree to do. You know, of course, as a railway company we want to oblige all our customers, and we do get foul of so many of them when we allow a vessel of the class you refer to to occupy our wharf. I will give instructions for it to be done in this instance, and hope in future you will try and work with us in this matter.—Yours faithfully, JOHN FARROW." As a matter of fact, I frequently have to put my stone into barges owing to the utter want of facilities which exist. Then, with regard to the Great Northern and London and North-Western Railway Companies, the means of discharging from ship to truck here are also most inefficient. These companies appear to have no accommodation of their own, but have some arrangement with the North London Railway Company, by which they are allowed the use of the Collier Dock, Blackwall Basin, when the North London Railway Company do not require the berths and cranes for their own purposes. Even when a steamer with stone is alongside a berth she has to shift away if some collier comes up which desires to discharge for stations on the North London Railway, and this is of frequent occurrence. With reference to the Midland Railway Company, I have not had much traffic over this line, but what I have had has been most slowly discharged. With regard to the South-Eastern Railway Company,

fair accommodation exists, and as to the London, Brighton and South Coast Railway Company, the same remark applies. I should say that the accommodation on the latter railway might be termed good except that sometimes one has to wait for a berth. When once one has a berth the discharge is quick. With reference to the London and South-Western Railway Company, they have no accommodation for steamers below bridge, and all material for their line has to be lightered to Nine Elms at a great extra cost. To sum up, looking at the importance of quick dispatch for steamers carrying goods intended for destinations served by the various railway companies, I can say that the arrangements existing in such a port as London would be a disgrace to the smallest port, and in my opinion it is absolutely essential that there should be a large stretch of quay space, one on the north and one on the south side, into which the respective railway lines should converge, fitted with thoroughly efficient cranes, so that vessels of the size usually employed in this trade could come alongside and discharge quickly and without having to wait an undue time for a discharging berth. The import of stone into London is one of some magnitude, as I estimate that not less than half a million tons are brought into London by water, a large proportion of which must be intended for further conveyance by rail. As far as the north portion of the river is concerned I have had practically to leave the trade alone, and it hampers the trade very much, because if there were proper facilities we could compete at many places where it is now impossible to do so. One merchant has a wharf on the north side, into which all the railway lines run, and by his enterprise in this direction he has practically acquired a monopoly so far as water-borne stone is concerned. Especially in the London and South-Western district I find it quite impossible to compete owing to there being stone inland, and being handicapped by the extra cost of lightering to Nine Elms.

9912. (Sir John Wolfe-Barry.) What description of stone is it that you are chiefly interested in?—Broken stone for macadamising purposes.

9913. Not block stone?—No, broken stone for the roadways.

9914. Can you give us any idea of what proportion ought to go away by rail for the greatest convenience?—It is difficult to say, but I should think fully a half, if not probably more.

9915. I suppose a large quantity of it must always be barged?—Quite so, if the place is situate on the river.

9916. What is the nature of your complaint. Do you complain against the railway companies, or the administration of the port generally?—I am afraid my complaint is that the railway companies have not provided facilities for water-borne traffic; that such facilities do not exist in the Port of London.

9917. That the wharves of the railway companies are not sufficiently commodious and large?—That is so.

9918. Then I suppose your suggestion is that the railway companies should get larger wharves?—I do not know whether it is that the railway companies should get larger wharves, but railway facilities should be provided as in other ports. For instance, in Antwerp the quay berths are all provided with railway lines, and one can place the goods immediately on rail. Moreover, here, if one had a vessel with 1,000 tons of stone, which would be a small vessel, and one wished to send that over three or four different lines we should have to go to three or four different berths in order to get to the depot of each company. Under what I should consider a proper system it would be possible to discharge that boat at one berth and afterwards distribute the waggons to the different companies.

9919. Tilbury Dock has good accommodation, has it not?—Stone never goes into any of the docks.

9920. Why not?—It never has done in my knowledge.

9921. Is it because the consignees do not want to pay dock dues?—That may be the reason. It has never been suggested by the railway companies that it should go into the docks.

9922. (Mr. Ellis.) Are you speaking from the experience of your firm?—Yes, of my own experience.

9923. I do not understand you are authorised by

Mr. L. B. Sommerfeld.

17 June 1901.

*Mr. L. B. Sommerfeld.* anybody else to speak?—No, I do not come in that capacity.

17 June 1901. 9924. Can you give us at all an idea of the proportion of trade that you do out of the half million tons that you have mentioned?—My total trade, I suppose, would be about 150,000 tons altogether, but not necessarily in London.

9925. You say half a million tons come into London?—Yes. I should think I do of that about 40,000 or 50,000 tons.

9926. Do you think that your experience is the same as that of other persons in the trade?—With the exception of the firm I have mentioned, who have a wharf on the north side, into which all the railways go.

9927. Have you heard complaints from other people in your business?—Yes.

9928. (*Sir John Wolfe-Barry.*) Does your half million tons of stone include block stone?—No. I am speaking of broken stone, which is the only thing in which I am interested.

9929. (*Sir Robert Giffen.*) Where is that wharf on the north side of the river to which you refer?—Griffith's Wharf, Silvertown, and I have sent my steamers to another wharf belonging to Messrs.

Williams, at Dagenham, into which the railway companies go. The rate there is much higher, but I have sent it there in order to get despatch.

9930. You say a competing firm has advantages which you have not got?—Yes.

9931. Can you tell me where the accommodation of the Midland Railway Company is?—They have a small place on the river, and also I believe a portion of the Poplar Dock.

9932. Where is the place on the river?—It must adjoin the Great Eastern Railway, because at one time I got permission from the Midland Railway Company for my steamer to overlap their wharf.

9933. Where is the accommodation of the South-Eastern Railway Company?—At Westcombe Park.

9934. Down the river?—Yes.

9935. Have the Brighton Company a place down the river?—Yes; a very good place, at Deadman's Dock, Deptford.

9936. Of course, they have a place up the river?—Yes.

9937. Then you need not lighter from there?—No, not for the London, Brighton, and South Coast Railway Company. They have very good facilities.

Mr. JOHN WHEELER BENNETT called and examined.

*Mr. J. W. Bennett.* 9938. (*Chairman.*) You are nominated by the Home and Foreign Produce Exchange to lay evidence before this Commission?—Yes.

9939. Will you tell us whom you represent?—The Home and Foreign Produce Exchange.

9940. Do you represent any particular firm?—I am senior partner in the firm of Wheeler, Bennett and Company, one of the largest importers of provisions in the City of London.

9941. Do you tell us that, although it is somewhat cheaper to bring goods to the Port of London, this is more than counterbalanced by the delays in discharging and delivering?—Yes, that is so, because the product is so delicately cured that it requires very speedy transit, and, owing to the delays that we have suffered from in the Port of London, we have been compelled to take refuge in other ports.

9942. What have you to say with regard to the disposition on the part of the docks towards wharfingers?—There does not seem to be a disposition on the part of the docks to make things easy for the wharfingers. There seems to be no cohesion between the dock companies and the wharfingers. The great market is in Tooley Street, where the large warehouses are situated, and it is the market for London. We want the product brought up there through the agency of the wharfingers. There is a certain amount of delay in the delivery with the craft. There seems to be no sort of good feeling existing between the dock companies and the wharfingers. This is the excuse they give us.

9943. What is your opinion as to the monopoly of the lightermen?—I think it is an obsolete custom, which should be got rid of, it is strangling the port of London; and time and again we have been delayed with large quantities of provisions on account of strikes.

9944. Have you any remedies to propose?—In my opinion the water-carrying trade should be as free and open as the land-carrying trade, and by bringing the docks under one control in the form of a dock trust. What we want is a supreme control; we have none at present, we want to see the present obsolete equipment replaced by more efficient machinery; we want to have more speedy loading, and we want the lighterage trade to be thrown open, so as to give free trade from one end of the river to the other.

9945. (*Sir Robert Giffen.*) Can you tell us what are the chief ports outside London to which the goods come that are ultimately destined for London?—Southampton and Liverpool.

9946. Which is the more important as a competitor?—Southampton. The transatlantic boats arrive on Wednesday night in the Port of Southampton, and we get the product delivered in London on Thursday night and Friday morning, so that it comes into the warehouses of the wholesale merchants in time to manipulate for Saturday.

9947. Would not these transatlantic steamers for Southampton always bring the goods?—No.

9948. It is not a question of the facilities of the Port of London?—No. For years and years we have brought over very large quantities of our products into the Port of London, and we should bring them still if we could get a quicker delivery and more facilities.

9949. That is to say you would be better able to compete with Southampton than you are now?—Yes. We pay a much higher rate of freight into Southampton, so as to get a quicker delivery, than we should into the Port of London.

9950. Can you tell us roughly what the difference of freight is by Southampton and by London?—Yes. From Toronto to Liverpool, freight 35s. per ton, dock charges in Liverpool 4s. 3d. per ton, costing landed Liverpool 39s. 3d. per ton. Toronto to London via Liverpool, freight 62s. 6d. per ton. Toronto to Southampton, freight 53s. 4d. per ton, dock charges (varying from 1s. 6d. ton to 4s. ton) averaging, say, 2s. 6d. per ton, costing landed Southampton 55s. 10d. per ton. Toronto to London, via Southampton, freight 63s. 4d. per ton. Toronto to London direct, freight 40s. per ton, dock charges and landing 8s. 6d. per ton, costing landed London 48s. 6d. per ton.

9951. So that if you have equal facilities at the Port of London you would use it, from its advantageous position?—Yes.

9952. (*Rear Admiral Hext.*) Do you use the docks or river?—We use the river.

9953. You do not go into the docks in London?—We have to go into the docks.

9954. Do you cart or lighter from the docks?—We send the lightermen down to the docks.

9955. You do it by lighter, not by cart?—That is so.

9956. The principal of your imports at the Port of London go into dock, and thence by lighter?—Yes, that is the cause of the delay.

9957. (*Sir John Wolfe-Barry.*) Do your goods arrive in part cargoes in the vessels, or whole cargoes?—Part cargoes.

9958. Are there as many liners going to London as there are to Southampton?—Not at present. It varies a great deal. Sometimes we have very good services, and then they get tired, or it does not pay, and they lose control of the traffic.

9959. Do your goods come in in passenger steamers?—Yes, in the quick transatlantic line boats, "St. Paul" and "St. Louis," and boats of that kind.

9960. They make their home at Southampton, do they not?—Yes.

9961. Then anything that they carry would always go to Southampton?—Yes; but we could divert at the other end and put the goods into London boats.

9962. (*Chairman.*) What quick transatlantic boats are there which come to London?—It would be difficult to name many of them. There is the "Minnesota."

9963. But I am speaking of the quick transatlantic boats to London?—There are no very quick boats to London.

9964. So that whatever the accommodation in London, it would not be easy to send your goods that way at the present moment?—No, but we have men disposed to take up lines of steamships to promote speed if we could get good accommodation.

9965. (*Sir John Wolfe-Barry.*) Do you complain of the want of facilities for unloading into barges?—Yes.

9966. How are your goods unloaded. Are they unloaded overside or on to the quay?—Sometimes they are unloaded on to the quay and sorted, part going by rail and part into craft.

9967. Where does the delay take place of which you complain?—In getting it into craft and lightering it up the river.

9968. If the goods are discharged overside, does the ship discharge them?—Yes, the ship discharges into lighters.

9969. Therefore the dock company does not discharge that portion of the cargo?—No, but the complaint is that they do not give the craft the same advantages as they give the land side of the delivery.

9970. You think then that the wharfingers are not treated in that respect with the same amount of consideration as if the goods were going into the warehouses of the dock company?—Yes, that appears to be the difficulty.

*Mr. J. W. Bennett.*

17 June 1901.

*Cross-examined by Mr. Harper.*

9971. I think the bulk of these goods are warehoused in Tooley Street?—Yes.

9972. You make no complaint, I think, of the wharf accommodation there?—Not the slightest; it is the best in the world.

9973. And I think they have modern appliances that you said the docks lack?—Yes.

9974. Luffing cranes, for instance, so that they can take from barges two deep?—Yes. They do it very well when we can get there.

*Re-examined by Mr. Rowland Whitehead.*

9975. Do you also import through Liverpool?—Yes, largely.

9976. Do you find that you get quick delivery at Liverpool?—Very quick. They often have races between Southampton and Liverpool; there is hardly any variation of time at all. I do not say it is always the case, because there is the question of weather to consider as a rule.

Mr. JOHN STEWART called and examined.

9977. (*Chairman.*) You are shipping manager to the firm of Henry R. Merton and Company, Limited?—Yes.

9978. You have been appointed to lay evidence before this Commission with special reference to the London clause of the North Atlantic inward bills of lading, and the system of directly charging consignees for work?—Yes.

9979. Does your firm deal exclusively with metals?—Yes.

9980. How much do you import per annum?—From 6,000 to 10,000 tons of metals from North America.

9981. Will you please proceed with your evidence?—Various causes arose during the years prior to the insertion of the "London Clause," that all tended to the increase of the importance of the saving of time in the discharge of vessels, in order that they might spend as little of their time as possible in port and make the greatest number of voyages possible in a year. My experience is that the charge made to the consignee under this clause is detrimental to the trade of the Port of London; there is no adequate service rendered to either

the shipper or consignee in return for the payment. The consignee does not receive his goods any quicker by paying this charge—goods discharged from one vessel on the quay frequently get locked in before delivery to barge, by the subsequent arrival of another vessel at the same berth. The method of first discharging goods intended for barges on to the quay of course facilitates the rapid discharge of steamers, which, we are told, is essential. The fact that this method of discharge greatly delays the delivery of goods to the consignee, and causes him considerable expense by reason of the demurrage on waiting craft and loss of interest is rarely taken into account. It is but fair to add, however, that with docks or quays constructed with a special view to the overside trade that the passing of goods intended for water carriage, over the quay would not necessarily mean delaying the delivery of goods. The present docks at which American steamers unload are entirely unsuitable to this method of delivery, and therefore goods are greatly delayed by reason of the quay space being required for vessel after vessel discharging cargoes on to a limited quay space. Barges should have other means of access to the quay than that part occupied by the unloading steamers.

*Mr. J. Stewart.*

Mr. JOHN YOUNG HENDERSON called and examined.

9982. (*Chairman.*) You are a director of the firm of Henderson, Craig and Company, Limited?—Yes.

9983. Are you chairman of the Wood-Pulp Association?—Yes, I am.

9984. Are you a member of the London Chamber of Commerce?—No.

9985. By whom were you nominated to lay evidence before us?—I was asked by the Chamber of Commerce to do so.

9986. Not by the firm of Henderson, Craig and Co.?—I represent that firm.

9987. As far as regards your evidence, is it the evidence of your firm?—Yes.

9988. And not of the Chamber of Commerce?—No. My company imported into London in 1899 168,358 bales and in 1900 91,907 bales of wood pulp from Canada, Germany, and Scandinavian countries, which is bought very largely by the manufacturers of news and other papers. English manufacturers of papers used in the production of newspapers carry on their business against very heavy competition from Continental countries. Wood pulp is shipped to and arrives in this country both in the dry state and containing 50 per cent. moisture, so that in the latter case the tax under the "London Clause" amounts to 3s. 6d. per ton. It frequently amounts

to 3s. 6d. a ton on the dry pulp, which sometimes measures 80 cubic feet per ton. The rate is per ton measurement or weight, so that sometimes it comes to 50 or 100 per cent. more on the dry ton as well as on the wet. By this charge the paper trade of this country is very heavily handicapped in their competition with Continental manufacturers. The producers of pulp in Canada by this charge are at a disadvantage in their efforts to compete with German and Scandinavian manufacturers, because from those countries pulp does not pay this charge. If the London and India Docks Company obtain and exercise the powers sought by them in the bill entitled the "London and India Docks (Lighterage, etc.) Bill, 1901," the home newspaper manufacturing industry on which is dependent the wood pulp industry, will be greatly handicapped in the South-Eastern districts. I am of opinion that the Watermen's Company should be abolished, and that free trade in lighterage should obtain on the River Thames. Such conditions would be most beneficial to the wood pulp trade.

*Mr. J. Y. Henderson.*

9989. (*Sir Robert Giffen.*) You say that producers of pulp in Canada are at a disadvantage compared with German and Scandinavian manufacturers because they have this charge for delivery to pay under the American bill of lading?—Yes.

9990. Is not that a question of freight?—It might be

*Mr. J. Y. Henderson.* looked upon from that point of view. It is an extra charge, whichever way it is.

17 June 1901. 9991. The shipowners who are not making that charge to the merchants might put it into the freight?—Yes. Still, it would increase the trade; it would be the same thing in the end.

9992. If a person makes a certain charge per freight, knowing that he would be able to charge the merchants something more for delivery, that is one thing; if another person knows that he cannot make the charge for delivery, and delivery has to be made, the cost would be adjusted in some way or other?—Yes, but it always adds something to the cost in London. I understand this charge is imposed by the dock companies for allowing the barges to come into the docks and receive the pulp. Years ago there was no such charge, and we got it free, as in the river. All such charges on raw material are very heavy compared with other goods.

9993. So that it is a charge for using the docks which one set of people have to pay and another set of people have not to pay? Is that what you mean?—The buyer of the pulp ultimately has to pay that; the paper maker has to pay it.

9994. Are you prevented from taking delivery over-side as regards the goods coming from the Continent, or is that all over-side?—It is all put over-side in the river either from whole or part cargo.

9995. (*Rear-Admiral Hext.*) You say that the dry pulp is often charged as much by measurement as the heavier wet pulp?—Yes.

9996. What is that due to. Is it due to bad package?—No, it bulks much more.

9997. It is not compressed well?—Some of the pulps are very bulky. You cannot compress them under 60 cubic feet. I have never known a pulp to be compressed under 58 to 60 cubic feet.

9998. Why should there be this great difference between the different sorts of dry pulp. Surely it must be the packing?—There is no great difference really. None come under 60 cubic feet. We have always to pay 1s. 9d. plus the percentage. That is 40 cubic feet per ton, and in many cases it goes up to 80.

9999. That is double?—Yes.

10000. What is that owing to?—It is a different kind of pulp; it will not press so well.

*Mr. HAHNEMANN EPPS* called and examined.

*Mr. H. Epps.* 10001. (*Chairman.*) You are a director of James Epps and Company, Limited, cocoa and chocolate makers?—Yes.

10002. You appear before this Commission in order to give evidence with reference to the cocoa trade?—Raw cocoa and the storage of raw cocoa and other Colonial products.

10003. Will you please proceed with your evidence?—My company are in the habit, for the purpose of their business, of investing in and holding some thousands of tons of raw cocoa and other Colonial produce annually, and, until recently, kept such produce in the warehouses of the London and India Docks Joint Committee, of Metropolitan Wharf, of Wilson's Wharf, and others. The following figures show that my company have paid for many years sums of money amounting to over £2,000 per annum for rent on their goods to the London and India Docks Joint Committee, and to the proprietors of the wharves referred to:—

Year ended	£
July 31st, 1892 - - - - -	2,304
" 1893 - - - - -	2,228
" 1894 - - - - -	2,278
" 1895 - - - - -	2,391
" 1896 - - - - -	2,623
" 1897 - - - - -	3,170
" 1898 - - - - -	3,607
" 1899 - - - - -	3,309
" 1900 - - - - -	1,045

My company, being of the opinion that the charges for this warehouse accommodation were excessive, erected a warehouse during the year 1898 at a cost of eight thousand pounds, or rather more, and stored their cocoa and produce there instead of at the warehouses of the allied dock companies and of the wharves referred to. During the first year that my company were able to store their produce at this warehouse they saved the sum of £2,264 gross from the amounts previously paid to the London and India Docks Joint Committee and to the wharves referred to (the stock of goods held being without much variation). A larger saving could have been realised if all my company's raw stock had been drawn home.

10004. What do you mean by the word "gross"?—That means without allowing for interest on capital and labour.

10005. Would it not be less misleading if you were to give us the net amount?—I have here a statement of the expenses that I reckon would come off that. The land on which this particular warehouse stands is valued at £3,000, and the outgoings may be calculated at: interest on land at 4 per cent., £120; interest on buildings at 5 per cent., £400; depreciation at 1½ per cent., £100; and so on. I work it out so that I get a net saving that year of £1,546 out of the £2,264 gross.

10006. (*Sir John Wolfe-Barry.*) What depth of water have you at your wharf?—We have no wharf—we are not on the frontage. It is land carriage.

10007. How do your goods get from the docks to your warehouses?—We draw them in with our own vans.

10008. (*Rear-Admiral Hext.*) Have you any complaint against the Watermen's Company in working your barges?—No, I have not.

10009. You are content with their control?—We do not use them except very exceptionally. We have no experience sufficient to pass an opinion upon the subject.

*Cross-examined by Mr. Daldy.*

10010. You said: If all your company's raw stock had been drawn home." Is yours one of the trades in which stock is kept abroad in order to avoid dock warehousing charges?—No. We store very largely here. When the statement of my evidence was drawn up our Colonial produce in the docks and at the home wharf came to £98,000, but we do not buy before it is landed.

10011. I only wanted to clear that up. We know that in the wine trade they keep it abroad very often to avoid these charges?—Yes.

*Cross-examined by Mr. Harper.*

10012. What are the rates and taxes on those warehouses?—They are on a rating of £2,480, but we have not a separate estimate for that portion.

10013. You have not included it?—I did not include it in that estimate; there was interest on outlay on buildings included in that estimate.

*Mr. GEORGE ROFFEY* called and examined.

*Mr. G. Roffey.* 10014. (*Chairman.*) You have been nominated by the London Corn Exchange to lay evidence before this Commission?—Yes.

10015. You are a partner in the firm of George Roffey and Sons, who are large importers and dealers in corn and grain?—Yes.

10016. And you are also Vice-Chairman of the London Corn Exchange?—Yes.

10017. Is this statement of evidence which we have before us written by yourself?—Yes, and if I had known I was to be cross-examined upon it I should have been more careful.

10018. The contents of this statement are to your knowledge facts?—Certainly, to the best of my knowledge.

10019. Will you proceed with your evidence?—My

firm has been established in London for 60 years, during which time they have imported into London some thousands of tons of corn and grain annually. I have been nominated by the London Corn Trade Association (of which I am a member) to offer evidence before the Commission. The accommodation for berthing and unloading vessels, engaged in bringing corn and grain into the Port of London, and the warehousing and other general dock accommodation, has for many years past been expensive and insufficient. The machinery, appliances and stock in trade for the rapid unloading of vessels are inadequate for the requirements of the trade, and consequently vessels prefer to charter for any other port than London, unless they can obtain a higher rate of freight. The London corn trade has been dominated for the last few years by large combinations of American shipowners, who have imposed their own terms both upon the London docks and on the grain trade generally. This has led not only to increased charges for unloading vessels, but is the cause of such delays and errors in such unloading and delivery of grain that nearly every small trader in the eastern counties has ceased dealing in London in favour of out-ports such as Lynn, Ipswich, and Harwich. The present administration of the port is in divided hands, and in consequence thereof the charges at different docks for similar services are not uniform. I am of the opinion that the present system of double handling of grain should be abolished, and that dock-charges for similar services should be uniform all over the port; in fact that the whole system of charges should be re-arranged. After the great dock strike, the docks came to an agreement with shipowners, that they, the shipowners, should do the working out over-side charging the merchant with the cost thereof, thereby losing control of their own business, and also of a very profitable source of revenue to themselves. The corn trade are unanimous in the opinion that the dock companies ought to cancel the agreement, and take the working of the ships in their own hands again, holding themselves solely responsible for the working out between the shipper and the receiver. These and other essential reforms can only be undertaken by a Dock Trust, directed by merchants in the interests of the trade of the port, who should be granted powers not granted under the Dock Act of 1799. Now I wish to say this with regard to the Watermen's Company. The trade generally is of opinion that the privileges of the Watermen's Company ought to be very considerably curtailed; that any man who understands his business and is of good character ought to be able to get a certificate from the Watermen's Company; and that the river should be thrown open to labour, instead of being now a close borough, which is not the case in any other port. It entailed an enormous amount of friction and trouble, delay and disorganisation of trade for four or five months last year, and the men who have the privileges of the Watermen's Company simply dominated the whole trade of the Port of London for some period. If the Watermen's Company's privileges were either abolished with regard to the question of apprenticeship to lightermen, or the river was thrown open to free labour, I do not think cases like the strike of last year would occur again.

10020. (*Mr. Ellis.*) You have told us that the corn trade are unanimous in a certain direction. Has there been any meeting or resolution?—We have had informal meetings on the subject, and I think I may say with absolute safety that the corn trade are unanimous in wishing that the dock company should undertake the working, which they usually did up to 1890, for the 1s. 9d. a ton. Although we maintain that that is an excessive charge and ought to be reduced, we would rather see the dock company take that and do the work between the shipper and the receiver than be handed over to the shipping companies, where we cannot fix responsibility.

10021. I am not talking about arrangements. I am simply on the point of unanimity. Have you any formal resolution you can put before us?—I have no formal resolution, but I can say with safety that it is the opinion of the trade.

10022. (*Mr. Peel.*) What is the double handling you speak of?—I was speaking of the double handling in regard to the Atlantic transport liners as they go into the Tilbury Dock. They are handled once there, put into the barge, then sent up to the Victoria Dock and discharged into silos, and from the silos they are discharged into the buyers' and customers' crafts. That is double handling which must entail an enormous amount of expense somewhere.

10023. Then what do you suggest. Do you suggest that the grain vessels should go into docks higher up the river?—These enormous vessels that are being built in advance of the facilities for working them cannot come up the river because it is not deep enough for them. The river must be deepened before they can come up.

10024. Then that is hardly a charge against the dock companies?—No, except that these vessels have been imposed on the trade, as it were. This is only, after all, a substitute for what we should have had to put up with had we been pledged to take our delivery in the Tilbury Dock.

10025. You would not suggest that the goods should be brought up by rail, would you?—No, not from Tilbury, but I should suggest that the trade is very materially hampered and injured by these deliveries first into Tilbury Dock to facilitate the discharge of the vessel. The vessel can come into the Tilbury Dock and discharge in three or four days, and go away again, whereas I can prove that within the last three weeks we have had a great number of complaints from our buyers in the country with regard to these vessels that discharge in the Tilbury Dock, and which have gone away in the course of three or four or five days, that the grain has not been delivered to customers until quite a fortnight afterwards. The delays are so serious to our customers buying this American grain that wherever they can get it elsewhere they will not come to London for it, but go to Lynn, Ipswich, Harwich, and other places.

10026. You put that down to the fact that they cannot get delivery of the grain for some time after it is loaded?—A fortnight after it is discharged in the Tilbury Dock in many instances. Now I should like to speak of the 1s. 9d. charge on grain.

10027. Do you mean as to the system of charging, or the quantum?—The 1s. 9d. system of charge on grain. I say that grain has to pay for a great number of other goods that pay nothing, and, therefore, the expenses of the docks are maintained out of the charges they make upon grain, whereas, if all goods that enter the dock paid dock-charges, the 1s. 9d. per ton could be reduced by 50 per cent., and yet the dock revenue be quite as good as, if not better than, it was with the 1s. 9d. charge; that is to say, that grain pays the revenue of the dock where other goods do not. They have no power, I understand, to raise the dock-charges on these other goods, and they have power to raise it on grain; and grain pays the proportion for other goods, really and truly.

10028. (*Mr. Lyttelton.*) Do you mean they have a maximum for other goods beyond which they cannot go?—I think it was Mr. Scott, of the Dock Company, who said that 80 or 90 per cent. of the rice which came into his dock paid nothing, but every atom of grain that goes into his dock pays a charge. I understood from his first day's evidence that the 1s. 9d. charge on grain in the dock they get nothing out of; but I cannot quite understand that when I am told that other docks consider that the 1s. 9d. charge on grain pays them from 25 to 30 per cent. profit.

*Cross-examined by Mr. Harper.*

10029. You were saying something about the mode of measurement. I do not know if you read Mr. Gordon Coombe's evidence?—No. I do not think I mentioned measuring.

10030. Is not the delivery under the American bill of lading now made by servants of the shipowners direct into the barges alongside if it does not go on to the quays?—Not always, but to a certain extent.

10031. But it is the shipowners' servants who make the delivery, and, therefore, there is no independent authority to come in between to deal with the measurement of the grain?—Exactly.

10032. Is not that one complaint of the corn trade in London?—Yes; a very serious complaint.

10033. And that which used to be done by the old City Meters is now entirely gone?—Yes.

10034. And you desire to see some independent authority introduced between the shipper and the receiver?—Yes.

(*Mr. Druce.*) My Lord, may I be allowed to put a question in the absence of my counsel on behalf of the Surrey Commercial Dock Company?

(*Chairman.*) Yes.

*Mr. G. Roffey.*

17 June 1901.

Mr. G.  
Boffay.

17 June 1901

*Cross-examined by Mr. Druce*

10035. You alluded to the equipment of the machinery being inadequate. Do you include the Surrey Commercial Dock in what you said?—No; certainly not. I think the Surrey Commercial Docks are the only docks in London which are carried on on business principles. I think that is shown in the value of their shares and their being able to pay five per cent. dividend every year, when other dock companies pay nothing.

10036. (Chairman.) Have you anything to do with the Surrey Commercial Docks in your business?—Yes, very largely; and I have always found them well-equipped.

10037. (Mr. Druce.) You think that the working-out of the ships ought to be done by the dock companies themselves?—The working-out of the ships is done by the Surrey Commercial Dock Company, and there we get a responsible agent between the shipper and the receiver. What I want to point out is that we have innumerable complaints of wrong delivery, deficiencies, and so on, from our customers, amounting to £10, £15, and £20 to £25 a-piece, which we have really to ignore rather than spend hundreds a year in order to recover them.

10038. I understand you to say that you came here officially not to represent the Corn Exchange, but the Corn Trade Association?—I came here, I think, officially to represent the Corn Exchange. I was nominated by the Corn Trade Association, and being the Vice-Chairman of the London Corn Exchange, I take it that I represent them.

10039. Have you any resolution of the Board requesting you to attend?—No; they did not appoint anybody.

*Re-examined by Mr. Rowland Whitehead.*

10040. Are you familiar with the working out of grain in the Surrey Commercial Dock?—Yes.

Mr. FREDERICK STONE GARRATT called and examined.

Mr. F. S.  
Garratt.

10049. (Chairman.) You are nominated by the London Corn Trade Association to offer evidence before us?—Yes.

10050. You are the head of the London house of the firm of Robert Procter and Sons?—Yes.

10051. Importers of foreign grain of all sorts carrying on business in London, Liverpool, and Hull?—Yes. Previous to my connection with the grain trade I was from 1876 to 1882 in charge of the general traffic management of a line of steamers running from New York to Bristol and Avonmouth Docks. I am not personally a member of the London Corn Trade Association.

10052. Will you kindly proceed with your evidence?—I do not know whether I am coming to give evidence with regard to the practical working of cargoes of grain or evidence against any docks.

10053. You are not here to give evidence against anybody?—Merely to give evidence with regard to working cargoes of grain coming into England?

(Chairman.) We should like you to know, Mr. Whitehead, that it is not by our invitation that we have the pleasure of seeing Mr. Garratt.

(Mr. Rowland Whitehead.) I understand that the witness desires to explain to the Commissioners how it is that the trade in grain is leaving London and going elsewhere.

(Chairman.) We have already gone into that question very fully.

(Mr. Rowland Whitehead.) I understood from the last witness that Mr. Garratt could go into the question of the movement of trade from the Port of London.

(Chairman.) We would suggest that statements are useless to us without going into figures, since it is impossible for us to tell the exact character of the services performed, or the difficulties that have to be dealt with at the various ports. Without having the figures it seems to us to be useless to go into the services performed at London, Liverpool, or Hull with regard to particular charges.

10041. Do you know whether that company have any grain elevators?—I believe they have on land.

10042. Are those of use for the working out of the ships?—I do not think they work out of ships by elevators. I do not think they are used until the grain gets on to the land.

10043. (Sir John Wolfe-Barry.) Do you never have grain in the Surrey Commercial Dock under the American bill of lading?—No, never; at least, I do not think so, because the American grain that goes into the Surrey Commercial Docks always goes in in tramp steamers, not by line steamers. I have never known one of the Atlantic transport boats to go into the Surrey Commercial Dock, and it is the Atlantic Transport boats and some others that have this bill of lading which causes this expense, trouble, and anxiety to the buyers to know when their goods are going to turn up in the Eastern counties and other places.

10044. Is that the reason for the difference of system?—I think so, to a very great extent.

10045. It is because in one case the grain comes in liners and in the other case it comes in what are called tramp steamers?—Yes.

10046. And the tramp steamers have not the American clause?—No; and tramp steamers, generally speaking, have full cargoes, whereas the American liners are always split up between wheat, maize and so on. Then again, the liners are so enormous that they cannot come up the river at the present moment. They have been built I suppose in anticipation of better dock accommodation.

10047. Do you wish to touch on the evidence which was sent in in the name of Mr. William Pigote Wood?—Only to suggest that I think you ought to hear him because he is a man who has a house in Ipswich and Hull, trading personally with those places.

10048. You have said all you wish to say on your own behalf?—Yes.

(Mr. Ellis.) I really think that counsel sometimes forget that we had a large amount of evidence as to the movement of trade, last year before counsel appeared. We had an enormous mass of evidence last year, all of which, of course, it is our duty to examine very carefully.

(Chairman.) Do you wish us to take this evidence, Mr. Whitehead?

(Mr. Lyttelton.) The witness himself is not apparently desirous of giving evidence at all.

(Witness.) I beg your pardon. I am nominated by the London Corn Trade Association to give evidence, and there are one or two points which, as far as I can judge, the witnesses who have already given evidence have not clearly emphasised with regard to the question of charges in London. Some witnesses seem to say that this 1s. 9d. is never charged by the London Docks. I have paid it, and I have a bill here which I can put in.

10054. When you first came into the box I understood you to ask whether you should give evidence against the docks?—We have houses in Liverpool, Hull, and London.

(Mr. Rowland Whitehead.) My Lord, unless Mr. Garratt desires personally to press any matters I do not think, on behalf of the London Chamber of Commerce, I will press this evidence upon you. I think a good deal of it has been gone into on a former occasion.

10055. (Chairman.) If you wish to tell us anything as to the want of facilities in the port we shall be glad to hear you?—Some of the previous witnesses, I think, have given the Commission the impression that this 1s. 9d. is not charged by the Dock Company. We have paid it this year, ex "Loango."

(The Witness handed in a Copy of a London and India Dock Company's Account, showing a charge of 1s. 9d. per ton for giving delivery of wheat from "Loango" to barge. See Appendix, 26th Day, No. 2.)

We have actually paid it to the London Dock Company. It is not in all cases the ship company who work out the grain. I have myself paid 1s. 9d. to the dock com-

pany. The dock company seem to reiterate the statement that this 1s. 9d., which is an excessive charge, always goes to the ship company. With regard to facilities, I maintain that there is not in the whole of the London docks, even including the Surrey Commercial Docks and the Millwall Dock, a properly constructed elevator—that is, a large receiving warehouse where a ship carrying bulk grain can go alongside, and the whole of the grain be taken from the ship in bulk, taken into the warehouse, stored, and delivered without a lot of hand labour, and so on. There is no warehouse that can take the grain by its own machinery from the ship, take it into the warehouse, store it, and deliver it to rail or carts and back again, as the case might be. There are some pneumatic elevators, some floating elevators—I do not know how many—which put the elastic spout of the elevator into the grain and pump it out of the holds of the vessel through a floating structure, after which it goes through shoots and hoppers, and is weighed and delivered into barge. In the first place, a port like London for the delivery of grain should have, not three or four, but fifty or a hundred properly constructed elevators. It is not my province, but expert engineers, I suppose, know perfectly well—and you have probably heard it from engineers—that with a properly constructed floating elevator, instead of having to pay 1s. 9d., the whole thing could be done for 3d. or 4d. a ton, and the charge of 1s. 9d. is preposterous. If you choose to go into the question of what can be done, you will find what I say is correct. As merchants we bring grain into London, and this 1s. 9d. is really a tax on our trade. We used to send grain to Hull and other ports, such as Ipswich and Lynn, and now we do not send any, because absolutely the London charges kill the trade, and those ports are now fed from Hull. They do the business down the East Coast and down to Northampton and Birmingham. I remember that fifteen years ago there never was a pound of grain sent from Hull to the Birmingham district, and now there is a considerable trade done from Hull to Birmingham, because Hull charges in contrast with those of London are so light. I should suggest that the London port ought to have in every dock a properly constructed grain elevator. The total imports of grain into London are nearly ten millions of quarters per year, so it is a very important trade. I do not know that it is realised what an important trade the corn trade is. As a trade we pay very large sums for working our grain. If they had the elevators the London docks would be able to charge what other places charge.

10056. (*Sir John Wolfe-Barry.*) Do you use the Surrey Commercial Dock?—Yes, we frequently have grain going into the Surrey Commercial Dock.

10057. You do not pay 1s. 9d. a ton there?—I think it is 1s. 9d. a ton in the Surrey Commercial Dock.

10058. Mr. Roffey told us that the American bill of lading was never used in the Surrey Commercial Dock?—Not for tramp steamers.

10059. But we are told that the other steamers do not go there?—They do not habitually go there, but they could go if they wished.

10060. Is most of the trade that you speak of done in liners?—The American trade is principally done in liners. When the freights get dear the liners cannot carry the whole of the goods. Then the outside tramp steamers come. They ship whole cargoes, and then

they can choose their own dock to go to, and they choose to go to the Surrey Commercial Dock, I suppose, because they find it better worked than the other docks.

10061. Mr. Roffey told us he was completely satisfied with the grain facilities of the Surrey Commercial Dock?—I am very glad to hear that he is so happy. Of course I have the experience of Liverpool and Hull. He may be satisfied with London because he does not go to Liverpool or Hull. If he knew Liverpool and Hull, I think he would not be satisfied with what they do in the Surrey Commercial Dock.

10062. What you desire is in the way of facilities to have more appliances and machinery for discharging the grain either in the warehouses or into the barges?—Exactly. If the dock companies had proper machinery and did the work themselves, instead of charging 1s. 9d., they could do it for 9d. or 8d. or 7d., and still make a considerable profit, and these elevators would enable the dock companies to keep grain in store much cheaper than they do.

10063. (*Bear-Admiral Hext.*) You say that the Atlantic transport steamers only bring part cargoes. Supposing there were grain elevators in every dock, do you think that those steamers would move from their berths and go and discharge their grain, and then come back again?—I think it is quite possible. The reason these big steamers do not move about is that they would lose time if they did, but if they could go under a properly constructed elevator, which would work out 100 tons an hour out of each hatchway, they would go, because the mere fact of going to the other side of the dock would enable the ship to be discharged so much more quickly.

10064. Of course with a full cargo it would pay, because they could naturally go to a grain elevator; but would a vessel with a part cargo use the elevator?—I should think it is very likely, because the American bulk grain is certainly more than half the cargo. Sometimes it is a large part of the cargo—that is in the liners.

*Cross-examined by Mr. George Wallace.*

10065. Do you happen to know if the liners in Liverpool go alongside an elevator?—No, because the whole system in Liverpool is different. The liners in Liverpool go alongside the quay and put the grain on to the quay from the ship, and it is there delivered to the receivers. But there again, although they do that, they charge 1s. 1d. a ton, and the London charge is 1s. 9d. a ton for much less work. Steamers in the Waterloo grain warehouses do go under the elevators, and the grain is taken from the ship into the elevator. That is the case in the Birkenhead warehouses and the Waterloo warehouses used specially for whole cargoes of grain.

*Cross-examined by Mr. Harper.*

10066. Have you ever discharged grain yourself?—Yes, in past years.

10067. I think you were in charge of the general traffic of a line of steamers?—Yes, before I was specially in the grain trade.

10068. Have you used grain elevators yourself?—No, because it is a good many years ago, and grain elevators had not come in then.

10069. Have you experienced any difficulty with regard to the matter I was putting to Mr. Roffey just now with reference to the absence of any independent authority with regard to weighing, and so on?—So far I have not.

Mr. JOHN KINGSFORD called and examined.

10070. (*Chairman.*) You have been nominated by the London Flour Trade Association to lay evidence before us with regard to that trade?—That is so.

10071. Will you be good enough to proceed with your evidence?—I am President of the London Flour Trade Association and a member of the Council of the London Chamber of Commerce. I wish to submit a general statement on behalf of the London Flour Trade Association, as President of that body, and also a statement to show the disadvantages under which American flour is being placed in this port owing to the introduction in 1888 of this "London Clause."

10072. Did you prepare your own statement of evidence?—No. It was drawn up by one of the sub-committee of the Flour Trade Association, and afterwards

it was approved by the sub-committee. I wrote the criticism on the London Clause, which was afterwards approved of.

10073. I understand you are in the flour trade?—Yes.

10074. What is the name of your firm?—William Kingsford and Son.

10075. Have you any specific facts to back up the statements which you make. They seem to be statements of opinion?—No, they are facts, and I am here to be cross-examined upon them. Take the case of the flour being landed at St. Katharine Dock.

10076. Have you any specific instances to support your statements?—We can get flour landed cheaper else-

*Mr. F. S. Garratt.*

17 June 1901.

*Mr. J. Kingsford*

Mr. J.  
Kingsford.  
17 June 1901.

where. We have flour that is landed in St. Katharine Dock for which we pay certain prices, and we have flour landed at other places for which we pay less money. The flour was landed at St. Katharine Dock because it was during the watermen's strike, and it was the only place where we could get it landed.

10077. Do you complain of the charge?—Yes. We think that the Port of London demands and should have (1) the cheapest and most convenient dock accommodation; (2) the best management; (3) the newest appliances; (4) the greatest railway facilities; and we do not think that the present companies are at all likely to give us these. We think that the time has come when it is no longer possible for the interests of the port to be at the mercy of private companies.

10078. And like a good many of the other witnesses, I understand you suggest a dock trust?—Yes.

10079. I understand that your trade claims that American flour, one of the principal products of the people, should be admitted free to the Port of London?—Yes. I ought to say that we are one of the biggest trades of London, with an annual import of 367,000 tons.

10080. What do you wish to tell us about?—I am here to speak on this question of the "London Clause." It is a clause which has troubled us from the year 1888, and which we have tried to do away with.

10081. Will you tell us what you object to?—We object to the whole thing. We want free delivery according to the facts that we have given in evidence. Of course, flour is put on the quay just in the same way with the Australian steamers, but they do not charge us. We have free delivery there. The charge there is included in the freight, and that is what we want. In the working of the London Clause, importers pay 1s. 9d. per ton on all flour coming from Canada and the United States, for which they get no material advantage. By the terms of this clause importers' barges have to make application for the goods within 72 hours of report of vessel, and when for ship's convenience the vessel reports at Gravesend it is 12 to 24 hours before she is actually in dock. Although application has to be made and destination given within 72 hours of the vessel's report there is no guarantee as to when delivery of the goods will be made, and although barges have to be in continual attendance at the dock to take delivery when it suits the convenience of the dock company, it is seldom delivery can be obtained in less than ten days, and it often takes three weeks before delivery is completed. I have a table of the times actually occupied, which I would like to hand in, showing that the average time in which we obtain goods is about ten days.

*(The Witness handed in a Statement showing the time occupied in landing flour at an up-town warehouse from certain vessels discharging in the London Docks under the "London Clause." See Appendix, 26th Day. No. 3.)*

Canadian and American flour is by far the largest import of flour into London, and although other imported flour, such as Hungarian, French, Russian, Australian, Californian, gets free overside delivery, Canadian and American flour is subjected to the London Clause, and besides which, whereas the charge for landing at an up-town warehouse for the purpose of distribution in Canadian and American is 4s. per ton, the charge on other imported flour is 3s. 6d. per ton, so that Canadian and American costs 2s. per ton more to land than other flour. With Australian flour these steamers come in; we obtain our flour without any clause whatever. The flour is put on the quay and paid for by the shipowner and included in the freight, and that is what we want on the American liners. Since the introduction of the London Clause in American bills of lading, the chief wharfingers and the London and India Docks Joint Committee have combined together whereby under a penalty of £500 they bind themselves to certain fixed charges for the landing, weighing, and delivery, and making merchantable of flour.

10082. (Sir John Wolfe-Barry.) You gave us an average of 10 days as compared with 72 hours?—Yes.

10083. Will you give us the shortest and the longest times?—This is the time taken for flour after the date of the ship's report until it is brought up to the granary either at the docks or the up-town warehouses.

10084. No, I think the time should be up to the time

that it is discharged into the barges. Nobody knows what happens to the barge after it leaves the dock?—You cannot very well get the date of that going back a long time.

10085. But in your statement you have given us an average of 10 days?—We could not go back to September and October and obtain those dates from the shipowners.

10086. Is the 10 days including delivery to the wharf itself?—Yes, you may take it that would mean a tide less.

10087. Not more, you say?—I do not think so.

10088. Then you compare 10 days minus a tide with 72 hours?—No, I do not. The statement is made up on the date the flour arrives at the wharf.

10089. You say that is less one tide?—Yes.

10090. Then your average is 10 days less one tide?—Yes.

10091. As compared with 72 hours?—No, nothing to do with 72 hours.

10092. 72 hours is the amount of latitude you have?—Yes. Then we obtain our goods in from 5 days (that is the lowest date) up to 19 days.

10093. Is that from the time the vessel reports?—Yes. She has three clear days. The shortest time in which we have obtained flour is 5 days, and the longest time is 19 days.

10094. Then this 72 hours is a latitude which is allowed you from the time of the report, is it not?—Yes.

10095. Therefore you have to take the 72 hours off the time if you complain of the whole time. You need not send your barge there for 72 hours after the report is made?—No, we need not, but, of course, occasionally the flour might be available within the 3 days.

10096. But no complaint would lie against you if your barge was there 72 hours after the time you were told?—No, not with the ship, but the buyer might complain. A man with a country barge cannot always wait the exact 3 days. If he is there he must go in as soon as he can; he could not wait a day lying about; he would go in at once.

10097. The American clause has been decided to be legal, has it not?—Yes, it is legal certainly, but it is in contravention of the Dock Charter and the Merchant Shipping Act.

10098. But still the judges have pronounced it to be legal?—Yes, because we accept the bill of lading; we contract ourselves out of our rights, but we cannot help that.

10099. If the American shippers on this side of the water accept the clause, then it becomes a legal document and it does not contravene any Act of Parliament; that is by the decision of the courts?—The shipowners compel us to contract ourselves out of our rights. We have certain rights but we are deprived of them.

10100. Do you wish the Commission to recommend that the law shall be altered?—We should be quite content if the American steamers charged this 1s. 9d. per ton, and made that part of the freight. We do not complain about putting the goods on the quay; let them do that. We do not want to delay their steamers; let them put the goods on the quay just like the Australian steamers do, and let that charge be part of the freight.

10101-2. I do not quite understand what you want the Commission to do. The law is perfectly plain according to your own statement that it is a legal arrangement between the ships on this side and the ships on the other side?—It is a legal arrangement, yes.

(Sir John Wolfe-Barry.) There is no contravening an Act of Parliament or anything of that kind, because the Judges have decided that it is not in contravention.

10103. (Mr. Lyttelton.) Is there any report of the case to which you have referred?—Yes.

10104-5. Is there any report of it in the newspapers that you can refer me to?—In the newspapers of the day, of course.

10106. Have you any report of it?—No, I have not.

(*Mr. Lyttelton.*) It interests me to know on what grounds you contested the clause. As you have not the report I suppose we cannot tell.

ee 10862.

(*Mr. Harper.*) I think we shall be able to supply that. I do not think the question of the agreement between the Dock Company and the Atlantic Transport Company forms any part of that special case; it was on the bill of lading *per se* as a commercial case question.

Mr. HERBERT BISANT TASKER called and examined.

10107. You are nominated by the London Flour Trade Association acting in conjunction with the London Chamber of Commerce to offer evidence before this Commission?—Yes.

10108. To what does your evidence principally refer?—My evidence refers principally to the system of charges on, and the method of working, flour imported into London as compared with Liverpool. As regards the comparative facilities of the two ports I would point out that the docks in Liverpool are so situated that a very large proportion of the flour, probably 70 per cent., is carted direct, from the quay to the baker's shop, thus saving 2s. 3d. per ton on the charges. Owing to the situation of the London Docks, this is impossible, and the full expense of 9s. 1½d. per ton (that is now raised to 9s. 4½d.) has to be paid, whereas in Liverpool this flour only incurs 5s. 4d. per ton for total charges paid by the shipowners and flour importers. Then, again, in Liverpool there is something done for the benefit of the flour importer, for the flour is there weighed, sorted, classified for damages, and delivery orders are acknowledged for specific parcels or portions of parcels. In London you pay the quay rate and get nothing for it, you simply have to wait, get your flour when they please to let you have it, just as it comes, and if you want it weighed, sorted, classified, etc., you have to pay the full landing, storage, and delivery rates. Another facility obtainable in Liverpool is that unless the quays are very crowded you can nearly always get your flour put on rent at a very moderate rate, which is often of immense advantage and saving to the importer. By the above we think we have clearly proved our case, that in London we pay a quay rate and get nothing for it compared with good work done in Liverpool, and that there is careless and slow handling here, against good, quick work and careful handling in Liverpool. I do not know whether I am out of order in saying that. I have been very interested in reading Mr. Scott's evidence, and notice he bitterly complains of how little we use dock warehouses for landing our flour. There is a case that has come to my knowledge a little while ago where I had some flour landed at the Victoria Dock, and I wanted to export that flour by a steamer in the same dock, only at another part of the dock. I asked what they would charge to put it on board from one part of the dock to another; 3s. 4d. a ton was the charge. Had that flour been landed at any private wharf in London it could have been done for 1s. 9d. I asked them whether they could not lighter it for a very much smaller amount than 3s. 4d. They said: "No, we are not bargeowners; we cannot lighter it, that is not our work;" though, of course, they employ more barges than any company in the Port of London. Then I asked: "Supposing I wanted the flour stored with you in the Victoria Dock, put on board outgoing ship in another dock, what would your charges be?" They said 8s. 9d. per ton. So you can see that it is quite reasonable that we should not land more flour in the docks than we can help, because it directly prevents our exporting it. The difference in charge of 8s. 9d. to 1s. 9d.—7s. a ton—is a much more handsome profit than we get on our trade in the usual way.

ee 11736-2.

10109. Will you tell me what you eventually did with that particular flour?—That actual flour I put on rail and sent it into the country afterwards, but I supplied my export customers with flour landed at a wharf, in order to save the difference between 1s. 9d. and 3s. 4d.

*Cross-examined by Mr. George Wallace.*

10110. Can you give me the name of a particular jetty. Can you identify that transaction for me?—I cannot here; I have not my books. The information is in my books in the office.

10111. How long ago was it?—Within the last month or two. I know it is a fact now, and the consequence is, of course, I did not attempt the business.

10112. Can you give me any particulars of the ship and the dock. It was Victoria Dock, I understand?—

(*Witness.*) We are utterly powerless in this case on this side. The steamship owners print the bill of lading; that bill of lading is circulated all over America; it is presented at different mills in different parts of America and it contains those clauses; a miller accepts it in America and it is sent over to us; it is a contract already made between the shipowner and the miller; we have no alternative but to accept it.

*Mr. J. Kingsford.*

17 June 1901.

It was Victoria Dock. The flour was warehoused in the warehouses in the Victoria Dock, in the dock company's hands.

*Mr. H. B. Tasker.*

10113. Standing in your name?—Yes.

10114. I only want to identify the transaction if possible?—Certainly. I shall be very pleased to give you full particulars from the office.

10115. Can you tell me the ship that it arrived by?—I cannot now. It is not the only transaction I have ever had in my life.

10116. That is the reason I want to get something definite?—If you ask me to do it I shall be pleased to send you the information. I can send anything, but I cannot answer the question here.

*Cross-examined by Mr. Harper.*

10117. Have you ever had any difficulty with regard to the measuring out when the ship delivers flour or grain to barges?—Yes, generally two or three times a week.

10118. I do not know whether you were here when Mr. Roffey gave his evidence?—Mr. Roffey was a grain witness. I am speaking of flour.

10119. Have you the same difficulty with regard to flour that he was speaking of with regard to grain?—Yes.

10120. Would it be desirable that there should be some dependable authority to act between the shipowner and yourself as receiver?—I think it might be an advantage.

*Re-examined by Mr. Rowland Whitehead.*

10121. With regard to the facilities at Liverpool compared with those at London, do you get quicker delivery in Liverpool?—Yes, because in Liverpool you only have to apply for your goods after they are absolutely ready for delivery.

10122. And is that an advantage?—Certainly. Here you have to apply for them within 72 hours after the ship reports, but you may not get them for a fortnight.

10123. With regard to the handling of the flour, is there any difference in the facility in that respect as between Liverpool and London?—Yes, decidedly. In London we dare not import flour in cotton bags, because the handling it receives is so rough that the bags are not sufficiently strong, but in Liverpool we import all our flour in cotton bags, and flour can even be landed in Liverpool, carted, we will say, to an Irish steamer, sent over to Ireland, then transported by railway into the heart of Ireland, and it will get there in better condition than flour in jute bags will come up from the Victoria Dock to a London wharf.

10124. With regard to the quay accommodation in London as affecting the flour trade, is it conveniently arranged?—We get no advantage of quay accommodation; we get nothing; it is not the slightest use to us; it makes no difference to us whether the flour goes on the quay or not, because it is not sorted for marks and classified for damage, and the bags are not weighed. There is nothing done for us on the quay. The only thing is, we, as consignees of the flour, have to pay 1s. 9d. a ton in order that the steamship owner should put it on to the quay, which he ought in the ordinary way to do at his own cost.

10125. The flour is always discharged comparatively low down on the river?—Yes.

10126. It has to be taken to the centre of distribution, which is higher up?—Yes.

10127. Therefore it always has to proceed either by barge or by cart?—Yes.

10128. It has to bear the expense involved in that cartage or barging, and that makes the question of facilities all the more important to the flour trade?—That is so.

Mr. JOHN INNES ROGERS recalled and further examined.

Mr. J. I.  
Rogers.  
17 June 1901.

10129. (Chairman.) I understand that you now come before us to present the scheme for a trust as adopted by the London Chamber of Commerce at a meeting held on the 9th of May last?—Yes.

10130. Will you be good enough to give us the scheme?—I ought to say, first, that we present this with extreme diffidence, and really in reply to the request of the Commission made some months back that we should prepare a scheme.

10131. I do not think you are quite accurate as a matter of fact. We never did ask for a scheme. We said we could not listen to anything unless you formulated your ideas?—I understood that we had to draw up a scheme.

10132. At all events, you have done so?—Yes, and we were very anxious after we had drawn it up to consult the various public bodies on the subject in order to work in consonance with them, but for various reasons they were unable or declined to consult with us. We then called a large meeting of traders, representing a large number of trades, and they made a few alterations in the scheme, but practically it was unaltered. Our idea is to have a scheme for the waterways only, and to exclude warehousing.

10133. Will you please give us the scheme?—Yes.  
*Formation of the Trust:*—(1.) A London Harbour Trust (hereinafter called the Trust) to be formed, to whom shall be given the sole control of the waters of the Thames from Richmond Lock to Yantlet Creek, and of the water area of the docks, and of the banks, foreshores, piers, tow-paths, and adjacent property, and also of the waters and banks of the Lea and other streams, so far as may be desirable. *Object of the Trust:*—(2.) The objects of the Trust are to acquire the control of the whole of the waters of the port, and having done so, to control them and the traffic thereon so as to promote the trade and commerce of the port for the benefit of, and in the interests of the whole of the inhabitants of London, and not of any section thereof. In particular, the object of the Trust is to render the waters of the port accessible, so far as is reasonably practicable to the vessels of all sizes of all nations, and to promote their entry, unloading, reloading, and sailing to the best of their ability, levying only such rates, tolls, and charges as may be absolutely necessary for such purposes, or for extensions of the works of the Trust, and using all surplus revenue (left after paying the expenses of administration, interest on borrowed capital and amortization thereof), in the reduction of such rates, charges, and tolls, with the aim of rendering and keeping the Port of London as the chief mercantile mart of the world as well as of the Kingdom. *Powers of the Trust:*—(3.) The Trust shall have transferred to it the whole of the powers, duties, rights, privileges, charges, rates, and tolls now exercised or enjoyed between the said limits by:—(a.) The Thames Conservancy Board. (b.) The Watermen and Lightermen's Company. (c.) The London and India, Millwall and Surrey Commercial Dock Companies and any other docks. (d.) The Commissioners of Canvey Island. (4.) The Trust to be able to impose and collect rates, and to do any matter or thing which may be done or vested in the authorities or undertakings taken over. (5.) The Trust to have the power transferred to it of regulating pilots, of fixing pilotage rates, and to take over any property, real or personal now held in Trust and for pilotage purposes in the port. (6.) The Trust to have powers to dredge channels and shoals beyond Yantlet Creek where necessary. (7.) Above Richmond Lock the authorities now existing to continue in charge, with all their powers and rights, in the same way as is done by the Mersey Trust above the Port of Liverpool. (8.) In taking over the powers of the various bodies named, the Trust is to safeguard the interests, so far as may be, of the servants of the corporations they supersede. *Constitution of Trust:*—(9) The Trust to be constituted as follows:—Ex-officio members: Corporation—six representatives. London County Council—six representatives. One representative of the Admiralty and one of the War Office. The Chancellor of the Exchequer. One representative of the Board of Trade. The Chairman and Secretary of H.M. Customs. Two representatives of the Thames Conservancy. Two representatives of the Trinity House. Two representa-

five elected members, representing the shipowners, sailing barge and tug owners and lightermen, short sea traders, Lloyds, public and private wharfingers, and merchants and manufacturers landing goods in the port. The President and Vice-President to be elected by the Trust. These representatives to form the Board of the Trust. The elected members to be chosen in the manner laid down in Schedule A. (to be hereinafter drafted). *New Docks:*—(10.) On and after the formation of the Trust, no new dock or docks is or are to be formed within the limits of the port save by the Trust itself and for its benefit. *Transfer of Docks to Trust:*—(11.) On and after the formation of the Trust by Act of Parliament, the whole of the property, rights, and privileges of the London and India Dock Company, the Millwall Dock Company, the Surrey Commercial Dock Company, and any other dock company within the limits of the port, shall pass to and be vested in the Trust, which shall thereupon and thereafter enjoy the same, and in return assume and in due time pay such liabilities as may be incurred from that date on account of such docks. (12.) The Trust to have power to take over such property on or near the river, as it may think desirable to acquire, the power to be compulsory, subject to due compensation to owners. (13.) Money due, to or from various authorities and undertakings, to be taken over by the Trust at the time of transfer, and all books, papers, and documents relating to the property and rights of the authorities or undertakings to be handed over to the Trust. *Revenue of the Trust:*—(14.) The revenues of the Trust to be those now levied with power to add to, diminish, vary, or extinguish such charges, rates or tolls as are or may be levied by: (a) The Conservators of the Thames. (b) The Watermen and Lightermen's Company. (c) The dock companies or others whose interests have been or may be acquired. (15.) The Trust to be empowered also to make such charges as may be reasonably levied on any goods, wares, or merchandise whatsoever that may be landed in or on any public or private wharf, warehouse, quay, foreshore, shore, banks, road or path within the jurisdiction of the Trust, from any ship, vessel, lighter barge, tug, boat, raft, or floating receptacle. *Power to Public Bodies to Aid Financially:*—(16.) Should such rates, charges, or tolls as are hereinabove enumerated be insufficient for the maintenance or development of the port, the London County Council, and /or the Corporation, on the request of the Trust, may, if it so please, levy a rate of not more than in the pound sterling on the property liable to rates within the jurisdiction of the Council, such to be solely used:—(a) In deepening, dredging, and keeping in order the channels, shoals, docks, basins, and water area of the port and its approaches. (b) As security for a loan or loans to be guaranteed or raised by the Corporation of the City, the London County Council, or by the Trust, with its or their authority for the purposes named in the preceding paragraph, such loan or loans to be for a period for each of not more than years, interest to be duly paid thereon at dates to be fixed; and if interest be not duly paid, the Corporation or the London County Council may enter upon, seize, and become possessed of and enjoy the whole of the property, rights, powers, privileges, tolls, charges, rates, rents, or fees of the Trust, and administer the Trust thereafter in the interests of the inhabitants of London. Provided nevertheless that, if it be shown to the satisfaction of the Corporation or the County Council, that any or certain works are essential to the development or maintenance of the port, and that the rates, charges, tolls, fees, or rents levied, or which may be levied by the Trust, are insufficient for the due execution of such works, or would only be sufficient at too great a cost for the trade of the port for the time being to bear, then the Council may in its absolute and unfettered discretion make a grant to the Trust of such sum or sums as may be necessary for such works, either by way of a free gift or a loan, seeing only that the Trust use such grant or grants for such works and for no other purposes. *Payment for the Docks:*—(17.) The Trust shall be empowered on the security of the property acquired, and of the rates, charges, tolls, rents, or fees to be levied by them in the port, to borrow such sum of money at such rate of interest as may appear reasonable, interest to be guaranteed by the Corporation and /or the London County Council in consideration of their representation on the Trust, and out of the proceeds of such loan or

See 1027

See 1035

See 10270.

loans to pay the dock companies for the value of their property as hereinafter provided. (18.) The Trust shall take account of the value of the property of the dock companies, and shall pay therefor (either in bonds or cash) such a price as shall appear reasonable having regard to the condition of the property, but not more than the market value of the debenture mortgage, or debts, of the companies and of their preference or ordinary shares on the . . . The value to be attached to the bonds will be determined and enhanced by the greater liability of a public trust to fulfil its obligations, as compared with the debts of the dock companies. Disputes as to the value of the property, or as to the sum to be paid for it, to be settled by arbitration as provided in Schedule B. (This Schedule we have not yet drawn up.)

*Administration of the docks by the Trust:*—(19.) On becoming seized of the properties of the dock companies or of any of them, the Trust shall, as soon as may be, proceed to sell or to let upon rent to the best advantage, all water basins, warehouses, sheds, cranes, boats, lighters, land, or other property that may not be consistent with its duties as a Trust for the water area of the port, and not for the purpose of warehousing goods for hire, such warehousing beyond a period of . . . clear days after landing being expressly forbidden to be undertaken by the Trust.

The Trust, as soon as may be, shall retain in its possession or control only the water area of the docks and port and the quays, locks, bridges, and appliances that may be requisite for the accommodation of vessels within the docks, and the landing therefrom of goods on to quays, elevators, stages, barges, or craft, having regard to the following conditions:—(a) The Trust may retain any land likely to be wanted for extensions of the docks area, and all roads, bridges, and other appliances or adjuncts that may be necessary for convenient access to the docks, or for the construction or enlargement of railway lines within the dock areas. (b) The Trust may also keep, purchase, hire, or erect such sheds, warehouses, or elevators of one or more storeys upon or adjacent to the docks, quays or stages, such sheds and warehouses to be used only for landing, and for weighing, taring, and sampling of such goods by persons licensed by the Trust, and acting under their supervision under cover at such rates or tolls as may be fixed by the Trust, so long as the rates for landing shall not be less than the tolls charged by the Trust when goods are landed elsewhere, and so long as such goods are removed by the owners from such premises within a space of . . . days from the date of landing and if not so removed, then the Trust shall be bound to place them at the risk and cost of the owner at the nearest or other suitable public warehouse receiving goods on rent or hire. (c) If any warehouse or warehouses taken over from the docks, abuts or abut on the water side of a dock, creek, or river, with no intervening quay between such warehouse and the water, the Trust shall in no case use such warehouse or warehouses for the purpose of storing goods, ~~unless~~ <sup>but</sup> be reasonably suited for the landing, and weighing, and sampling of goods as hereinabove provided, but shall sell or let such warehouse or warehouses so abutting upon the water, and be empowered to charge additional tolls for the direct discharge of goods into the warehouse, so that such property shall not unduly compete with the public and private wharfingers of the port. (d) The Trust may place or erect quays or stages between such abutting warehouses, or other warehouses or property and the water under its control.

*Legal:*—(20.) The revised laws as to the Trust and the port to be embodied in one consolidated Act, and based as far as may be applicable or desirable on 21 and 22 Vict. Ch. 92, The Mersey Dock Consolidation Act, 1858, with power to the Trust to confirm, issue, vary, or cancel bye-laws, etc. Until new bye-laws are issued, those in force under the power of any previously existing body to remain in force. The Trust, in particular, to have power to issue new bye-laws for the registration of lightermen, barges, etc., in place of those of the Watermen's Company, and also to be given all requisite powers over and under, and in the docks to be acquired. General powers to various authorities under the Canal Boats Act, 1877 to 1884, the Merchant Shipping Act, 1894, and the Public Health Act, to remain as they are, but so far as may be, their administration within the port to be handed over to the Trust. The Thames Conservancy Act, 1894 (57 and 58 Vict. Ch. 187), the Thames Watermen and Lightermen's Acts, 1859 (22 and 23 Vict. Ch. 133) and

1893 (56 and 57 Vict. Ch. 81), and the various bye-laws and rules issued thereunder, to be used as the basis of the powers of the Trust, but to be repealed; new Acts being passed to renew and confirm what may be left of the Conservators' and Watermen's Company's powers.

Mr. J. I. Rogers.  
17 June 1901.

10134. Now have you any remarks to make upon that scheme?—Yes. I am the chairman of the Council of the London Chamber of Commerce, and submit the following evidence with reference to the scheme. In accordance with the suggestion made by the chairman of the Commission on the 4th day's sitting, that the London Chamber of Commerce should submit details of their suggestion that a public body should be formed to administer the Port of London, the Railway and Dock Rates and Charges Committee appointed a sub-committee to draft such scheme. This sub-committee was appointed, and consisted of:—Mr. Charles Charleton, director of the Associated Portland Cement Manufacturers (1900) Limited, Chairman of the Railway and Dock Rates and Charges Committee of the London Chamber of Commerce; Mr. John Innes Rogers, chairman of Joseph Travers and Sons, Limited, Chairman of the Council of the London Chamber of Commerce; Mr. George Roffey, of the firm of George Roffey and Sons, vice-chairman of the London Corn Exchange; Captain Anthony Standridge Thomson, C.B., one of the Elder Brethren of Trinity House, Member of the Council of the London Chamber of Commerce; Mr. Edward Besley, managing director of Chamberlain's Wharf, Limited, member of the Wharf-owners', Warehouse Keepers' and Granary Keepers' Association; Mr. Henry Coker, late general manager of David Sassoon and Company, late president of the Liverpool Chamber of Commerce, and late member of the Mersey Docks and Harbour Board, and of the Bombay Port Trust. The sub-committee as above held meetings on November 29th, December 5th and 11th, and submitted their scheme to the Railway and Dock Rates and Charges Committee, who recommended it to the Council of the Chamber at a special sitting held on the 9th January, 1901, when the scheme as presented by the sub-committee was adopted "for purposes of conference only." The Council of the Chamber were of the opinion that it was desirable that a united scheme from the City Corporation, the London County Council, and the Chamber of Commerce should be presented to the Commissioners. The conference was therefore delayed until the very last moment in the hope that the co-operation of the City Corporation might be obtained. The London County Council were also requested to join the conference, but declined to do so on the ground that they had decided upon their course of action prior to receiving the invitation.

See 1281.

See 10272.

10135. Will you tell us the answer that you received from the City Corporation?—They practically had adopted their own scheme. We had a number of verbal communications with the officials of the Corporation, and we found they preferred to go on by themselves. Therefore we thought it was useless proceeding further. The scheme was sent to various trade associations and trade sections of the Chamber, with a request that it might receive the consideration of those bodies, and that a delegate might be appointed to attend a conference to be subsequently held to either approve the scheme or to suggest amendments thereto on behalf of those bodies. The bodies represented were:—The London Shipping and Forwarding Agents' Conference; The Foreign Carriers' Conference; London Chemical Manure Manufacturers' Association; London Flour Millers' Association; London Corn Trade Association; London Flour Trade Association; Barge Owners' Protection Society; Sailing Barge Owners' Protection Association; Grain Trade Mutual Protection Association; Committee of Lloyd's; Metropolitan Grocers', Provision Dealers', and Oilmen's Association; Timber Trade Federation of the United Kingdom; London Wholesale Sugar Dealers' Association; Wine and Spirit Association; Indian Tea Association; Preserved Food Trade Section (Chamber of Commerce); United Planters' Association of Southern India; Western Australian Section (Chamber of Commerce); Provision Trade Section (Chamber of Commerce); Leather Trade Section; Trade Marks Section; Toy and Fancy Goods Trade Section; Colonial Wool Merchants' Association; Textile Trades Section (Chamber of Commerce). The Wood Pulp Association expressed their approval

Mr. J. I.  
Rogers.

17 June 1901.

of the scheme, but did not attend the Conference. Certain amendments were proposed by delegates at this Conference, some of which were adopted by a majority, for recommendation to the Council, and some were not accepted by the majority at the Conference. These amendments were four in all; three had reference to Clause 9 (the constitution of the Trust), and two referred to Clause 19 (administration of the docks by the Trust). These amendments will be detailed in their respective places. The chief difference of opinion disclosed was as to whether the proposed Trust should take up the warehousing of goods, more or less in competition with the existing wharfingers. The conference by a majority decided against this idea, in consonance with the opinion of the Chamber. The Chamber also asked for independent suggestions from Mr. P. W. Meik, M.Inst. O.E., C.M.G., and Mr. Francis Brooke Girdlestone, Manager of the Bristol Docks. I now hand in the two letters they wrote in reply:—

*(The Witness handed in Copy of a Letter from Mr. P. W. Meik, M. Inst. C.E., C.M.G., respecting the scheme of the London Chamber of Commerce for the formation of a London Dock and Harbour Trust. See Appendix, 26th Day, No. 4.)*

*(The Witness also handed in Copy of a Letter from Mr. F. B. Girdlestone, Secretary and General Manager of the Dock Estate of the Corporation of the City of Bristol respecting the scheme of the London Chamber of Commerce for the formation of a London Dock and Harbour Trust. See Appendix, 26th Day, No. 5.)*

The London Chamber of Commerce now beg to submit to the Commission the result of these lengthy labours and discussions. They do so with considerable diffidence, and solely in deference to the request of the Commission. Your Lordship tells me it was not at the request of the Commission, but we understood it was, or we should not have gone into all this work. The subject bristles with difficulties and the Chamber simply hand in their scheme as a draft for consideration. Their guiding principle has been, while respecting the existing position and proceeding on the lines of least resistance, to draw up a working plan for a public Trust which shall absorb the various authorities and shall manage the waters of the port, and the waters only, for the good of London as a whole. We feel acutely that London has for a long time past been falling behind the requirements of modern commerce, and that in the interest of its 6½ millions of people, in the interest of the nation, and even of the Empire, a vigorous effort must be made to bring this great and ancient port up to the level of the age. With this object in view, we have not approached the subject in a huckstering spirit with a view to reducing the charges upon our businesses. On the contrary, it is our belief that no adequate reform can be brought about, without at first, at any rate, increasing the burdens upon trade; but we are willing to submit to this so long as the money falls into the hands of a public body working for the interests of all, and not into the hands of private bodies quite properly working in the interests of their shareholders. We greatly regret that, owing to circumstances, our action takes the apparent form of an attack on the dock companies of the port. As a matter of fact, we see their difficulties very clearly, and sincerely sympathise with their position. We should have much preferred that the whole question should have been discussed on general grounds, but owing to the dock bills this has been impossible. At the same time, we feel that, while the dock companies should be treated not only fairly, but with the utmost consideration, the time has come when the control of the docks of the port should be taken out of private hands, and that the navigable waters of the Thames should be governed as a whole in the public interest. The difficulty is to create such a trust with fairness to all the parties. We have to deal with:—(1.) Ships discharging in the river, of a tonnage of some 16,000,000 tons a year. These pay no dues to the port except the entirely inadequate Conservancy charge. (2.) Ships of some 6,000,000 tons a year discharging in the various docks. These pay dock dues of 1s. per ton, in addition to the Conservancy charge. (3.) Goods landed on the docks—some 2,000,000 tons a year out of the 6,000,000 tons brought into them, the remainder being removed by lighters which pay no charges or dues, but the working of which entails considerable expense on the docks. (4.) Goods either landed at public or private wharves in the first instance or lightered to them from the

docks. These goods pay nothing towards the expenses of the port. The joint value of the public wharves of London is believed to exceed that of the docks, judging from the rating books. (5.) Of the value of private waterside premises no estimate can be formed, but as the separate properties exceed 300 in number, their aggregate value must be enormous, especially as some of the waterside factories or warehouses are of immense extent. (6.) The lightermen's and bargeowners' interest. We have thus at least six distinct and more or less conflicting interests to deal with, and the initial difficulty faces us that for the smaller ships discharging in the stream (which appear to give us some 70 per cent. of our supplies) London is almost a free port—that is, we only pay ½d. or ¾d. per ton on the ships in the Conservancy charge, and the goods pay nothing at all. It is believed that this can be altered without driving trade elsewhere by a moderate increase in the rates on ships and by a port landing charge on goods, which shall extend to all goods whatsoever landed in the port. The short sea traders naturally would object strongly to both propositions, but without them we believe that an adequate revenue cannot be raised. The only alternative if the river is to be brought up to date is a rate on all property in London. We should only contemplate this if it were proved that the cost of bringing up London to the level of the age would be so great that if placed on ships and goods it would drive trade away. In considering this question also it must be borne in mind that charges must not be so raised here as to encourage imports at Southampton and other railway ports. With reference to long distance and large vessels the dock dues here are 4d. per ton less than in Liverpool, but shipowners state that the latter is nevertheless the better port for them, in consequence of the facility of discharge. If we can obtain the latter advantage, dock ship dues here might be raised. There can be no doubt that much of the delay and difficulty in the Port of London is due to the public and private warehouses, where goods are stored, covering miles of space on both sides of the river. This necessitates lightering, of some of the results of which the dock companies quite naturally complain, though their proposed remedy is absolutely unjust and impracticable in the opinion of the Chamber. Parliament a century ago granted a compensation of one million sterling for the partial creation of a dock monopoly for 21 years to the public wharfingers of London then existing. Their interests now are probably enormously greater in the aggregate than in 1800, and our immense private waterside interest has probably entirely come into being since then. Free lightering, in the opinion of the Chamber, is thus absolutely essential to the port. In our scheme for a trust we have tried to deal fairly with all the conflicting interests in the port, and if we have proposed any thing that is unjust to anyone, it has been contrary to our intention. In our proposals we have dealt only with the waterways of the river. We believe that it is absolutely impossible for a trust to buy up the whole of the public and private warehouses where goods are landed, at any price that would not be prohibitive, in addition to the cost of the docks and other improvements necessary in the port. If the whole of the warehouses are not bought up, we should leave the trust with the advantage of the public credit, competing with private individuals. In addition to this, we believe that warehousing has not only decreased, but that it is likely to decrease in an increasing proportion, owing to the changes going on in the trade, which render it essential to reduce charges, and to keep as light stocks as possible. The trust might thus spend tens of millions on bricks and mortar, which might rapidly depreciate in value. A trust for the whole waters and waterside interests of London would also necessitate the employment of tens of thousands of labourers, an undesirable position for a public body. For all these reasons we believe that the only port trust practicable in London is a trust to control the waterways. As regards the constitution of the trust we believe it should be very largely municipal, so that there should be efficient control in the general interest. In the peculiar position of London as a great military, naval, and fiscal port, several Government departments should also be represented on the trust, as proposed in our scheme. The whole of the detail work ought, however, in our opinion, to be in the hands of practical representatives of the traders and shipowners interested in the port. As to the finances, I give the following evidence with some diffidence, as we have felt ourselves in the difficulty of not really having sufficient data. The Chamber of Commerce have not sufficient data to make more than a rough sketch of how

See 102

the financial portion of their scheme would work out. If the power be given to the trust to levy port dues on ships, and on all the goods landed in London, it is obvious that any revenue required can be raised. The sole thing to guard against is to see that the port dues to be imposed do not exceed those of other competing ports. If the necessary money cannot be raised without making London relatively dear, the importance of bringing our port up to the front rank is so great from the civic, national, and Imperial points of view, that in the last resort, a rate in aid, levied on all property in London, would, in our opinion, be justified. We do not, however, believe that any step of the kind would be in any way necessary. The market value of the various stocks and shares of the dock companies of London in round figures is £17,000,000 to £18,000,000.

10136. Does that include the Surrey Commercial Docks and the Millwall Docks?—Yes.

10137. And the Poplar Docks?—I took the whole of the dock stocks; I do not recollect the individual names.

10138. That includes all the companies you propose to take over?—Yes. If the undertakings were bought at that price the land and warehouses would be sold under our scheme. As the land area is roughly half of the whole area of the docks its value may be taken for our purposes at £9,000,000. Then we have to consider the unknown amount required to adequately deepen the river and to bring the docks, quays, and appliances up to date. The cost of a 30ft. channel up to the Albert Docks has, we believe, been put by the County Council Engineer at £2,000,000, and to this we add £4,000,000 for the cost of dock improvements, a figure probably unnecessarily high. This would give the following as the capital required by the trust:—Capital—Cost of water area and quays of docks, £9,000,000; cost of deepening river, £2,000,000; cost of modernising docks, £4,000,000; total estimated capital, £15,000,000. We assume that this money would be borrowed at 3 per cent. under a public guarantee or perhaps by a loan from the municipal authority raised at 2½ per cent., and lent at 3 per cent., so as to allow for redemption.

10139. Where do those figures come from; who is responsible, for instance, for the suggestion that a municipal authority could borrow at 2½ per cent.?—That is in our scheme. We have discussed it a great deal; I do not know that we have taken a formal vote upon the point. This was put in in a very diffident way; we have not gone into each of these points specifically, but that is the general idea underlying it. A capital of £15,000,000 at 3 per cent would mean a yearly charge of £450,000. We took out the figures as to the cost of managing ships in Liverpool, from the Liverpool Dock returns as nearly as we could. We then added 2d. a ton, because they have not in Liverpool to deal with lighters. The yearly charge of £450,000 might be raised as follows:—

#### Estimated Revenue.

Dock dues on 6,100,000 tons of shipping at an average of 1s. per ton, with a maximum of 1s. 4d.	£305,000
Port dues on 22,000,000 tons of shipping in and out at an average rate of 2d. per ton, with a maximum of 4d.	185,000
Balance required for income to be made up by a charge on all goods arriving in the Port of London. For the purpose of rough calculation I have assumed that the shipping tonnage represents the goods tonnage 14,500,000 tons at an average of 5d. per ton.	302,000
Total gross income of the trust.	£792,000
Expenses of working taken at 1s. per ton, the Liverpool cost being apparently 10d. per ton without the lighters we have to deal with here.	305,000
Income of trust.	£487,000

If exports were charged at an average of 2d. per ton for dues the extra income would be £70,000. We do not propose to charge exports. The receipts given above omit a number of important items for rent, graving docks and other charges made by the docks on ships which the trust would continue. It also omits a number of minor charges made by the Thames Conser-

vancy. In fact, in the absence of details as to the actual gross and nett revenue from ships in our docks, the only object of our rough outline sketch is to show that there are ample sources of revenue for the proposed trust, the only difficulty being to adjust them so as not to interfere with trade. A small increase in charges such as is proposed would be compensated to traders as a whole by the universal creation of quay rates in London which would follow on our scheme. We propose, it will be noted, no port dues whatever on exports. The gross extra charge on London goods and ships named above would amount to £475,000 a year, or less the present conservancy rates, say, £415,000 a year. It is quite likely that quay rates at the docks would save merchants even half of this sum, but assuming the gross extra charge to nett £300,000 a year, after deducting this saving, the alternative would be a rate on London property of 2d. in the £, in which case no extra charge need be imposed on ships or goods.

(Adjourned for a short time.)

Now I will deal with the clauses of the scheme in detail. Class 1.—Yantlet Creek is suggested as the seaward limit as it was not thought advisable to encroach on the waters under Admiralty jurisdiction. Clause 6, however, proposes to give powers to the Trust to dredge seaward channels and to deal with shoals. There appears at present to be no authority dealing with these points. Clause 2.—I have no special remarks to make on the definition of the object of the Trust which speaks for itself. Clause 3.—Here the original scheme proposed to take over the lighting and buoying powers of the Trinity House, but on consideration it was thought better to leave these matters under the present management. Thames buoying and lighting are paid for out of the general revenue of the Trinity House levied on all shipping, and while this remains unaltered it would not be economical for the Trust to undertake the work out of specially raised funds. Clause 4.—It will be seen later that it is not proposed to include warehousing among the undertakings of the new authority. Clause 5.—It should be recorded that Captain A. S. Thomson, C.B., of the Trinity House, one of the members of the sub-Committee responsible for the scheme, differed from his colleagues with regard to this Clause. The majority of the sub-Committee and the Council of the Chamber both approved of the Clause as it stands. Clause 9.—Constitution of Trust.—I will first of all detail the amendments suggested by delegates to the conference in connection with this Clause. In the original draft the President and Vice-President were among the ex-officio members and were: the Lord Mayor for the time being, and the Chairman of the London County Council. An amendment to the effect that the President and Vice-President should be elected by the Board of Trust was adopted by a majority of delegates. In the original draft scheme no representation was given to the lighter, barge, and tugowners. A motion to the effect that these bodies should have representation among the elected members was carried. A motion to the effect that the new Borough Councils for riverine boroughs should have representation was not seconded. Representation of the County Council and the Corporation.—This representation was accorded with the view of a public guarantee of the loan, and possibly of a rate.

10140. What do you mean by a "public guarantee." Do you mean an imperial guarantee?—No, I mean a municipal guarantee.

10141. Perhaps you would be kind enough to tell us what you do mean?—That the Corporation and/or the County Council should guarantee it. In other official cases we think an ex-officio representation of two or three at the most will suffice, as the root idea of the constitution of the new authority should be that those paying port dues or having intimate business relationships with the port (such as the wharfingers and lightermen) should have the main representation, and that the working Committees (with the exception perhaps of the Finance Committee) should be entirely taken from the elected members. Apart from the financial aspect the City Corporation is entitled to representation, from its old historical connection with the management of the port; from its position on the existing Thames Conservancy, and by reason of its connection with the port as the sanitary and market authority. We consider that the London County Council are also entitled to representation, and if either taxation of the ratepayers of London or a guarantee of

Mr. J. I.  
Rogers.  
17 June 1901.

Mr. J. I.  
Rogers.

17 June 1901.

the Trust's loan is necessary to a strong representation on the Trust. The inclusion of both these bodies would strengthen its constitution, for while the detail work of the Trust should be in the hands of the elected members we feel that it should not altogether be conducted in trade interests, without control on the part of the general public as represented by the inhabitants of London. The imperial aspect of London should also be represented, as London is the centre of the Empire, and the Thames includes our chief arsenal and is a great naval and military centre. As the chief port of Customs' revenue and for British commerce, the Board of Customs, the Chancellor of the Exchequer and the Board of Trade should have a voice on the Trust. There was considerable difference of opinion in the Chamber as to whether the elected representatives who would have an immense amount of work to do, particularly at first, should or should not be paid. The Commissioners are of course aware that in Liverpool the elected representatives are not paid, and the system has worked admirably. The very best men are placed upon the Trust, and are proud to serve their fellow-citizens without reward. London is less concentrated than Liverpool; there is less public municipal feeling among the commercial community, and there might be a danger of unpaid representatives taking up the work for the promotion of their own special interests. The question of payment is a difficult one, and the general feeling was that the Chamber should not make a recommendation to the Commission upon this point. Clauses 14 and 15.—This is not a suggestion that the new authority should be entitled to the property of the Watermen's Company. It is hoped that the company will be done away with; but it will probably need its revenue for pensioning its members and officials, and compensating its freemen. Clause 16.—We think that the revenue of the Trust, if given powers to impose dues on all goods landed in the port, will be ample for all requirements. There is not, in our opinion, the slightest fear that the guarantors would have to take over the administration. We do not think that the proposal that the Exchequer should guarantee the loan is practicable, as such strong opposition would be met with. We think that the London County Council should be asked to guarantee the loan, solely in order to raise the money cheaply. So far from thinking that the security of the rates would tend to extravagance on the part of the new authority, we think that that body, composed, as it would be, of those merchants and ship-owners whose interest it is to appropriate the dues they pay to the proper purposes of improving and preserving the harbour and accommodating shipping, who know that all surplus moneys will be devoted to reducing or abolishing the dues in proportion as they can be surrendered, would use the utmost care over expenditure. Clause 18.—The market value of the shares and stocks of the companies should be the basis for the payment. They are trading companies, and cannot fairly claim a right to the enhanced value of their property, consequent upon the increase in the population. It was discussed several times among us, and we thought that an average value of the shares might be taken, say, over a period of three years, or something of that sort. What we have put in is the market value, leaving the date to be fixed.

10142. Are you aware whether there is any Parliamentary precedent for buying up undertakings of this kind at a Stock Exchange market value?—I am not aware. We wish the dock companies to be treated handsomely and liberally, and if there is no precedent without a percentage added to it we should bow to that, of course. Then with regard to the last clause, No. 19, Mr. Coke was to be here to explain, but, owing to the evidence having come on earlier than we expected, he is not here. He was a member of the Mersey Dock Trust for several years. If your Lordship wishes, I can give the bulk of his evidence, which I can support.

10143. Has it been carried as part of your scheme?—Yes.

10144. Do you wish to make any remarks of your own upon it?—I only wish to give the reasons that influenced the Chamber in deciding that warehousing should not form part of the general business of the new authority. First, they consider that under the circumstances of the Port of London such authority should not interfere or compete with the public wharfingers.

10145. (Mr. Lyttelton.) What about private wharves?—Public or private it would be; but discretion should

be given to the new authority to retain such warehouses adjacent to the docks as may be necessary for the purposes of the trust. Secondly, they do not believe that the new authority would be able to make a general warehousing business profitable. I am aware that the present dock authorities hold a contrary opinion, but I would point out that in order to make any definite statement as to whether any particular branch of their business is or is not carried on at a profit, the accounts of those branches should be kept separate and distinct, and that only the difference between the receipts and expenditure should be carried to the general accounts. To fully illustrate the reasons for my belief that warehousing would be of no advantage to the new authority, I would allude to the system in force at Liverpool, where the warehouse accounts are kept distinct from the general account. The profit or loss on each warehouse is shown and the net balance is carried to the general account. This net balance, I believe, does not cover the interest on capital expended on the warehouses, notwithstanding that the charges in the board's warehouses are generally higher than those of outside warehouse-keepers. If he had been here Mr. Coke would have enlarged on that point, because he was a member of the trust for some years. Powers should be given to the new authority to levy dues on goods discharging in the river, inasmuch as such goods get the advantage of all improvements of the port, the amount and method of collecting being left to the authority.

10146. What is the basis of the opinion that the market value of the shares should be the basis of the purchase?—We discussed it, and we thought it was fair that the market value prior to your report or any scheme being formulated should be the basis, in order to prevent speculation in shares after the method was known.

10147. Is not the general basis of the purchase of public undertakings of this nature, and tramways, water companies, and so forth, a certain number of years' purchase applied to net maintainable revenue?—I believe it is very frequently so.

10148. Had you anything special in your mind which induced you to adopt this in contradistinction from that usual basis?—We thought that the market value of the shares was obviously their value at the moment, and that therefore it would be fair to the dock companies to adopt that.

10149. Was it before you that the usual basis was the basis that I have indicated to you?—No, it was not.

10150. It was not discussed by you?—It was not discussed.

10151. I see you have addressed yourself—and speaking for myself I am extremely obliged to you for having done it—to what a good many people think is the real core of the question, that is, whether a public trust can be formed without injustice to the private and public wharfingers?—Yes, that has been my main pre-occupation.

10152. First upon that question you have had, I suppose, to consider whether as a practical matter the severance of what we may call the docks from the warehouses can be made?—Yes, we thought on the balances that it could, but it presents great difficulties, undoubtedly.

10153. As that is so very important a question, I want to know if you are able to tell us whether you were advised or informed by a practical man upon that practical question?—We had several wharfingers at several of our meetings, and they were of opinion that the only practical step was a trust for the waterways. We thought on going into it that it was perfectly practicable.

10154. Now I want to know, please, if you can tell me, how you addressed yourself to that question, because that is, if I may call it so, a practical dock question—I mean the question whether the warehouses can be severed from the docks. Were you advised by any dock expert on the point?—We were not.

10155. Did you only take the opinion of the wharfingers?—The wharfingers, and Mr. Coke is a practical man. He has had to deal with the creation of two trusts, one in Liverpool and one in Bombay, and he thought it was entirely practicable.

10156. Did you yourself go over the docks and the warehouses with a view to seeing how far they were practicable, as did Mr. Coke?—He is very intimately acquainted with them, and in former years I was very intimately acquainted with them. I spent months of

See 10261.

my time in the docks, but I did not go specially for this purpose.

10157. Did you get any report from any engineer or dock expert on the point?—No.

10158. You will not understand me as underrating the value of your and Mr. Coke's opinions on the matter. I only want to know to what extent you were assisted by experts on this very practical commercial point?—We were assisted by a great body of commercial men, and they were of opinion that it was quite practicable; but we had not the opinion of any dock expert.

10159. I am not suggesting, of course, that you should have obtained London dock opinion, but you have not obtained any from anywhere?—No, except that which we have handed in.

10160. I have looked through that, and it does not deal with the point at all. Do you draw any distinction between the different docks in respect of this matter; that is to say, taking the London and St Katharine or the Albert and Victoria Docks, is any one of them better adapted for severance of its warehouse business than the others?—I think the St. Katharine Dock is less applicable to the purpose, because I think all the warehouses go right out to the water's edge, from my recollection.

10161. Then we will take that first. If you take St. Katharine Dock, would you say, that, as far as the dock is concerned, you could not separate the warehouse business from the dock business?—I think it could be separated.

10162. But with difficulty?—With comparative difficulty.

10163. In your opinion is it the least adapted for the purpose?—Yes. We attempted to deal with that in one of our sub-clauses. The point was raised by Sir Robert Giffen.

10164. That is what I was very much interested to see, because it shows that you have really dealt with what a good many of the witnesses have not dealt with?—In sub-clause (c) of clause 19 we have attempted to deal with that, but really what impresses our minds mainly is that we do not believe that warehousing will pay a trust. We believe that from the course of trade that warehousing is decreasing, and is likely to decrease, from general trade and commercial reasons.

10165. Is not that a somewhat hazardous opinion to give in relation to the proposition in another portion of your scheme, that the warehouses when bought by the public authority should be sold at the price of nine millions?—It might affect it, undoubtedly.

10166. If you think that the warehouse business is a declining business, what grounds have you for estimating the purchase value of these warehouses at nine millions when acquired?—You must recollect that it is a very special business in many respects, and that what might not pay a general trust, might pay a company or an association of a particular trade. For instance, the wool trade is an important trade. It might be worth their while to buy a block of warehouses, and to give a very fair price for it, in consideration of their working their own trade. They would understand their difficulties and their advantages better than a general trust would, and they would be more flexible in their regulations.

10167. Do you then wish to modify the opinion you have expressed as to the declining nature of the warehousing business by saying that you would not expect that it would increase or maintain itself, in the hands of a public trust?—Yes, that is what I mean.

10168. The Chamber of Commerce do not anticipate that the warehousing business in private hands would decrease?—No; I think not. The great tendency is for people to take goods into private warehouses at present, because the goods have to be sorted, weighed, and measured out, and so on; and that would always take place. For instance, in our own business we should have been very glad a short time ago, if the opportunity had offered, to have premises in the docks.

10169. Do you regard the warehousing business for certain trades as so specialised as to be only fruitful in the hands of private specialists?—That is my personal opinion.

10170. And as such you would deprecate the carrying on of warehouse business by a general Trust?—Yes.

10171. Now as to the 9 millions. I am quite aware

of the difficulties you have had in preparing this scheme, but have you informed yourself by any expert opinion as to the value, or have you merely formulated the scheme from a bird's-eye point of view?—We have done the best we could. We put that forward with the utmost diffidence. Of course if we had had the docks valued by experts it would have been a very expensive matter, and we have no funds for such a purpose.

10172. But it is a matter that would be ascertainable by a very competent opinion?—Certainly.

10173. (Sir John Wolfe-Barry.) Can you not give us the voting as to the separation of the warehouse property from the water space property?—The Chamber of Commerce as such is very strongly in favour of it, but when we had the conference with regard to the separation it was only carried by a small majority, and I think mainly by votes of the Chamber of Commerce. Several delegates had an object in view which we did not think was at all justifiable. They thought it would be a great advantage if the Trust was enabled to compete with private warehouses so as to bring down the heavy rates in London; but we did not think that was a legitimate object in a public body. That was the main difference of opinion.

10174. You think that these gentlemen's votes were influenced to some extent by private views?—Yes, by the view of their own trades.

10175. You thus consider that they might be rather influenced adversely to the proposal and were not considering it from a public point of view?—That was our opinion.

10176. At any rate you carried it by a majority, but not by a very large majority?—No, but the Council of the Chamber is practically unanimous in favour of the separation.

10177. Are there not two very distinct questions to be considered in the separation, one the physical question, and the other the commercial question?—Certainly.

10178. You cannot give us any help on the physical question?—No.

10179. You have not consulted any engineers?—No.

10180. You have no really detailed information on the point?—No.

10181. With regard to the commercial view of the subject, I gather that you have no doubt whatever?—We have no doubt at all.

10182. Am I not right in thinking, as has been given here in evidence, that the successful conduct of the private warehousing business rests a good deal on facilities given to traders?—Do you mean advances?

10183. We will say banking?—I think to a very considerable extent it does.

10184. And that is one of the functions which is fulfilled by the private wharves in London, and which to some extent takes away the goods from the dock warehouses?—I have heard it very frequently stated so, but I am not personally acquainted with it.

10185. Those facilities are facilities which could not very well be given by a Trust?—No. It would be impossible for a Trust to give them.

10186. But if the dock warehouses were formed into a warehousing company, or a series of companies, the affording of those commercial facilities would present no difficulties?—None whatever.

10187. And to that extent the various warehouses would all be competing on equal terms?—Yes.

10188. The difficulty which we were told by Mr. Scott presses upon the great dock company would not apply under such a new condition of things?—I think not.

10189. On your revenue side of the question I notice that you propose a considerable addition to the charges. You take first of all the existing rates on a ship at a shilling a ton, but I think you add to that 5d.?—4d.

10190. You do not add 4d., but you propose a maximum of 4d.?—Yes.

10191. Lower down you add 5d.?—We add 5d. by a landing charge on goods—a port due on goods landed in the port, wherever they may be landed.

10192. That would be additional to what is paid now?—It would. Our difficulty is to know whether it is so far additional as to drive the trade elsewhere. If so, it would have to be modified; but with that point

Mr. J. A.  
Rogers.

17 June 1901.

Mr. J. I. Rogers. in view we have left out certain items of revenue which would help to fill any gap.

17 June 1901. 10193. Then you also propose to add to the Conservancy's present charge on shipping?—2d. to 1½d. is, I think, the present Conservancy due.

10194. Then that again is a slight addition?—Yes.

10195. I gather that having given the best consideration that the Chamber could give to this subject, you do not think that these additions would drive away the trade?—No; but we had not the exact rates for similar services in other ports before us. It would very much depend on that, of course. That would be all-important.

10196. But still, as representing the Chamber of Commerce, you propose this as part of a financial scheme, and, therefore, I presume that, *primâ facie*, on the information you have at your disposal at present, you suggest it is reasonable?—Yes.

10197. And, really, the finance of your scheme rests upon these proposals?—Yes.

10198. (Mr. Peel.) Do you suggest that the maximum and minimum rates should be fixed by Act of Parliament, or do you suggest that this trust should have power to charge what it likes?—We have not considered that point; but I should think that the Trust ought to have power to levy what rates it thinks desirable.

10199. Without any restriction?—Yes, without any restriction by Act of Parliament. But we have not considered that point.

10200. You did not consider whether you would allow any trader to have any appeal to any public body with regard to that question?—We have not considered it; but the natural body would be the Railway Commissioners.

10201. In section 12, you say: "The Trust to have power to take over such property on or near the river." I suppose that means in reference to constructing new docks?—Constructing new docks or means of access. I believe—in fact, I know—that the Dock Company have an enormous wall round portions of their property. It might be desirable to make new approaches through that, for instance—new streets even.

10202. Then, with reference to transshipment, do you propose to exempt transshipment goods from any charge?—We have made no proposal for any charge upon them, because we think that both the exports of London and the transshipments have been suffering by the heavy nature of our charges, and if the Trust could raise sufficient revenue on imports only, we think it would be very desirable, if possible.

10203. Then, as to your rate in aid, you were going to do that by requesting one of the public bodies to supplement the revenue if necessary?—If necessary. Of course our proposal is that the Corporation and the London County Council should have between them 12 members upon the Trust, and, therefore, any question could be conveyed by those representatives to their respective bodies.

10204. But you would leave it entirely at the option of these public bodies to raise the rate or not?—Certainly.

10205. And in the same way with regard to the raising of the capital sum?—It would be entirely optional on their part; but that would be settled by Act of Parliament, of course.

10206. (Rear-Admiral Hext.) With reference to what you say with regard to estimated revenue, the only due you would put on shipping not using the docks, would be 2d. per ton, with a maximum of 4d.—Yes.

10207. That means for ships using the river or the wharves, and not the docks?—Yes. All the ships coming in would pay it.

10208. The ships that use the docks would pay that in addition?—Yes.

10209. Then with reference to the average of 5d. a ton, I presume by that that you would give the Trust power to charge rates on goods. They would charge more on a pound of tea than on a pound of lead?—Yes. That would be the average.

10210. Then with reference to the constitution of the Board: you give the Corporation six representatives, and the London County Council six representatives?—Yes.

10211. Why should you have those representatives here in London when they are not necessary in London?—The circumstances are somewhat different. The Corporation of London for a great number of years was the sole authority of the port, and it now is the market authority and the sanitary authority. We propose to leave that in its hands. The London County Council is already represented on the Thames Conservancy, and I think very properly so, and, although we are traders, we think that the whole working of the scheme should be somewhat controlled in the public interest, though the details should be left to traders. Liverpool used to be a municipal trust, but there were found to be great objections in Liverpool and other places to municipal trusts, because they applied the revenue to churches, police courts, and various things.

10212. Then you put on two representatives of the Thames Conservancy?—Yes, that is for the upper river. We propose to leave the Thames Conservancy as it is above Richmond lock. We have been asked why we have selected Richmond lock instead of Teddington lock. Teddington is, of course, the lock named in the old Acts of Parliament, but the new Richmond lock—a half-tide lock, I believe—has been erected, and we think that the Thames Conservancy should have the management of the whole of the pleasure traffic of the river, and if they stopped at Teddington lock there would be a break.

10213. You propose to take the pilotage out of the hands of the Trinity House, and yet give them two representatives?—Yes. We have left the buoying and lighting in their hands.

10214. Did you discuss that question?—Yes, we discussed it with Captain Thomson, a member of the Trinity House. He was opposed to the removal of both, but the commercial members overbore his opinion.

10215. You would leave them the power to dredge the channels, but yet you would refuse them the power of buoying them?—The Trinity House do not dredge the channels, do they?

10216. No, but you propose that the new Trust should dredge the channels?—Yes. I think our opinion was rather economical. Captain Thomson pointed out that the revenue that was used in the Thames by the Trinity House was raised over the shipping in the whole of the kingdom, and that, if the Trust had to raise a special revenue with a view to lighting, it would add to the expenses of the Trust. Our first proposal was to have only one authority in the river altogether for lighting and other purposes.

10217. (Sir Robert Giffen.) You perceive superficial inconsistencies between what you are suggesting and what your witnesses have told us as to the dearness of the Port of London, and yet, after that, you come forward proposing to add to the charges?—Yes.

10218. I suppose your reason is that you think the charges as they are now are not properly adjusted, and what you really propose is a readjustment. Is that so?—Yes. We imagine that one result of this scheme would be largely to increase quay rates in London, and that considerable economies would be effected in that respect. Another point is that so long as the charges are levied in the public interest we have not such an objection to them as if they were levied for the benefit of individuals or private companies. If they are found to be necessary by a Trust for bringing the Thames up to the level of the age, we are prepared to make a sacrifice.

10219. But suppose, for instance, that these gentlemen in the wheat trade, who now grumble at being saddled with 1s. 9d., found themselves saddled with an additional 5d., do you not think they would complain?—Our opinion was that the quay rates would effect saving. But, at any rate, we are prepared to pay some what more under the state of things disclosed by the evidence before the Commission. We think the state of things is so serious that it must be grappled with, and we propose that, if the extra charge would be too great a burden on trade, the municipal authorities should intervene by a rate.

10220. But you are not sure that, as a matter of fact, the trade is quite prepared to pay a charge of 5d. per ton on goods imported, which may be an extra charge?—They would be prepared to pay an extra charge. There would be great differences of opinion as to what that charge should be, but I think they are all prepared to pay a landing charge on goods.

10221. I rather infer from some of the evidence that has been given that they are not prepared to pay, and will object very much to pay, anything more than is paid at any other ports?—We believe that the effect on the port would be a very general and drastic revision of the scale of charges, and that very considerable economies would be effected on the whole, and that, although there would be an additional landing charge, it might be saved in other directions.

10222. But, still, it is a great deal to impose upon the trade, a new charge of about £300,000. I am speaking of the 5d. per ton on goods?—It is a very great deal.

10223. And the last state may be worse than the first unless you could make quite sure that some of the other charges are as a matter of fact diminished?—We do not think it would have the effect of increasing them all over, but if it had, if the rate proved to be oppressive, we could apply to the public authorities to ask for permission for them to aid us. That scheme is entirely tentative. We felt bound to make some remarks on the financial part of it, but, as I said in introducing it, it speaks with no authority at all.

10224. I am putting to you the difficulties which you must see for yourself that we on the Commission will have to consider?—I see them very plainly.

10225. With regard to the amount of tonnage of goods which may be subject to this charge of 5d., have you any information to give us additional to what you have given us as to what the amount of that tonnage may be?—No. We have found very great difficulty about that. We got from the Conservancy Board the figures of the entire tonnage entering London, and then we have deducted the ships coming in in ballast. They would, of course, have to pay the port due on ships, but not on goods, because they do not contain goods.

10226. But a great many ships come in. Liners, especially liners in the short sea trade, do not come in with full cargoes. In fact, as a rule they have not full cargoes. Is not that so?—I believe so.

10227. So that this 14,500,000 tons is a little speculative. It may be 10 million tons with tolerable certainty, because we know that about four million tons go into the docks in the foreign trade, and about six million tons of coal. I think that is the figure that was mentioned—but beyond that I have seen no particular evidence as to what the amount of goods may be that comes in. Are you aware of any return as to the amount?—No. That was one of our main difficulties in drawing this up. There is no return of the actual amount landed in London.

10228. But if we should find as a matter of fact that instead of the 14,500,000 tons, upon which you estimate you can make a charge of 5d., you have not more than 10 millions, it would affect the rest of your estimate?—Yes; but, on the other hand, I think the shipping tonnage is less than the actual amount of goods.

10229. (*Rear-Admiral Hext.*) That is the registered tonnage?—Yes.

10230. (*Sir Robert Giffen.*) That is to say as regards the capacity of the ships?—Yes.

10231. But that is not quite the problem as it affects the practical part of the question as to what the quantity of goods coming into London is?—That is quite true.

10232. Have you compared this item of £305,000 for expenditure in working the docks with the actual figures of expenditure in the dock companies' accounts for the same services?—I have not done so, because from all I could make out the dock companies' accounts are so mixed up with other items that they have very great difficulty in stating what was for ships and what was for warehouses. Therefore we took the Liverpool rates, where the figures seem clear, and make the average come to 10d. per ton on the cost of working the ships that went into Liverpool. Then to meet the special difficulties of London we added 2d. per ton to cover the expenses of the barges.

10233. What is the total expenditure of the dock companies as they stand?—I have not the figures here, but I have looked through them several times.

10234. It is a very much larger figure than this, is it not?—Yes; it is a very much larger figure.

10235. Then you must assume that all the other expenditure of the dock companies is for the other purposes of the business, and not for this reduced busi-

ness which you have assigned to them?—Yes. I assume so. *Mr. J. I. Rogers.*

10236. It is a little speculative as it stands?—Yes. I think I stated that. *17 June 1901.*

10237. Can you tell me whether the business carried on at Liverpool by the dock authorities there in regard to warehousing is a large business or not?—I went down there for the purpose of this inquiry some time ago, and went over the docks, and saw the different officials, and gathered that it is not a large business compared to the extent of the docks, and that it has never been a paying business; and I am aware from our own experience in our own trade that we warehouse all our goods in our own place there. We move them immediately from the quay.

10238. Is it an increasing business at Liverpool?—I think it is a decreasing business from all I have gathered, and that it has been decreasing over a course of years so far as the dock companies are concerned. I cannot speak with authority on that point, but Mr. Coke could.

10239. I should like to know what you know as a matter of fact, and not merely from reports?—I cannot speak on that.

10240. You speak of the business of warehousing exceeding that of the docks, judging from the rating books?—I did not say the business exceeded that of the docks, but what I mean is that their valuation for rate purposes is greater than that of the docks. We have that on the authority of one of the members of our Committee, who is a wharfinger, and who has had those statistics compiled.

10241. But you cannot give us the figures, can you?—No. I cannot give you the figures.

10242. (*Rear-Admiral Hext.*) Did you consider the question whether the barges should be charged anything in the dock for services rendered, or not?—I think the whole basis of our inquiry was that lighterage and barging should be absolutely free as it is at present. We think it essential to the Port of London.

10243. And you did not consider the question of charging a licensing fee, or any charge at all on the barges?—As far as a licensing fee is concerned, it would be a small matter, and there would be no objection to that; but with regard to charging a barge on all the goods it contained every time, that would be, in our opinion, destructive of the trade of the port.

10244. Was it ever considered whether the barges should be charged any small licensing fee or anything in other ways for services rendered by the docks, and for losses entailed on the docks by their using the docks?—No. We want the barges to be free. A small licensing or registration charge there would be no objection to. We had that out several times. We thought the proper way was to make any charge that there is on the goods to get the revenue for the Trust, and to leave the lighters free; otherwise it would be very detrimental to the interests of the wharfingers.

10245. But still the Trust would be handicapped unduly by that competition if the barges pay nothing, because they would take the goods away from the docks, or away from the Trust that might be formed, exactly as they do at present?—The Trust would get the revenue from the landing charge on the goods.

10246. But they would not get it on the overside deliveries?—They would not get it on the overside deliveries, but the goods, wherever they were landed, would pay whatever charge there was. We thought it was right to put it on the goods, but not on the barges.

*Cross-examined by Mr. Balfour Browne.*

10247. You have spoken of the body of representatives, and you gave a list. Was there any shipowner amongst them at all?—Mr. Becket Hill.

10248. Is that the only one?—No, there was another one who has already given evidence. We consulted the Chamber of Shipping, and two of our witnesses, Mr. A. L. Jones and Mr. Becket Hill, were consulted throughout.

10249. And those were the only shipowners you consulted, were they?—We consulted the Chamber of Shipping as well.

10250. They have not been represented here, I think?—Now let me ask you this. You say, "The joint value of the public wharves of London is believed to exceed

*Mr. J. J. Rogers.* that of the docks judging from the rating books." Do you mean the rate books for poor law purposes?—For parochial purposes.

17 June 1901.

10251. Are you aware that docks are to be assessed at one-fourth of their value, while warehouses are to be assessed at the full value?—I was not aware of that.

10252. Now, where do you get the figures of your valuation of the dock companies of London, which you say is, in round figures, from 17 millions to 18 millions. Has there been any valuation made?—The Stock Exchange valuation.

10253. The Stock Exchange valuation. Is that all?—Yes.

10254. I have a question to ask you about that afterwards. Then you speak about the cost of water area and quays of docks as nine millions; the cost of deepening the river as two millions, the cost of modernising docks as four millions, making 15 millions in all; but in that figure you have not included the nine millions which you would have in the first instance to pay for the warehouses?—No.

10255. So that it comes to out of pocket, all at once, 23 millions or 24 millions, even on your own showing?—Yes.

10256. Then you say you think that this trust that you want to establish could borrow as cheaply as the Government?—Three per cent., we propose.

10257. Two-and-three-quarter per cent. you propose?—No. I say we assume that this money would be borrowed at 3 per cent. under a public guarantee, or, perhaps, by a loan from the municipal authority raised at 2½ per cent.

10258. I do not know what that means?—It means that the corporation, or whoever raised it under guarantee, would get the money at 2½ per cent., and make a profit on it towards amortisation.

10259. Do you know any precedent for allowing a public body to borrow money at 2½ per cent. and lending it at 3 per cent. in order to get a profit on it?—I do not know that there is any precedent for such a problem as we have before us at all.

10260. (*Chairman.*) The witness just now spoke of a public guarantee, and then when I asked him what he meant by it he defined it to be a guarantee of the Corporation of the City of London and the London County Council, and not an Imperial guarantee?—Yes, the Corporation of the City of London, and/or the London County Council.

10261. (*Mr. Balfour Browne.*) As you say you want to make precedents, you are making one here. You said: "They are trading companies, and cannot fairly claim a right to the enhanced value of their property consequent upon the increase in the population." I suppose you know of other trading companies. Take a water company for instance. Is that a trading company?—I do not know whether it is or not. I suppose it is in one sense.

10262. Trading in water?—Yes.

10263. Are you aware that their properties not only increase in value in consequence of the increase of population, but they increase in value in every quinquennial period, whenever the rating of London is increased?—I believe it is so.

10264. Why should the dock companies be treated differently?—We wish to treat the dock companies fairly and handsomely, and I believe that this would do it, in giving them the market value of their undertaking.

10265. Do you not think that if you take away a man's property, he should have, not only the present market value, which is your idea, but all the prospective value that there may be in that property?—No; I think not in the case of the dock companies.

10266. Why not?—Because the dock companies have had very valuable water privileges given to them in the past years, which are now standing in the way of public improvements.

10267. Every public body, such as a gas company or a water company, has privileges given to it by Parliament, as you know?—Yes.

10268. To break up streets and roads is one of them?—Yes.

10269. Why should a dock company be treated differently in this way without any prospective value being

given to it?—This is only tentative. If the dock companies are not satisfied let them make their own proposals. We wish them to be treated handsomely.

10270. Then in paragraph 11 of the scheme you say: "On and after the formation of the Trust by Act of Parliament the whole of the property, rights, and privileges of the London and India Dock Company, the Millwall Dock Company, the Surrey Commercial Dock Company, and any other dock company within the limits of the port, shall pass to and be vested in the Trust." That is, every piece of property is vested in the Trust. Then in Clause 18 I find this: "The Trust shall take account of the value of the property of the dock companies, and shall pay therefor (either in bonds or cash) such a price as shall appear reasonable, having regard to the condition of the property, but not more than the market value of the debenture mortgage or debts of the companies, and of their preference or ordinary shares." So that the value is to be taken before it is ascertained?—That is a point that did not occur to us, but I think that could be very easily set right.

10271. Are you a wharfinger?—We have two private wharves.

10272. Listen to this, and see if you think it is fair. It is sub-section (c) of Clause 19 of your scheme: "If any warehouse or warehouses taken over from the docks abuts or abut on the water side of a dock, creek, or river, with no intervening quay between such warehouse and the water, the Trust shall in no case use such warehouse or warehouses for the purpose of storing goods, unless it be reasonably suited for the landing, and weighing, and sampling of goods as hereinabove provided, but shall sell or let such warehouse or warehouses so abutting upon the water, and be empowered to charge additional tolls for the direct discharge of goods into the warehouse, so that such property shall not unduly compete with the public and private wharfingers of the port." You mean to say that these warehouses in the dock are to be purchased and taken out of competition. Do you think that is fair?—That would be handed over to a private initiative which could compete.

10273. I beg your pardon. They are to be let or sold, so that such property shall not unduly compete with the public and private wharfingers of the port?—It means that the Trust shall not unduly compete.

10274. Then are all those warehouses still to be in competition with the ordinary wharfingers?—So far as they belong to private or individual wharfingers, who shall compete if they think fit.

10275. But the Trust is to put additional tolls on for the express purpose of not allowing them to compete. It says: "And be empowered to charge additional tolls for the direct discharge of goods into the warehouse, so that such property shall not unduly compete with the public and private wharfingers of the port." The very object of putting those tolls on is to prevent competition in the interests of the public?—And it is to ensure fair play in the interests of the wharfingers.

10276. It would be very fair play in the interests of the wharfingers if you kept the whole of the nine millions out of competition?—That is not the object. The object is that the competition should be keener than ever.

10277. Then you said: "The expenses of working are taken at 1s. per ton, the Liverpool cost being apparently 10d. per ton." Would you mind telling me where you get that 10d. per ton, because we cannot find any such figure?—I got it from that book you have there, the Mersey Dock and Harbour Board Report. I do not know what year that is.

10278. I find here that the total expenses on the debtor side are £1,252,909?—I think that includes warehousing.

10279. That includes interest on bonded debts. In order to make it fair I must take out that, because that is not a working expense. Now I deduct £582,000, the interest on bonded debts. That gives for working expenses £670,000 per annum. Where is your 10d.?—Does not that include warehousing?

10280-1. No, the warehousing is a separate matter altogether. That is £210,000. I have not got that in. This includes engineers' department, harbour master, marine surveyor, riverside station, observatory, dock traffic, dock lines of railways, police expenses, general

10386-96.

charges, Parliamentary and law expenses, income tax, and so on?—But a large number of those items have nothing to do with working the ships.

(*Mr. Balfour Browne.*) They are the working of the docks, and you say that the working expenses at Liverpool are apparently 10d. per ton. This is not working the ships; it is working the docks. What you have given us here is expenses of working taken at 1s. a ton, because Liverpool is 10d.?

(*Sir John Wolfe-Barry.*) What do you say it works out to?

10282. (*Mr. Balfour Browne.*) I have not worked it out, but the tonnage is less than London. I am sorry to say it cannot be worked out, because it deals with the whole of the river and the river dues as well. I do not know how Mr. Innes Rogers did it?—There are a large number of items in this amount which I think have nothing to do with it, such as the Mersey Docks annuities, and interest on promissory notes.

10283. It is very likely that I may have included some things that should not have been included, but I want to know how you get that 10d.?—By taking the tonnage and working out the items which have actually to do with the working of the docks.

10284. Can you give me the tonnage and the items, and we will see if they are accurate?—I have not got them here, but I have been through them a large number of times.

See 10386-28 10285. (*Sir John Wolfe-Barry.*) Perhaps you could give that statement on another occasion?—Yes, I will look it up.

10286. (*Chairman.*) And you will put it in?—Yes.

*Cross-examined by Mr. Loehnis.*

10287. Is it your proposal that this Trust is to undertake the discharging of vessels?—No.

10288. Did you hear Mr. Roffey to-day say that it was the unanimous opinion of the grain trade that the discharging ought to be done by the dock companies so that there is only one person after the vessel between the vessel and the receiver?—I was not present.

10289. Do you know that that is the view of the grain trade?—I think it is very probable, because there is a great difference of opinion on all those points.

10290. Then on that you do not represent the opinion of the grain trade. Now with regard to timber, is it your opinion that the Trust is to sort the timber into various qualities and various lengths?—We have not considered that point.

10291. You are only going to have the water and quays; you are not going to take any warehouses; you are going to discharge in August, September and November timber cargoes on to the quays. When are you going to get that cleared away. Who is to take that away. You have not got any land to stack it on. You will have your quays blocked. How are you going to deal with it?—We shall make them take it away to some other place.

10292. Make who take it away?—The owners of the goods.

10293. And you are going to undertake sampling, taring, and weighing, but you do not intend to deal with the timber trade in any way similar to that in which the Surrey Commercial Dock Company are dealing with it at the present moment?—Some of the members of the timber trade objected to our scheme. I think there is a sort of pond or reservoir where the timber is kept, and it was a general opinion I think that the Trust should allow those to be kept with the warehouses. They are empowered to sell any portion.

10294. Then as far as the timber trade is concerned they were not unanimous?—No, they were not unanimous at all. We only carried these things by majorities. It bristles with difficulties.

10295. Then may I take it that the whole of the timber trade objected?—I do not think so.

10296. The majority?—They objected to warehouses.

10297. The timber trade came to the conclusion that your proposal to separate the docks from the warehouses was impracticable?—As far as certain portions of the trade are concerned at any rate.

*Cross-examined by Mr. Dady.*

See 10133 10298. In clause 17 of your scheme you say the trust shall be empowered "to borrow such sum of

money at such rate of interest as may appear reasonable, interest to be guaranteed by the Corporation and/or the London County Council in consideration of their representation on the trust." Assuming the Corporation will not put their hands in their pockets at all, and the County Council do guarantee this fund, do you still propose six representatives of the Corporation and six representatives of the County Council?—Yes.

10299. Still?—Yes. We have not considered that point, but I should say so certainly.

10300. Why?—Because of the old connection of the Corporation with the river, and from the fact of its present connection for market and sanitary purposes.

10301. That somewhat conflicts with paragraph 17, does it not?—I do not think so.

10302. Will your scheme work without a public guarantee?—I think so.

10303. What I am suggesting to you is this: You are proposing an extra £300,000 a year on the trade of the port, are you not?—Yes.

10304. In order to run your scheme you must put that charge on the trade all at once?—Yes.

10305. You cannot do it by degrees?—You could not do it in the twinkling of an eye. Some months must elapse before the trust came into being.

10306. But would it not be possible with a public guarantee to levy a charge on the trade gradually instead of putting it on the trade at once?—Yes.

*Cross-examined by Mr. Porter.*

10307. You say that the County Council and/or the Corporation may levy a rate on the property liable to rates within the jurisdiction of the County Council or the Corporation. I take it that you do not mean that the rate should be levied simply on the specific jurisdiction, but over the whole county of London?—Yes, over the whole County of London.

*Cross-examined by Mr. Harper.*

10308. What is the nature of the jurisdiction that you propose in Clause 1 that the trust should exercise:—"to whom shall be given the sole control of the waters of the Thames from Richmond Lock to Yantlet Creek, and of the water area of the docks, and of the banks, foreshores, piers, towpaths, and adjacent property"?—Similar to what the Conservancy Board now has. See 10133

10309. Neither more nor less?—Neither more nor less.

10310. Then in the third clause, sub-section C, you refer to "The London and India, Millwall and Surrey Commercial Dock Companies and any other docks." Do you mean public docks there?—It was very doubtful on going into the question what were docks and what were not docks. We put that in generally. We had not the material for drawing up the scheme in detail, but we put that in to cover all docks that were docks. See 10133

10311. Then in Clause 11 you say: "On and after the formation of the trust by Act of Parliament, the whole of the property, rights and privileges of the London and India Dock Company, the Millwall Dock Company, the Surrey Commercial Dock Company, and any other dock company within the limits of the port"?—Yes. See 10133.

10312. Take the case of Hay's Wharf, which is a small private dock—I think the only one in London—do you propose to acquire that?—No.

10313. You will exclude it?—Yes.

10314. Now take the question of the constitution of your proposed trust. You are entirely deviating from the Liverpool model here?—Yes, that is so.

10315. You yourself pointed out, I think, that Liverpool has worked admirably?—It has.

10316. And there are there only four ex-officio members, and the whole of the balance of 24 members are elected by the electors?—It is something like that; but the circumstances are very different.

10317. You have placed on here all these gentlemen representing, if I may so call them, ex-officio members, and, as I understand, they are to have no voice whatever in the actual management of the Trust?—Not the details.

Mr. J. L.  
Rogers.  
17 June 19

Mr. J. I  
Rogers.

17 June 1901

10318. They are a sort of watchdog?—They are to settle the principles. The policy of the Trust the whole Board will settle.

10319. What do you mean by "the policy"?—Questions of general policy. There will be an enormous number of questions to settle on general broad grounds.

10320. Will you give me an illustration of the class of things you refer to that would go to the whole Board, and that would not be the province of what I will call the Executive Committee?—We mean that the executive work of the Board should be done by the elected members.

10321. But you leave finance to the whole Board?—Yes.

10322. Then the executive would be simply able to carry out that which the financial part of the scheme allowed them?—The management of a dock or wharf is of an extraordinary character and a work of very great detail, and they are practical men who would have very much more knowledge.

10323. At the present time the London Docks Boards contain 24 merchants and lawyers. I do not think there is a shipowner or bargeowner among them?—I do not think that the directorate of the docks is a model to follow altogether.

10324. But still you are suggesting that that body should actually carry out the permanent work?—Yes.

10325. You agree with Mr. Pembroke, do you not, that the funds you could raise from a tax on goods would be adequate for the support of your Trust?—We believe so, but we are in this difficulty. We do not know how many goods are landed in London.

10326. You have the tonnage of shipping in. That is net registered tonnage, that 22 millions, I suppose?—Yes.

10327. In and out?—We take it on the 14 million tons, I think.

10328. Forgive me. You say port dues on 22 million tons of shipping in and out; that is about 11 millions in?—Yes.

10329. Then we heard a short time ago how the ship builders had begun to dodge the tonnage register by making a squarer vessel. That would be a vessel of a much greater carrying capacity?—Yes.

10330. And your 14,500,000 tons is merely a percentage of 3,400,000 tons on the different-shaped vessels?—That is 14,500,000 tons entering the Thames, less the ships in ballast which make the 22,000,000, as I understand it.

10331. The 22,000,000 tons are net registered tonnage in and out, and half that is 11 millions in?—Yes.

10332. Probably carrying import goods?—Yes.

10333. And you put the import goods 14,500,000. Subtracting the two, you get 3,400,000 as being the percentage on the different-shaped vessels?—I think there is more comes in than goes out.

See 10133 10334. Then in Clause 12 of the scheme you propose that "the Trust to have power to take over such property on or near the river, as it may think desirable to acquire, the power to be compulsory, subject to due compensation to owners." What do you suggest that is for. What is the need of a power like that?—There are new docks, for one thing.

10335. For purposes of that kind?—Yes, and approaches to docks for facilitating the working—roads, or railways, or bridges.

10336. Then, in Clause 15, with regard to the Trust being empowered to make charges, and so on, I suppose you are suggesting that those charges should be levied equally on all goods coming into the port?—Yes, wherever they may be landed.

10337. That is a tonnage rate, without regard to value?—No, it would be an average rate graduated to a certain degree in proportion to value.

10338. That is just what it does not say. Have you considered that at all?—We have called it an average rate in the financial part of it. Of course, as one of the members of the Commission said, we should not dream of charging the same rate on lead as on tea, for instance.

10339. You are proposing to make the heavier goods cheaper?—Yes.

10340. You know, do you not, that the heavier goods

do not come to wharves?—Some of them do. Lead probably does not; but I do not know.

10341. Do you yourself think that this power of levying a rate on the county of London including, of course, the City of London, is a desirable thing as long as you have the means of raising it directly from the industry affected?—I think it is very undesirable; but if, on the other hand, it is found that we cannot raise sufficient revenue for the Trust, we think the Trust is such an important matter to bring the Thames up-to-date, that even such a power as that should be exercised.

10342. And you would give the extraordinary representation suggested in Clause 9?—I do not think that representation is too large.

10343. Now, with regard to the suggestion in Clause 19, about administration, you are proposing that all the warehouses should be sold or let on rent to the best advantage?—Yes.

10344. That would rather have a tendency to cause what is sometimes termed a slump in warehouse property to put all the warehouse property on the market at once?—Not necessarily. I think there would be a very great demand for them.

10345. You told us a short time since, as I understood, that the warehousing business was steadily diminishing?—The public warehousing business, but the private warehousing business is increasing with the increase of imports.

10346. Do you mean to say that the business of individual merchants is increasing?—Yes.

10347. There is not an individual merchant, is there, in London who requires a warehouse such as a dock warehouse?—Many of them.

10348. A large dock warehouse, or do you mean a floor?—One of the buildings I mean. I mean one of those blocks.

10349. Is it not one of the difficulties at the present time that goods go much more rapidly into actual consumption than they used to?—Yes, but they have to go into a warehouse to be sorted and dealt with.

10350. That can be done in sheds, can it not, in many instances?—No. In many instances it cannot. The things have to be weighed in small packets.

10351. But in many other instances it might be done in sheds?—It might be, but then they would not take them away from the quay.

10352. Then there would be no warehousing for them, and so keeping the sheds would not be effective protection for the wharfingers. You could do all the short time warehousing, sampling, and taring at the sheds?—It would be the Liverpool system practically.

10353. Can you tell me how many days you propose?—We have left it blank.

10354. Can you tell me what you have in your mind?—I have nothing in my mind.

10355. Can you tell me what was discussed?—I do not think any special number of hours was discussed.

10356. Mention is made of clear days?—I think three days was discussed.

10357. Take hides and things of that sort. That would account for a very great proportion of the goods?—Very probably.

10358. All that could be dealt with in sheds?—Of course, the docks could do this and have quay rates to-morrow if they like, and therefore the wharfingers would not suffer in that respect any more than if they did it at once.

10359. According to your scheme, sub-section (b) of Clause 19, you are proposing to keep, purchase, hire, or erect sheds, warehouses, or elevators, and so on, to do this same work?—Yes, but not to house goods for rent.

10360. For how long do you propose these?—We have left that to the Commission.

10361. Was that three days again?—That was what was discussed.

10362. Was there a difference of opinion about it?—We thought it was a matter presenting very great difficulty, and we could not settle it. We had not information enough before us.

10363. What were the limits; what were the proposals of each side?—I do not think there were any definite proposals.

10364. Some people thought less time, I suppose?—Some thought less and some thought more.

10365. Then you are to sell and let the warehouses abutting on the water. That is according to sub-section (c) of the same clause. I suppose when you put in that you had specially in your mind the warehouses at St. Katharine's Dock?—What we had in our mind were some questions asked by Sir Robert Giffen at one of the early sittings of the Commission, which raised the precise difficulty, and then we found that it applied specially to St. Katharine's Dock.

10366. Have you observed that at St. Katharine's Dock a number of the quays are actually let. Has not the Clyde Shipping Company a berth there?—Yes. But the trust would not interfere with that.

10367. But they have the quay, which is really the ground floor of the warehouse, is it not?—Yes.

10368. Have they the warehouse; it bears the name on the end, does it not?—Some of them have, some of them have not.

10369. Do not the Clyde Shipping Company, and the Apollinaris Company, and others?—I believe so.

10370. And Elder, Dempster and Co.?—I do not know. You may take it there are a number of warehouses let in St. Katharine's Dock.

10371. You were asked a question about the assessment of the docks. I do not think my friend intended to mislead the Commission, but in general terms, comparing the figures you gave, you were including in the price of the docks their up-town warehouse?—Yes.

10372. In no sense, of course, could it be assessed on the principle of being part of the docks itself? It is miles away?—That is so.

*Re-examined by Mr. Rowland Whitehead.*

10373. With regard to these additional charges which the Chamber of Commerce put forward in their claim?—They were only inserted tentatively.

10374. One can quite understand that there was no absolute unanimity with regard to the new charges, but as I understood your evidence the Committee thought that if there were a public Trust traders would get a *quid pro quo*?—Yes.

10375. In increased facilities of the docks and quick despatch?—Yes.

10376. And that an important factor in those facilities would be a low quay rate?—Yes.

10377. Which would facilitate that quick despatch?—Yes.

10378. Then with regard to the figures which Mr. Balfour Browne commented upon, he put it to you that in that figure of £15,000,000 you had not included the £9,000,000 which you appropriated to the warehouses which the Chamber of Commerce proposed should be sold?—Yes.

10379. Taking the cost of deepening the river that would not be an immediate out of pocket expense, would it?—No, it would take some time.

10380. That would be spread over some time?—Yes.

10381. Take the next figure, the cost of modernising the docks?—That would take several years I should imagine.

10382. The immediate out of pocket expense would be £9,000,000?—Yes.

10383. Then you would have £6,000,000 further expenditure gradually incurred?—Certainly.

10384. Then you would have the £9,000,000 gradually repaid as the warehouse property came to be sold?—Certainly.

10385. (*Chairman.*) We shall be much obliged if you will convey to the Chamber of Commerce our thanks for the scheme they have been good enough to put before us?—Certainly.

Recalled 10386.

(Adjourned to to-morrow morning at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## TWENTY-SEVENTH DAY.

*Tuesday, 18th June, 1901.*

### PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTETON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.  
Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. BALFOUR BROWNE, K.C., and Mr. GEORGE WALLACE appeared on behalf of the London and India Dock Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council.

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. R. W. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

Mr. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. HORACE AVORY, K.C., appeared on behalf of the Watermen and Lightermen's Company.

Mr. CLAUDE BAGGALLAY, K.C., and Mr. F. P. M. SCHILLER appeared on behalf of the promoters of the Thames Lightermen's Bill.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

Mr. F. P. M. SCHILLER appeared on behalf of the Short Sea Traders' Association.

(*Chairman.*) It may be convenient to the learned counsel present if we now say that we propose to hear their addresses on the 1st July, or, at any rate, we hope to commence them on that day. The Commissioners have greatly appreciated the help which has been rendered

to them by counsel in the shortening of the proceedings by the condensation of the cross-examination of witnesses, and they trust that counsel will restrict their speeches to the matters which affect their particular clients.

Mr. JOHN INNES ROGERS recalled and further examined.

Mr. J. I.  
Rogers

18 June 1901

See 10277

10386. (*Chairman.*) I understand you wish to put in a statement with reference to your evidence yesterday?—Yes. Mr. Balfour Browne questioned my evidence with respect to the working of the ships in Liverpool costing 10d. per ton. I have here the accounts of the Mersey Docks and Harbour Board for the year ending 1st July, 1900. These are the dock expenses, which, I think, are applicable to the working of the ship: Harbour master, £43,556; marine surveyors, £4,844; riverside railway station, £832; observatory, £801; dock traffic expenses, £94,329. That, however, includes expenses of foreign animals' wharf, £27,000. Police expenses, £41,196; general, £76,004; engineers, £211,836; and then the Conservancy I take as £40,000, as the Conservancy includes other charges. That comes to a total of £513,398. There are 12,380,000 tons entering the Mersey, and that works out at 10d. per ton.

10387. (*Sir Robert Giffen.*) Where do you get the figure of twelve million tons from?—Those figures are in the last page but one of the accounts.

10388. Does that correspond with the 15 millions in the Thames?—No. I think you will see that ten millions go into the docks and two millions in the stream. They are not precisely the same figures, but I take it that as we have six millions in our docks, and they have ten millions in theirs, the cost of working is propor-

tionately greater there than if the ships remained in the stream.

10389. Are you quite sure about the ten millions in the docks, because the figure we have had hitherto is eight millions?—I take it from that book of accounts.

10390. Is it not the figure of gross tonnage you are giving now?—I do not know; I took the figures there. I think it is the registered tonnage.

10391. But there are two figures of registered tonnage, one gross and one net, and it is very embarrassing unless you tell in each case what figure you are giving?—I am unable to say. Those figures work out at 10d. a ton. That was the basis of my figures. There is one other point which I should like to direct your attention to, which I saw on looking at this table. That is the statement of warehouse expenses for the year ending 31st July, 1899. The balance transferred after paying the expenses of warehousing in Liverpool was £51,439 6s. 2d., and I am informed that to pay the expenditure on the warehouses in Liverpool an amount of £60,000 is wanted.

10392. (*Chairman.*) That has nothing to do with the question, has it?—No, but that confirms the point we raised yesterday as to the warehouses.

10393. (*Sir Robert Giffen.*) I see that in the account of the expenditure of the Mersey Docks and Harbour

Board there is an item of £42,000 for insurance and depreciation of vessels. Ought that to be a part of the dock expenditure, or what is it?—I am unable to answer that. I do not understand it.

10394. But if it should involve an item that you ought to have included as part of the dock expenses, it is rather an important item?—It is the working of the ships that I have been taking, and I do not see that insurance would have anything to do with that.

10395. Might it not be the vessels which the Dock

Company use in the course of their business?—It might be so.

10396. Then it is a proper item to go in?—Possibly.

10397. Of course you would quite admit that all those figures which you have put in illustrate the mode in which you have arrived at your conclusions?—Yes.

10398. And they are open to the observation of the Commission when we come to look into it afterwards as to what the real expense would be?—Certainly. They are conjectural, more or less.

Mr. J. I.  
Rogers.  
18 June 1901.

Mr. CHARLES WHELON called and examined.

10399. (Chairman.) You are a partner in the firm of George Simon and Whelon, and have been connected with the wine and spirit trade since the year 1872?—Yes.

10400. You are also chairman of the committee of the Wine and Spirit Trade Association?—I was chairman last year.

10401. And you have been appointed to lay evidence before us on behalf of that Association?—Yes.

10402. Did you write your statement of evidence yourself?—Yes.

10403. Will you be good enough to proceed with that evidence?—The actual effect on the wine and spirit trade in the want of a better organisation at the docks in London is at the present day probably less than it was 30 or 40 years ago owing to the fact that the heavy scale of charges has driven importers and merchants to seek accommodation where expenses are more moderate. In days past, wines and spirits bonded in the London Docks met with a more ready sale and commanded better prices than would have been the case if they were bonded elsewhere, but by offering lower rates the other bonded warehouse proprietors have gradually succeeded in drawing away from the docks so large a part of their stock that at the present time the extra value pertaining to goods lying in the docks has almost ceased to be considered. As a large proportion of the incoming steamers go into the docks, the natural inference would be that by far the greater part, if not the whole quantity, of wines and spirits imported into London for storage would be kept in the extensive vaults and warehouses provided by the Dock Company, for it seems evident that with a ship "along-side" goods should be discharged and housed in the vaults at hand cheaper than if removed to other stores; nevertheless, the reverse is the case, for in a comparative table, which I will give to the Commission presently, it appears that, as compared with 30 years ago, the docks have suffered a falling off of the stock of wine and brandy held by them of over 70 per cent., as against a decrease of about 50 per cent. in all other London bonded stores. Increased facilities for obtaining supplies from abroad, and heavy expenses here, have had a great influence upon the stock of wines and spirits kept in this country. The figures given of the total imports of wines show no serious variation between the quantity imported now and 30 years ago. A comparison of those figures makes it evident that the docks have not held their ground as well as the rest of London and the United Kingdom. Prior to the dockers' strike, in 1889, the custom prevailed for the Dock Company's competitors to offer varied concessions, extending as far as 50 per cent. or more, from the dock rate according to their anxiety to attract business, but at the conclusion of the strike an agreement was come to—which seems to have been fairly well adhered to—that the printed dock rates should be recognised as the standard throughout the Port of London, but whilst the docks were to allow a maximum discount of 10 per cent. other warehouse keepers were to be at liberty to offer 15 per cent. It must be remembered that wines and spirits being subject to duty, their every movement after entry is guarded by Custom House regulations, and this in itself is apt to make things move more slowly than is the case with free goods. At the docks these movements are slower than elsewhere owing to the red tape that exists in their system, and in this respect there is great room for improvement. As a proof of this it may be stated that at an up town warehouse it is possible to clear a cask of wine or spirit and have it all ready for delivery in an hour and a half, whilst at the docks it practically takes 24 hours to accomplish the same object. In the

case of rums which are practically confined to the West India Docks 48 hours may be taken as the ordinary time in which a similar operation can be carried through. Whatever may be the cause of this it is very desirable that wine and spirit merchants should be afforded facilities for clearing their goods from the docks more expeditiously. In days past such delays were not of much importance, but the same cannot be held good at the present time, and until some radical change takes place in the docks' administration they can hardly expect to maintain even their present unfavourable position. One of the serious disadvantages that exists is the inadequate provision made for dealing with goods of all kinds going to or coming from the docks. The limited space available at the railway dock depots often causes a heavy congestion of traffic with the result that horses and men are kept in enforced idleness for many hours, and this must have a most disastrous effect upon the importations *via* London of goods intended for inland towns, for these delays have to be taken into consideration when through rates have to be compiled. An alteration in the matter would probably bring back to the port very much of the trade that during the last 25 or 30 years has drifted away to Liverpool and other ports.

Mr. C.  
Whelon.

The following is a table showing the relative stocks in 1870 and 1900:—

The total stock at the London and St. Katharine Docks.

		WINE.
1st October, 1870	-	5,442,140 galls.
1st " 1900	-	1,464,980 "
Showing a decrease of		3,977,160 galls., or 73 per cent.

		BRANDY.
1st October, 1870	-	3,674,760 galls.
1st " 1900	-	1,006,800 "
Showing a decrease of		2,667,960 galls., or 72·6 per cent.

		RUM.
At the London, St. Katharine, West India, and Victoria Docks.		
1st October, 1870	-	3,393,096 galls.
1st " 1900	-	2,356,380 "
Showing a decrease of		1,036,716 galls., or 30·5 per cent.

		The total stock in all London
		WINE.
1st October, 1870	-	8,204,240 galls.
1st " 1900	-	3,939,475 "
Showing a decrease of		4,264,765 galls., or 51·9 per cent.

		BRANDY.
1st October, 1870	-	4,256,040 galls.
1st " 1900	-	2,202,133 "
Showing a decrease of		2,053,907 galls., or 48·2 per cent.

		The total stock in the United Kingdom.
		WINE.
1st October, 1870	-	14,155,029 galls.
1st " 1900	-	7,370,000 "
Showing a decrease of		6,785,029 galls., or 47·9 per cent.

<i>Mr. C. Whelton.</i> 18 June 1901.	1st October, 1870	BRANDY.	9,348,741 galls
	1st " 1900		4,963,000 "
	Showing a decrease of	4,385,741 galls., or 40·9 per cent.	
		RUM.	
	1st October, 1870		6,746,730 galls.
	1st " 1900		7,425,000 "

10404. Have you any remarks to make upon that table?—No, except to say that the evidence I have given

Mr. HUGH COLIN SMITH re-called and further examined.

*Mr. H. C. Smith.* 10408. (Chairman.) You appear before us now in order to give evidence on the subject of the licensing of lightermen on the River Thames?—Yes.

10409. Will you be good enough to proceed with your evidence?—My firm are large employers of labour on the water and own and hire a large number of barges. I beg to hand in a copy of the Thames Lightermen's Bill, 1901, also copies of six petitions, namely, one to the House of Commons for leave to bring in the Bill, and five to the Board of Trade in its support.

## The Witness handed in the following documents:—

(A copy of the Thames Lightermen's Bill of 1901. See Appendix, 27th day, No. 1.)

(A copy of petition of shipowners, merchants, wharfingers, etc., trading in the Port of London to the House of Commons for leave to bring in the Thames Lightermen's Bill, 1901. See Appendix, 27th day, No. 2.)

(A copy of petition of merchants, brokers, and members of the commercial sale rooms to the President of the Board of Trade on the subject of the Watermen and Lightermen's Company, dated the 9th day of November, 1900. See Appendix, 27th day, No. 3.)

(A copy of petition of merchants, brokers, and members of the London Shipping Exchange to the President of the Board of Trade on the subject of the Watermen and Lightermen's Company, dated the 9th day of November, 1900. See Appendix, 27th day, No. 4.)

(A copy of petition of merchants, brokers, and members of the London Metal Exchange to the President of the Board of Trade on the subject of the Watermen and Lightermen's Company, dated the 9th day of November 1900. See Appendix, 27th day, No. 5.)

(A copy of petition of members of the Corn Exchange to the President of the Board of Trade on the subject of the Watermen and Lightermen's Company, dated the 9th day of November, 1900. See Appendix, 27th day, No. 6.)

(A copy of petition of members of Lloyd's to the President of the Board of Trade on the subject of the Watermen and Lightermen's Company, dated the 9th day of November, 1900. See Appendix, 27th day, No. 7.)

10410. With reference to this bill, of which you hand in a copy, we understand that your evidence to-day will be restricted to the matters which are embodied in that bill?—Yes.

10411. And that bill still represents your views on the subject to which it refers?—Yes, and the views of

with regard to the total stock at the London and St. Katharine Dock is taken from the returns of the dock itself. Those with regard to all London are taken from the various bonded stores. The stocks in hand in the United Kingdom and the imports of wine and spirits into the United Kingdom are taken from the figures given by the Board of Trade.

10405. (Sir Robert Giffen.) Are these figures as to the stocks in bonded stores published figures?—Those given by the docks and bonded stores are the figures they themselves issue. I do not know that they issue them publicly, but they send them round to the trade Press.

## Cross-examined by Mr. George Wallace.

10406. You refer to the case of rums in the West India Docks, and you say that 48 hours "may be taken as the ordinary time in which a similar operation can be carried through." Are you able to tell us how far that delay is due to Customs arrangements?—A great part of it is due to Customs arrangements. At any rate, we might say that 24 hours is due to Customs arrangements, because in all cases there is a test to ascertain the actual strength.

10407. And there is a great deal of blending, is there not?—Yes, but it is not necessarily the blending. The blending might be done before. The extra delay is in connection with the Custom House requirements to ascertain the actual strength.

the mercantile community generally, as I think the petitions will show.

10412. You understand my point. The Bill has been withdrawn and is dead, and we want to be assured by you that the views expressed in it have suffered no modification?—Certainly not.

10413. It was only withdrawn because this Commission was sitting?—Yes, that is so. The business carried on by my firm is general and a large one, and more or less affects a great number of the trades in the Port of London, so that I am able to speak both as to the particular business of lighterage and as to the trade of London generally as affected by lighters. My firm have taken great trouble in connection with the lighterage trade, and have assisted in the efforts which have been previously made to relieve it from the restrictions relating to the employment of licensed lightermen. I gave evidence before the Thames Traffic Committee in 1879, and I wish to call the attention of the Commissioners to the report of that Committee recommending that the navigation of barges should be thrown open entirely. Lighterage is at present carried on under three Acts of Parliament—the Watermen's Acts of 1859 and 1893 and the Thames Conservancy Act of 1894. Three classes of men are affected by these Acts—(a) lightermen, (b) watermen, (c) men equivalent to lightermen and watermen who have not served an apprenticeship, but have worked under a contract of service for two years, which contract is defined by Sections 301, 302, and 303 of the Thames Conservancy Act of 1894. The latter class of men, after completing their contracts and proving their competency to the satisfaction of the Court of the Watermen's Company, obtain certificates, which certificates are equivalent to a lighterman's or waterman's license. A lighterman is defined under Section 3 of the Watermen's and Lightermen's Amendment Act of 1859 as a person working or navigating a barge, boat, or other craft for hire within the limits of the Act. A waterman is a person navigating, rowing, or working for hire a passenger boat. Under the 2nd Section of the Act a passenger boat is described as a sailing boat, river steamboat, row boat, wherry, or other craft used for carrying passengers within the limits of the Act. An apprentice, who under Section 52 may be in sole charge of a barge or boat, is a person who has served two years, and whose competency has been ascertained to the satisfaction of the court of the company. Under Section 48 an apprentice must not be less than 14 or above 20 when he enters into his indentures. It is thus seen that under the Act a youth of 16 may be in sole charge of a barge. The 1859 Act recites 7 and 8 of George IV. and repeals it. It also recites and repeals the 18th Section of 4 and 6 Anne, Chapter 19, under which freemen of the company were obliged to serve on board Her Majesty's fleet if required. The 66th Section of

Mr. H.C.  
Smith.

18 June 1901.

the Act provides that no barge, etc., shall be worked within the limits of the Act unless a licensed man or apprentice is in charge. A licensed lighterman is a person holding a licence in respect of which he has qualified by serving an apprenticeship to a freeman or widow of a freeman for five years at the least. This qualification is described in Section 56 of the Act. Under Section 8 the limits of the Act are from Lower Hope Point on the east to Teddington Lock on the west. Section 11 of the Act provides that the company shall be regulated by a court of master, wardens, and assistants elected from the freemen of the company. Section 18 provides that the master and wardens shall retire from office annually, and the court shall fill the vacant offices, but the retiring master and wardens are eligible for re-election, and if there is no re-election, the master and wardens shall continue to act. Section 20 provides that an occasional vacancy shall be filled up by the court. Section 10 provides that the company shall consist of freemen who would have composed the company if the Act had not passed and such other persons as may be admitted freemen. Section 44 provides that every person who holds a licence or is the registered owner of any barge or lighter shall be qualified to be admitted a freeman of the company. Under Section 66 a barge owner is liable to a penalty not exceeding £5 if a person other than a licensed lighterman or apprentice is in charge of the barge, but no such penalty is payable if the owner proves to the satisfaction of the magistrate that he is unable for the usual compensation to obtain the services of a lighterman. The funds of the company are raised under the 84th Section of the 1859 Act. The court of the company is empowered to make bye-laws under the 80th Section of the Act, and such bye-laws have to be printed and made public. The funds of the company are raised under the 84th Section of the Act, and the company's balance-sheet has, after audit, to be sent to the Thames Conservancy and to the Board of Trade. (Sec. 309 of the Thames Conservancy Act.) The accounts of the company are kept under the 27th Section of the Act of 1859 under two distinct heads, the "Poors" account and the company's accounts. Under Section 310 of the Conservancy Act the Board of Trade have power to regulate the income of the company in the event of its being found more than enough to meet the proper expenditure of the company by reducing the fees. Upon these matters the company themselves will be able to give reliable information. So far as the promoters of the bill are concerned we have no suggestions to make as to the application of the funds of the company. The promoters think that the persons from whom the court is selected should be somewhat broadened, and include the directors of limited companies who own barges. The main contention of the promoters is that the employers of lightermen should not be restricted to any particular class of men but the barge owners (who cannot in all cases insure) should be at liberty to employ such persons as they may select and in whom they have confidence. There is no limit of liability for the barge owner as there is for the shipowner, or as in the case of a shipowner, who is free from liability altogether when the vessel is compulsorily in charge of a licensed pilot, although the barge owner has to compulsorily employ a licensed lighterman. The promoters of the bill are the mercantile community at large and not the master lightermen only, but the master lightermen are, speaking generally, in full sympathy with the promoters of the bill. The promoters of the bill were moved to take action owing to the very serious loss and dislocation of trade consequent upon the dispute between the masters and men which lasted for some months in 1900 and 1901. They were influenced by the fact that under the present law London stands in the grave peril of its whole maritime trade being stopped at any moment in consequence of a dispute arising between these 8,000 men and their masters. London is the only port where this is the case. The promoters of the bill are in no way interested, nor does the question of wages enter into their consideration. They are satisfied that if the restriction was removed they would secure a better class of labour and relieve the commerce of London from the risk attaching to men refusing to work in consequence of a dispute with their masters. Apprenticeship is absolutely unnecessary, and the practical value of an examination in a hall on shore of a man's competence to navigate a barge is nil. I recognise that a broad distinction must be drawn between watermen rowing boats with passengers and who own the boats, and

journeymen lightermen who are employed by barge owners. In one case the craft is a frail boat navigated in all sorts of directions, and constantly across the line of traffic; whilst the barge is now mainly towed, and if rowed always navigates with the current. A barge is a distinctly substantial craft and does not carry passengers. A very full history of the company was written some few years ago by Mr. Humphreys, the late clerk of the company, and there the explanation of the restriction and licensing is explained. It dates from early times when the river formed a part of the highway between the extreme east and west, and was the principal means of conveyance for all the passenger traffic to and from London. Goods formed little or no part of the traffic in those days, and it is the safety of life and the maintenance of order which is spoken of as justifying the steps taken by the authorities to regulate the 40,000 watermen who are said to have been employed in the work. There was always a power reserved to the Trinity House to license seamen to navigate the Thames as lightermen or watermen between their voyages. There was a regular service of barges each tide between Gravesend and London for the carriage of passengers, but the idea of restricting the employment of persons to navigate this craft when working with goods only was never formulated, and it is only by imperceptible degrees that the rule at length applied, and has been duly brought about, no doubt, by the hackney coaches, and then the steamboats, and then the railways, completely destroying the passenger traffic on the Thames, at least so far as watermen are concerned, and leaving the river as a highway only for the transport of goods. It is, I think, by accident and not by design that the present restriction as to the employment of lightermen as distinguished from watermen exists. The promoters of the Bill have caused inquiries to be made at the outports, and so far have been unable to learn that any system at all exists as that on the Thames. In no case have the lighter hands to serve an apprenticeship, nor are the owners restricted as to the employment of men. In the case of the Thames, the application of the Act is limited to the vessels working within the limits of the Act, so that barges navigating from below Lower Hope Point to above Teddington, though they may navigate under oars in the river, have not to employ licensed men, and do not do so. But the anomaly arises if one of these barges stops on her way up from Sittingbourne, say at North Fleet, and loads a cargo there to be discharged at a point within the limits of the Act, then she has to take on board a licensed man, otherwise the owner is summoned under Section 66. So, too, the lighters of Trinity House have not to employ licensed men. The 35th section of the Act of 1893 and the 313th section of the Conservancy Act of 1894 exempts the owners of barges passing along the River Lee and using the Thames from the necessity of employing Thames lightermen. The 312th section of the Thames Conservancy Act protects the owners of duly registered lighters navigating from any place on the Thames above Teddington Lock to any point on the Thames as far as London Bridge, and, therefore, within the limits of the Act, from being compelled to employ Thames watermen. But below London Bridge they have to take licensed men. In fact the Act is strictly limited to a particular class of craft, and these craft are such as least need these men, because they are most constantly navigating the waters to which the Act applies. It is not from any present public advantage that the restriction exists, nor can it be considered necessary for the public safety, because if such were the case it would equally apply to all barges whether going from the west end of the Thames, or the east end of the Thames or the Lee. In 1893 an Act was passed amending the Watermen's Act of 1859. This Act deals mainly with the registration of craft, and with the necessity for the owners of craft to have legibly marked upon them the names and numbers of the barges and their owners. Under the 7th section of that Act no craft may be worked until the certificate has been issued and the particulars above mentioned affixed to the craft, so that means exist for ascertaining the person responsible when damage arises. Efforts have been made previous to the present to amend the difficulties complained of, and in 1890 a Committee of the House of Commons recommended that a Bill should be brought in by the Board of Trade to remove the restriction as to employment.

10414. Can you tell us what was the result of that recommendation?—Nothing. Apparently the view of

See 10646

Mr. H. C.  
Smith.  
18 June 1901.

the Committee was that the system of apprenticeship should also be amended, but they thought the examination as to capability should be maintained. The apprenticeship and the restriction are the two great objections to the present system. In my opinion any examination must be useless, as it is impossible to ascertain a working man's capabilities for outdoor employment by examination held in a hall. Of late years the employment of steam tugs has become very general, and one of the most striking anomalies of the Act is that steam tugs are not required to employ licensed men of any kind, unless they are plying for hire with goods or passengers. The craft towed must have a licensed man, but the steam tug who provides the motive power and tows them into mischief or otherwise, need not employ a licensed man.

The company passed a bye-law under which steam tugs in all circumstances would need to employ licensed men, but in the case of *Kennaird v. William Cory and Sons* the Court held that such bye-law was bad. The suggestion that barges when being towed should not employ licensed men would certainly be a relief, but I suggest it would rather add to the anomaly, as then neither tugs nor barges, though moving faster than the tide, would employ licensed men. In the opinion of the promoters of the Bill nothing but complete relief from the restriction can place the trade of London by water in a satisfactory condition, and this can, in my opinion, be safely done.

10415. (Sir Robert Giffen.) Have you ever raised the question under Section 66 of the Act of 1859 as to licences of the men not working for you?—I do not quite understand your question.

10416. At certain times you have had strikes when you have had a dispute as to terms?—Yes.

10417. At that time it would be legal for you, I suppose, to employ other men?—Yes.

10418. Have you ever tested the point as to how far that employment once begun may continue?—During this late strike when our men refused to work we carried on our business with the aid of some of our wharfmen and our clerks and so on. The strike lasted from the 15th October to the 24th January. During that time we moved up and down the river about 2,000 barges, and we carried about 40,000 tons of goods without any accident at all. I hand in a table giving the figures.

(The witness handed in a statement of goods and barges shifted during the Lightermen's strike of 15th October 1900 to 24th January 1901 from Hay's Wharf. See Appendix, 27th Day, No. 8.)

10419. Is it not rather anomalous that you are compelled to take these men who refused to work for you when they are willing to come back. Is not that an extraordinary arrangement—that you are obliged to take the men when they are willing to come back?—Yes. We can get lots of men but we cannot offer them permanent employment because the moment they come a licensed man may say: "You have no right to employ these men; I will do the work."

10420. Have you ever tested this point?—Yes.

10421. How far did you go?—We cannot go any distance because they can take us to a police court if we do not employ them.

10422. You might put this section of the Act before the magistrate—Section 66: "If the owner proves to the satisfaction of the magistrate of the court before whom the case is heard that he is unable for the usual compensation to obtain the services of any such lighterman or apprentice"?—We did that, but at any moment if a licensed man comes forward and offers to take the barge we have to employ him and get rid of our other men. That is the trouble.

10423. Have you any case where the point has been tried?—Not myself, but there have been cases.

10424. (Rear-Admiral Hext.) If you did away with the present monopoly would you put the control in any person's hands or would you leave those men to be unlicensed and the matter entirely in the hands of the barge owners?—I should like to be as free in the employment of lightermen as I am in employing drivers for my vans in the City—to take whom I like. I am responsible.

10425. Would you ask for any examination?—No, none whatever.

10426. (Mr. Ellis.) Turning for a moment to this Committee of 1890 was it appointed to examine the subject at large, or was it a Committee to which a bill was referred?—It was a Committee to which a bill was referred.

10427. Was the bill introduced by the same promoters as the bill of 1901?—Practically the same, and it passed the second reading in the House and was referred to a Committee.

10428. Then the Committee in their report did not adopt that bill; they recommended the Board of Trade to introduce a bill?—Yes.

10429. They thought it should be a Government matter?—I think so.

10430. Then the promoters, finding nothing was done, introduced another bill in 1901?—Yes.

10431. Did the Board of Trade in any way decline to take action or merely let the matter go by the board?—I think they let it go by the board.

10432. They gave no opinion in the House of Commons or elsewhere as to the recommendations of the Select Committee?—I do not know.

10433. Is this bill of which you have given us a copy in all respects what you would introduce, say, next session?—Yes; it was introduced this session.

10434. I am aware of its introduction this session. I will not trouble you about that, but it is the bill which now expresses your views *verbatim et literatim*?—Yes. The difference between this bill and the previous bill is that this does not interfere with the Watermen's Company. We merely wish the restrictions taken away and leave the Watermen's Company to themselves.

10435. ((Sir John Wolfe-Barry.) The Thames Conservancy have very considerable powers over the navigation of barges in the Thames have they not?—Yes.

10436. They have the power to require towing of all barges?—I do not know that.

10437. I believe I am right in saying that they have the power, but they have not exercised it to the fullest extent?—Certainly not.

10438. Perhaps you have not read the Act of Parliament under which the power exists. It is the Act of 1894. Have you any views as to whether it is for the good of the river that barges should be allowed to drift about with the tide in the way they do now as compared with being towed?—It is a very difficult question to answer, because there are short trips with a barge when towing would be very expensive. I do not think that they get in the way of the navigation.

10439. I think from my own experience they sometimes do so very much indeed. Do you think that the trade of the port would suffer very materially if towing was compulsory?—No, not materially; I should say not.

10440. There was a recommendation of the Thames Traffic Committee which says that they think a rule might properly be made requiring all dumb barges navigating the whole distance between London Bridge and the uppermost dock entrance in Blackwall Reach to be towed?—That is the whole distance. I think there are very few now that do come up under oars.

10441. It is only, therefore, with regard to their short trips that you would like to retain the advantage, such as it is, of not being towed?—If you had two or three tugs going down the river to bring up your barges and you wished to send a barge to some wharf close by or to the tier it would render it very expensive to get a tug just to take it a few yards.

10442. But I suppose for anything like considerable distances the time saved and the certainty of arrival are great advantages to the barge owner?—Certainly, and everybody thinks so.

10443. You think that is rather a matter which may be left to the self-interest of the person concerned?—Yes.

10444. Are we to take it that you are of opinion that there should not be any examination into the antecedent position of people employed to navigate barges?—Yes.

10445. You would rather trust to the individual examination of antecedents by those who are going to employ the men?—One would not employ men unless one knew they were capable.

10446. Would you recommend that reliance should be placed upon the employer taking the necessary steps?—Yes. It is entirely in the self-interest of the employer only to employ capable men.

10447. You are not in favour of any licences being granted?—No.

10448. Or of any examination into antecedents by any public authority?—No.

10449. (*Mr. Lyttelton.*) With reference to what Sir Robert Giffen asked you, when the strike was on, free trade prevailed as regards employment of men; the moment it stopped I suppose the view you took, on advice, was that you were able then to obtain for the usual compensation the services of lightermen?—Yes.

10450. And therefore the exemption under Clause 66 of the Act went?—Yes.

*Cross-examined by Mr. Horace Ivory.*

10451. On behalf of the Watermen's Company I should like to ask a question or two. Was the Bill of 1890, that was referred to the Select Committee, founded upon the recommendations of the Thames Traffic Committee of 1879?—More or less I believe it was.

(*Mr. Ellis.*) Was that a Committee of the House of Commons?

(*Mr. Horace Ivory.*) It was a Committee of the Board of Trade.

(*Mr. Ellis.*) A departmental Committee?

(*Mr. Horace Ivory.*) Yes.

(*Chairman.*) Who was the Chairman?

(*Mr. Horace Ivory.*) Mr. Farrer was in the chair. There were seven members of the Committee.

10452. All the recommendations of that Committee were discussed before the Select Committee of the House of Commons in 1890?—I cannot say that they all were.

10453. In substance they were?—Yes.

10454. Did you give evidence before the Committee of the House of Commons in 1890?—Yes.

10455. And in substance you put before that Committee the same views as you have put in your evidence to-day?—Yes.

10456. I do not know whether the Commissioners have before them the report of that Committee. I wish to call your attention to it. Was this the report of that Select Committee of the House of Commons in 1890? "That the constitution of the company, called the 'Master Wardens, and Commonalty of Watermen and Lightermen of the River Thames,' should be amended, the company ceasing to be, as now, a close corporation. Whenever a vacancy takes place in the Court of the Company, it should be filled up by election, the electors being in all or the majority of cases, the Freemen of the Company, and no one being eligible except a licensee of full age. That the examination for a lighterman's license should be more strict than at present. That any persons shall be eligible for a lighterman's license if found on examination to possess the necessary qualifications, it being no longer necessary that he should be an apprentice to a freeman or to the widow of a freeman, or to a bargeowner employing a freeman or licensed lighterman. And your Committee recommend that a Bill to effect these amendments of the present law be prepared by the Board of Trade, and introduced in the next session of Parliament." Those were the recommendations of the Committee after hearing the evidence?—Yes.

10457. Was that report made after hearing a very large number of witnesses (I have in my hand the book containing the evidence) called for the promoters, and I think only two or three called on behalf of the Watermen's Company. The Committee stopped the evidence on behalf of the Watermen's Company, did they not?—I do not recollect that, but there were a great many witnesses called by us, certainly.

10458. Do you not remember that the Committee stopped the evidence tendered on behalf of the Watermen's Company?—I do not recollect anything about it.

10459. You said in your evidence that "the promoters of the Bill are the mercantile community at large, and not the master lightermen only; but the master lightermen are speaking generally in full sympathy with

the promoters of the Bill." Is it not a fact that in 1890 the master lightermen, or a large number of them, presented a petition against your Bill?—Certainly, but my evidence is that now they have changed their opinion.

10460. Are we agreed that in 1890 the large majority of them were against you?—Yes—at Watermen's Hall.

10461. But were they in fact the large majority of the whole of the master lightermen?—I should say not, because the principal lightermen on the Thames are the Companies, and they are not represented at Watermen's Hall.

10462. Do you remember as a fact that the petition against the Bill was signed by 253 master lightermen?—I do not deny that.

10463. Will you just see if you recognise the petition. I do not want to fix you to a figure without a reference. Here is the petition against the Bill, presented by the master lightermen?—Yes, it is so, but I do not see the names of the large lighterage companies in it who are the principal lighterage people on the Thames, as, for instance, The Thames Steam Tug Co., The London and Tilbury Lighterage Co., and so on.

10464. That is the petition that was presented against the Bill?—Yes.

10465. You have to-day in your evidence called attention to an Act that was passed in 1893, amending the Watermen's Act of 1859?—Yes.

10466. As a fact, was not that Bill introduced by the Watermen's Company?—Yes, I think so.

10467. And that has, as I understand you, effected an improvement?—Yes.

10468. You approve of the conditions?—Certainly.

*Cross-examined by Mr. Cranston.*

10469. With regard to the offence under section 66 of the Act, is not the information on which the summons is issued generally laid by a common informer, by a lighterman, who goes on board at some particular time?—Yes.

10470. And it is his evidence generally that is brought against the particular barge owner?—Yes.

10471. And he swears that at some particular time he tendered his services for the usual remuneration?—Yes.

10472. And, that being done, the magistrate considers that this Statute has not been complied with by the lighterman, and, consequently, convicts?—Yes.

*Re-examined by Mr. Claude Baggallay.*

10473. Just one question with regard to this matter of the ownership of the lighters. I see, in the list of petitioners for the Bill in Parliament, there are a large number of bodies petitioning besides shipowners. I see, in the petition for the Bill, there are mentioned the Union Lighterage Company, Limited, the Thames Steam Tug Lighterage Company, Limited, and the London and Tilbury Lighterage Contracting and Dredging Company, Limited. Are they amongst the largest owners of lighters?—Certainly.

10474. Does the number of barges owned by them run into hundreds or more?—Yes.

10475. And are they larger owners of lighters than any of those which appear in that petition which Mr. Ivory referred to?—I should say very much.

10476. These large companies, which do the bulk of the lightering trade now upon the Thames, are not, as I understand, represented at Watermen's Hall, are they?—No.

10477. One question with regard to this matter of examination. My learned friend has called your attention to the fact that Mr. Childers' Committee recommended that the examination for a waterman's license should be more strict than at present. Have you carefully considered that recommendation which was made by that committee in 1890?—Yes.

10478. Do you now say that, having carefully considered that during the last ten years, you have come to the conclusion that examination is no security, and that the responsibility of the owners of the lighters and the cargoes in the lighters is what should be the security for the proper navigation of lighters?—That is my opinion.

10479. That is your point?—That is my point.

*Mr. H. C. Smith.*  
18 June 1901.

Mr. H. C.  
Smith.  
18 June 1901.

10480. You have an absolutely unlimited liability, as I understand, except so far as you may be able to cover it by insurance, with regard to the goods in your own lighters, or with regard to the damage which may be done by your lighters to other vessels?—Yes.

10481. Therefore, you, as owner, have the very greatest interest in seeing that your barge is properly and carefully navigated?—Certainly.

10482. And you represent that that is sufficient security, and a greater security than examination?—Yes.

10483. Do you see any reason why the navigation of your lighters or barges or the lighters and barges which convey your goods should be put in any different position from the case of driving cars and vans in the streets, where also valuable commodities are carried?—No, not at all.

10484. The responsibility of the owner is what ought to control the matter?—Yes. We have a large number of vans and we can employ anybody we choose.

10485. With regard to the watermen you have a different case, there the waterman is plying for hire more like a cabman, or anybody else in the streets?—Yes.

10486. And you do not want to interfere with that?—Not with the watermen.

10487. You do not want to touch that question?—No.

(Mr. Horace Ivory.) Would your Lordship put a question for me which I have omitted. I should like to know whether Mr. Jacobs, the Managing Director of the Thames Steam Tug and Lighterage Company, was not elected on the Watermen's Company about 18 months ago.

10488. (Chairman.) Will you answer that question, Mr. Smith?—Yes, I think he was.

(Mr. Lyttelton.) Is there something latent in that fact?

(Mr. Horace Ivory.) The witness stated that the representatives of the large towing companies were not represented on the Watermen's Company at all.

(Mr. Claude Baggallay.) But he would be, I think, in accordance with the Act, elected not as a representative of the company; he would merely happen to be a member of the company, but he would be elected as Mr. Jacobs, a Freeman of the company.

(Witness.) As a barge owner.

(Mr. Claude Baggallay.) That is under the constituency as created by the Act of 1859.

(Mr. Horace Ivory.) It is only the fact that I want. I do not want to get into controversy about it. My Lord, there is one other question I am reminded of. The witness has stated that during the strike he got a large amount of work done, and efficiently done, by unlicensed men. The question is whether during that period the witness was not in fact employing at least 14 licensed men, whose names I have here.

(Witness.) Some of the men stuck to us.

10489. (Mr. Ivory.) I suggest at least 14 of the licensed men?—Does that include foremen, because the foremen did stick to us. I cannot tell you off hand; my manager could tell you that.

10490. What it comes to is that a number of licensed men were, in fact, working for you during that strike?—Foremen.

10491. (Mr. Ellis.) Is it within your knowledge that any Parliamentary action was taken by anybody (promoters or anybody else) between the report of Mr. Childers' Committee in 1890 and 1901 when you introduced your Bill?—No; no action was taken by anybody.

10492. No appeal was made to Parliament by anybody?—No.

10493. (Sir John Wolfe-Barry.) Did you give any evidence before the Board of Trade Departmental Committee which reported in 1879?—Yes.

10494. Then perhaps you are acquainted with the report. Have you read the report?—Yes.

10495. The Departmental Committee reports at considerable length upon this subject on pages 47 and 48. Perhaps you have forgotten it, but the mat-

ter was dealt with in that report at very considerable length?—What matter?

10496. The question that we have been discussing as to the throwing open of the navigation?—Yes, it was for the purpose of discussing that that the Committee was formed.

10497. That and other things. There were a great many other subjects in the report, but that particular subject was dealt with at pages 47 and 48. Do you recollect the names of the gentlemen who sat on that Departmental Committee?—No.

10498. You will see all the signatures at the end of page 54. There is Thomas Henry Farrer—that is the late Lord Farrer?—Yes.

10499. Sir Richard Collinson?—I do not know who he was.

10500. Was he not chairman of the Thames Conservancy or in some way connected with it?—No, I think Sir Frederick Nicholson was—the next on the list.

10501. Sir Richard Collinson was Deputy Master of the Trinity House?—Yes.

10502. Sir Frederick Nicholson was one of the conservators of the River Thames?—Yes.

10503. Then there is Staff-Captain Batt, Master Attendant at Chatham Dockyard?—Yes.

10504. Thomas Gray, Assistant Secretary to the Marine Department of the Board of Trade?—Yes.

10505. W. C. Morgan, Secretary to the Steamship Owners' Association?—Yes.

10506. And Digby Murray, one of the Nautical Advisers of the Board of Trade?—Yes.

10507. I suppose one would call that rather a strong committee of a departmental kind?—I am not quite sure, but I think Mr. Chamberlain was President of the Board of Trade when this was introduced—

(Mr. Ellis.) Mr. Chamberlain was not President of the Board of Trade in 1879. It was a Conservative Government.

10508. (Sir John Wolfe-Barry.) The committee point out that here is a great difficulty in establishing a satisfactory examination. At page 47 they say: "But considering the great difficulty of establishing a satisfactory examination, considering also that the western barges and the sailing barges, requiring at least equal skill, are admirably navigated by men who are simply selected for the purpose by their owners, and are not required to pass any examination; considering also that the best way of securing good and skilful service is in general to throw the responsibility on the employer, and to leave him perfectly free to select whom he pleases, we are not disposed to recommend any test examination or preliminary proof of qualification. We are confirmed in our opinion by the practice on other rivers, namely, the Clyde, the Mersey, and the Tyne. The physical and other features of those rivers differ from those of the Thames, but in all of them skill and experience are required, and on none of them is there any monopoly or any attempt made to ascertain the qualifications of the men employed on the navigation by previous examination. On all of these rivers the results appear to be satisfactory. We are informed by Captain Moodie that at New York also, where there is an immense and well-conducted barge traffic, the business of the bargemen is perfectly free. We recommend therefore that the navigation of barges on the river be thrown open entirely, leaving the men employed in it subject to penalties in case of misconduct or breach of bye laws, and the owners liable also to civil damages in case of injury. If this be done the men will be relieved from original payments, amounting to £3 16s. 6d., and an annual payment of 3s. now made to the Company." I take it that you agree with almost every word that I have read?—Yes.

10508a. You want to press that on this Commission, with the authority that you have as an owner of barges on the River Thames?—Yes.

10509. (Chairman.) Have you anything else you wish to say, Mr. Smith?—There is one matter in connection with my previous evidence that I should like to refer to. It is at Question 2549. I find I was wrong in my statement that some of the superior Custom House officers received overtime and did not visit our premises. That statement was made under a misapprehension as to the facts. All who receive overtime come to our premises at one time or the other.

Mr. GEORGE LIVESSEY called and examined.

10510. (*Chairman.*) You are chairman of the South Metropolitan Gas Company?—I am.

10511. Which company was one of the promoters of the Thames Lightermen's Bill of this session?—Yes, it was.

10512. Will you be good enough to proceed with your evidence?—The company uses about 1,200,000 tons of coal a year, about three-fourths being delivered direct from the steamer into the works, and the rest is barged to those works to which ships have not access. The company's supply of coal must be maintained at all costs and risks. If the lightermen strike, other men must be employed regardless of the question whether they are licensed. This happened in December, 1889, when the gas stokers struck, and the coal porters, the lightermen, and the seamen and firemen also struck in sympathy without notice. The Company had to supply their places as best they could. They promised (and the promise was kept) permanent employment to all suitable men who stood by them through the difficulty. In the case of lightermen the Company had to find other work for those who were unlicensed. I consider that the late most unjustifiable strike of lightermen was due solely to the fact that only licensed men can be employed. It seems obvious that had it not been for this the men would not have struck. But knowing that their places could not be filled they felt they were safe. They knew new men could not be engaged, and that their places must be kept open for them when they chose to return to work. This alone is a most complete condemnation of the system. It is even bad for the men themselves, and it was on this ground that the Company joined in the promotion of the Bill. Although the Company's lightermen did not strike and worked contentedly all through, the Company suffered serious loss and injury. Whenever a section of men in a trade do not join the strikers, special attention is shown towards them and their employers. I might say special malice; very often the men who helped the Company during their strike, especially those engaged on the river, were exposed not merely to continual hooting and insult, but to absolute danger by the strikers, and the Company's property was also damaged in every possible way. During the late strike (last year), eight of the Company's loaded barges, which were securely moored off the Company's works at Vauxhall, were cast adrift. Two were sunk and the greater part of the coal lost, another was carried against a bridge pier and was only saved from sinking by running aground. The remainder were picked up by a friendly tug. The men who worked the tugs were not licensed watermen. The loss to the Company was about £400 from this piece of mischief. The Company being responsible for their barges—they have nearly 100—are bound to exercise care in the selection of lightermen. I may say that ours (gas supply) is a dangerous business, and we have a very heavy responsibility, and are liable for damage caused by any of our workmen. We therefore know what it is to bear the responsibility of the employment of suitable men. The Company, of course, as required by law, employ only licensed men. But the licence of

the Watermen's Company is not considered any recommendation. They do not regard it in fact, but select their men quite independently for their general capacity and their trustworthiness. The Company has three tugs. On the captains and their men the real responsibility of navigating the river lies, as the barges never go alone. They are always towed, consequently the lightermen have little or nothing to do in the navigation. But the Company is free to choose men from all the world to work their tugs. They ask that similar freedom should be granted in the case of the lighter. If this were done, the existing licensed lightermen would not suffer, provided they were trustworthy and capable men, and such men would undoubtedly secure priority of employment.

10513. (*Mr. Lyttelton.*) You have said that the men who struck knew that their places could not be filled. I suppose the meaning of that is that they knew their places could not be permanently filled?—Yes, that is what I mean.

10514. Then you say the licence of the Watermen's Company is not considered any recommendation; that is, putting it impersonally. I should like to have your view as to that. Is it your personal opinion, or is it your company's opinion?—We do not regard it at all.

10515. That is your view?—Yes; we do not regard it at all. We select our men on other grounds.

*Cross-examined by Mr. Horace Ivory.*

10516. In fact, are all the masters of your tugs licensed men?—They may be; I do not know; they are not necessarily licensed.

10517. You are not prepared to say that you have any master of a tug who is not a licensed man?—I am not prepared to say, but we have not selected him because he was licensed; we have selected him for other reasons.

10518. Because you found he was a competent man?—Yes.

10519. Did you give evidence before the House of Commons Committee in 1890 on the Thames Watermen and Lightermen Bill, which proposed the abolition of the system of licences?—I do not remember it. Perhaps I did.

10520. I have your evidence here?—Yes.

10521. And to the same effect as the evidence you have given to-day. You were called as a witness in support of the Bill which proposed to abolish the system of licensing of the men?—Yes, I suppose so. I had forgotten it.

10522. (*Mr. Claude Baggallay.*) It might have been Mr. Livesey's father?—No, my father has been dead 30 years. I have given evidence a good many times, and I had forgotten that I was called.

10523. (*Mr. Horace Ivory.*) And you did particularly give evidence upon this question of the strike, did you not, then?—Yes, I was full of it then. That was immediately after it.

Mr. THOMAS HOPKINS WOODWARD called and examined.

10524. (*Chairman.*) You are partner in the firm of Messrs. Henry Gray, junior, who carry on business in the City of London as lightermen and bargeowners, and are in a large way of business?—Yes.

10525. You desire to give evidence before us with reference to the licensing of lightermen on the River Thames?—Yes.

10526. Will you be good enough to proceed with your evidence?—I have been in the business all my life, and am well acquainted with all its peculiarities and requirements. The existence of the present restriction as to the master lightermen's right to employ whom he thinks proper, is a serious drawback to the trade, and one which creates difficulties at all times for the masters, and sometimes, as in the case of last year, for the public and the bargeowner's customers generally. Not quite all, but a very large part of the enormous water-borne trade of London has to pass by water, and it is an objectionable and dangerous fact that the whole of this trade is under the control—for

evil if the men should be so disposed—of these 7,000 or 8,000 lightermen. In addition to the existence of the company there is also a lightermen's union, to which I do not object, but the fact is that although the court of the company do not restrict in any way apprentices being taken, a system has grown up under which the work of an apprentice is more or less regulated, so that the apprentice is for the bargeowners of less value than he would be, and some few firms refuse in consequence to employ apprentices altogether. There are excellent men amongst the licensed lightermen working on the river, but there is an undue proportion of men, who not being subject to the healthy competition which would follow a general right to employ, not infrequently show an indifference to the interests of their employers which is very annoying, and the employer being limited in his selection of men, is compelled to overlook deficiencies which in other businesses would not be condoned. Speaking generally, employers do not take apprentices owing to the terms of the indentures being quite out of date, and the owners object to

Mr. G  
Livesey.

8 June 1901.

Mr. T. H.  
Woodward.

18 June 1901.

Mr. T. H.  
Woodward.  
18 June 1901.

burden themselves with responsibilities which have no compensating advantages. Experience is certainly necessary in this business, but the experience to be of value must be general, and the man who has had experience both in barges of all kinds and going to sea and loading and stowing ships and so on, is a better man for the purpose of the master lighterman and the public generally than the man who has simply gained his knowledge under the present system of apprenticeship, and nothing else. For the purpose of the trade of the port it seems obvious it is wrong that a restriction should exist which yet permits a lad of 16 to be in sole charge of a dumb barge, yet such is the case under Section 52 of the Watermen's and Lightermen's Act, and even that is capped by the greater absurdity that a man who has arrived at mature age, and has a great deal of experience, and has the full confidence of his employer who is responsible for his acts, must be turned out and cease to work if under the terms of Section 66 of the Act a lad of 16 expresses himself willing to accept the usual compensation, although such lad may be unknown to the employer and in his opinion not fit for the job. In the one case you have the employer satisfied with his servant and his servant's character; acquainted with his history and prepared to leave his interests, which may be very large, in the hands of such a man. In the other case you have a boy of 16 of whom the employer knows nothing, whose experience may be of a very inferior character, but who has been found qualified upon examination by the court of the company. I am sure that such an examination in the hall of the company is of no practical value. The barges of my firm probably carry as a regular thing the most valuable cargoes in the Port of London, and I have no hesitation in saying that my firm and the large majority of master lightermen would be glad to see the whole system of apprenticeship and licensing removed, and I would have no hesitation in employing unlicensed men. The Port of London is in keen competition with the outports, notably Hull, and is distinctly placed at a very great disadvantage owing to the fact mainly of the possibility of something arising with these licensed men which will cause a delay or additional expense in connection with goods in the port. In no other port does this restriction exist, and that it is unnecessary I submit is shown by the fact that barges passing through the Port of London are free of the restriction although they are strangers more or less to the port, whilst barges trading within the port and therefore at home, are compelled to employ these men. I call attention to the fact that no advantage is gained by the master lighterman either in economy of working, in security of property, or in reduction of liability by being made subject to this serious restriction. The use of tugs for moving barges by steam has now become almost universal, and all employers more or less use tugs; those who do not possess them, hire them. It is the practice of my firm to tow 90 per cent. of their barge traffic, and for this 90 per cent. of business the knowledge required by the workman is in no way due to the system of the Watermen's Company apprenticeship and freedom.

10527. (Mr. Peel.) I suppose sometimes you do navigate barges on certain journeys by your own men because there are no lightermen ready?—Yes, frequently.

10528. No lightermen offer to come on board?—There must be somebody on board to navigate them.

10529. Yes, your own men; but you very often do it with your own men without these licensed watermen being on board, do you not?—They are all licensed.

Captain DAVID EDWARD HUMT called and examined.

Capt. D. E.  
Hume.

10548. (Chairman.) You have recently retired from the official position of Conservator of the River Humber which you held under Board of Trade appointment of 1887?—Yes, I retired in December last year. The appointment commenced in 1887.

10549. To what effect is your evidence?—It is with regard to the custom as to lighterage adopted in the River Humber. Prior to my official appointment there I was Superintendent Dock Master of the Hull Docks for 14 years.

10550. Will you be kind enough to proceed with your evidence?—I was a Commander in the Pacific Steam Navigation Company's service, and prior to that I was

10530. You have your own men on board?—But they are all licensed.

10531. Were you here while Mr. Smith was giving his evidence?—Yes.

10532. Do you agree with all he stated?—Absolutely.

Cross-examined by Mr. Horace Ivory.

10533. How long have you been a partner in the firm of Gray and Company?—Since March.

10534. Since March of this year?—Yes.

10535. Was Mr. Robert Gray the senior partner of that business in 1890?—Yes.

10536. Do you know that Mr. Robert Gray was one of the few witnesses called before the Committee against the Bill of 1890?—I do know that.

10537. And he gave evidence against that Bill?—Yes.

10537a. Have you any reason to suppose that Mr. Robert Gray, the senior partner, has altered his opinion since then?—Yes.

10538. Is he coming here?—No.

10539. You speak about an apprentice of 16 taking charge. As a matter of practice lads are not apprenticed, are they, until they are about 16 years of age?—It is possible to apprentice a youth at 14 years of age.

10540. I know it is possible, but I ask you as a matter of practice, is it not within your experience that they are not apprenticed until they are 16?—No, earlier. I should say between 14 and 15.

Re-examined by Mr. Claude Baggallay.

10541. Is Mr. Robert Gray still a member of your firm?—No.

10542. Has he retired?—Yes.

10543. When did he retire from your firm?—On March 31st.

10544. At the time when you came into the firm?—Yes.

10545. Were you in the employ of the firm for many years before you became a partner?—No. I was manager for Mr. Humphrey for 25 years.

10545a. (Mr. Horace Ivory.) That is the same firm as Mr. Smith's?—Yes.

10546. (Mr. Claude Baggallay.) That was at Hay's Wharf, was it?—Yes.

10547. But there you had a great deal to do with the lightering business?—Yes, for over 30 years.

(Chairman.) Mr. Baggallay, you are responsible, I think, for these witnesses. The witnesses we have had to-day are sufficiently representative, in our opinion, to explain to us fully the case for the bill. Do you think there is any use in the reiteration of this evidence? See 1128; 1144; 1154.

(Mr. Baggallay.) There are only two further witnesses whom I would ask you to call, and they are very short. One is Sir Edwyn Dawes. I should rather like to have his evidence before you. The other witness is Captain Hume, who has been for a long time the official conservator of the River Humber under the Board of Trade and superintendent of the docks at Hull. I think it would be advisable to have his evidence shortly as to the experience on the Humber, where they have free navigation, and where there are a great many difficulties in the navigation as well.

Staff Commander in the Egyptian Navy. I acquired my earlier experience under the P. and O. flag, and was for about two years in the London, Belgium and Brazil Royal Mail Service from London, sailing out of the Victoria Docks. I have also had experience in the ports of Liverpool and Southampton, having commanded vessels sailing to and from Liverpool, and having been an officer on board ships sailing to and from Southampton. For the last 30 years I have been one of the Junior Brethren of the London Trinity House, and for 13 years one of the official Nautical Assessors for the Hull Admiralty Court, and a Commissioner of Pilots for the River Humber for a period of 12 years. In consequence of these appointments

and wide and varied experience I am well acquainted with the requirements of navigation for inland, river and canal purposes, and I know the barge system in London almost as well as that of Hull. In Hull I have had much close personal acquaintance with the system, and I am able to say, that, notwithstanding the peculiar difficulties and dangers of the port, it works remarkably well, alike in the interests of the merchants, traders and shippers. It has assisted materially in the development of the port. The Port of Hull has within the last 25 years developed enormously. If necessary I can give the amount of increase in the tonnage from time to time during that period. The late re-arrangement of the dock system has largely assisted this development, but the lighterage system and its admirable working has been continuously helping the port, with the result that the transhipment of cargo from dock to dock, or ship to ship, or ship to warehouse, has been facilitated both in its economy and working. Further than that, the lighterage system of transporting goods from Hull upwards to Goole and other places, and the canals connected therewith, and downwards to Grimsby and other places, have all been admirably worked by the existing system, and it is astonishing how the business involving the transport of a vast tonnage of goods goes on year after year with exceptionally few casualties. The Port of Hull is, as compared with the Port of London, surrounded with difficulties. The Port of London is an ideal port for navigation purposes. The River Thames has a good depth and could easily be made deeper. The tide is moderate in its current compared with the Humber, whilst the river is so protected as to render the navigation fairly free of risk and danger. The Humber, on the other hand, being 9,000 feet wide opposite Hull, and very much wider lower down, is greatly affected by meteorological and atmospheric disturbances. For traffic of this description it is one of the wildest rivers in England, the tide flowing at the rate of four to five knots an hour, and the tidal range being, say, about 21 feet at spring tides. The Humber has a navigable channel of over 30 feet depth from the sea upwards to the Hull Docks. The barge traffic is limited to the dealing with cargo in and about the docks, which occupy a river frontage of 4 miles, and the transport as before mentioned of the goods upwards and downwards in the open river. There are wharves and quays in the neighbourhood of Hull, but these are situated in the River Hull, a tributary of the Humber. The river transport goods traffic is done by craft called keels. The lighters are used for the internal work of the docks, and these are moved either by towing but chiefly by hand, being propelled by boat-hooks. The keels sail from the docks upwards. A large number are towed, and that number is increasing. Hull has but few steam keels. The lighters vary from 50 to 250 tons burden, and the keels are about 70 tons burden. The only authority which applies to the craft is that of the Port Sanitary Authority as to the accommodation for the crew, and the dock bye-laws which have to be obeyed as to the navigation of lighters. The men forming the crew of the craft usually work the cargo in and out. No rule exists either in connection with the Humber or the docks as to the number of men or their qualification for manning the craft. There is no restriction of any kind, the owners employing whom they think proper. The same legal responsibility of common carriers attaches to them as in the Thames. The men who are in charge of the craft, whatever their capacity may be, whether master or mate, have to pass no examination or be members of any guild, nor have they to serve any apprenticeship. In fact, the barge owner on the Humber is as free as to the employment of his men as is the barge owner in Rochester. I am of opinion that it is a great advantage in any port to have the labour free in all possible respects, and to all comers. Knowing the Thames as well as I do, I am able to say that there is no reason, so far as the safety of life or property is concerned, or protection of navigation, why the barges of the Thames should not be as free for their crews

as the barges of the Humber. The inducement on the part of the owners to protect their own position in the matter is such that they will always choose the best possible men. On the Humber there is never any lack of men, as any intelligent respectable man accustomed to maritime work is fit and competent to navigate a lighter. In this respect, London is analogous to Hull. Both ports have a large floating population on the steamers and vessels engaged in the coasting and Continental traffic, and the men who work these steamers and sailing craft are equally competent either to load a ship or navigate a barge, and it seems reasonable that the barge owners should have the option of employing the pick of these men. The earnings of river men are, as a rule, much better than the wages of a sailor, and, in addition to that, the man has the advantage, while engaged in river work, of living at home with his wife and family. The present state of the law in the Port of London practically prohibits the barge owner from employing this kind of man at all in barges worked within the limits of the Watermen's Act, and, in my opinion, this is a hardship both on men and masters. In the event of trade disputes, good and competent men hesitate to interfere, and restrictions such as exist on the Thames are a disadvantage to the public; and, in addition to that, so far as I can judge from the Act of Parliament, there would be a difficulty in getting other men to undertake suddenly the work, supposing there was a strike.

10551. Can you tell us the distance from the sea to the docks at Hull?—Twenty-one miles.

10552. And how much of that channel beyond 30ft. depth, to which you have referred, is due to dredging?—None at all; it is Nature alone. I may say it is a good deal over 30ft. deep as far up as Killingholme, that is, above Grimsby.

10553. So far as that particular difficulty is concerned, it would seem that the Port of Hull is not so much surrounded by difficulties as the Port of London?—From the depth of water, certainly not. That can be remedied.

10554. (*Rear-Admiral Hext.*) That is at low water springs, of course?—Yes.

10555. Which port, in your opinion, is most dangerous for navigation by barges—Hull or London?—In my opinion, the Humber is very much wilder, and more open to heavy swells, and more difficult to navigate barges in than the Thames. The Thames is more enclosed.

10556. Then you consider it a much more dangerous river for barge navigation?—From a barge navigation point of view, I do.

*Cross-examined by Mr. Horace Ivory.*

10557. Is there, in fact, any navigation of barges on the Humber except by towing?—Yes; keels we call them, not barges.

10558. Is not that done by towing?—It is becoming more and more so, but still a great many do sail from Hull to Goole, a distance of say 30 miles.

10559. Is there any navigation by oars?—No. Oars are seldom or never used on the Humber.

10560. You speak here of it being done by hand?—That is the internal dockwork from dock to dock.

10561. The same thing, I suppose, is done here. The internal dockwork is done in the same way here, is it not?—Presumably so. Some of the keels or lighters have to come outside the dock into the river, and some of them hook round if they do not tow round, or they drop round with the tide.

10562. You have no experience there of navigation by oars?—Practically none, except the watermen, of course.

10563. I mean the goods traffic?—There is practically no navigation by oars.

Sir EDWYN SANDYS DAWES, K.C.M.G., called and examined.

10564. (*Chairman.*) You are senior partner of Gray, Dawes and Company, shipowners?—Yes.

10565. You are also a director of the British India Steamship Company, Chairman of the New Zealand Shipping Company, and a partner in other shipping companies using the Port of London?—Yes.

10566. You have been good enough to come here to give evidence with reference to the system of licensing of lightermen in the Port of London?—Yes.

10567. We suggest to you that you should first give evidence with regard to that subject, and afterwards we shall be glad to hear any general evidence that you

*Capt. D. E. Hume.*  
18 June 1901.

*Sir E. Dawes,*  
K.C.M.G.

Sir E.  
Davies,  
K.C.M.G.

18 June 1901.

may have to offer on the subject of the inquiry. Now will you be kind enough to proceed with your evidence with regard to the lightermen?—Having such large interests in connection with the trade of London, and in the loading and discharging of steamers of the various companies I am associated with in the port, I have experienced losses and inconvenience in carrying on business owing to the late strike among the lightermen of the port. The effect on the trade of the port in connection with the refusal of the men to work the barges was very grave, owing to the practical difficulties in the way of getting other men to undertake the work of transporting the barges. Goods were delayed in shipment and delivery for several weeks. The quays and wharves became blocked with goods, and much trade was diverted from the port, as also serious expense was incurred in the rent and charges owing to the delays. Transhipments through the port were for some time stopped, as the master lightermen could not undertake to receive and deliver the goods. I am of opinion that the restriction of employment to a small body of men is unnecessary. Speaking as a shipowner, I am satisfied that the work could be done better, with less friction, and in every way more effectively, if the employment was thrown open and owners of barges allowed to employ the men whom they find the best qualified for the work. In this part of my evidence I refer only to the troubles that arose during the strike, but it is not by any means a new grievance. We have had difficulties of various kinds with lightermen owing to the especial privilege which they possess. That especial privilege practically makes them masters of the situation. If a lighterman refuses to work we cannot put any other man in. No man, however well qualified he may be to do the work, will expose himself to the risk that he may be turned out at a very short notice. I remember on one occasion during the dock strike we had a barge laden with Government stores for India. These were kept for some weeks, the lightermen not permitting them to be taken out of the barge, although we had no grievance or trouble with them whatever; and to our misfortune the Government charged us with demurrage, although we were absolutely helpless. That is the position shipowners are in in the Port of London, whilst there is increasing competition with the Continental ports. Formerly we used to get very large quantities of continental goods to London for shipment, but the Dutch, the Germans, the French have now their own lines of steamers from their own ports to Australia and India and China, which defects in the Port of London help to encourage. During the lightermen's strike in London, continental goods brought over by the General Steam Company to be transferred to steamers for New Zealand, Australia, and India (I am speaking of the lines that I have to deal with) could not reach the outward bound ships in time for transshipment, and the traffic had to be discontinued. I personally took a great deal of trouble in interviewing master lightermen, and they said that they were perfectly helpless. They told me that they could not get men to take the place of the men on strike, because they could be turned out at any time. To some of these master lightermen I said, "Face the difficulty. Put other men in, and be pulled up in the police court. Make the public aware of the disadvantage under which the trade in this, the greatest seaport in the world, is being worked." There were various conferences in my own room with master lightermen, but they all gave me to understand that the difficulties facing them were too great. They said that the business was a dangerous one; that if they came into collision with an organised body of men situated as these privileged lightermen are the risk would be very great. They pointed out that their craft and the goods they were responsible for were so vulnerable that it was wiser to submit to the temporary loss, and endeavour to get relief by legislation. Rather than lose our trade, I then sought the help of the Shipping Federation, an institution that has been as helpful to the men as it has been to the masters. The Shipping Federation was willing to provide men, and there were numerous applications from the outports, subject to two conditions. One was that there should be some permanence of employment, and the other that there should be police protection. We discussed this very seriously for some time, but had at last to give it up because the Watermen's Society might at any moment order them out. A good deal has been said about the qualifications of these men. Of course, we must have on the river men who know their work, but so it is with the crews who man

our ships. Our captains, our mates, our engineers, and crews all have to prove that they are qualified for the work that they have to do, but having been engaged, they work with us, and from the time that they enter our employment there is almost invariably the greatest cordiality between ourselves and them. We employ also some hundreds of men in the docks, and whether they are union or free labourers, we do not care so long as they do their work, and for several years since the dock strike things have gone on smoothly. I say that it is wrong that the trade of this great Port of London—my own trade for instance which is in competition with foreign lines—should all be hampered by an old world monopoly, mischievous alike to employers and employed.

10568. Now will you tell us what you have to say with regard to the general question?—The New Zealand Shipping Company, of which I am chairman, are the owners of a fleet of 17 steamers of the aggregate tonnage of 101,791 tons, 13 of which are trading between the Port of London and New Zealand. I am also authorised to speak on behalf of the Shaw, Savill and Albion and Shire Lines, representing 21 steamers and 9 sailing ships of 138,343 tons, employed in the same trade. My experience of the shipping trade of the Port of London extends over a period of 36 years, and for seven years, namely, from 1881 to 1888, I was a director of the London and St. Katharine Docks, during which time the Royal Albert and the Tilbury docks were constructed. During these 36 years an extraordinary development has taken place in the trade of the Port of London, and especially in regard to the size of the ships visiting the port. I believe I am correct in stating that up to the year 1865 it was the exception for any steamer exceeding 2,000 tons gross register to visit the port. The first steamers that my firm employed in the Indian and Australian trades varied in size from 2,000 to 3,000 tons, with a draught of water not exceeding 22 ft. to 23 ft. At the time of the construction of the Royal Albert Docks it was believed that the facilities then provided would meet the requirements for many years to come, and the construction of the Tilbury Dock by the East and West India Dock Company was regarded with dismay by the London and St. Katharine Dock Company. On completion of the Tilbury Dock a sharp competition arose between these two dock companies, exceptional inducements being offered to shipowners to berth their ships at Tilbury. Yet in the comparatively short space of 13 years it is found that both docks are fully occupied, and that there is a deficiency of accommodation, so much so that old occupants of the docks with a growing business are being deprived of some of the space and facilities they had previously enjoyed in order to make room for newcomers. I have read the evidence given by Sir Thomas Sutherland, Mr. Becket Hill, and Mr. Williams, and generally agree with all they have said, and particularly with the suggestion of Mr. Becket Hill that if there was a barge canal in the Royal Albert Docks, the discharge of steamers would be greatly facilitated. The shipowners' most pressing needs are: (1) another large and commodious deep-water dock, provided with all modern appliances for rapid discharging and loading.

10559. Will you tell us where you would suggest a site for that dock?—That would be of little value coming from me. It needs much more expert knowledge of the subject than I profess to have.

10570. (Rear-Admiral Hext.) You would prefer to have it nearer the Albert Dock, would you not, if you could, in preference, to further down the river?—We should like to bring the ships as near to the trade as we can. The advantage of the Albert Dock is that it is not too far for carts and vans. The docks lower down are under the disadvantage that the goods cannot be taken by road.

10571. (Chairman.) Now will you tell us what the other most pressing needs of the shipowners are?—(2) Additional dry docks for cleaning and repairing; (3) increased shed accommodation and more powerful modern cranes in the existing docks, also improved facilities for getting goods away by barges; (4) the deepening of the channels of the river to 30 ft.; (5) sorting sheds for refrigerated produce; (6) greater freedom for the employment of lightermen. Now I should like to say a few words on the question of deepening the river to 30 ft. Sir Thomas Sutherland, in the excellent evidence he submitted to the Commissioners, appears to me to have restricted his general ideas as to the requirements to

the depth of water in the Suez Canal, through which all the Peninsular and Oriental and British India steamers have to pass; but in the case of steamers to and from America, Australia and New Zealand no such limitation exists, and the tendency is to increase the size and draught of water to the utmost limits of the port. I express the hope that we shall regard 30 feet as the minimum depth. I may mention the fact that, for instance, the White Star Line steamers trading to Australia are now 11,000 to 12,000 tons, drawing 32½ ft. when fully laden; the New Zealand Shipping Company's steamers, 9,000 tons and 28 ft. draught of water. Already it happens frequently that the latter are resting on the mud in the docks when loading, and have to be restricted in weight of cargo and coals. These limitations are injurious to the trade of the Port of London and to the community at large, for, given a sufficiency of cargo, the larger the ship is the more economically she can carry. A very important interest connected with the steamers I am here to represent is that of refrigerated produce imported into London. This trade only commenced in the year 1882, and you will see from a table which I will hand in the steady increase of the New Zealand exports, nearly all of which come to London.

*(The witness handed in a table showing the increase in the exports from New Zealand from 1882 to 1899. See Appendix, 27th Day, No. 9.)*

All the steamers regularly trading between London and New Zealand are provided with freezing machinery and insulation for carrying 40,000 to 100,000 carcasses of mutton or an equivalent of beef or dairy produce. The discharge of this produce is attended with considerable delay and expense and a certain amount of injury owing to insufficiency of cold storage and also to the difficulty of sorting out the numerous marks. The great need of one or more sorting sheds for facilitating the work has long been felt and urgently pressed, the New Zealand Government having gone so far as to offer to contribute towards the cost of construction and maintenance of such sorting sheds for New Zealand produce. Negotiations at different times have been conducted with the London and St. Katharine Docks Company for providing these at the joint expense of the New Zealand Government, the meat exporters, and the shipowners, but so far without success. This matter is not only of very great importance to the Colony of New Zealand, but to the British consumer, who is becoming year by year more dependent on foreign supplies of meat. I hand in a table showing a summary of the frozen meat exported from New Zealand for the six months ending the 31st December, 1900.

*(The witness handed in the table. See Appendix, 27th Day, No. 10.)*

I also hand in a table showing the exports of frozen meat from New Zealand from 1882 to 1900.

*(The witness handed in the table. See Appendix, 27th Day, No. 11.)*

10572. (Sir Robert Giffen.) Are all those tables compiled by Dalgety and Co.?—I think the first is from the official reports of the New Zealand Government; the last is compiled by Dalgety and Co. I would mention that I have only here put in the trade of New Zealand, but the meat trade from Australia is very large, and also large quantities come in from the Argentine. It would be a very great help if sorting sheds were provided, and it may possibly be useful to bear in mind that if ever we should be in difficulty with regard to imports of food into the country, these sheds would serve as additional storage, and be helpful to that extent.

10573. They would come in very useful?—Yes, they would come in very useful, without being at the public expense, because meanwhile we want them for turning over and sorting the marks, which needs to be done in a refrigerated shed, so that the meat shall not thaw and become damaged.

10574. (Rear-Admiral Hext.) With reference to what you have said about the shipowners' most pressing needs, I presume another one that you have not included is rapid despatch?—That I thought I had implied. It is despatch more than anything else that we want, owing to the increasing value of the ships that we employ.

10575. And that applies, of course, to detention in  
4736

the river as much as to discharging the ships in the docks?—It does.

10576. Have you seen the report of the Lower Thames Navigation Commission of 1894 as to deepening the river?—No, I have not.

10577. I was going to ask you if you approved of that, but you virtually say the same thing by saying that you want the channel to be deepened to 30ft. That, of course, is as far as the Albert Dock?—Yes.

10578. Are you acquainted at all with the so-called American bill of lading?—In a very general way; but I am not engaged in the American trade.

10579. The only question I wanted to ask you with regard to that is whether you consider that the ships get quicker despatch from the American bill of lading than they would from the ordinary one?—I do not see how a bill of lading can come into the question, because, regardless of the bill of lading, we begin to discharge our ships as soon as they come alongside the wharf, and continue that discharging until it is completed, paying the dock company for giving the goods back to the lighters of the merchants who have made their entries within 48 hours of the ship's arrival. The difference of the bill of lading is merely a question of expense to the shipowner.

10580. But you have that expense?—Yes, we have that expense.

10581. And unless you go to that expense you cannot have the facility of putting the goods on the wharf?—No, someone would have to bear the expense.

10582. (Sir John Wolfe-Barry.) With regard to the privileged watermen, your companies, I suppose, trade to other ports besides the Thames, do they not?—Not in England.

10583. Then you have no experience of the barge traffic on the Clyde, the Mersey, or the Tyne?—Very little.

10584. You gave evidence before the Commission of 1894?—I think not.

10585. Yes. I have all the evidence before me?—Then my memory is at fault.

10586. And I had as Chairman the honour of asking you a great many questions?—I had quite forgotten it.

10587. I was in hopes that you had refreshed your memory as to what you had said then, because I wanted to ask you whether you are still of the same opinion as you were in 1894 as to the necessity of deepening the river?—I hope I did not say anything on that occasion contrary to what I am expressing now.

10588. Your evidence was very strong that the river required to be deepened?—We have had a larger advance in the size of ships in the last six or seven years than at any other period, consequently the need is still greater.

10589. You stated this in one of your answers: "The larger the ships the more inconvenience we feel in London under the present state of things." I am referring to your answer to Question 1823?—I say the same now.

10590. You said "It was bad enough when we put in our letter of 1887, but in 1887 we never thought of building steamers to carry 10,000 tons of cargo." I was going to ask you whether this matter had not been agitated by the shipowners ever since the year 1887?—That is the case.

10591. And I think I am right in saying that Messrs. Gray, Dawes and Co. signed the letter of the 26th January, 1887, to the Thames Conservancy Board, urging the deepening of the river?—Yes.

10592. If you will kindly refer to page 126 of the evidence before that Commission it might be useful to see the signatories to that letter: The Secretary of the Peninsular and Oriental Steam Navigation Co., Gray, Dawes and Co., John Swire and Sons, Donald Currie and Co., McDiarmid, the Manager of Shaw, Savill and Albion Co., the Manager of the National Steam Navigation Co., the managers of the Glen Line, and without going through them all, I may say practically all the principal owners of ships in London. But very little has been done?—Very little. I am not aware of anything in the way of deepening.

10593. We have lately had a programme put forward

Sir E.  
Dawes,  
K.C.M.G.  
18 June 1901.

Sir E.  
Davies,  
K.C.M.G.

18 June 1901.

by the Thames Conservancy, but very little has been done to realise it at present?—That is so.

10594. Then in 1894 you expressed the same opinion, speaking on behalf of your two companies?—Yes.

10595. The two companies that you now especially represent have a tonnage of about 240,000 tons, I think. I mean trading to London. You said 101,000 tons for the New Zealand Shipping Company and 138,000 for the Shaw, Savill and Albion and Shire Lines, making roughly 240,000 tons?—Yes.

10596. That, I suppose, is the tonnage of the ships, and does not represent the number of voyages into the Thames?—No; it would merely represent the tonnage of the ships.

10597. You would have to multiply that by some figure to show the number of ships making journeys in and out of the Thames?—About  $2\frac{1}{2}$  in the New Zealand trade. That is, they would make  $2\frac{1}{2}$  voyages per annum.

10598. That would represent 600,000 tons of vessels used in the Thames annually in your two companies alone?—Yes.

10599. And in 1894 you advanced the desire of having 30 ft. of water up as far as the Albert Dock?—Yes.

10600. You said: "It is far from creditable that the greatest city of the world should have its approaches in such a lamentable state. We know how the Clyde has been improved, and I hear a great deal about the improvements of the Continental ports, but why London should lie back and fall behind in the race I do not know." And, I suppose, from having the pleasure of seeing you here to-day you are still as strongly of that opinion as you were before?—Yes.

10601. It is now seven years since you gave that evidence in 1894, and little or nothing has been done?—That is the case.

10602. (*Rear-Admiral Hext.*) In case these great improvements in the river take place or are taken in hand, would you advocate a Trust on the same lines as the one at Liverpool, or not?—That is a question I have some little hesitation in answering, because I do not know enough about these Trusts. We have always got on extremely well with the dock company, and if the dock company was supplying our wants we should be quite content. If the dock company is from any cause unable to do it some other body must if the Port of London is not to fall behind.

10603. I only wanted to know if you had formed any opinion on the subject?—Sir John Wolfe-Barry called attention to this petition that was sent in in 1887. It is signed by nearly all the important shipowners in London, and it would be very interesting to see the tonnage or rather the size of the ships that they were employing then and the size of the ships that are being employed to-day. I venture to say we should find that the ships have more than doubled in size in that interval. At the later date in 1894 I spoke of a tonnage of 10,000 tons as the maximum, but we have already gone considerably in advance of that. There are steamers carrying 14,000 tons and even the British India Company has made a contract within the last few days for a new ship to carry 11,000 tons.

10604. (*Sir John Wolfe-Barry.*) You have pointed out very clearly that considerable expenditure is required on the dock and the port generally. Have you formed any opinion where the money is to come from?—I have simply read the various suggestions that have been made more or less at this inquiry.

10605. You have not personally formed any opinion?—No.

10606. Sir Thomas Sutherland said: "Do not put it upon the ships"?—It seems to me to come to pretty much the same thing. If you put it on the ships we put it on the freight. If you put it on the goods it is not on the ships.

10607. Sir Thomas said: "If you put a high rate upon the ships you would discourage the shipowners from taking freight for that port, because the shipowner has to pay the money out of his pocket in the first instance." Do you think there is much in that

argument?—It is a question not answered very easily. There are two classes of shipowners. There are those who are in regular trades with ships going backwards and forwards and seldom deviating, and in that regular trade it is possible to make the rates of freight to cover all these charges. There is another class of ships disrespectfully spoken of as "tramps" that are open to go to any part; and in the case of these vessels the shipowner would take the freight which pays him the best and send his ship where his charges were least.

10608. Then to that extent you would say that assuming a certain amount of annual charges would be incurred it should go upon the goods rather than upon the ships?—To that extent it would be better that it should be upon the goods rather than on the ships.

10609. The shipowner, I suppose, has a considerable amount of power in deflecting his ships from one port to the other. It is not merely a question of consignor or consignee?—It rests with the shipowner, and the shipowner is governed by the balance of profit and loss that is shown.

10610. And the rates that he sees staring him in the face?—Exactly.

10611. Have you any experience about trading to Antwerp with cargoes partly for Antwerp and partly for London?—Nothing that would be of any value. It is a diminishing quantity. Many years ago we used to send our steamers to Antwerp to be partially loaded. But the position has been reversed. The Antwerp trade has passed into the hands of the Continental lines, which now come and poach at our ports. For instance, a good many of them come to Middlesbrough. Now the London lines have been driven out of the Continent, and they take Middlesbrough. I mention Middlesbrough as a port where the Continental lines have retaliated. They have taken from us what we used to get by sending our ships to foreign ports, and now send their ships into our ports.

10612. You cannot give us any comparative statement of the case of identical ships going to Antwerp, and going to London, can you?—No.

10613. Then the present tendency of things is that Antwerp is the principal port for a certain quantity of traffic, and the balance of the cargo does not come to London; and London is the principal port for a certain quantity of traffic, and the balance does not go to Antwerp?—That is the case.

10614. There is not much taking of part-cargo in either case?—That is so.

#### Cross-examined by Mr. Horace Ivory.

10615. You emphasise, apparently, the difficulty that arises from a strike. Is that really at the bottom of your grievance about the lightermen?—It has, certainly, been emphasised by the strike; but I went a little bit further than that. I said that it is an old grievance; that the position is an unsatisfactory one.

10616. It is inconvenient to you, I suppose, when the dock labourers strike?—Not in the same way. When the dock labourers struck, we had no difficulty in getting outside labour, and that outside labour remained with us, and after the dock labourers came back, we were the very best of friends. But the position with regard to the lightermen is an entirely different one.

10617. When the lightermen are on strike there is no difficulty about getting other men, is there?—We cannot promise those men permanent employment. What men want when they change employment is to remain.

10618. I thought you said that as soon as the dock-labourers' strike ceased, you took the dock-labourers back, and you were all good friends?—That is true, but we did not part with the men we had taken on.

10619. Then you could not have taken all the old labourers back?—I could not give you the figures, but we kept such men as desired to stay with us, and the dock labourers who came back worked with them, and from that time to this we have got on extremely well.

10620. And so with the lightermen. The lightermen who were on strike came back to work, and you have

got on very well. It is a fact, is it not, that the lightermen have only struck twice in the last 40 years?—I could not tell you that.

10621. Do you know to the contrary, or do you suggest to the contrary. It has been stated this morning here that they have only struck twice in the last 40 years?—I wonder at their striking at all.

10622. You have said in your evidence that you think the owners ought to be allowed to employ men whom they find the best qualified for the work. How do you ascertain the qualifications of your captains and mates whom you employ on your ships?—I had better tell you how we take them. We take young men with their qualifications. The lowest grade of certificate is that of second mate.

10623. Where do you get the certificate from?—The certificate is granted by the Board of Trade.

10624. So I thought. Then in that case you rely in the first instance on a certificate of the Board of Trade as to their competency? You do not take men for your ships as officers to navigate your ships unless you have a certificate of their competency?—Quite so, but there is no restriction as to numbers. Any young man can go up to the Board of Trade and say, "I have had my sea experience and I wish for your certificate." He gets it as a matter of course.

10625. But he has to satisfy the Board of Trade that he is competent before they grant the certificate?—Certainly, but there is no limitation as to numbers.

10626. What limitation is there as to the number of lightermen who might offer to be apprenticed and get their certificates. There is no limitation, is there?—They are a very limited body.

10627. But in law there is no limitation of the number. Do you not think that the law of supply and demand applies to this as much as to anything else?—No.

10628. If there was a demand for more lightermen do you not think there would be a greater supply?—All my information goes to show that there is an insufficiency of lightermen owing to restrictions.

*Re-examined by Mr. Claude Baggallay.*

10629. One question about the examination of the Board of Trade for certificates. That does not relate to the actual navigation part, does it, but rather to the scientific side of navigation; that is to say, capacity for doing the mathematical and scientific part?—There are two examinations—one for seamanship and the other for practical navigation.

10630. There is the practical seamanship too?—Yes.

10631. With regard to the number of licensed men do you happen to know about the rules of the Society of Foremen Lightermen with regard to the taking of apprentices?—I do not know the point you are referring to. I see that they take apprentices.

10632. You do not know anything about the rules of the Amalgamated Society of Foremen Lightermen of the River Thames?—No.

10633. With regard to the examination for seamanship that is not surely an examination as regards practical seamanship. It is a question of what you

would do if, for instance, you had an emergency. It is more or less an oral or paper examination, is it not?—It is a very practical examination for everything connected with the working of a ship apart from navigation. You have two distinct examinations. A young man has to begin with seamanship and finish with navigation.

10634. Is there any analogy whatever between the work into which that examination goes in the case of a captain, or a mate, or a man who wants to be either one or the other, and the work which has to be done by a lighterman on the River Thames?—Very little. There was a time, of course, when it was much more important, but as lighters now are mainly towed, a man needs to have very little seamanship qualification. But I would say this, that the shipowner has opportunities (not that shipowners want to become lightermen), of selecting men; there are always a number of men who are willing to take longshore work instead of going to sea, in whose case with a very moderate examination they would be quite able to undertake the management of barges. The owners of barges may be trusted not to put their valuable property into the hands of men who are not qualified to look after it, and in my opinion the owner of the property is the best judge of the man he employs.

*Cross-examined by Mr. Rowland Whitehead.*

10635. You say the restriction of the employment to a small body of men is unnecessary. I want to clear that up. Do you say that if the present restriction were removed the number of men employed in lightering work on the river would be larger?—I should say so, certainly.

10636. Then it is almost the same thing under the present system. There is really a shortage of men?—That is the information I get.

*Cross-examined by Mr. Harper.*

10637. As I gather with regard to the suggestion of charges, if charges were put on the ship you of the regular liners would be able to maintain the charges and still get them back on the goods at the other end. You would put it into your freight and get it on your goods, and, therefore, the consignor at the other end would have to charge this rate. That would be practically the same thing as in the case of a tramp steamer, would it not?—Not exactly.

10638. The tramp steamer would not be able to keep up rates, you think?—No, not so easily as the regular liner.

10639. That is the distinction you draw. That is the view you take?—I refer to the different systems existing in the regular line and the tramp steamers, but I hardly like to express an opinion different to Sir Thomas Sutherland. I think he looked at the matter all round much more than I did. My mind has been given more to my own particular business.

10640. (Sir John Wolfe-Barry.) On the subject of examination I suppose the man in charge of a barge is more comparable to a leading seaman or a quartermaster than to a mate of one of your big ships?—Yes.

10641. You do not have any examination for them, do you?—No.

10642. You select them from your practical knowledge of their ability to do the work?—Quite so.

Mr. BENJAMIN JOSEPH JACOB called and examined.

10643. (Chairman.) You are a retired master lighterman?—Yes.

10644. You wish to give evidence on behalf of the Watermen's Company?—Yes.

10645. Will you be good enough to proceed with your evidence?—I have been a member of the court of the Watermen's Company for the past 14 years, and was until last year senior partner in the firm of Benjamin Jacob and Sons, lightermen and steam tug owners. The firm then owned 80 barges, and are also tug owners. I had been extensively engaged in the business for 48 years, and was a partner in the firm for 23 years, having previously worked as a journeyman lighterman for 25 years. The duties of the court of the Watermen's Company may be briefly stated thus:—Two members taken

in rotation attend what is commonly called a rota court every Thursday. Two members of the court must be present together at these weekly meetings, when the general business of the company is transacted and licences are granted to apprentices. If complaints are made against members of the company, either by the public or by other members, the complaints come before the rota court, who issue summonses which have to be heard before the court of complaints. The court of complaints is a meeting of the whole court, which is usually held on the last Thursday in every month. It is at this court that the judicial functions of the company are exercised, and the summonses which have been granted by the court at the rota court meetings are heard and adjudicated upon. The number of them varies considerably, and consist most commonly either

Sir E.  
Davies,  
K.C.M.G.  
18 June 1901.

Mr. B. J.  
Jacob.

Mr. B. J.  
Jacob.  
18 June 1901.

of using abusive language or infringing the acts or bye-laws of the company by working craft without the requisite licensed lightermen on board, working boats not being licensed, or when carrying a number of persons in excess of that expressed in the licence granted by the court, neglecting duty, and occasionally instances of overcharge by watermen are met with, but they are exceptional. The business of the court is conducted in a methodical and painstaking manner, and in my opinion substantial justice is done. The company have no power to enforce their own convictions. In case of need they apply for assistance in this respect to the Lord Mayor or other magistrate of the district where the offence was committed. Before those tribunals sentences properly pronounced by the Watermen's Court can be enforced.

10646. Did you write the statement of your evidence yourself?—With the assistance of the clerk. It is similar evidence to what was given twelve months ago before the House of Lords. At the Rota Courts, masters who wish to apply for a two years' license for their apprentices in accordance with the provisions of the Act of 1859, attend, and master and apprentice are examined as to the qualifications of the apprentice to take sole charge of a barge. The master has to produce a certificate, signed by himself and six other freemen, that the apprentice has served the whole period in craft, and that he is competent to take sole charge. The examination is a real enquiry, and the inspector of the district where the apprentice has been at work is always in attendance. The Court are in many cases not satisfied as to the competency, and order the apprentice to work for a further period before making a fresh application. The licensing of pleasure boats and watermen's skiffs, as to their carrying capacity, is also done at these weekly Courts. Complaints of masters against apprentices and apprentices against masters are also heard on these occasions. The fees payable are £1 8s. for binding, £2 6s. for the freedom, and 2s. 6d. each for the licenses. An annual fee of 3s., called quarterage, is paid by each freeman. The members of the Court also have to attend a Court held on the second Tuesday in every month for the purpose of binding apprentices and granting freedoms, licenses, and contract licenses. At these courts the apprentice and his parent or guardian attend with the master. A certificate of birth has to be produced proving that the apprentice is not under 14 or above 20 years of age, and the parent or guardian has to give his consent. The period of apprenticeship is for five, six or seven years. A copy of the indenture is given to the master and to the apprentice. A notice is also given to the apprentice that he will be expected to be able to swim before obtaining his two years' license. The average age of an apprentice, when bound, is about 16 years and 4 months. Two years' contract men, under the provisions of the Act of 1864, now incorporated in the Conservancy Act of 1894, are also contracted to the masters at these courts. They must be over twenty years of age, and produce a certificate of birth in proof thereof. Apprentices who have served the whole period of their apprenticeship also obtain their freedoms on these occasions. The master has previously to attend and sign the register consenting to the freedom, and the apprentice has to obtain the signatures of six freemen to the effect that he has during the last two years of his apprenticeship been continuously serving as a lighterman, and that they are of opinion that he is quite competent to act as a lighterman. The applicant must produce the certificate before the court, and after paying the fees and obtaining his freedom he is examined by the court, all the other applicants being excluded, as to his qualifications. If he is known to the inspectors, who are always in attendance, the examination is not severe, but in the event of there being any doubt the applicant is put through a very severe examination. As a proof of its severity I may mention that nearly 10 per cent. are put back or refused the lighterman's license. The court is an open one, and other freemen attend, the hall being at times crowded. An objection can be raised by anyone present, or lodged previously in writing. The examination is a real and serious enquiry into the service qualification of an applicant, and the inspectors, who are acquainted with all the apprentices in their several districts, make the court aware if they do not know an applicant. The regulations with reference to the applicant for a two years' contract license are similar, except that the applicant in this case must obtain the signature of twelve freemen to the certificate of competency. The representations made that the licenses are not guarantees of competency are entirely false. The court in the most bonâ fide manner endeavour to

discharge their duties and to take care that none but properly qualified men are authorised to work on the river. They do this not only for the benefit of the public, but for their own safety as the employers of licensees. Under the provisions of the Act of 1859, with respect to the renewal of licenses every three years, the court have the power if any case comes before them of refusing to renew the same, in addition to the general power of suspending a license for misconduct or incompetency. The court have in some instances suspended licenses for misconduct, but they have never had occasion to revoke a license on the ground of incompetency discovered subsequent to the granting of the original license. In the event of a felony being committed by any Freeman, his license is always cancelled, and he cannot obtain it again without making application to the full court in writing, accompanying such application with testimonials as to reformation and offers to find work for the applicant in case the license is renewed. There are several cases where applications have been deferred for different periods, and others where licenses have never been renewed. I have always been accustomed to employ the trained Freemen of the Watermen's Company and their qualified apprentices to navigate my barges to and fro. The court of complaints, held from time to time by the court of the company at Watermen's Hall (and which has been established since 1827 under the sanction of Parliament), for deciding disputes and inflicting fines for any breach of duty of the company's Acts and bye-laws, works well and efficiently, and provides a quick and inexpensive mode of settling questions arising between the Freemen, and saves much valuable time and law costs in litigation which would otherwise be incurred by resorting to the ordinary tribunals; in fact the river police bring the cases which come under their notice for infringement of the company's Acts and bye-laws before this court instead of before a police magistrate. Prior to the Act of 1827 the company was not incorporated. It was incorporated by that Act. It remained in that condition until 1859, when most of the provisions of the Act of 1827 were repealed and practically the company became re-incorporated under the Act of 1859. Up to 1859 a master could only have a limited number of apprentices; by that Act he can take any number, and since 1864 it has been competent for any barge owner to take an unlimited number of contract men. In 1864 a Bill was introduced, called the Conservancy Bill, the object of which was to throw open the river to any person, skilled or unskilled. The object was not attained, but a provision was inserted allowing men who proved that they had worked under a contract for two years in the river to become licensed, and they are called contract licensed men. The result of that law remains that a man must be either a licensed Freeman of the company or a licensed man who has worked for two years under contract. Another attack was made upon the company and the privileges of the Freemen in 1870, which failed. In 1890 a Bill founded on the recommendation of the Thames Traffic Committee of 1879 was brought in by the same interests which promoted the Bill of this year. The Bill of 1890 was thrown out after being thoroughly threshed out by a strong Committee of the House of Commons. I hand in a copy of that Bill.

(The witness handed in a copy of the Thames Watermen and Lightermen Bill, 1890. See Appendix, 27th Day, No. 12.)

I also hand in a copy of the Petition presented against that Bill by a number of master lightermen, barge-owners, wharfingers and others.

(The witness handed in a copy of the Petition. See Appendix, 27th Day, No. 13.)

I also hand in a copy of the Special Report of the Select Committee of the House of Commons on the Bill.

(The witness handed in a copy of the Special Report. See Appendix, 27th Day, No. 14.)

The conditions of the traffic and navigation on the Thames are practically the same now as they were then, except that the traffic becomes more congested year by year, and the navigation consequently more difficult, and the same reasons which influenced that Committee in favour of retaining the licensing system still hold good. In 1871 a bill was brought in to alter the constitution of the court of the company by providing for the election of the court by the Freemen from among their own body, and for two members of the Watermen's Company to be placed upon the

Thames Conservancy. That bill was thrown out by the Committee to whom it was referred. A precisely similar bill to that one (excepting the appointment of two members on the Thames Conservancy) was in 1892 brought in by the same persons as those promoting the bill of 1871, but was thrown out by the Committee without hearing the case of the company. A similar bill was brought in in 1899, but thrown out by a Committee of the House of Lords. In 1893 a bill was promoted by the company and passed, providing for the measuring and registration of craft and the measuring and registration of pleasure boats. The effect of this Act has been to remove the former complaints which existed with reference to false registration, and has practically done away with the accidents which used to occur through pleasure boats being overcrowded. Complaints were made before the Thames Traffic Committee, 1879, that the Court refused to elect barge owners as freemen under the provisions of the 25th section of 22 and 23 Vic. cap. 133. All barge owners who apply are now admitted, and over 40 have taken up the freedom of the company, and two have been elected in the Court. While the great body of the men are fairly well conducted, and are as honest and skilful a body of men as will be found engaged in any labour of so arduous a character, yet, looking at the hard life they have to undergo and the temptations to which they are subjected, it is, in my opinion, essentially necessary that a proper system of control and management should exist for the maintenance of order and regularity amongst the men, and for the enacting and carrying into effect the necessary regulations and bye-laws for their conduct on the river. The members of the company's court are freemen of the company who have been actively and personally engaged in the various departments of labour on the river both as lightermen, bargemen, pilots, etc., and who by industry and attention to their duties have raised themselves to be employers of the working lightermen and watermen. The members of the court derive no pecuniary or personal benefit or advantage whatever from the discharge of their duties (beyond a limited sum allowed for travelling expenses, not exceeding 5s.); they have arduous and difficult duties to perform, involving on the part of some of the members of the court very frequent and long attendances at the hall of the company; they have the duty of examining and reporting upon all persons applying to be licensed as apprentices, and thereafter on their applying for certificates when they desire to obtain their freedom, granting summonses, boat licences, settling disputes, managing the charities, and attending the various committees which meet from time to time; and all these duties they discharge gratuitously, and simply from a desire to promote the benefit of the company and the trade of the Port of London. Certain provisions have been made by which a fund generally known and called "The Poor's Fund" has been created and accumulated. Under the authority creating that fund Sunday ferries were established by the company at various plying places and public stairs between Vauxhall and Limehouse, and the proceeds arising therefrom were from time to time received and disbursed for the benefit of the persons entitled thereto. On the erection of bridges and public improvements (such as Blackfriars, Waterloo and London Bridges) many of the Sunday ferries which had previously existed and been in full operation on the sites of the bridges or near thereto, and were producing a large income thereby, became useless and were in fact destroyed, and large sums of money have accordingly been received by the company from the promoters of these undertakings by way of compensation for the loss of such ferries, which moneys have been invested by the company in the public funds. The dividends arising from such funds, as well as the incomes produced by the existing Sunday ferries, have been and now are disbursed, under the supervision and management of the court, in small pensions among the poor, aged, and decayed freemen and their widows, and about 500 persons are at the present time participating in the benefits derived therefrom. The income arising from the Poor's Funds invested is now between £1,400 and £1,500 a year. In addition to the foregoing, the company are also trustees of a small fund belonging to the watermen of Westminster, created under the same Acts of Parliament which empowered the company to form Sunday ferries for the benefit of the poor, aged, decayed, and maimed freemen of the said company of the said parish. On the erection of Vauxhall and Westminster Bridges, where ferries formerly existed

belonging to what was known as "The Westminster Chest," the sum of £2,760 18s. 1d. Console was received as compensation for the loss of these ferries, and such sum was paid to the company and invested by them as trustees for the Society of Westminster Watermen, and the annual income produced thereby is paid over by the company to the stewards of such society, to be disbursed among the poor persons entitled thereto. There is also, belonging to the company, an asylum for the aged, decayed, and maimed watermen and lightermen and their widows, situated at Penge, in the County of Surrey, and occupying two and a quarter acres of freehold land, and contains 47 substantial almshouses. The said almshouses could contain 94 inmates, the average being 65. The married couples receive 9s. per week, and the single men and women 6s., besides coal, medical attendance, and medicine. This charity, founded by the contributions of members of the company, aided by those of some of the public, is supported by annual subscriptions and donations, and by income arising from the funds already collected. This charity is quite outside any duty imposed by Act of Parliament, and no funds of the company are used for its maintenance. Six of these almshouses were built in 1695 at a cost of £1,400. Some years ago the late William Vokins, Esq., conveyed 12 other almshouses, situated at Ditchling, Sussex, to the company for the benefit of the aged and infirm freemen, and endowed the same by his will. For the benefit of the inmates of the almshouses at Penge, and also the inhabitants of the immediate neighbourhood, a church was some years ago erected through the exertions and contributions of the court and their friends, in which free sittings are provided for the pensioners of the asylum and the residents in the neighbourhood. The above-mentioned almshouses are supported as well by donations and annual subscriptions received from master watermen and lightermen, barge owners, merchants, and corporations engaged in the commerce of the Port of London, and from others, as from the charity's funds, and amount to a large sum annually. The "others" include the working men of the River Thames. They contribute very liberally to these almshouses. The court consists of members from all parts, and is a fairly representative body, and when a vacancy occurs effect is given, if such is possible, to representations as to electing working freemen. During the last nine years the court have elected three working lightermen and one pilot as members of the court and, in my opinion, they sufficiently represent the interests of the general freemen of the company. I am of opinion that the present licensing system is necessary to the interests of the public and the trade of the Port of London. The injustice of depriving the lightermen of their privilege is manifest. The course of legislation during the last 40 years shows that the question of the necessity to employ skilled labour on the River Thames has been carefully inquired into, and on four successive occasions (1859, 1864, 1870, and 1890), at an expense of about £10,000. Parliament, after carefully enquiring into the matter has declined to throw the river open. In reliance on this fact the freemen of the company have assumed, as they were entitled to do, that the rights and privileges of the company were definitely established and approved by Parliament. They have consequently made pecuniary payments to entitle them to membership in the company, and moreover have served protracted periods of apprenticeship under arduous circumstances and at great cost of time and labour. The injustice of depriving the lightermen of these rights and privileges guaranteed to them by Parliament without receiving any compensation is obvious. A still more serious objection arises from the injurious effect it is likely to have upon the interests of the public. The conduct of the traffic upon the Thames is attended by so much danger that it can only be successfully conducted by those who are possessed of considerable skill and experience. It is to be observed moreover that the mischief which results from the employment of incompetent men cannot be confined to their operation, to the navigation, to the wrongdoer, or to those who are properly responsible for their want of skill. Another employer, who may have exercised all proper care in placing his craft in the hands of thoroughly competent men, may find himself involved in a collision and thus suffer a very heavy loss through the carelessness or incompetency of someone navigating other craft, who, though admittedly in the wrong, and liable therefore to make good the result of his error, may be wholly unable to do so through lack of means. The present system has

the great advantage that it offers the best precaution against the employment of incompetent men. Nothing will create the required skill and competency except a continuous service upon the river, and nothing will ensure this experience so fully as a well regulated system of apprenticeship. Under his indenture the apprentice cannot play truant at night time or in bad weather, and it is precisely at these times that the most useful experience is obtained. It is because the system of apprenticeship ensures that during the long apprenticeship the apprentice shall work all weathers, and at all hours, and under all circumstances, that it offers the best possible guarantee that the man who has passed through the training has acquired the experience and skill necessary to carry on the occupation, in which want of skill may be productive of enormous loss and perhaps peril, not only to himself and the craft under his control but to passenger steamers and all using the river. Another advantage is secured by the present system in the close acquaintance possessed by the officers of the Watermen's company with the freemen and apprentices. With few exceptions all thus engaged are known to the officers of the company, and all without exception are registered in the company's books. In case, therefore, of any misdemeanour or negligence, the wrongdoer is easily found and rendered amenable to the jurisdiction of the company's court or of the ordinary Courts of Law. This is very important, as the opportunities for theft and the temptations which constantly beset them are greater than in any other occupation. The work of a lighterman in dumb craft is quite different to that of the men in sailing craft. In the latter case they are permanent hands and reside in the craft, they always have two hands, and the mate, who is very often the son of the captain, acquires the necessary experience before he is made captain. These sailing craft from the Medway always take a freeman on board to assist them through the bridges. A proof of the absolute necessity of skilled labour was shown in the late strike, when if it had not been for the Association of Foremen Lightermen remaining loyal to the masters, the latter could not have dealt with their work in the smallest degree and must have been beaten. The privilege has always acted as a great deterrent to strikes on the river, as the men have recognised that they would jeopardise their privileges in the event of striking. Strikes of any magnitude have only occurred on two occasions during the last 40 years. The number of convictions for theft, etc., are remarkably small. The number of licensed men is about 5,863. The number of apprentices, 1,676. The number of contract men holding licenses is 359. The number of dumb craft registered in the books of the company on the 31st December, 1900, was 10,205, and their tonnage 704,421, and of sailing craft 913, tonnage 61,808. The number of new craft registered from 1st January, 1899, to 31st December, 1899, was 433, tonnage 41,614, and from 1st January, 1900, to 31st December, 1900, was 462, tonnage 41,116. The fee for measuring and registering a barge is 5s. The income of the company averages about £3,200, and the expenditure £3,130. The accounts are audited by an auditor appointed by the Thames Conservancy, and are submitted to the Board of Trade. The number of lives lost by drowning during the last eight years has been 104, showing that there is considerable risk to life which would be greatly augmented in case of inexperienced men taking charge of craft. Two hundred and fifty-three barge owners signed the petition against altering the present system of licensing in 1890, when the bill for throwing the river open was before Parliament, and the same number of signatures could be obtained on the present occasion. The promoters of the Thames Lightermen Bill propose that the river should be thrown open, but do not suggest any provision for carrying on the company's functions, as Section 84 of the Company's Act enacts that "for providing a fund to defray the expenses of the company every freeman shall pay 3s. per annum." In the event of the licensing system being done away with it would be impossible to levy these fees. I am strongly of opinion that if it were impossible to insure there would not be any question of doing away with the licensing system. The insurance companies always insert a condition into their policies that they shall only be liable in the event of craft being manned by licensees.

10647. (Sir Robert Giffen.) Do all the marine insurance companies insist upon that stipulation?—As far as our barge owners insurance is concerned, they insure under all circumstances as long as there are competent men on board.

10648. Have you any statement by insurance companies to refer us to, showing that they insist upon that stipulation?—Not here.

10649. How do the insurance companies act in other ports than London where there are no licensees?—I am not aware of that.

10650. Are the goods uninsured?—The goods are all insured.

10651. The goods would be insured in those cases in other ports where there are no licensees, and I suppose we may assume that if these privileges are withdrawn the insurance companies would still find a way to insure?—Possibly they would require a higher premium.

10652. You have no evidence that the premium would be higher, have you?—The only evidence we have is that we find it is a very difficult thing at the present time to get insured at all.

10653. How is that?—There is so much risk.

10654. What is the risk?—There is the risk of collision. There is a great risk for this reason. Under the Compulsory Pilotage Act the pilot is only responsible to the extent of £100 if he runs down a craft and is found guilty of incompetency, and the barge might have £3,000 or £4,000, or £20,000 worth of goods in her. They could not recover from the owner of the vessel which runs her down if there is a compulsory pilot on board her.

10655. As far as I recollect no barge owner before has stated as one of his grievances that he finds it difficult to insure?—I am rather surprised at that.

(Mr. Horace Ivory.) This witness is a barge owner, I understand, himself.

10656. (Sir Robert Giffen.) This is the first case where we have had a statement to that effect made. I should like you to add to your statement by mentioning what the premium of insurance is?—It varies from 10 per cent. to 20 per cent.

10657. On the goods?—On the goods and craft together—against all damage.

10658. Is not that a very serious charge upon the traffic in the Port of London?—Yes; it is so crowded; there are constantly accidents. It is very rare we go a year without having to make very heavy claims against our insurance company for above what our premium is.

10659. Are you quite sure that the premium is 10 per cent. upon this traffic passing in the Port of London?—I am quite certain of that.

10660. Is not that much heavier than any other charges upon the traffic of which we have heard?—I have no doubt it is. I have no doubt any master lighterman could tell you that it is quite as high as that.

10661. Are we to take it that 10 per cent. of the goods passing in barges in the Port of London are lost?—I mean the charge on premium is 10 per cent.; the cost for the premium on insurance is 10 per cent.

10662. 10 per cent. on the value of the goods insured?—Yes, what we are insured for, whatever the amount is.

(Mr. Horace Ivory.) The premium is 10 per cent.

(Mr. Claude Baggallay.) I think it is in the time policy.

10663. (Sir Robert Giffen.) You mean the annual premium of insurance on the barge?—Yes.

10664. But not 10 per cent. on the goods conveyed?—No, I do not say that. We pay so much money for a year, an annual policy to cover all risks. It is so much per ton of the carrying power of the craft.

10665. Is that because the barge is liable to the full amount?—Yes. The lighterman is entirely liable.

10666. He is liable to the ship, although the ship itself is not liable?—That is so.

10667. You gave us the number of dumb craft registered and other figures?—Yes.

10668. Are we to take that as the actual figure of craft in existence and at work in the Port of London?—You may take that as guaranteed, taken from the present craft licences according to the registration numbers on our books at the present time.

10669. But are all these craft in existence?—Yes, otherwise the barge owner would have to pay for licensing them every year. These are licensed every year and registered through the books of the company every year.

10670. And those are the actual numbers existing?—

See 10777

See 10665

Those are the actual numbers from the books of the company at the present time.

10671. You say that the number of convictions for theft, etc., is remarkably small?—Very small.

10672. Can you tell us the number?—I cannot tell you the number. The number is very small. We have only had to suspend about half a dozen licences, I suppose, for some years past. I am sorry to say we shall have to suspend one which was a case tried and conviction obtained at the Newington Sessions last week of a freeman being convicted of stealing some rope from one of the steamers. His licence will have to be suspended at the next court.

10673. Have you many cases of theft reported to you?—Very few amongst the lightermen themselves. There are other men going about who are constantly on the look-out, but during the last few years the police surveillance has been so good that there are very few thefts about the river at all among any class of men.

10674. You speak of the guarantee of having a good class of men always attending to the barges in bad weather and at night time, and so on?—At all hours and in all weathers.

10675. We have had statements made to us before the Commission that barges are very frequently left unattended altogether?—That is when they are moored in a tier or at a buoy, or safe alongside a steamer ready for the next morning's work, or at a granary. It would not do to have the men on board constantly; you could not possibly do the work; it would mean double the money if we had men on board always.

10676. But are they not unattended sometimes in the docks when it is desirable that a man should be in attendance?—You are never supposed to have a man on board in the dock for the simple reason that you would find him dead very possibly in the morning in the winter time. The dock people do not allow any fire on board a barge in a dock. I have been nearly frozen myself when I have been there.

10677. Then you justify the absence of men in attendance on barges of which complaint has been made?—If it is in a dock, unless they have a valuable cargo, when it would not be well to leave it unattended.

10678. I suppose you have heard complaints of apprentices being allowed so much about the docks and in public-houses, and not attending to the barges?—I am sorry to say that the good old rule has become almost extinct. When I was a lad no freeman would allow an apprentice to enter a public-house where he was; he would be likely to get a kick behind him and be sent out sharp if he went into a public-house where there was a freeman; but at the present day it is not so.

10679. You are aware that lately complaints have been made by associations of workmen and others that the apprentices upon these barges are leading a life which is not altogether desirable?—I presume, in all trades, there are some apprentices who lead a life which is not altogether desirable. I always understood that boys will be boys, and when they are between a boy and a man they are worse still.

10680. That is all you can say about it?—They are not worse on the river than they are anywhere else. They want looking after and properly training, and to be treated well, and they generally turn out pretty well.

10681. You say that the conduct of the traffic upon the Thames is attended by so much danger that it can only be successfully conducted by those who are possessed of considerable skill and experience?—Yes.

10682. Did you hear the evidence which was given by Mr. Hume to-day as to the comparison between the Humber and the Thames?—I heard some of that evidence. There is a great deal of difference. I believe there is no river like the Thames, where they navigate under oars.

10683. The danger you speak of arises entirely from that circumstance?—Not entirely. A tug that tows barges behind her has to be very careful as they come up through the Pool sometimes; and even going through the bridges they have to be careful. There is a great deal of skill required on the part of the captain of a tug to know his duty in towing craft.

10684. As to the necessity for skilled labour, is there any greater necessity for licensing with regard to lighter-

ing than there is with regard to carmen in the City of London, for instance, driving their waggons and conveyances through that difficult traffic?—Yes, for the simple reason that a carman can stop within a few yards; he can see where danger is; but a man with a barge of between 50 and 60 tons, or going up to 100 tons, cannot stop; he cannot bring up quickly.

10685. The business of a carman involves what one may call very difficult navigation?—I do not consider a carman has anything to do as difficult as a lighterman has, or anything like the risk.

10686. You told us that the Committee of 1890 decided for certain reasons to retain the licensing system. Can you tell us what those reasons were which influenced the Committee?—They came to the conclusion that it was necessary for a man to be proved to be a man of skill and ability.

10687. They did not state their reasons in the report, did they?—No, I do not think they did; they only threw out the bill.

10688. So that all they decided was negative to a certain extent, and they did not give an explanation of the reasons for coming to their decisions?—I do not think they stated any reasons.

10689. We are not able to compare the reasons which acted upon their minds except by inference?—No, I do not think so.

10690. I wish to know if you have any statement of the reasons that you can give us which acted upon their minds. You refer to the reasons; you say they were influenced by the same reasons?—I do not know what their reasons were. They were the same parties that brought the bill up. They wanted to throw the river open because they thought, I have no doubt, that they would get the work done much more cheaply, and they would not be under the necessity of employing licensed men.

10691. You have spoken about renewing licenses?—Yes.

10692. And that sometimes you refuse to renew them on the ground of incompetency. Can you tell me, first of all, are there any permanent licenses?—They have to be renewed every three years.

10693. That applies to all licenses?—All licenses for the river. Every three years they must be renewed.

10694. So that a man may lose his license from misconduct, but in addition to that the company have power not to renew the license?—Yes.

10695. Can they do that without assigning any reasons?—They would not be so unjust as to do it without assigning a reason.

10696. Have you ever refused to renew the license of a holder of a license because he had engaged in a strike at one time, refusing to work for people and then, when he changed his mind, went back and did the work. You support the members of the company, although they possess these privileges, in the practice of refusing to work. Is that so?—No; certainly not support them in the practice of refusing to work.

10697. Do you renew the licenses?—Yes, because it is a license of competency. A man might refuse to work and might be thoroughly competent for work. We have no jurisdiction over whether a man declines to work or not.

10698. Is it not a case of misconduct for a man holding a privilege of that kind to refuse to do the business?—I cannot say it is misconduct. He has a perfect right to go to work or to refrain from working. It is his freedom as a subject, and it would be interfering with the liberty of the subject to say, "You shall work," or, "You shall not work."

10699. But he claims a very special position—he claims that nobody else is to be allowed to do the work?—It is one of those difficulties that all trades have to put up with during a strike.

10700. Would it not be fair if the Government in consenting to the licensing of these people, required as in the case of cabmen in the City of London, that they should not refuse a fare if the money is offered to them?—I think it comes under a different heading to that.

10701. In the absence of any public enactment would it not be a fair thing for the Watermen's Company, if

Mr. B. J.  
Jacob.  
18 June 1901.

Mr. B. J.  
Jacob.  
18 June 1901.

it wishes these privileges to be supported, to insist that the members of the company are not to refuse a fare?—A waterman cannot refuse a fare; if he is plying for a fare he must not refuse a fare.

10702. But we have had it in evidence that the lightermen practically do the same thing; they refuse employment?—They can decline employment surely. After a man has engaged to do a job, if he refuses then he may be liable to punishment if he neglects a duty after he has undertaken it, but we have no power to compel a man to take on work.

10703. But it is a reasonable thing generally, and it is very often enforced, that when Government gives a special privilege to a class of people, such as cabmen, and they are plying for hire, they should not be allowed to refuse a fare?—The case is somewhat different. At all events we have no power in the court to do that. Our Act of Parliament will not allow us to carry it to that extent.

10704. With regard to your judicial powers I think you mentioned that some of your sentences have to be enforced by an appeal to the Lord Mayor or to a magistrate?—Yes, we have no power to enforce our convictions. We impose fines and penalties, but there is no appeal against it. The magistrate confirms our decision.

10705. Are these fines and penalties imposed upon people who are not members of the company?—No, we have no power over anyone who is not a member of the Watermen's Company.

10706. This is entirely confined to members of the Watermen's Company?—Entirely.

10707. (*Rear-Admiral Hext.*) You have stated that the court have in some instances suspended licenses for misconduct?—Yes.

10708. But they have never had occasion to refuse a license on the ground of incompetency discovered subsequent to the granting of the original license?—That is quite correct.

10709. Are we to understand that no complaints have been made of incompetency from employers of labour?—There might have been complaints, but when the case has been tried we have found that the complaints have not been proved.

10710. Therefore during a considerable period of years you have had no case of incompetency in some 5,863 men?—Just so.

10711. (*Mr. Peel.*) You say that you inflict fines sometimes on the members of the company?—Yes.

10712. If they do not pay those fines do you ever refuse them their licenses?—No, we take them before the Mayor, and they know that, and it is very seldom we have to do so. They know our power and they know they would get convicted.

10713. You said 14 years was the minimum age for starting apprenticeship?—Yes.

10714. Then the apprenticeship lasts 5, 6 or 7 years?—Yes.

10715. Therefore a young man must be 19, 20 or 21 before he has sole charge of a barge?—No, he takes his 2 years' license. After he has been apprenticed 2 years and proves his competency he is allowed to work as a Freeman of the company.

10716. Are there many of these boys of 16 in sole charge of a barge?—No, very few, because they are seldom apprenticed before they are 16. They generally are about 18 years of age before they have charge of a barge.

10717. Eighteen would be the minimum age in practice?—Yes.

10718. This examination through which they are put, I suppose, is an oral examination?—Yes.

10719. There is no practical test to which they are put at all?—Yes; sometimes we are doubtful whether a man can navigate a barge single-handed, and we put him back to take charge of a barge with another man on board. In fact, any member of the court is quite willing to allow him to go on board one of his barges with one of the members of the court's men and see whether he can really navigate or not.

10720. And is that frequently done?—That has been done about a dozen times within the last two or three years.

10721. These freemen who have to speak to his competency are, I presume, men who can testify that they have seen him working a barge?—They are. If we discover that they know nothing about it we summon them before the court and reprimand them, or if it is a very flagrant case we inflict a fine. We have power to do that—that is, if we see that they have signed indifferently—given false witness, in fact.

10722. Is there any particular set of questions that are asked at these examinations? Do the men know beforehand the sort of questions that will be put to them?—No, not at all. They would not know what questions were going to be put to them.

10723. That depends entirely upon who happens to be chairman at the time?—Yes. We generally, first of all, make ourselves acquainted with what part of the river they have been working most. For instance, if they were working up from the Albert Dock to London or from there up through the bridges and on to Brentford, I should say, "Now bring me a barge out of the Albert Dock or Victoria Dock and show me which way you will shape her course for coming up the river"—or for going into another dock, or anything of that sort. If they could not answer those questions satisfactorily we should put them back.

10724. And you might, of course, if he did not answer them satisfactorily, put the man on the barge if you were uncertain and see if he could do it practically?—Then we should let him go with another man aboard and we should give him an opportunity of proving his competency on board a barge by doing it.

10725. Your licence when granted extends to the whole river. It is never limited to any specified portion of the river or any distance—between two docks, for instance?—No, but we have endorsed a licence to that effect. When we have found that a man has not worked above London Bridge we have said, "Fully competent to navigate below London Bridge," so that any employer wishing to see his licence can see that he has not been used to going through the bridges.

10726. With reference to this two years' contract licence, do you put these men through an examination in the same way?—The same examination entirely.

10727. And you have a large number of freemen to speak to their competency?—Yes; they have to have twelve instead of six.

10728. Why is that large number?—Because he is only two years navigating in the river instead of five or seven.

10729. In that case is there any limit of age upwards or downwards?—He cannot contract under 20 years of age. He has to serve an apprenticeship under 20. It is generally men who have been at work, in fact, nearly all their lives on the water, but who have missed their apprenticeship—have been unable to get apprenticed to anyone; so that when they come in on full contract they are perfectly capable of working. They have been on craft all their lives. There are several mates of barges or captains of barges from the Medway who wish to work their barge upon the River Thames, and they serve two years on contract so as to make them competent and qualified.

10730. You do not agree that the experience of the bargeowner would be sufficient to induce him to select perfectly qualified men. If it was thrown open you would not trust them to select properly qualified men?—You could see their licences, but you cannot find out the difference until you put them on board a barge and you find some accident happen. A man might come to you and say, I know how to navigate a barge, and I can do this, that, and the other, and he might get up a series of answers to questions, but he might deceive you entirely until you get him on board a barge, and then find that he knows nothing at all about it.

10731. (*Mr. Ellis.*) As I understand, the powers, duties, and functions of your company rest upon the Acts of 1859 and 1893?—Yes.

10732. Your company promoted a bill in Parliament which became an Act in 1893?—Yes. I think that was for measuring and registering craft and boats.

10733. For that purpose only?—Yes.

10734. Did you meet with any opposition in getting that Act?—Very little indeed. I do not know that there was any. I do not think there was any difficulty

about getting that Act. There had been so many losses of lives through boats being allowed to be let out capable only of taking three or four persons and having seven or eight in them.

10735. Am I to take it that, so far as Parliament is concerned, you are satisfied with your position?—Yes, I think so.

10736. You have no other bill before Parliament?—No.

10736a. Have you a copy of your last balance sheet?—I have not one here at present.

(Mr. Ellis.) I think it would be convenient to have that.

(Mr. Horace Ivory.) I have one here up to June, 1900.

(Mr. Ellis.) Is that the last?

(Mr. Horace Ivory.) Yes.

10737. (Mr. Ellis.) Will you put a copy of it in?—Yes.

(The witness handed in a copy of the Accounts of the Company of Watermen and Lightermen of the River Thames from the 1st July 1899 to 30th June 1900. See Appendix, 27th Day, No. 15.)

10738. (Mr. Lyttelton.) Will you tell me what expense is involved in becoming a freeman?—There is £1 8s. for the freedom and 2s. 6d. for each licence. A man has two licences: he has a waterman's licence to allow him to work boats, and a lighterman's licence to allow him to work craft. Each of these costs 2s. 6d.

10739. Are these fees annual fees?—The annual fee is only 3s.

10740. And the £1 8s. and 2s. 6d. for the freedom, and the 2s. 6d. for the licences, are first payments?—Those are first payments.

10741. With that exception, once a freeman you continue a freeman for 3s. a year?—Yes, the man is always a freeman, but he has to have his licence renewed every three years.

10742. Take your own case. How much expense have you actually been put to by being a freeman?—I was out of my time when I was 21 years of age. It would be 3s. a year for about 45 years.

10743. Your court only has power to hear complaints from members against members?—That is so.

10744. (Mr. Ellis.) Are you familiar with these accounts?—Not very, without looking at the balance sheet.

10745. At all events, they are audited accounts. Am I right in supposing that the total invested sum you have amounts to between £51,000 and £52,000?—Yes, you can take as perfectly correct whatever you see on the balance sheet.

10746. I do not doubt that for a moment. That is the capital sum of money that your company have?—Yes.

10747. Can you give me at all what is the value of other property that you may have—freehold land or property other than invested money?—No, I could not tell you. We have property at Penge, and the Ditchling Almshouses and land.

10748. That is the total capital sum possessed by your company?—Yes.

10749. It is invested money?—Yes.

10750. Almshouses and land at Penge?—Just so.

10751. Then I notice in your funds a church repairing account?—Yes.

10752. Does that arise out of your statutory obligations?—It comes out of the asylum fund. We have always contributed to that. I do not know that we are obliged to do it.

10753. In this invested money there is everything that has arisen from the construction of these bridges to which you referred, paid you by way of compensation for the abolition of the ferry?—Just so.

10755. Then you have told us that certain provisions were made originating this poor's fund. Were those certain provisions in pursuance of statutory obligations; were you obliged to do them by Act of Parliament?—I could not answer the question.

10756. You cannot tell me whether that poor's fund owes its rise to an Act of Parliament, or whether it was voluntary?—We received that money on behalf of poor men who are thrown out of work, and we are in duty bound to invest it on their behalf.

(Mr. Daldy.) I do not know whether your Lordship after the adjournment would say something as to the order in which speeches by counsel should be put before the Commission. It seems to me in a case of this sort it is purely a matter for arrangement with regard to what will be most likely to help the Commissioners. I know that my friend Mr. Balfour Browne is anxious to sum up for the docks. On the other hand the public authorities might possibly have some claim to come last. It may be convenient if, either after the adjournment or later on, the Commission thought fit to express some view.

(Adjourned for a short time.)

Cross-examined by Mr. Cranstoun.

10757. For how many years were you apprenticed?—Seven.

10758. You have told us your time was up when you were 21?—Yes, I was apprenticed when I was 14 years and 3 months old.

10759. You were apprenticed at 14 not at 16 years of age?—Not at 16.

Cross-examined by Mr. Harper.

10760. I should like to ask you something with regard to that question of insurance. What you take out is what is called a craft policy?—Yes.

10761. That covers so many craft for all journeys in the river between stated periods?—Yes.

10762. It is usually a 12 months' policy?—Yes.

10763. With a loss recoverable under the policy limited to whatever sum is named—£4,000, or whatever it may be?—Yes.

10764. You may have a cargo of much greater value at one time than that?—Yes.

10765. But the utmost amount you can recover on your policy is the fixed amount?—Yes.

10766. Merchants very frequently insure their own goods, do they not?—Some merchants insure their own goods in craft from shore to shore.

10767. It does not follow that the insurance of lightermen is the only insurance on goods?—No.

Re-examined by Mr. Claude Baggallay.

10768. Can you tell me of any policy which you have ever seen containing a provision that the insurance company should only be liable in the event of craft being manned by licensees?—It is not expressed in their policy, but they make enquiries to that effect.

10769. You said that the insurance companies always insert a condition in their policies that they shall only be liable in the event of craft being manned by licensees. Is it in the policy or not?—I could not answer that question.

10770. Have you ever seen a policy with that in?—I can only state the fact that they are only navigated by licensees.

10771. Can you produce any documentary evidence, a letter or anything else, from an insurance company showing that they have refused to insure unless it is undertaken that the craft should always be manned by licensees of your company?—No.

10772. Are you aware that Lloyd's have presented to the Board of Trade a petition by a very large number of members in favour of the Bill which was promoted in Parliament for getting rid of this obligation to employ licensed watermen?—Very possibly it is so.

10773. That does not seem quite consistent with your statement?—Lloyd's do not insure craft very often. They insure vessels.

10774. They do insure craft too, do they not?—I do not know of that.

10775. Where do you insure them?—With the Ocean Company principally, and there are plenty of other firms.

Mr. B. J. Jacob.  
18 June 1901.

See 10863.

See 10409.

See 10863.

*Mr. B. J. Jacob.* 10776. Can you produce any proposal for a policy in which this provision is inserted or on which it appears that the craft are to be so manned, or in which anything is mentioned with regard to the manning of the craft?—No, I do not say I can.

18 June 1901. See 10646. 10777. With regard to this matter of the loss of life, which you have referred to, you said "The number of lives lost by drowning during the last 8 years has been 104, showing that there is considerable risk to life, which would be greatly augmented in case of inexperienced men taking charge of craft." Whose lives are included in that number, 104?—Licensed men and apprentices.

10778. Where have you got that figure from?—From our books. We register all fatal accidents on the river.

10779. Are they fatal accidents due to improper navigation. Do you separate those from other accidents or other causes of death?—We have no accidents from improper navigation. They are generally caused by collisions with steamers or by men falling overboard.

10780. Things which the licensed men cannot avoid?—They cannot avoid it, or else they would.

10781. And nobody else would avoid them?—I do not say that.

10782. You think then that unlicensed men might avoid them?—No, an unlicensed man would very possibly lose his own life.

10783. I see that Captain Vyvyan, when he was giving his evidence at Question 8570, said that the loss of life was about two a year. That would make the figure 16, if it is an average of two a year, from the running down of small craft, and so on. The question was, "Would 10 lives be lost per annum, speaking from memory? A. About two a year." Do you disagree with that?—I had three in a fortnight once.

10784. Of course, you might have three at one accident?—There is no guarantee about that. There is no rule. These are taken from our books.

10785. But these accidents are not things apparently which depend upon whether a man is licensed or not. They are accidents from running down by steamers, or something of that sort?—If an incompetent man is aboard a barge, the chances are he would very soon lose his own life. We do not allow any incompetent man to work.

10786. That is not an answer to my question. You have put it to the Commission that all your licensed men are practically competent?—Just so.

10787. And that the barges at the present time are all in charge of those men?—Yes.

10788. And you say you have these losses of life?—Yes.

10789. I ask you, do you attribute the loss of life in these cases to anything on the part of the men who are navigating the craft, or to causes from outside which these men cannot control—like the running down by a steamer or something of that sort?—Yes, sometimes they strike a bridge and get knocked overboard.

10790. It does not depend on the man who is navigating the craft, but it depends on some circumstance outside?—Just so.

10791. With regard to your examination: as a matter of fact you hardly ever do have a man taken on to the river for the purpose of examination, do you?—Yes.

10792. Is not your examination in Watermen's Hall?—Mr. Fletcher a few months ago allowed a man to go on one of his craft to prove his competency as we were not satisfied.

10793. But, as a matter of fact, your examination, in 99 cases out of 100, rests upon the examination in Watermen's Hall, does it not?—Just so. I could prove in a few minutes whether you could navigate a barge or whether you could not. Any man that was not able to do it I could soon prove was not competent.

10794. You say that the sailing barges take Free-men on board for going through the bridges?—Yes.

10795. You spoke of sailing barges from the Medway. Are you aware that they do not take men on board to go through the bridges?—Possibly the men are licensed men.

10796-7. No, the Medway people say they do not use these men when they are going through. I do not know

what a hoveller is, but they sometimes take a hoveller for barges carrying 120 tons; though they generally have a tug?—They are termed hovellers. They earn their living by working these craft up through the bridges.

10798. They do not have them when they have a tug; do they?—No, there is no occasion when they have a tug.

10799. There are two conditions, then, under which they do not take them. They do not take them if they are under 120 tons, and they do not take them if they have a tug?—I have known plenty of them take them with 50 ton barges when they are not used to going up through the bridges. There is no rule without an exception. There are some of these Medway men who are so constantly up and down through the bridges and have been with hovellers for years that they know how to do it themselves; they know all the sets of the tides.

10800. You say it is unnecessary when they have a tug?—Quite unnecessary for an extra man. All that they have to do is to steer their barge behind a tug.

10801. Your Watermen's Company's rules require that the ordinary dumb barge (not a sailing barge which goes right through) has to have a man on board even if he is in tow?—Yes, one man always. It is very necessary for one man to be on board a barge in tow.

10802. But you require him to be a licensed man?—Yes.

10803. You have just told me that is unnecessary if you have another man on?—I can give you the reason. Suppose the barge was to break adrift from the tug, who is to manage her if she has not a competent licensed man?

10804. Who manages the Medway barges if they break away from the tug?—They have two men on board her.

10805. But they are not licensed men?—But they are men who understand navigation.

10806. May I put it to the Commission that capacity for navigating a barge does not depend upon a man's license. In the case of the Medway you have the evidence of that?—I have not stated so. I stated in my case that a lad who was with his father was brought up to it, and that practically he underwent the same thing. A lad with his father many years on a sailing barge has the same knowledge as a man who has been apprenticed.

10807. You spoke about the necessity for taking licensed men on board, because the traffic is a very difficult one in London, with risks of collision, and so on. As a matter of fact, when a barge is not in charge of a tug, and she is being navigated, she is almost invariably going with the tide, is she not?—She could not go otherwise.

10808. Then I may put it higher—she is always going with the tide?—Certainly.

10809. And all other moving traffic of the barge class is doing the same, is it not?—Just so.

10810. I only wanted that because you were comparing it with being so much worse than street traffic?—A barge does not go where you tell it.

10811. That entirely depends on how you tell it?—You would have to navigate it. You would have to row with the oars or it would not go where you wanted it.

10812. I suppose a horse would not go in any particular direction unless you used your reins or made a judicious use of the whip?—No.

10813. You cannot steer him like a motor car?—It requires skill.

10814. With regard to this question of licensed men. Licensed watermen, under your Act, who ply for hire, are obliged to go for regulated fares when required by any person, and are obliged to go to the point they are required to go to?—Just so.

10815. Your licensed lightermen are under no obligation in respect of their privilege to work, are they?—No, unless a man has taken a job; then he is bound to finish it.

10816. That is a question of his personal contract with his employer, but under your Act he is not obliged to render any service in return for his privilege?—Neither is a waterman, unless he is in the boat plying for a fare.

10817. If he is plying like a cabman plying on the street he is obliged to go for fixed fares, and he is obliged to go where he is told?—Just so.

10818. The licensed waterman is under no corresponding obligation?—No.

10819. He used to be under obligations until 1859, under the Impressment Acts, was he not?—He was never under an obligation to work unless he wished to do so.

10820. Was he not under an obligation till 1859 to impressment for sea service for the Royal Navy?—Yes; so he is now.

10821. You are not aware that that obligation was repealed by the Act of 1859?—I do not think you will find it repealed.

10822. Yes, it is. It is the 5th Section of the Act. I know your Watermen's Acts pretty well?—I will not dispute it.

10823. It is Section 5 of the Watermen's Act of 1859 which repeals the obligation?—I will not dispute it.

(Mr. Horace Ivory.) That is so; I agree with my friend.

10824. (Mr. Claude Baggallay.) There is another point I want to ask you about. Do you think you have any power to revoke a licence once granted to a lighter-man, however incompetent he is?—Yes.

10825. Have you any power under your Act, that you are aware of, for that purpose?—We are the licensing body; surely we have power to revoke.

10826. You are obliged, under certain circumstances, to give a man a licence. You have power for the recovery of your fees, and for keeping a certain control over his conduct, to renew the licence. On the ground of his incompetency, or on any other ground, do you think you have any power whatever to revoke it?—We have done it in the case of convictions.

10827. You think you have the power?—Yes.

10828. I am not going to discuss the sections of the Act of Parliament at the present moment, but that is your impression?—Yes.

10829. You have referred to the Bill of 1899. You gave evidence against that, did you not?—Yes.

10830. Can you tell me who were the promoters of that Act?—The Amalgamated Association of Watermen and Lightermen of the River Thames.

10831. Are they a body which contained at that time about one-half of the whole number of licensed lighter-men?—Less than one-third. There were not 2,000 men of the whole number that were subscribers, and many of them were against that Bill entirely.

10832. It was a very large number?—No, it was not one-third of the number.

10833. If it was one-third, 2,000, that was a considerable number?—There were 2,000 subscribers on their books, but there were a lot of them who did not subscribe to that Bill.

10834. You remember we opposed that bill?—Yes.

10835. I daresay you will remember that one of the principal things put forward was that they were proposing to get representation upon the board of the Watermen's Company?—Yes.

10836. Am I right in saying that your case for the opposition there was that if they got, as they would do, a controlling voice on the board of the Watermen's Company, it would be used for the purpose of making the lightermen into one gigantic trades' union, which would imperil the trade of London?—It would.

10837. That was the case?—Yes.

10838. You have given some tonnage figures. Can you tell me whether those figures are the registered tonnage as measured under the Act of 1893, or are they the gross tonnage?—They are according to our measurement.

10839. They are the gross measurement?—Yes.

10840. It does not necessarily represent the carrying capacity, does it?—It is whatever the barge would carry level with the water.

10841. Can you tell me what proportion of that tonnage is owned by the members of the Watermen's Company?—No, I have not the figure. There are non-free-men barge-owners; they are all registered the same.

10842. This includes the whole of what belongs to the lighterage companies, and so on?—Yes, and wharfingers—all barges navigating with the port have to be registered.

10843. But you cannot tell me what fraction of that is owned by the company?—I could not tell you that.

*Cross-examined by Mr. George Wallace.*

Mr. B. J.  
Jacob.  
18 June 1901.

10844. Is the tonnage that you have given of 704,000, tonnage by measurement, or the burden tonnage of the craft according to your Act?—Our measurement is of burden tonnage really. It is measured so closely that I do not suppose a barge would carry more than half a ton more than what we measure.

10845. Is this it: tonnage by measurement of craft, multiplied by  $\frac{3}{4}$ , to be deemed the weight-carrying capacity or burden tonnage of craft?—That is it.

10846. Are those figures of 704,000 tons and 61,000 tons, in your evidence, the burden tonnage?—Yes.

*Cross-examined by Mr. Horace Ivory.*

10847. My learned friend, Mr. Baggallay, has asked you about the bill of 1899?—Yes.

10848. That was before the House of Lords?—Yes.

10849. On that occasion, I believe, my learned friend so successfully advocated your interests that the bill was thrown out?—That is so.

10850. The Committee decided that the constitution of the court of the Watermen's Company did not require alteration?—Yes.

10851. He has asked you whether you have any power to revoke a licence. May I refer you and the Commissioners to Section 64 of the Act of 1859: "If any lightermen or watermen to whom a licence is granted in pursuance of this Act is guilty of such misconduct or acts of incompetency while working as a lighterman or waterman as in the opinion of the said court of masters, wardens, and assistants, to disqualify him either wholly or partially from holding such licence, such court may, after hearing all he has to urge in his defence, and subject to an appeal to the said conservators of the River Thames, who may revoke or modify the order of the said court, endorse, suspend, or cancel altogether any licence he may hold." Is that the answer to my friend's question?—Yes.

(Mr. Claude Baggallay.) It is the answer. I was not aware of this section. I had looked at the other sections further on about the proceedings in the court. I admit at once that that answers that point.

10852. (Mr. Horace Ivory.) I want to ask a question about examination of candidates. It is suggested that you very seldom put a candidate to a practical test on the river; but, in fact, are you assisted always in your deliberations by the reports of your inspectors?—We only refer to the inspectors as to their knowledge of the candidate.

10853. Are the inspectors employed constantly on the river?—Nearly half the week. Half a week in the office doing their reports and half a week afloat.

10854. Is it their business to make themselves acquainted with the apprentices who are at work on the river?—They know nearly all of them in their different sections.

10855. Before granting the licence do you have before you the reports of your inspectors as to the man's capacity?—They are always in the room and we refer to them. We say: "Do you know this man?" and they say they do or they do not.

10856. With regard to the strike to which so much reference has been made, as a matter of fact at the last strike how many lightermen out of the total number went out on strike?—I should think nearly two-thirds of them.

10857. One third did not go out?—One third did not go out.

10858. Were they the foremen who did not go out?—Some of the lightermen as well; in fact, the only reason why our lightermen did go out was that they were so mixed up with others and they were afraid to keep in.

10859. From your experience on the river would there be a possibility of a strike whether the men were licensed or not?—All bodies of men combine and strike. When there is combination there is generally a strike if they do not get their own way.

10860. Would the abolition of the licences in your opinion abolish all strikes on the river?—No, certainly not.

10861. Now one question about the bill of 1899.

*Mr. B. J. Jacob.* You have been asked by one of the Commissioners if you could give the reasons which influenced that Committee, but as they were not expressed I suppose you cannot do that. May I take it from the report that there were only three witnesses called on behalf of the Watermen's Company in opposition to the bill? Do you know that as a fact?—I think that was a fact.

10862. *Mr. Robert Grey, Mr. H. E. Braine, and Captain Mills.*—I am not aware of any others from my memory.

10863. Is it a fact that at the conclusion of their evidence the Committee said, through their Chairman, "The Committee have decided that they will not trouble counsel against the bill to call any further witnesses or to address the Committee. They have determined that on the evidence now before them the preamble is not proved, but they will make a special report." The special report has been put in this morning. That is so, is it not?—I believe so.

See 10864. I can now hand in a copy of the river craft policy of the Ocean Accident and Guarantee Corporation.

*(The witness handed in a copy of the River Craft Policy of the Ocean Accident and Guarantee Corporation, Limited. See Appendix, 27th Day, No. 16.)*

*(Mr. Harper.)* My lord, I will now hand in a copy of the special case and judgment in the case of Borrowman, Phillips and Company v. Wilson. That was the case which was referred to in evidence yesterday, and also a copy of the judgment which I promised to hand in.

See 10106. *(Mr. Harper handed in a copy of the special case of Borrowman, Phillips & Company v. Arthur Wilson in the High Court of Justice, Queen's Bench Division. See Appendix, 27th Day, No. 17. Also a copy of the judgment in the case of Borrowman, Phillips & Company v. Wilson in the Royal Courts of Justice, April 7th, 1891. See Appendix, 27th Day, No. 18.)*

*(Chairman.)* Before we adjourned, the learned Counsel, appearing for the London County Council, asked us for some expression of our wishes with regard to the order in which we would hear the speeches of the learned Counsel later on.

*(Mr. Balfour Browne.)* Would you hear me upon that, my Lord, before you decide?

*(Chairman.)* Yes, as I know you are a very busy man.

*(Mr. Balfour Browne.)* I was only going to say this. I think really, strictly speaking, I have the right to the last word. I am not speaking, of course, of seniority—I want to conceal that as much as possible now—but we are practically the promoters. As your Lordship knows, this all arose out of our bills, and your Lordship thought that the right course to pursue was to have Mr. Scott practically first, and I see that upon the 6th of May, when the contentious business was commenced, and when Counsel were allowed to appear before this Commission, Mr. Scott was called as the first witness. Therefore we opened. Now we ought to hear, I think, the criticisms that are to be made upon us before we are called upon to say anything. Therefore I should suggest, notwithstanding what my learned friend has said, that we ought to have the last word.

*(Chairman.)* It is only fair to say that the learned Counsel did not make any suggestion as to the course of procedure. We are quite willing to leave the matter to you gentlemen who are representatives of the various bodies for whom you appear. We leave it to you to come to some satisfactory arrangement between yourselves before the 1st of July.

*(Mr. Balfour Browne.)* If your Lordship pleases.

(Adjourned to Monday next, June 24, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## TWENTY-EIGHTH DAY.

*Monday, 24th June, 1901.*

PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.  
Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.

Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. BALFOUR BROWNE, K.C., and Mr. GEORGE WALLACE appeared on behalf of the London and India Dock Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council.

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. R. W. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

Mr. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. HORACE AVORY, K.C., appeared on behalf of the Watermen and Lightermen's Company.

Mr. CLAUDE BAGGALLAY, K.C., and Mr. F. P. M. SCHILLER appeared on behalf of the promoters of the Thames Lightermen's Bill.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

Mr. JOSEPH SHAW appeared on behalf of the North London Railway Company.

Mr. F. P. M. SCHILLER appeared on behalf of the Short Sea Traders' Association.

The Hon. J. D. FITZGERALD, K.C., appeared on behalf of the Commissioners of Sewers for the limits extending from Lombard's Wall to Gravesend Bridge in Kent; the Commissioners of Sewers from Gravesend Bridge to Sheerness in Kent; the Commissioners of Sewers for Havering and Dagenham and other levels in Essex; and the Commissioners of Sewers for Rainham and other levels in Essex.

Mr. RICHARD DEERING recalled and further examined.

10864. (*Chairman*.) You are managing director of Messrs. James W. Cook and Co., Limited, wharfingers and bargeowners?—Yes.

10864a. You have already appeared before this Commission representing the Association of Master Lightermen and Bargeowners?—Yes.

10865. You appear now in order to give evidence with reference to the licensing system of the Watermen's Company?—Yes.

10866. Will you be good enough to tell us what you have to say on that subject?—In the evidence that I gave before the Commission on the 20th March last, nothing was said by me as to the working lightermen, nor was my opinion asked as to whether I considered the present system of licensing men by the Watermen's Company necessary for safe navigation of the river both in regard to life and craft, or whether I agreed with the witnesses who had preceded me, viz., Messrs. T. W. Jacobs, jun., and Richard Lambert, who were in favour of throwing the river open. As a lighterman who served an apprenticeship on the river, I am certainly of opinion that apprenticeship and licensing are both more necessary nowadays than ever they were. My reason for saying this is that ships and barges have greatly increased in size during the last few years, thus rendering navigation much more difficult. In the old days of paddle steam vessels for coasting and continental purposes, with stems curved round, if a barge were in the way the steamer turned astern, and the wash from her paddles would send the barge away, and if she did strike, the curved bow very frequently would

take the gunwale of the barge and do some damage to that, but not cut her down to the chine as is the case with the present steamers with straight stems, or stems that rather protrude at the lower part further into the river than the upper part. The consequence is that screw steamers, which are not so easily turned astern, when they do strike a barge, the bottom part of the stem chimes the barge, and the damage is much more serious both to the craft and the goods laden in it. I was apprenticed to the water when I was 14 years of age. I served six years, and I obtained my freedom directly I was out of my time. I then worked as a lighterman for three years, and then went into tugs, and in due course obtained the command of the tug "Rattler," which was one of the largest barge tugs at that time. After that I was foreman to Messrs. A. Frey and Co., then assistant manager for that firm until 19 years ago, when I joined Mr. Ross in the firm of Ross and Deering, so that my time has been employed on the river the whole of my life. I have paid particular attention to the system of having licensed men in all barges working on the Thames, and there are, in my opinion, many reasons why the men should be under some control, such as is now in existence. The fact that there is only such control on the Thames is answered, I think, by the fact that there is only one Thames in the Kingdom, and whilst I think Thames men could do the work of all the other rivers, yet if you brought men from the other rivers, they would not be able to do Thames work. I have been on the Ouse and the Mersey, and have conversed with the lightermen on those rivers, in order that I might form an opinion on the subject,

Mr. R.  
Deering.

24 June 1901.

Mr. R.  
Deering.

24 June 1901.

and in answer to my inquiries, I have been told that they could not undertake to work London barges on the London river. During the recent strike, men from other rivers, and also men from fishing vessels were brought to London to navigate barges, but none of them would attempt to take a barge under oars for navigation. In the case of contract men, they as a rule have worked for years on the river in some capacity, other than navigating barges, before they enter into their contract, and the master who takes contract men always satisfies himself that they are trustworthy, and have a good knowledge of navigation, otherwise it would never answer his purpose to contract them. I have during my career only had one contract man, and he has given up work on the river and returned to working on barges in the docks as a watchman and barge loader. In my opinion the Watermen's Company is to all intents the Scotland Yard of the Thames, and just as the police license busmen and cab drivers, so the Watermen's Company grant licences for the lightermen and watermen on the river. It is necessary to have a firm hold on the men. The largest proportion of the goods are and must always be lightered by lightermen, and as a class they are men who are very honest and can be trusted. They have day and night, and often on dark nights, the care of goods which have not been tallied into their barge and which might be purloined, and looking to the value of the cargoes that are afloat and the number of men employed as lightermen, the robberies are very very small, in fact I consider the present day lighterman would compare favourably with any tradesman for honesty. There is another matter. Nearly all the dutypaying goods are sent to bonded warehouses for weighing for duty, and they have to be lightered in the custody of lightermen with duty unpaid. My firm does a large quantity of dutiable goods, such as tea, tobacco, etc. I may mention we have carried for one firm 3,500,000 chests of tea since we have been in business, not one pound of which has gone to the scale for duty until it has passed through our hands. These are put in our barges in bond and the duty is not paid until delivery at the bonded warehouses. I have never had a complaint from the Customs that these unpaid duty goods have been in any way tampered with, which I think speaks volumes for the present system and the safety of the revenue. I believe 95 per cent. of the tea is carried in craft to the warehouses. All the rum and 90 per cent. of all the tobacco that comes to London passes through the hands of the working lightermen before it comes to scales to weigh or be gauged for duty. In my opinion every care is taken by the Watermen's Company to ensure men who obtain licences being capable and fit for the duty, and in any case of a man applying, even with his papers fully signed, about whom the Court, of which I am a junior member, has any doubt, he is required to navigate a barge under oars in the presence of one of the company's inspectors before the licence is granted to him, although he may have passed his theoretical examination. In a case of dishonesty the licence is immediately cancelled, but if the guilty man can get an employer to say he will employ him, on an application to a full Court in writing, and on his giving proof that since his discharge from prison he has been working and getting an honest living, the Court will renew his licence. At the same time the inspector of his district knows it, and he keeps an eye upon him and reports to the Court if he considers he is acting in at all a suspicious manner and not working honestly for his living, but likely to lapse into dishonesty again. To sum it up, my opinion is, the licence is absolutely necessary. In my opinion, if the river be thrown open, I consider the risks which my firm would run alone with their laden craft, from untrained men navigating barges, would be enormous.

10867. Why do you suppose that if there were no licences the barge owners, who are responsible for the goods would employ untrained men?—Some firms might take any man who offered his services because he would be cheaper; and the expense of insuring with trained men now is enormous. A barge load of tea is frequently worth £5,000, and the Customs can call upon us to pay the duty on it notwithstanding it may have been sunk, and, apart from the damage to which the barge itself might be subject, my firm might also be made liable for large amounts presuming that the barges by reason of incompetent men being in charge were allowed to drift foul of steamers. The latter's damages would have to be borne by my firm, and as there is no limit to the liability of a lighterman, except the extent of his means, unlike shipowners whose limit of liabilities is

£8 per ton on the gross tonnage, without deduction on account of engine room, for a steamer, and her registered tonnage for a sailing ship. In the case of an apprentice being neglectful of his duty, on being brought before the Court he is admonished and warned to be careful, and that generally has the desired effect upon him, because he knows that if he continues the course of conduct that he has begun, he may never get his licence, and he is also liable to a penalty under the Act. In conclusion I may say that, unless some regular system of licensing and of inspection such as now carried on be established, I am at a loss to conceive how the trade of the river is to be carried on with safety for all interests.

10868. (Sir John Wolfe-Barry.) Did you give evidence before the Board of Trade Committee on the Navigation of the Thames in 1879?—No.

10869. (Rear-Admiral Hext.) You talk about barges being navigated under oars. That number is decreasing every year, I presume?—The short distances and the smaller craft will always be navigated under oars. You cannot keep a craft three or four hours after high water waiting to be finished. For instance, you must leave three or four hours for Tilbury—before the tide is out.

10870. For short distances, I presume you mean a distance of a mile or less?—Yes, but when you have towed six barges to their destination you may not be able to get them all alongside at once. You have to leave the barges at a tier in charge of a lighterman. It is not always possible to get right straight alongside a place that you are bound to with your barge.

10871. You talk about having untrained men. I presume if the Charter was done away with the same men would work on the river. They would not all depart, would they?—But certain people might start in the business in a small way, and they would employ the cheapest labour they could get. If they did any damage they would not be able to pay it. At present our expense for insurance is enormous. In my firm we do not take the risk of carriage of goods of any kind or description. Notwithstanding that, in order that we might be guarded against wilful negligence or something of that sort, we have to pay six guineas per cent. for a policy of £6,000; but we have to take the first £100 risk on each transaction, so that if we had lost this week £100 each on half a dozen barges, although we are insured, we should have to take the first loss of £100 in each case, and the distinct understanding is that you do not insure yourself out of that risk of £100. And that is the first-class underwriters of Lloyd's with whom we have done insuring for many years, and against whom we have never had a claim; but for all that we cannot get the risk taken for less than six guineas per cent. That is for a twelvemonth on the bulk of the goods we carry.

10872. (Sir Robert Giffen.) Have you to give security to the Customs?—Yes, we have a bond.

10873. How much is that in proportion to the business?—I think our bond is £100,000.

10874. So that that is a serious responsibility?—If we had a barge of tea sunk to-day, and they called upon us to pay the duty to-morrow, we have to do it. Suppose a barge goes out of sight, and is never seen again, as does happen sometimes, we have to pay.

10875. Have you had any trouble of your own with the lightermen at any time?—During the last strike. That is the only trouble since 1889.

10876. Had you to employ people in place of the lightermen who struck?—Our foremen stuck by us and we had to muddle through, but only about 10 per cent. of the lightermen of the Port of London stuck together. The bulk of the men who struck are what we call watchmen, not freemen. They came out in a body right through from first to last.

10877. And not the lightermen?—Only 10 per cent. of the lightermen in the Port of London struck.

10878. (Sir John Wolfe-Barry.) Did you give evidence before the Parliamentary Committee in 1890?—No.

Cross-examined by Mr. Daldy.

10879. A system of licensing carried on by a port authority would be equally satisfactory, would it not?—That would depend upon whether the party who applied for a licence had qualified himself before he applied for it. How is he going to qualify if he is not apprenticed? They begin in my firm by going into the

docks for the first six months before they are apprenticed. Then they come out in the river and assist to row the foreman or manager about in a skiff for the next six months.

10880. May I take it from you that that is the only objection you see to this system of licensing being transferred to the port authority?—My objection is that there should be nobody licensed unless they have gone to work on the river as a boy.

*Cross-examined by Mr. Claude Baggallay.*

10881. All you want, I think, is that the men who work the lighters shall be qualified?—Certainly.

10882. What the security is for getting that qualification is not a matter of importance. You want that they shall be qualified—that is the important thing?—What I really want is what you persuaded the Select Committee of the House of Lords in the early part of last year—to keep to the present system, because in your opinion after many years it could not be improved upon.

10883. I did not argue for that?—You so far persuaded that Select Committee that they advised that the bill should not go to a second reading.

10884. I quite agree, but was not what we persuaded the Committee then this: That the licensed lightermen were not a body who ought to have the preponderating influence on the Court of the Watermen's Company?—That was one of the things.

10885. That was then proposed, was it not?—The idea was, I think, to make a general thing of it such as is suggested now.

10886. I happen to have my speech in my pocket. Somebody has kindly reprinted it. I have been looking at it. What I want to know is this. Let us keep to the point. You want a security that the men shall be duly qualified. That is the principal thing?—That is a very important point.

10887. You get properly qualified men who come up with the sailing barges from the Medway, do you not?—My experience of those men is if they lower the mast and have to come under oars they engage a freeman of the Watermen's Company to assist them not by rowing but by steering their barges up the river.

10888. Are not the men who come up in charge of the western barges qualified men?—In what way, licensed or unlicensed?

10889. I am speaking of the Medway barges first. Are they not qualified?—They are qualified to handle their barges by letting go the anchor and sheering about, but they are not qualified to handle barges without rudders.

10890. Do not they sail their barges right up from the Medway to the Port of London?—They do, but they have rudders.

10891. Do not they row them up, after they have got to the Pool, themselves?—In most cases they engage a lighterman or a man who is called a hoveller to take the rudder while they run the barges.

10892. In some cases of the big ones, where they go through the bridges, is not that the case?—Big and little, you invariably see them.

10893. The Lee barges come into the Thames?—Yes.

10894. And out?—Yes.

10895. They do not have to have any licensed men?—No, they have not.

10896. Are not the men who work those barges qualified?—They are at it from boyhood.

10897. That may be, but they are qualified without being licensed men?—But they navigate their own barges, and no other.

10898. Do not the men with the barges which come from the west come down navigating their barges without help?—They take help below the bridges occasionally.

10899. Right through to London Bridge they do without them, do they not?—They do.

10900. Is it not a fact that they are obliged to take them at the present time below London Bridge?—I believe it is by Act of Parliament. I cannot tell you that.

10901. Their exemption only goes as far as London Bridge?—That is so.

10902. If they take them below that is not necessarily an admission of the incompetence of their men to navigate the barges, but it is simply that they are obliged to take them, having regard to the requirements of the Watermen's Company?—I do not know that ever they have applied for exemption.

10903. But they have got it?—I do not know that they have applied for it.

*Re-examined by Mr. Horace Ivory.*

10904. Reference has been made to the strike. Can you give us some more particulars about the actual number of lightermen who were out on strike?—Between 9 and 10 per cent. of the licensed men. The whole of the labourers came out, as far as I know.

10905. But the whole of the foremen remained at work?—With one or two exceptions.

10906. Was there any proposal to refer the dispute to arbitration?—I believe there was.

10907. What was the question that they came out on strike about?—Departure from Lord Brassey's award by some of the employers, I believe, was the first cause.

10908. That was the origin of it?—Yes.

10909. A question about overtime?—Yes.

10910. I want to ask you about the Humber. Reference has been made to the barges working on the Humber. Have you experience of the working of the barges there. Can you give us any information about it?—Captain Hume's evidence seemed to be so at variance with what I had heard that I went down to Hull last week, and chartered a steamer and went along the navigable channel everywhere.

10911. Having seen it, what do you say?—There is no comparison whatever with the Thames. The only navigation there that the men did without a tug or a sail is to tow the barge along the river bank like a horse tows a barge along the Regent's Canal. There is not a buoy in the river. There is not a sign of a ship ever having been there to let go her anchor and load up in the stream. I saw the dock master, who had been there 35 years. He had never seen a barge under oars. I thought that very strange, so I went into the docks, and went over the barges. Not only have they not got an oar, but they have not a rowlock to put it into. I asked him if he had ever seen a barge under oars in the Humber. He said: "I have been here 35 years, and I have never seen such a thing."

10912. There is no navigation under oars?—None, whatever.

10913. From what you saw, would any man who was qualified to work barges on the Humber be qualified to work them on the Thames?—No; he would know nothing at all about it.

10914. You are a member of the Court of the Watermen's Company?—Latterly.

10915. A junior member?—Yes.

10916. Reference was made to Mr. Robert Grey, who gave evidence before the Committee in 1890. Did he remain a member of the Court up to the time of his leaving business?—Yes.

10917. It is said that a great deal of towing is done now-a-days, but in fact do the tugs always have one licensed man on board?—Yes.

10918. In practice?—Always. I never knew a tug to be worked without a licensed man. Most firms have two licensed men to relieve the captain, in case he might be taken ill, or something of that sort.

(*Sir John Wolfe-Barry.*) Is that obligatory or optional?

(*Mr. Horace Ivory.*) That is a question which has not yet been decided. In the only case in which the question was raised, proceedings were taken under the by-law, which required two men at least to be on board, and the Court held that that was not necessary. The question whether one man should be on board has never yet been decided in a court of law. The Company have been waiting the opportunity to take proceedings, but the occasion has never arisen.

10919. That is so, is it not?—I never knew a tug to be worked on the river without a man having a licence.

*Mr. R. Deering.*  
24 June 1901.

Mr. CHARLES JAMES FIELDER re-called and further examined.

Mr. C. J.  
Fielder.  
24 June 1901.

10920. (*Chairman.*) You are a member of the firm of Messrs. Fielder, Hickman and Co., Lightermen and Barge Owners?—Yes.

10921. You desire to give evidence now with reference to the licensing system of the Watermen's Company?—Yes.

10922. Will you be good enough to proceed with that evidence?—In the evidence that I gave before the Royal Commission on the 20th March last, I was not asked my opinion as regards the present system of licensing men by the Watermen's Company. I attend to the outdoor department of my firm's business in and about the various docks and the River Thames. I have had altogether 23 years' experience: 5 years as an apprentice, 7 years as a freeman working in the craft, 3 years as a foreman, and 8 years as a master lighterman. During this time the traffic on the River Thames has increased very considerably. The number of steam tugs, vessels and barges has increased very largely, both in size and number, and I am of opinion that, owing to this fact, great skill and training are necessary for safely navigating all classes of vessels, particularly barges, of which a large number are moved under oars both day and night and in all weathers. My firm has 55 barges of the gross burden of 3,300 tons and employ regularly about 25 freemen and apprentices of the Watermen's Company of the River Thames. Our usual course of business is to work our craft as much under oars as possible consequently only a small proportion of our barges are towed. In so working we send one freeman and one apprentice with craft loaded or light up to 70 tons carrying capacity; barges over 70 tons carrying capacity, two freemen. By working our business in this manner we are gradually teaching the apprentices their business and enabling them to become practical freemen. At every tide, say one hour before and one hour after high water, the upper and lower pool are very much congested with craft of every description, and navigation is often very difficult and risky. I am of opinion that men of skill and experience are imperative, and are especially necessary at that time to be in charge of all classes of craft. The river and sea-going pleasure steamers which often carry nearly 1,000 persons each, arrive at and depart from this part of the river; consequently the risk to life and property, if craft were allowed to be in charge of inexperienced persons, would be enormously increased, and cause a grave and serious public danger. Considering that a large proportion of the cargoes lightered are very valuable, and are generally left solely in the lighterman's charge, the number of cases of neglect and dishonesty is small, which goes to prove that the men as a body are competent, reliable and honest, and I certainly am of opinion that they are quite up to the standard of the average working man. I think that the Watermen's Company who have the granting of the men's licenses, make the best use of the means at their disposal to ensure that the men they license are competent, honest, and respectable. In fact, when I applied to the company for my freedom, I was examined in 1883 by the master and a member of the Court before it was granted. The supply of good licensed men is, however, somewhat limited, in view of the rapid growth of the river traffic; if a larger supply of competent men were available, having of course a certificate to prove their capacity after trial and examination as at present, I should be glad, so as to ensure a greater choice when extra men are required, and those now possessing the freedom would not in that case be so independent as they are at present.

10923. (*Rear-Admiral Hert.*) You have alluded to the great increase in the size and number of barges. Have the numbers of the freemen increased proportionately?—I should think they had.

10924. Can you give us any figures at all?—No, I must leave that to the Watermen's Company.

10925. You have said it is the usual course of business to work out craft as much under oars as possible. That is very natural, but that is very seldom done I presume in the case of long distances?—For any distance under 12 miles it is our practice to send them under oars. From London Bridge to the Royal Albert Docks, which is nearly 12 miles, we send them frequently under oars; in fact I should think quite 70 per cent. of our craft are under oars always.

10926. This is rather a contradiction to what we have already heard as to lighters being towed?—Perhaps the previous witnesses have accustomed them-

selves to towing a great deal more than we have, but I was brought up as a practical man, and I have always felt that it was only right to keep up the standard of men, and I have given every encouragement I could to sending the craft about under oars.

10927. Then you have alluded to the river and sea-going pleasure steamers carrying 1,000 persons. Do they carry your men or anybody connected with the river?—I think they are all licensed by the Trinity House.

10928. That is a different thing altogether?—Yes.

10929. You have said that the supply of licensed men is very limited. To what do you attribute that if the pay is good?—Only twice in my whole experience have I ever been actually unable to get men. Once, when I was in my apprenticeship, I was sent out to find men, and had to come back and could not find them; and recently it has occurred once.

10930. You were speaking of the present day. You said the supply is somewhat limited in view of the rapid growth of the river traffic. The question I want to put is why with the good pay which I presume these freemen get you think there are not more applications and a larger number forthcoming?—I suppose it is because the employers have never availed themselves of the facilities that there are to take apprentices or two years' contract men.

10931. It seems a curious thing that in a port like the Thames you should only have about 6,000 freemen when the requirements appear to be increasing every year?—I think a great deal of that rests entirely with the employers or with the bargeowners. They are at liberty to take as many apprentices as they choose, and they are also at liberty to take what are called contract men—that is to say, men who are apprenticed for two years—but I do not think that they avail themselves of that. I do not think you can attribute the scarcity of men to anybody but ourselves. The remedy is in our own hands. If we liked to take the apprentices they would come out as freemen, but we neglect that, and trust to the men keeping up the supply of labour instead of taking the matter into our own hands.

10932. (*Mr. Ellis.*) You tell us that in your opinion the Watermen's Company do the best with the means at their disposal. Do you wish us to infer that you would like them to have other means at their disposal?—No, I do not wish you to infer that. What I wish you to infer is that before a licence is granted by the Watermen's Company they take every means that is in their power to ascertain that the men are competent.

10933. I quite understand that. You think the means at your disposal are sufficient?—I do.

10934. Are you familiar with the report of the Select Committee of the House of Commons of 1890?—No.

10935. I will just ask you one question with reference to their recommendation. They recommended: "That any person should be eligible for a lighterman's licence if found on examination to possess the necessary qualification, it being no longer necessary that he should be an apprentice to a freeman or to the widow of a freeman, or to a bargeowner employing a freeman or a licensed lighterman." Will you give us your opinion on that recommendation?—I do not think it would make much difference to us if we could make sure that the men were competent, but as there is no other system ensuring competency but the Watermen's Company I feel bound to uphold that, more especially as we have been so successful under it.

10935a. But if under any other system the area was widened and the end secured you would not object to it, I gather?—I do not think we could object to that. I think all that we require is competency.

10936. (*Sir John Wolfe-Barry.*) Have you the regulations as to apprenticeship? Are they going to be put in?—They are contained in the bye-laws of the Company, which I will now hand in. You will find them at Section 37.

(*The Witness handed in a copy of the Bye-Laws of the Company of Watermen and Lightermen of the River Thames. See Appendix, 28th Day, No. 1.*)

10937. Can you tell us about what average pay these lightermen obtain?—It varies considerably. The average for our men is £2 17s. 6d. a week, but it varies considerably in different firms.

See 11310.

10938. Is the pay always by the week or by the number of trips?—The men are paid by the number of days and nights. They are paid, say, 6s. per day and 6s. per night. A day's work is 12 hours and a night's work is 6s. a lump sum, for one job. It often takes the whole of the night—sometimes three or four hours or five or six hours, as the case may be.

10939. But the average earning would be £2 17s. 6d.?—Yes. Of course I am speaking of the regular men in our employ.

10940. You are only talking of your own firm?—Yes, and the men who are regularly employed.

10941. Would that be a fair estimate for most of the men, or do you think it would be more or less?—I could not give you an average for the whole number of men; I could only give you an average for the men who are constantly in employment.

*Cross-examined by Mr. Claude Baggallay.*

10942. One of the grievances you have, if you have one at all, is that perhaps there are not quite enough men to work the lighters?—I do not know that that is a grievance; it has only occurred twice, but still the fact remains that on two occasions we could not get men.

10943. If there is a remedy wanted, as I understand, it is in the direction of being able to get more men?—Competent men.

10944. I am assuming they are competent. I am not discussing now how they are ascertained to be qualified, but if you want a remedy at all it is in the direction of having a greater number of competent men?—Yes, if there is a remedy, but I must call your attention to the fact that the remedy lies with ourselves. If we do not avail ourselves of the opportunities that are here before us we cannot blame anyone else for it.

10945. Of whom are you speaking when you say it rests with "ourselves"?—Master lightermen and barge-owners.

10946. It rests with them, does it?—Undoubtedly.

10947. I suppose you are supported by the Amalgamated Society of Foremen Lightermen; you are one of the Committee of that Society, are you not?—Yes, I am one of the Committee and one of the founders.

10948. I see your name on the Executive Council?—Yes.

Mr. GEORGE HENRY ARDLEY called and examined.

10956. (Chairman.) You are foreman lighterman to Messrs. Hinton and Horne?—Yes.

10957. You represent the Amalgamated Society of Foremen Lightermen of the River Thames?—Yes.

10958. You desire to give evidence with reference to the Watermen and Lightermen's Company?—Yes.

10959. Will you be good enough to tell us what you have to say?—I have been foreman lighterman to Messrs. Hinton and Horne, who are coal merchants in a large way of business, for the past 17 years. Their fleet consists of 40 barges. We always have craft on hire. I have had as many as 80 on hire, but the average working is from 50 to 60 barges all told. I have belonged to the Amalgamated Society of Foremen Lightermen of the River Thames ever since it was registered, and I have been selected at a meeting of the society to give evidence before the Commission. If the river were thrown open there would be great risk to life and property. We have frequently to employ chance men, who are termed jobbers. We put them on to work a barge, from one given point to another, and rely on their certificate that they are competent. If there were no licence, a man employed over night might foul a steamship and do a large amount of damage between then and the morning, and the foreman would get all the blame for employing such a man, although there would be no opportunity of judging of his fitness or identifying him subsequently. In these days of extreme pressure and telephones we receive orders up to 8 p.m., and the work coming in up to that time has to be arranged by the foreman. It is needless to state my principals are never there at that time. A point in Mr. Jacobs' evidence, given on the 20th March, to which I take

10949. Is not one of your rules, rule 6, framed for the purpose of restricting the taking of apprentices?—No, I do not think it was framed with the object of restricting the taking of apprentices. I will tell you what I think it was put there for. A foreman lighterman stands in a unique position; he only superintends his master's work and he would be unable to properly teach an apprentice by taking him on barges under oars. Therefore we thought it was only wise that we should stipulate that he shall only have one at a time.

10950. You have restricted a foreman, who is a member of your society, from having a second apprentice until the existing apprentice shall have served three years?—That is so, but you see a foreman lighterman travels the whole of the area where the barges are, and he does not go under oars with the barges himself; he therefore has not an opportunity of teaching the apprentices the business.

10951. How would that apply in the case of a widow; she is not restricted?—No, not at all. We are not responsible for widows.

10952. This would not restrict any person who is a member of your society?—No, but before a widow could take an apprentice I should think she would come to men like ourselves, who would take the lad and teach him.

(Chairman.) I see the next witness represents the society to which you refer, Mr. Baggallay. As we have a witness coming from that society, perhaps it would be better if you restricted your questions to the general part of Mr. Fielder's evidence.

(Mr. Claude Baggallay.) Yes, my Lord. There is one other point I should like to put to this witness.

10953. Is not that, as a matter of fact, a restriction on the production of licensed lightermen?—Yes, with this qualification; we thought that as the foreman was not under way in the craft himself, he really was not capable of teaching three or four apprentices. We thought that one at a time would be quite sufficient for him.

*Re-examined by Mr. Horace Ivory.*

10954. Is the object of that to secure that the apprentice shall be properly taught?—Undoubtedly.

10955. Is that the only object?—That is the only object.

exception is that he states a lad of 16 can navigate the largest barges; this is a fallacy. I refer to the Thames Conservancy Rule No. 27, by which barges over 50 tons burthen when navigated under oars must have two competent men. An apprentice can form the second hand, but there must be a lighterman in charge. A good foreman always puts an apprentice with an old and tried freeman, who teaches him his business, and when he is able to go alone he is put into the smallest craft to work his way up. If there were no apprenticeship there would be no opportunity of training the lads and keeping them under one's own eyes. I know the value of skilled labour, as I lightered for my employers rather better than 80,000 tons a year, and five-sixths of that work was done under oars. I only employ a tug on special occasions, or if going to Brentford. My main work is moving about from Messrs. William Cory and Sons' derricks and Regent's Canal to the Pool, as my employers, amongst other work, lighter coal to nearly all the steamers in the most crowded part of the river, viz., the Pool. Another matter is an apprentice is bound to work, or he can be brought up before the Court and punished. If the river were thrown open discipline would be at an end, and in bad weather, ice, and snow, there would be difficulty in getting the men to work at all, as there would be practically no governing authority. I object to Mr. Jacobs' statement "that the great majority of craft are towed," as a large proportion of craft are worked under oars. I should point out that the river is becoming more congested year by year, and that navigation therefore becomes more and more difficult.

10960. (Sir John Wolfe-Barry.) Why are not some more tugs employed. Is it because it is cheaper to navigate by oars?—Yes, it is a matter of perhaps 2s. or 3s. a barge.

Mr. C. J.  
Fielder,  
24 June 1901.

Mr. G. H.  
Ardley.

Mr. G. H.  
Ardley.

24 June 1901.

10961. It is a matter of money?—Yes.

10962. You say the river is becoming more congested year by year, and the navigation therefore becomes more and more difficult?—Yes.

10963. Is the practice of towing increasing or diminishing under those circumstances?—I do not think it is diminishing. Large firms have tugs; the tonnage increases and the barges get larger, and therefore they have a tug to do the business.

10964. For what length of journey do you think towing becomes better?—Take the long distances from London to Tilbury, or London to Brentford, or London to the Albert Docks, or Dagenham and different places like that.

10965. Something like 7 or 8 miles?—Between London and Tilbury is 26 miles. From London Bridge to Brentford is 13 miles.

10966. You said Albert Docks. Would you take London Bridge to the Albert as a distance over which it would pay to tow?—It would pay you to tow beyond Albert Dock, if you could not go down with the tide.

10967. I thought you gave the Albert Dock as an instance to which it would pay to tow from London?—With big barges (the craft are increasing now) and sometimes with bad weather, or easterly winds, you would not get down under oars, therefore you have to have a tug.

10968. As barges increase in size does the difficulty of navigating with oars increase?—No; I am navigating 100 ton barges under oars.

10969. With two oars?—Yes.

10970. Is the difficulty any greater with large barges than with small barges?—Of course, there is a little more work. If you put a couple of men in a 100-ton barge they can get about.

10971. Suppose they happen to get in the way of a steamer?—They can back astern, or lay their barge up and attend to it properly.

10972. They have not the same control over a 100-ton barge, have they?—No, not quite.

10973. Do you find any want of labour?—No. At Regent's Canal Dock on Saturday afternoon I could have got a dozen lightermen if I had wanted them. In fact, they asked me for jobs.

10974. According to your experience, is there no want of licensed men?—I have never had any trouble to get the men personally.

10975. Supposing a barge comes up from down the river under well qualified men; does it seem reasonable to you that they should be obliged to take a man on board that they do not want?—It is a matter of safety to bargeowners' property. If a man comes up with a barge from the Medway and he does not think he is quite competent to take this barge up through the London traffic, he employs what we call a jobbing man or hoveller.

10976. But supposing he chose to come on without sails?—He could come along.

10977. Where would he be obliged to take a licensed man on?—Coming through the Pool; the most crowded part of the river.

10978. Do you say he can navigate up to the Pool, but not through the Pool?—As a matter of fact, there is no licence, I believe, in reference to a sailing barge. A man with a sailing barge coming from Rochester sometimes comes to the Port of London one day and goes away and is not back for another week or ten days. Of course, that man is not so competent in getting his barge about, therefore he employs what we call a jobbing man to assist him.

10979. There is an enormous amount of traffic in barges and sand which comes up from the Medway?—Yes.

10980. Constantly?—Yes.

10981. And these men can come up to some point in the river without a licensed man?—As a matter of fact all these men are brought up from boyhood on the barge, first as a boy and then as mate.

10982. You mean on board a sailing barge?—Yes; it is practically an apprenticeship.

10983. They serve their apprenticeship to the men who navigate those barges?—It is practically an apprenticeship, although there is no licence attached to it.

10984. Those who employ these men to navigate the sailing barges are employing men who have gone through an education—I will not call it apprenticeship—on similar barges?—Yes.

10985. And they gradually work up to be mate or captain?—Yes.

10986. And they are very well qualified to navigate their barges?—Below a certain point.

10987. I think you said you thought the Pool was the critical place?—Yes, going through the Pool.

10988. Supposing they go only as far as the Pool they can navigate without any danger?—It all depends. They take these men for their own protection and safety.

10989. Do you say that they could navigate safely up to the Pool, but beyond the Pool you do not think they ought to be allowed to navigate without a waterman freeman?—I do not think so.

10990. Witnesses have told us that the man who comes on board is no use, but they are obliged to take him because they have no choice. Is that your opinion or do you think that they are really useful to them?—The men are very useful to these sailing bargemen.

10991. What do they do when they come on board. Do they take the rudder?—They pilot the barges along the same as an ordinary pilot does for a steamship.

10992. Do the ordinary bargemen who come up from the Medway take the oars?—Yes.

10993. To that extent they assist the bargemen by doing work which somebody must do, that is to say they work the rudder?—Of course they have the knowledge of coming through these different parts, therefore they take the rudder.

10994. At any rate, up to a certain point you see no difficulty in navigation?—Yes, there is some difficulty in navigating the River Thames certainly.

10995. Of course there is difficulty in navigating any river and particularly a river like the Thames?—Yes.

10996. I think you say somewhere about the Pool is the place where the navigation should be in the hands of licensed men?—Yes, I think so.

10997. (Mr. Ellis.) As I understand you are here as the representative of the Amalgamated Society of Foremen Lightermen?—Yes.

10998. I want a little information about that Society, if you please. Is it what we ordinarily call a trade's union?—Yes, a trade's union. We formed this society to protect our employers to a certain extent.

10999. Is it registered?—Yes, it is registered.

11000. When was it registered?—I could not tell you the date.

11001. Give me some approximate date?—About 10 years ago.

(Mr. Claude Baggallay.) It was registered in October, 1889, I am told.

11002. (Mr. Ellis.) You have rules?—Yes.

11003. Have you a copy of them?—Yes.

11004. Will you hand that in?—Yes.

(The Witness handed in a copy of the Rules of the Amalgamated Society of Foremen Lightermen of the River Thames. See Appendix, 28th day, No. 2.)

11005. Do you publish a report?—Yes.

11006. Have you a copy of that?—Yes, I will hand it in.

(The Witness handed in a copy of the Balance Sheet of the Amalgamated Society of Foremen Lightermen of the River Thames for the half-year ending April, 1901. See Appendix, 28th day, No. 3.)

11007. Does this society comprise all the foremen lightermen who are eligible?—Yes, certainly.

11008. You are aware an ordinary trade's union does not always comprise everybody who might come in?—Yes, members who like to apply for membership.

11009. What I want to get at is whether there are any outside this who are eligible?—Yes. If any other foremen wish to come in they can come in.

11010. Are there any who do not wish to come in?—A very few.

11011. What is the number of your men?—Over 300.

11012. How many do you suppose there are outside?—Very few.

11012a. Ten, twenty, or thirty?—Not more, I should think.

11013. This is an ordinary trades union and a benefit society, I see as well?—Yes, for the protection of our old and maimed members.

11014. How long have you personally been a member?—From nearly the beginning; about 10 years, I suppose.

11015. Are you one of the officers?—I am their treasurer, but I have not got the figures quite at my fingers' ends in reference to the balance sheet.

11016. Was there any question as to the evidence you should give before this Commission. Was it settled for you?—It was settled by my executive council, and it is all in our minute book.

11017. We can take it that your evidence represents the opinion of your society?—It has been put before my members; I am merely a representative; it is not a personal matter with me.

11018. You are a representative witness?—Yes.

11018a. (Mr. Peel.) When a barge is under 50 tons, and when it is towed, then one man takes charge of it?—Yes.

11019. Then that man need not be a lighterman, he might be an apprentice?—He might be an apprentice, certainly.

11020. I see you object to the statement that the majority of the craft are towed?—Yes.

11021. What is your idea about that?—I think from figures that I can produce, I could show a hundred firms who do not tow, or who simply tow occasionally.

11022. Whose practice is to navigate under oars?—Yes.

11023. Are those barges of a special size?—They range between 50, 60, 70, and 80 tons.

11024. And upwards?—Yes.

11025. To what size?—Craft range from 50 to 130 or 140 tons.

11026. Your desire to have skilled men on board applies chiefly to barges when they are under oars?—Yes.

11027. Not when they are towed?—I could not carry on my firm's business unless I had practical men.

11028. When they are being towed you would not put the same high requirements on the men?—Yes. I have to drop them off on different tiers, berth them at different wharves, and they have to be watched. If you put an empty barge inside a loaded barge you would have her side torn out, which means damage.

11029. (Rear-Admiral Hext.) You told Sir John Wolfe-Barry just now that at a certain point a freeman has to come on board a sailing barge and take the rudder?—Yes.

11030. Suppose a sailing barge is under sail, does he still take the rudder and navigate her?—He would not sail a barge through a crowded spot such as the Pool.

11031. Therefore, as long as he is under sail he is of no earthly use?—I do not know that he is of no earthly use. He would assist.

11032. You have said if there were no licences a man employed overnight might foul a steamship and do a great amount of damage. Do your barges move about much at night time?—Yes, we do a lot of business at night time.

11033. Long distances?—Yes; Victoria Dock to the Pool, Chelsea Basin to Bankside.

11034. Then you have spoken about the difficulty of getting the men to work at all if there were no governing authority. I presume the governing authority were no use whatever in the strike, were they?—You cannot compel a man to work.

11035. Can you compel a man to work in this particular case?—With apprentices the mere fact of them knowing there is somebody above them puts them in fear and keeps them to this particular sort of the business. Unless you have some governing authority you cannot get a boy to get up at two or three or four o'clock in the morning unless there is somebody to rule him. The masters know this. The apprentices sometimes even run away from their masters; but the mere fact

of having a governing authority puts fear in these boys, and brings them up to their business properly.

Mr. G. H. Ardley.

11036. (Sir John Wolfe-Barry.) With reference to the rules of your society about taking apprenticeship, I see that the foreman who takes one apprentice shall not be allowed to take any apprentice unless he is in a position to teach or cause to be taught such apprentice the practical business of a waterman and lighterman of the River Thames?—That is so.

11037. It is not necessary for him to teach the apprentice himself as we rather gathered from a former witness. So long as he sees that he is taught he fulfils his obligation to the society?—I believe that is so.

11038. (Mr. Ellis.) I see the date of these rules is 1893. Can you assure us that the rules are now what they were in 1893?—When we formed this society the rules were the same as they are now.

Cross-examined by Mr. Claude Baggallay.

11039. A question with regard to your practice. Do you have a certain number of men who are more or less habitually in your employ as a foreman?—Yes; I have my brother under me as assistant.

11040. You are a foreman lighterman?—Yes.

11041. And you have a certain number of men who more or less regularly work for you?—Yes. My regular men.

11042. In filling up a vacancy if you want another man do you find out at all what the qualifications of the man are as regards his capacity for navigation?—The licence is the guarantee.

11043. Is that the only thing you look to or do you go at all by your own knowledge of the man or by what is recommended to you by other people?—Certain men that I know work on the river, and if I want one of them I employ him as my man.

11044. You do ascertain to a certain extent for yourself and use your own judgment in selecting a man you employ as one of your regular men?—In nearly all cases.

11045. And you do not rely implicitly upon the licence of the company?—I take it this way. If I go to Victoria Dock and I want an extra jobber or two, I say to a man willing to take my barge to Bankside, or to certain steamers at different points, "I suppose you are a lighterman?" He says: "Yes;" I say: "Well, I should like to know; I want to be certain that you are a lighterman"; then I ask him to produce his certificate, and that is the proof.

11046. That I can quite understand; when you are taking on a casual hand for a specific job you do have to rely in that case upon the licence as the only guarantee you can get; but with regard to the men you take on as your regular hands, those you use your judgment about?—Yes, I must say that.

11047. In other words you do not rely implicitly upon the licence which is granted by the Watermen's Company as evidence of his qualifications for your regular employment?—No.

11048. You rely on your own judgment, do you not?—In some cases we do certainly.

11049. For regular employment you rely on your own judgment over and above the licence. Is not that so?—To a certain extent I do.

11050. The Thames Conservancy Regulations require, as we know, one man to be on board in the case of a barge under 50 tons?—Yes.

11051. Two men in the case of a barge between 50 tons and 100 tons?—That is so.

11052. Three men in the case of a barge over 150 tons?—That is right.

11053. Unless she is being towed?—Yes.

11054. The Thames Conservancy Regulation requires that man No. 1 shall be a competent man?—That is so.

11055. It does not require that he shall be a licensed man of the Watermen's Company or that he shall have any other qualification except that he shall be a competent man. Is not that so?—I have not the rules of the Thames Conservancy here.

11056. I know what the Watermen's Company require, but so far as the Thames Conservancy Regulation goes it is this, is it not. It is No. 27 of their bye-laws: "Any lighter navigating the river shall

Mr. G. H.  
Ardley.  
24 June 1901.

when under way have at least one competent man constantly on board for the navigation and management thereof—it is only a competent man. The employer, of course, has to see to that; the other men have no qualification at all; is that not so?—By the reading of that, but not in practice.

11057. Let me ask you about this towing practice. You say that a large number of barges are navigating under oars?—Yes.

11058. I take it that when you say that, you mean the barges or lighters which work the short distance traffic just in and about the Pool?—Oh, no.

11059. Nearly all the barges which come up past Westminster and go up the river, are towed, are they not?—Taking it from the Pool to Brentford, you would not get them there under oars; you would at some time, of course, but in bad weather they are towed.

11060. Am I right in saying that nearly all the barge traffic which goes up the river beyond London Bridge and goes past Westminster is towed?—Not all the traffic.

11061. I said “nearly all.” I have myself seen them working with sweeps past Westminster, but as a matter of fact, the greater part of them do go under tow?—For the long distances.

11062. Is it not a fact that nearly all the traffic that comes up from the Albert Docks to the Pool is towed?—If you take the tonnage it might be, but I do not know about the number of craft.

11063. I daresay you might find some small craft which go certain distances under oars, but am I not right in putting it to the Commission that the bulk of the traffic which goes between the Pool and the Albert Docks is towed?—Yes.

11064. Does it not come to this; that what is moved about under oars may be in number very considerable, but it is principally the traffic which is going to and from the ship's side in the Pool to the wharf or in and out of the docks?—The bulk of it, I daresay.

11065. And that is chiefly the small barge traffic, is it not?—My craft run from 70 to 80 tons.

11066. But the larger barges are almost all under towage even there?—The large barges are.

11067. With regard to these sailing barges, you rather put it (I do not think intentionally) that the sailing barges when they come up have to take a man on board. As a matter of fact, whatever a sailing barge may do in the way of taking an extra hand in certain cases when they are coming up, they are not obliged to take any extra hand, are they, if they are going right through?—Not according to the law.

11068. If they take an extra hand it is a voluntary act on their part. I admit that they do for certain purposes, and in certain states of the weather, take a third hand on to get through certain bridges, but that is a purely voluntary act on their part, is it not?—It is for their own protection and the safety of their property.

11069. They want three hands for a big barge going through the bridges in certain states of the weather, and so on?—They want another because the navigation is difficult in different states of the tide.

11070. But there is no obligation on them to take another?—Not according to the law.

11071. If they take a man there is no obligation on them to take a licensed man?—I believe that is so.

11072. Now with regard to the western barges. The barges which come down from the west are under no obligation whatever to take a man unless after they have passed all the bridges and come below London Bridge?—That is so.

11073. What is the most difficult part of the navigation of the river. Is it at the bridges?—There is the congestion of traffic. This is increasing every year.

11074. At certain times there may be some congestion, but, taking it as a rule, is it not the tide or the weather when they are passing the bridges which causes the difficulty?—Not in all cases.

11075. But is not that the principal difficulty?—There is some difficulty, it is true, but that is not the principal difficulty, I think.

11076. Will you tell me what is the principal diffi-

culty. The hoveller is a man who is taken on board to help through the bridges, is he not?—Yes.

11077. But all these western country barges now are generally towed?—Many of them are.

11078. Mostly all of them are towed. Is it not the bridge navigation which is the greatest difficulty on the river?—Yes, it is.

11079. In the Pool, though you may have a great deal of traffic and some congestion, the traffic (so far as it is not being towed), is all moving with the tide, is it not?—It is all on the move.

11080. It is all on the move in the same direction?—Yes.

11081. Whether it is the wind or the tide which affects it, it is all moved by the same common motive power?—The tides come up and down, certainly.

11082. It is all moving in the same direction?—Yes.

11083. Now one question upon your rules. By Rule 6 of your Society's rules you restrict the power of the foremen lightermen to take apprentices?—Yes.

11084. You limit it?—That is so by this rule.

11085. The widows who can take apprentices, and any other persons who are persons entitled to take apprentices, are not restricted as your members are by that?—No, quite right—by the reading of this rule.

11086. There is nobody else who is entitled to take an apprentice who is restricted in the same way as you have restricted your members?—According to this rule, certainly; that is so by this rule.

#### *Cross-examined by Mr. Cranstoun.*

11087. You have taken exception to a statement made by Mr. Jacobs that a lad of 16 can navigate the largest barges?—Quite so.

11088. Was your attention drawn to the 35th bye-law of the Watermen's Company before you made that statement?—I do not think so. I am taking the Thames Conservancy Act.

11089. Here is the bye-law: “In all cases in which it may be necessary or requisite, under such Act or these bye-laws or under the bye-laws of the Conservators of the River Thames, that for the benefit of the public using the river in boats, barges, or vessels, two able and skilful persons shall be employed in the management and navigation of passenger boats at Gravesend, and in vessels of more than 50 tons burden navigated on the river, one waterman or lighterman licensed in manner provided by such Act and bye-laws, or an apprentice licensed to take the sole charge of craft, and an apprentice actually bound in manner provided by such Act.” Under that bye-law is it not a fact that a lad of 16 years of age who has got his licence may navigate a barge along with an apprentice who has just joined?—That is so, I believe.

11090. Then Mr. Jacobs was right, was he not, when he said that a lad of 16 could navigate?—You get so many bye-laws that you want the whole of the books before you.

11091. That is why I draw your attention to this bye-law. So that Mr. Jacobs was right when he said that a lad of 16 could navigate a barge?—Mr. Jacobs was taking it from that one; I was taking it from the other.

11092. Is it a common thing for a barge of 80 tons, we will say, with cargo on board, to be navigated under oars?—It is possible.

11093. But is it a common thing, or not?—It is not very common; sometimes they do.

11094. As a matter of practice, have you known it done?—It is done, certainly.

11095. Very seldom, I suppose?—No.

11096. Is it a common thing?—I am taking my own business. I can navigate a barge under oars with 80 tons, if you put it that way.

11097. Is it a common thing for a barge of 80 tons with a cargo on board to be navigated under oars on the river?—It is a common thing.

11098. Is 80 tons the limit?—No; these barges are of different sizes.

11099. Is it a common thing in practice for a barge over 80 tons with a cargo on board to be navigated under oars?—It is in my case. I am speaking of my own particular business.

11100. Do your barges exceed 80 tons?—I hire barges over 80 tons.

11101. Over what distances do you take barges?—I take from Victoria Dock to the Pool. That is 7 miles.

11102. Under oars?—Under oars.

11103. Up to what tonnage have you taken a laden barge under oars that distance?—You are putting a question to me which I can answer. I have navigated, with my brother, a barge with 130 tons in it.

11104. Under oars?—Yes.

11105. With how much cargo on board?—With 130 tons of coal.

11106. How far have you navigated that?—Seven miles.

11107. Have you done that more than once in your life?—Yes, I have.

11108. Frequently?—Frequently. I am not telling you any fairy tales, I am a practical man in reference to navigation.

*Re-examined by Mr. Horace Avory.*

11109. Tell me if you can verify the document which I now hand you, as a list of barge owners who are now navigating barges under oars?—Yes, I can. I got this list out myself.

11110. How many names are there in that list?—There are 100 barge owners on this list, large and small.

*(The Witness handed in a list of Bargeowners on the River Thames who navigate under oars. See Appendix, 28th day, No. 4.)*

11111. *(Rear-Admiral Hezt.)* Do they navigate entirely under oars; do they never tow?—Occasionally, in bad weather they do.

11112. *(Mr. Cranstoun.)* May I ask whether that list comprises those navigating solely under oars?—Not wholly under oars.

*(Mr. Horace Avory.)* They use towing in the case of bad weather.

*(Sir John Wolfe-Barry.)* To prevent misunderstanding, let us have this clear. The witness told us that the bulk of the traffic within certain limits was towed; it had nothing to do with bad weather so far as that is concerned; he did not mean us to gather that it was only in bad weather.

*(Mr. Horace Avory.)* Quite so, but I understood he was speaking only of the long distance journeys when he spoke of towing.

*(Sir John Wolfe-Barry.)* Apart from bad weather, for long distances the barges are towed.

*(Mr. Horace Avory.)* Yes, and the barges of the bargeowners shown in the list he has handed in were towed under these conditions from time to time.

Mr. HARRY GOSLING called and examined.

11124. *(Chairman.)* You are General Secretary of the Amalgamated Society of Watermen and Lightermen of the River Thames, with which Society is affiliated the Society of Watchmen of the Port of London?—Yes.

11125. You are also an Alderman of the London County Council?—Yes.

11126. You now appear before us as representing the Society of which you are secretary?—Yes.

11127. You desire to give evidence with reference to the licensing system of the Watermen's Company?—Yes.

11128. Will you be good enough to proceed with that evidence?—I am a lighterman, and have been fully qualified since 1882. Prior to that I had been apprenticed for seven years. My chief business was in the timber trade, my work being the general navigation of the river. I am now the General Secretary of the Amalgamated Society of Watermen and Lightermen of the River Thames. I have been secretary for the last eight years, and am now appearing for the members of that body and am instructed by them. The said society is a trade union consisting of 22 branches, extending from Kingston to Erith, and is managed by a committee of delegates elected by the members. The society at the present time has 4,000 members, of whom 3,400 are lightermen and apprentices, and the rest

11113. *(Mr. Horace Avory.)* Do you mean that these gentlemen whose names you have given use towing when they are going long distances?—Yes.

11114. *(Chairman.)* May we take it that those gentlemen whose names you have given us represent the majority of bargeowners?—Yes.

11115. What percentage would you say to the whole number of bargeowners?—Nearly half, I should think.

*(Mr. Claude Baggallay.)* If your Lordship will permit me to say so, I think that to make that valuable what is wanted rather is how many barges that represents out of the total number of barges. The mere number of bargeowners does not tell much; it is really the number of barges out of the aggregate number of barges that is important, and to a certain extent whether they are large barges or small ones.

11116. *(Mr. Horace Avory.)* What do you say to that, Mr. Ardley. Out of the total number of barges in use on the river, what proportion is habitually navigated by oars. Take the whole number of barges in use on the river?—I should say half, I think.

*(Sir John Wolfe-Barry.)* Rather than use the word "habitually," say they have no other means of propulsion than oars or towing; they are not habitually, I take it, navigated by oars if it suits the bargeowners to tow them.

11117. *(Mr. Horace Avory.)* May I take it that they are habitually navigated by oars for the short distances?—Yes.

11118. Do you think that the system of navigating by oars for the short distances will continue?—Certainly. It is a matter of cheapness. I could get a barge brought by hand for 5s., and it costs me 8s. for a tug.

11119. Is it likely in the future that the system of navigating by oars will be entirely abolished?—I do not think so.

11120. About how many of these western barges are there that have been spoken of?—Very few now that come down under oars; they tow right through.

11121. Rule 3 of your society, I see, provides, among other things, that one of the objects is to endeavour to settle any dispute that may arise between master and man?—Certainly, that is so, and I think we have done so.

11122. Have you, in fact, used that power in any case?—Yes, we have.

11123. In the case of the last strike that has been spoken of?—I think we have protected our employers very well.

watchmen. There are about 5,000 licensed lightermen and 1,700 apprentices working on the River Thames. A man can only become a lighterman in two ways (1) by serving a five, six, or seven years' apprenticeship, (2) by serving a two years' contract to some bargeowner or lighterman. Apprenticeship is applicable to a man who begins this calling early in life; the contract men are those who desire to obtain a license after they have passed the age of 20. At the present time a lad can be apprenticed at the age of 14, and after he has worked for two years, if he understands his work and satisfies the Court of the Watermen's Company that he is competent, his master can obtain an apprentice's license, which enables such apprentice to do such work as in the discretion of his master he is able to perform. But the apprentice only gets his full license on completion of his indenture, and provided the Court are satisfied that he is competent. The present tendency is not to apprentice boys until they are 16, and therefore apprentices' licences are not granted until apprentices are 18, nor full licences until such apprentices are 21. The Court always has an examination or evidence of competence before granting a licence, and I have myself opposed the granting of a licence on the grounds of incompetence, and on my satisfying the Court that the applicant was not competent, the licence has been refused until such time as the

applicant became qualified. The advantage of this system of training and licensing is that all the lightermen on the river have a common knowledge that can only be acquired by a continuity of service, and by each of them having been associated with the same system, and trained upon the same river, and any system that allowed men to come and go as they chose, would introduce danger and difficulty. At the present time a lighterman devotes the whole of his time to his trade; the result being that he works day and night, winter and summer, and obtains an experience that cannot be acquired in any other way. The successful navigation of the Thames is due to the fact that the methods of navigation adopted are common property and well understood not only by each lighterman but by the pilots, steamboat captains, and all others using the river, and this is more important as the navigation of the Thames cannot be controlled by any set of rules, but varies in every reach and with every wind and tide. If the present system were abolished and the barge-owners left free to employ whom they pleased, the risk to navigation would be materially increased, as the incompetence of one man is sufficient to throw out the whole of the navigation in any particular reach, and cause both delay and danger. The owners' risk can be covered by insurance, but the risk of personal injury to the lighterman cannot be covered, and the men on the river are strongly of opinion that any such course would increase the dangers of their trade, and make their lives less secure, as well as delay them in the carrying out of their work in what is admitted to be a very crowded river. The Court of the Watermen's Company have a better knowledge of the navigation of the Thames and its requirements than any other body; it is a class of navigation that is entirely distinct from everything else, and one that only a body actually in touch with the river and its requirements can competently deal with. Whatever alteration may be made in the management of the river for the improvement of the port, it would be advisable that those navigating the river should be licensed, and that they should be licensed by a body with the knowledge and experience of the Waterman's Court. The feeling of the men on the river is that the standard of competence should be raised rather than lowered, and that the navigation on the river should be subject to a regular night and day supervision.

11129. Was this evidence which you have just given read and approved at a meeting of your society?—Yes, it was prepared and submitted to a mass meeting of the men, specially called for the purpose, and approved by them.

11130. When was that?—Within the last three months. I am not sure of the date.

11131. Have you a book of rules of your society?—Yes.

11132. Will you please hand it in?—Yes.

(The Witness handed in the Rules of the Amalgamated Society of Watermen, Lightermen and Watchmen of the River Thames. See Appendix, 28th day, No. 5.)

11133. Will you also hand in a copy of your accounts?—Yes.

(The Witness handed in the Report and Accounts of the Amalgamated Society of Watermen, Lightermen and Watchmen of the River Thames for the year ending 31st December, 1900. See Appendix, 28th day, No. 6.)

(Witness.) I have prepared further evidence, which I should like to put before the Commission with reference to the strike, and with reference to the River Humber.

11134. Have you yourself been on the Humber?—I have been there several times.

11135. Lately?—I was there last week, and I was there in Whitsun week.

11136. Did you go up with Mr. Deering?—No, I did not. I saw him there, but he did not see me. He did not know I was going.

11137. Can you tell me the number of licensed men on the Thames now out of employment?—It is about 700 or 800, and of those that are employed, not all are working upon their license; that is to say, they are doing work in which the license is not necessary.

11138. Do you mean dock work, for instance?—Yes. There were on Friday about 100 or 150 men working in the docks as watchmen at a lower rate of wages than they would get if they were working as freemen outside.

11139. Are you acquainted with the Port of Hull?—Yes.

11140. Can you tell us anything with reference to the lighterage work there?—The lighterage work on the Humber is only along a straight piece of wide river about two miles in length, from the dock entrance into what is called the Harbour at Hull, and up about 2½ miles of harbour.

11141. How is the work done along that 2½ miles?—With hitches—that is to say, boat hooks.

11142. That is towing?—It is towed along with lines.

11143. Is that with steam?—No, manual labour. In the Humber it is with steam; the craft are towed there by steam.

11144. Is the work inside the docks at Hull similar to the dock work in London?—Yes, but in moving from dock to dock or place to place the Hull work is of a much more simple character than in London, because the docks have direct communication locks with the river. In many cases you do not need to go into the Humber at all to get from the docks into the harbour at Hull. There are communication locks leading into the harbour itself.

11145. How many lighters are there in Hull?—About 600, as against 10,000 on the Thames.

11146. How many lightermen are there?—There are about the same number of lightermen, as against 6,000 or 7,000 on the Thames.

11147. In your opinion, would the work at Hull be considered of a simple character by a Thames lighterman?—Yes, it would, compared with the Thames work.

11148. Do you think there is more difficulty and risk on the Thames?—Yes, there is so much more ground to cover; there is so much more to know.

11149. Can you tell me the view of the men on the river about strikes?—I do not want to say anything more about the strike than is absolutely necessary, because we are very good friends now, and I do not think we want to stir it up, but the unanimous opinion on the river is that the only way to prevent these disturbances is a permanent conciliation board with an independent chairman.

11150. Can you give me any idea of the number of lightermen that were out at the last strike?—Nine hundred was the highest number of freemen. They were not all of them out long. There were about 200 apprentices out, I think. The remainder of the men who were out were watchmen—unlicensed men.

11151. (Sir Robert Giffen.) There are about 6,700 lightermen and apprentices?—Yes.

11152. If 900 of the lightermen were out on strike that would be a much larger proportion than 10 per cent., would it not?—Yes; 900 were not out for very long, because the other firms came and took some of them.

11153. Still, you do not quite agree with the statement that the proportion out on strike was 10 per cent.?—No. Those are the actual figures, taken from our books.

11154. You say that the number of members of your union is 3,400?—Yes.

11155. And the total number of licensed men and apprentices is 6,700?—Yes.

11156. That would show that, roughly speaking, you have about one-half the men in your union?—About half.

11157. Have you a larger proportion in your union of the men actually employed as lightermen at this moment on the river, or how does that stand?—The tendency is for the unemployed men, of course, to leave; they lapse.

11158. Including in that number the men who are in some other occupation. They cease to be members of your union when they cease to be employed—is that so?—No, it is not so. They remain members so long as their contributions are paid. If a man is out of work the usual consequence of that is that he is not able to pay.

11159. So that you may have a certain number of men in your union who are not actually employed as lightermen?—Not a considerable number. The 700 men that I was speaking of are men who are looking for work, but trade is very bad indeed just now. They are looking for work and are unable to get it. I mean in that sense they are unemployed.

11160. I wish to know whether the men who are engaged in dock work and other employment of that kind more or less permanently still remain members of your union?—Not permanently employed in the docks; I do not suggest that; but they are working in the docks now at a lower rate because there is so little work outside for them to do.

11161. Have you any reason to complain of the apprentices at any time; are they properly trained and looked after?—We have always worked in the direction of getting better training for the apprentices, and one of our very strong objections used to be the age at which they commenced to work. Although the law has not been altered, owing to the assistance which the Board of Trade gave to the matter I think the age has been considerably raised. We thought it was rather too dangerous work for young lads; it was better that they did not come to the river at all until they were 16, and practically that is now the rule.

11162. Things have been better since a few years ago when the subject came to the notice of the Board of Trade?—That is so.

11163. (*Mr. Peel.*) Is there no other society or union of these men besides your own; I mean of the 3,300 who are not in your society?—There are one or two small local societies, I think, but the recognised trade's union is that one, and that is the only one I know of.

11164. There is no other large body outside yours?—No other large organisation at all.

11165. You say that the feeling of the men is that the standard of competency should be raised?—Yes.

11166. Are they not satisfied with the standard which is admitted by the Court?—If there is to be any alteration in it they suggest that the examination should be more strict.

11167. Do they think it ought to be more practical than it is?—No, I think the men are generally satisfied that the examination gets the result that is wanted, but if they were asked to make a suggestion as to how it should be improved they would suggest that it should be more practical.

11168. What would your own view be?—The finest test that I know of is to ask a man to do the work, and to look at him.

11169. And you think that ought to be put more in force than it usually is at present?—I should suggest that.

11170. Can you give any idea of the number of these contract men?—You could get that exactly from the clerk of the company; I think it is 300.

11171. When these men enter into a contract they are often, I suppose, put in charge of a barge very soon after the contract begins to run?—Not sole charge.

11172. Most of them have had experience of the river before, have they not?—Yes, but not in sole charge of craft.

11173. But still they have had experience of the river which would make them very soon competent?—Yes.

11174. You have taken objection yourself at the Court to men being made members of the Company?—Yes.

11175. Was that on the ground of incompetence or on the ground of bad character?—On the ground of incompetence.

11176. Never on the ground of bad character?—I have never personally objected so far as character was concerned.

11177. These objections are made sometimes, are they not?—Yes, I believe the Court look after that kind of thing very well indeed.

11178. Men are sometimes refused on that ground?—Yes.

11179. I should like to have your opinion about the difficulty of navigation. Is it a question of getting through the bridges, or the congestion of the traffic. Which would you put as the higher?—You cannot take any part of the river and say that is where the trouble is. The trouble is all over the river. You want to know the river well from end to end to be thoroughly competent.

11180. Do you say the special difficulty is in getting through the bridges?—I do not say that is the special difficulty. It is a difficulty, but not greater than in many other places. The difficulty is not every day

the same, and that is the greatest difficulty of all. To-day you may find it all right in a certain place, and think you are going all right; to-morrow it may be very difficult there, and that is where the local knowledge is wanted so much.

11181. (*Mr. Ellis.*) Your Society is a registered society, I presume?—Yes.

11182. The rules which you have put in will show that?—Yes.

11183. And you make a return to the Registrar of Friendly Societies every year?—Yes.

11184. Are you familiar with the Report of the Select Committee of the House of Commons of 1890?—I know of the Report.

11185. I was going to ask you the same question that I put to another witness—whether you confirm their recommendation. It is this: "That any person should be eligible for a lighterman's licence if found on examination to possess the necessary qualification, it being no longer necessary that he should be an apprentice to a freeman, or to the widow of a freeman, or to a barge-owner employing a freeman, or a licensed lighterman." Have you any observation to make on that?—I suggest that if that were adopted you would at once lower the standard.

11186. You object to that?—I do object. I say the least time in which you can become competent is that suggested by the contract system.

11187. You do not concur in that?—I do not.

11188. I have here the copy of your rules. It is dated 1900. Is this the most recent?—We are just re-registering and submitting a new copy of rules, but there is nothing in the new copy, I think, that can affect anything which this Commission may want to know.

11189. What alterations you are proposing to make are outside the purview of this Commission?—Undoubtedly. They are with regard to subscriptions and that kind of thing.

11190. (*Sir John Wolfe-Barry.*) Is there any limitation by the rules of the Society as to the number of apprentices that a man may take?—No, there is no limitation as to the number he may take, but we require our members to give notice to the Society that they are going to take an apprentice.

11191. As a matter of fact in ordinary practice how many apprentices does a man have at one time?—That is rather hard to say. Mr. Fielder, who was giving evidence here just now, had three at one time that I know of.

11192. I see that Rule 7 is this: "Any member of this Society wishing to take an apprentice must make an application to his branch and with the consent of its members he may take one, but no member shall sign any apprentice's paper out of his lodge." Then I see: "No member shall take an apprentice for a less period than five years." Are those the rules?—Yes.

11193. Does that mean that no member may take more than one apprentice?—Yes, undoubtedly.

11194. And further that he cannot take that apprentice without the consent of the members?—That is so.

11195. As a matter of fact is the consent of the members always given to a man taking an apprentice when he wishes to take one?—I do not remember a case where it was refused.

11196. Therefore, we may take it that usually it is conceded?—Yes.

11197. I do not quite understand one portion of your evidence. You said this: "Apprenticeship is applicable to a man who begins this calling early in life, the contract men are those who desire to obtain a licence after they have passed the age of 20. At the present time a lad can be apprenticed at the age of 14 and after he has worked for 2 years if he understands his work and satisfies the Court of the Watermen's Company that he is competent, his master can obtain an apprentice's licence, which enables such apprentice to do such work as in the discretion of his master he is able to perform." Does he get a licence as apprentice at the age of 16?—His master gets a licence.

11198. But it applies to the lad?—Yes.

11199. Is he then entitled to navigate a barge by himself?—If he gets the licence he is. But the tendency now is that he is not apprenticed until he is

*Mr. H. Goshing.*

24 June 1901.

*Mr. H. Gosling.*

24 June 1901

16, and therefore he does not get a licence until he is 18.

11200. I know what you say about commencing at 16, but I am talking of the rules for a moment. By the rules if he gets an apprentice's licence he is then allowed to navigate a barge?—If he gets a licence.

11201. Am I right in saying that up to a certain tonnage he may navigate that barge by himself?—Yes.

11202. What is the tonnage?—50 tons.

11203. Up to 50 tons by the rules of the Watermen's Company, and your Society, a barge may be navigated by a lad of 16 in sole charge?—That is so, but of course there is always the reservation that it is subject to the discretion of his master, and I should not consider his master very discreet if he allowed him to do it.

11204. But subject to the discretion of his master he may be put in sole charge of a barge of 50 tons?—Yes.

11205. Above 50 tons he is not allowed to do it?—That is so.

11206. And you say that at present the tendency is to increase the age, and therefore he would not be put in sole charge until he was 18 years of age?—That is so.

11207. Or at some age between 16 and 18 years?—Yes.

11208. You said that there was want of employment now among the licensed men?—The trade is very bad.

11209. Is that due at all to the strike and to other men having come in and remaining in?—No. I think it is the season of the year when trade is bad.

11210. As a matter of fact have all the men who went on strike got back to their old places?—Practically the whole of them, licensed and unlicensed.

11211. Do you consider that a lad of 16 is competent to navigate a barge of 50 tons through the most crowded parts of the traffic of the River Thames?—I think there are very few of them who are, and very few of them who do. It is a thing you hardly ever see or hear of. There are just one or two pretty smart boys who have been with their fathers and apprenticed exactly when they were 14 years of age and got their licences when they were 16, but it is very rare indeed. It is hardly to be seen.

11212. Suppose we take 18 years of age. Is a man who has served two years' apprenticeship, having been apprenticed at 16 and then put in charge at the age of 18, competent to navigate a barge of 50 tons through the most crowded part of the Thames?—You cannot say until you have seen him do it. I should like to see him do it before I gave an opinion upon that.

11213. I am talking of the average man. I am not talking of a highly competent or an incompetent man, because the rule applies to everybody?—The rule does not apply until they have been licensed. Therefore the Watermen's Company have to be satisfied that they can do it before they give a licence.

11214. Subject to that, do you think a man of 18 is competent to navigate a barge of 50 tons through all the traffic of the Thames?—No, I do not think he is. What usually happens is that he does work through the easiest parts first.

11215. Would you forbid it?—I should. I should like to see stricter regulations. I have always been against the employment of persons so young in sole charge of a craft.

11216. What age would you like to see a man before he is put in charge of a barge?—20.

11217. Therefore you think the rules of the Watermen's Company are very lax?—I do not think the rules of the Watermen's Company are very lax, but I think there is improvement wanted, and that should be in making them stricter.

11218. How many licensed apprentices are there now qualified to do this work, assuming their master puts them to it?—I could not say. There are about 1,700 apprentices, but how many of those are qualified I could not say. The Watermen's Company could give you that.

11219. That would be on the records of the Watermen's Company?—Yes.

11220. Is it a large number?—I could not say at all.

11221. Is there much difficulty raised by the Watermen's Company in giving licences to those who have served two years?—Yes, they are rather difficult to get. We have gentlemen like Mr. Jacobs and

Mr. Deering, who know something about the work, and you have to satisfy men like them that you are competent before you get the licence.

11222. How do they satisfy them they are competent?—Generally by examination, and sometimes by sending their officers out to see what they do. But you must remember that the officers are always on the river, and the officers first of all report to the Court what they know, and the officers are men who have worked in the trade and understand it.

11223. First of all are they asked questions in the Hall of the Watermen's Company?—When I presented myself to the Court for my apprentice's licence—

11224. That is a long time ago. Give us something later?—It is very much the same thing now. One of the officers of the Court who knew me and had seen me afloat told the court that he considered I was competent to take a licence, and then one or two members of the Court asked me one or two questions they thought I should answer, and then they gave me my licence.

11225. Were those gentlemen who had seen you afloat bargeowners or men who constantly saw you?—He was an inspector of the company who knew me well.

11226. The company then is guided entirely on that particular point of practical knowledge by the report of the inspector?—Not entirely, but they take their evidence.

11227. How long does the examination take on practical matters?—It depends a good deal upon who you are and how you are shaping, I should say. Some of them they send back for six months.

11228. How long did it take in your case?—Not very long. I was pretty well known there and had worked with my father and grandfather.

11229. May I ask at what age you got your licence?—About 16½, I think.

11230. You do not think you were quite qualified to navigate a 50-ton barge?—I certainly was not, and was not allowed to do it. I was always under the control of my master.

11231. But if your master had chosen to put you in charge of the barge there was nothing else to stop him?—No law to stop him.

11232. The law was in your favour if you had the licence of the Watermen's Company?—Yes; but my master was my father, so there was no fear of him giving me anything to do that was not proper.

11233. He had a personal interest in your safety?—Yes.

*Cross-examined by Mr. Claude Baggallay.*

11234. The licence given to an apprentice to work after the two years is a licence to him, is it not. He may work if he chooses. For instance, supposing you had kicked over the traces and had never paid any attention to your father, and had chosen to work for anybody who had offered work, you would have been entitled to do it, would you not?—I must confess I did kick over the traces, and my father called me back.

11235. He had sufficient authority?—Yes.

11236. As a matter of fact, the licence is a licence to the apprentice, and not to the master who employs the apprentice?—No, the licence is to the master.

11237. Section 52 says this: "It shall be lawful for all apprentices bound to a party authorised by this Act to take apprentices to have or take the sole charge of any boat, barge, or other vessel provided such apprentices shall have worked and rowed upon the said river as apprentices for the space of two years at the least, and upon their being found qualified to act upon examination by the said court, and upon obtaining a licence of the said court." That is a licence to the apprentice?—Yes, but you must read more. You want to read the licence itself.

11238. Do you mean to say that the Watermen's Company grant a licence which is not in accordance with the Act?—You told me once before that I am not to discuss law with you; I hope you will not put that to me.

11239. You do not know about that?—I do not know anything about law at all.

11240. Let us come to the practical working of the thing. At 16 you say he can get his licence. Now, supposing he was apprenticed to a widow, he would be

entitled to go to work because he could not be working with the widow on the barges?—Those who are apprenticed to widows (which are very rare cases) are generally cases where the husband has lost his life in the employ of a firm and the firm take the apprentice and take charge of him.

11241. That may be so, but as a matter of fact the apprentice, after he had reached the age of 16 could get a license, and would be able to work independently if he wished to do so?—No, he is never able to work independently.

11242. Is that limited by the terms of his apprenticeship, it might be that?—He is always subject to the control of his master or mistress.

11243. If your father had chosen to put you on board a lighter, he could have put you on board a lighter which had not got a licensed man on board, even though the man already on board was a competent man, and you could have ousted him. He might have been a man competent, we will say, to navigate a western barge, or a Lee barge, or a Medway barge. Your father could have put you at the age of 16½ on board, and ousted that man from the control of the vessel, could he not?—I do not know whether he could. He would not have done so. I never heard of that kind of thing being done.

11244. With regard to this question of the sufficiency of the examination, you gave evidence in 1899 in support of the Bill of that year, which was promoted by your society?—Yes.

11245. Was that a Bill for altering the constitution of the Watermen's Company by putting on eventually a majority of representatives directly elected by the licensed men?—Yes.

(*Mr. Ellis.*) Was that Bill read a second time?

(*Mr. Claude Baggallay.*) Yes, and it went to Committee in the House of Lords and was rejected. A somewhat similar Bill, which Mr. Wootton Isaacson had charge of, was brought in in 1892. That was rejected in the House of Commons.

11246. You made certain allegations against the Watermen's Company on that occasion, in order to justify your proposals to alter the constitution?—Yes.

11247. One of them, if I recollect aright, was that the examination was not an effective examination. You wanted the examination of the man to be licensed to be made more stringent?—We have always wanted the examination to be stringent.

11248. Then I am right; that was so?—I do not quite like the way you put it. What we really wanted was to keep up the standard of efficiency to the very highest point.

11249. You considered that the Watermen's Company as then constituted was not doing its duty from your point of view with regard to the examination for licensed men?—I do not like your saying, "Not doing its duty." I say we want the standard of efficiency to be as high as we can get it, and we thought if we had representation upon the Court that would ensure it.

11250. They were not obtaining by the means which they adopted, at all events, that high standard of efficiency which you thought was desirable?—They were not obtaining a standard so high as we should like to get.

11251. I will take it in that way; it is a paraphrase. That was one of the grounds upon which you proposed to alter the constitution?—Yes.

11252. Another ground, I think, was that you thought that the Watermen's Company ought not only to undertake the examination, but that they should undertake the education of the licensed men also?—The technical education—yes.

11253. You thought the Watermen's Company even ought to educate these men before they licensed them. I mean technically educate them with regard to working their barges and so on; I do not mean ordinary school education?—I think so now.

11254. That it ought to be a training school for licensed men as well as an examination board?—I think so still.

11255. And that you put forward because you were not satisfied with the present system of examination and licensing as regards turning out men?—The tendency all over the country is to technically educate

workmen, and we wanted the Watermen's Court to undertake that.

11256. There were other minor matters?—There was another very important matter.

11257. I am not going to forget it; there was another very important matter, which was this: that you proposed by that bill to raise the age at which men should be given licences?—Yes.

11258. By two years?—Yes.

11259. There was a smaller matter, which was that you wanted them all to be required to learn swimming, I think?—Yes.

11260. As regards the lightermen these were the three important matters: raising the age by two years; making the company act as a school and technical education department in the working of the craft; and making the examination more effective so as to get higher efficiency?—Yes, and better provision of gear.

11261. That was with regard to the craft themselves?—Yes.

11262. You wanted cooking stoves, did you not, in the barges?—No, we wanted sanitary inspection in the cabins.

11263. With regard to the number of men you say are out of employment at the present time (I think you said about 700), did you include among those licensed men, men who are no longer working upon the river as licensed men, or wanting the work?—No, I am leaving those alone altogether. I do not know how many of those there may be.

11264. There are a very large number of men who are licensed to work who have long since retired from the active work of licensed men, and are now barge owners or wharfingers or have got other occupations altogether, are there not?—I should not think there is a large number.

11265. All the members of the Court must have been licensed men?—Yes.

11266. You must be a licensed man before you can be a freeman, must you not?—No, you may be a freeman, and never get a licence.

11267. As a matter of fact, most members of the Court have been licensed men, have they not?—Yes, I should say they have. I cannot speak with any authority.

11268. You never work yourself now, I take it?—No.

11269. Yours is an official position with the Society?—That is so.

11270. Now I will ask you just one question with regard to Hull. In the barges which you have mentioned you were not including the keels, were you?—No, I was comparing the number of lighters there that are doing the same work that the 10,000 are doing here.

11271. There are a very large number of keels there, are there not?—There are a great number.

11272. Are not the keels, as a matter of fact, the equivalent on the Humber of the London barges?—The London sailing barges.

11273. Sailing barges and dumb barges too?—No.

11274. They do very much the work that is done by the sailing barges and the dumb barges?—No, not at all.

11275. You do not agree?—No.

11276. When did you first visit the Humber?—I have been there on and off for about four years.

11277. There are also a considerable number of barges and keels which go to Hull, are there not, from the inland navigations?—Yes, in the same way that it is so here—canal traffic.

11278. Over and above those which are merely at the port of Hull itself?—Yes. There are two classes of craft. There are those which can be compared to the dumb barges here, and there are those which can be compared to the canal traffic and the coasting work here.

11279. Last year when the strike took place is it not a fact that in many cases the barges were left out in the river unattended?—No, that is not true.

11280. You state that that is not true?—Yes.

11281. Were you on the river at that time?—I know what was going on; I was about the river side.

11282. What do you mean by them not being left

*Mr. H.  
Gosling.*  
24 June 1901.

Mr. H.  
Geeling.

24 June 1901.

Do you mean that they were moored, or what?—No man left his employment in any one case that I know of while that strike was on who was not properly entitled to leave his employment; whose contract had not expired—and the weekly men gave a weekly notice in every case that I know of.

11283. Take the case of Messrs. H. Gray, Junior's, barges. Are you not aware that the men were withdrawn without notice or warning, and that the barges laden with coffee and ivory and other valuable things were left unprotected in open river?—I say that is not true. No man came away from his work without notice.

11284. What length of notice?—Whatever notice he was entitled to give. If the men had a job on hand they completed it. No man who was not entitled to be done, and whom the firm were not entitled to discharge, refused orders.

11285. You say you do not know any such case as that?—No, I do not.

11286. With regard to the Union Lighterage Company, do you know whether any of their barges were left in the same way with commodities on board?—Only in the same way that they are left every night.

11287. And the men never came back, but left the barges with the commodities on board?—They do not go back now very often. The craft are left unattended very often.

11288. I put it to you that the barges of which I am speaking were left in the middle of a job in the open river?—I say no.

11289. You do not know of it?—I say if it had occurred I should have known of it.

11290. You said in your evidence that "at the present time a lighterman devotes the whole of his time to his trade; the result being that he works day and night, winter and summer, and obtains an experience that cannot be acquired in any other way." Do not the men who come up from Rochester and the Medway do exactly the same?—I should say the tendency is greater on the Thames than anywhere else that I know for men to follow up their work, and not seek other employments, because they know the work is there for them to do.

11291. I ask you whether as a matter of fact the men employed in navigating the Rochester barges and the Medway barges do not work continuously, devoting the whole of their time to the business of working, winter and summer, and night and day?—I cannot say beyond the answer I have given you.

11292. You do not know; is that it?—I do not know.

11293. And you do not know about the Lee or the Western barges in the same way?—I know of them. I do not know of their habits.

11294. And you cannot answer my question with regard to that?—No.

11295. Then you said that the Court of the Watermen's Company have a better knowledge of the navigation of the Thames and its requirements than any other body. Are the members of the Watermen's Company all experienced men, or if not, what number of them are experienced men with regard to the navigation of the river?—I should not like to say what proportion. I do not know.

11296. In fact, I think your allegation when you have been promoting your Bills was that they are not competent?—I have never said so.

11297. Is that not the reason why you want to put the licensed men on?—No, that was not the reason.

*Cross-examined by Mr. Cranstoun.*

11298. In answer to Sir John Wolfe-Barry you stated that an apprentice with a two years' license is not entitled to have sole charge of a barge over 50 tons?—Yes.

11299. But if he has with him on board an apprentice who has been bound for one day only, he is entitled, subject to that, to have sole charge of the barge?—I dare say legally he has, but I never heard of such a case.

11300. He is entitled to that under your own by-laws?—I never knew of such a case.

11301. But still the employer exercises his own judgment in these matters?—That is the greatest extreme. Nothing could happen worse than that.

11302. You have spoken to-day about the apprentices and the masters. In these matters the master and the employer are two different persons, are they not, as a rule?—Yes, as a rule. The owner does not trouble himself to take an apprentice.

11303. An apprentice may be an apprentice to a master who loses sight of him the following day?—That is possible.

11304. Is it not the rule that the apprentice does go and work for an employer who is not his master?—Yes, that is the rule.

11305. A company such as the Union Lighterage Company, or the Tilbury Lighterage Company may have 20 apprentices at one time who are not apprenticed to them as masters at all?—That is so.

11306. So that as long as a youth of 14 is an apprentice, he can go and work for any person that he chooses?—No.

11307. His master, it is true, has a legal control over him, but in practice does not the apprentice go and work for anyone who chooses to employ him?—No, I should say not; he is subject to his master's control.

11308. He is in law subject to his master's control, but in ninety-nine cases out of one hundred he is not. Does not an apprentice as soon as he is bound go and work for anyone who chooses to employ him?—I am not prepared to say so.

11309. Have you heard it stated to-day that the master lightermen were very often short-handed?—I have not heard it stated to-day.

11310. Have you not heard Mr. Fielder state to-day that they could not get men?—No. I understood Mr. Fielder to say that only twice in his life did he experience a difficulty, and once when he was an apprentice.

(Chairman.) I think he said the supply was "some- See 1082 what limited."

11311. (Mr. Cranstoun.) Do you agree that the supply was somewhat limited?—No; and the reason why I do not agree is that there are hardly any cases where the employers take apprentices. If there were a difficulty in getting men the masters could at once take apprentices, and so control the whole thing.

11312. I have now left the question of apprentices, and I am on the question of lightermen employed on the river. Is it not the fact that the supply of licensed watermen is somewhat limited?—No, I say that is not so.

11313. Do you say there are always enough to be had?—More than enough.

11314. You have stated that 700 licensed men are unemployed at the present time?—Quite that number.

11315. And 150 men are acting as watchmen?—Yes.

11316. Does a watchman get smaller wages than a licensed waterman would, as a rule, get?—Yes.

11317. Can you suggest any reason why they should work as watchmen instead of licensed watermen?—There is not enough work as licensed watermen.

11318. Then you do not agree with the statement that the supply is limited?—I am sure there are more men than are wanted.

11319. Is it not the fact that a lot of these men are not competent, and is not that the reason why they are not employed?—The licensed men, do you mean?

11320. Yes?—I cannot see how that can be because the master could report that to the Watermen's Company, and have them dealt with if they are not competent.

11321. But these 700 men are not employed for some reason or another. Is it not on the ground that they are not competent?—No. I know a good many firms who employ them when they have work for them to do. The trade is slack. That is the reason.

11322. You do not think the Watermen's licence is a guarantee of ability, do you?—Yes, I do.

11323. I thought you said that after two years when he had his licence you tested the man yourself?—I never said so.

11324. You said so to-day?—I should like you to refer me to that.

11325. I am in the hearing of the Commission. I understood you to say that when you had an apprentice you tested his ability yourself?—I never had an apprentice.

11326. An apprentice with a two years' licence?—I have never had any reason to test the ability of an apprentice. I have never had anything to do with the employment of any men at all.

11327. I thought you said so this morning.

(*Mr. Horace Avory.*) I think you are thinking of the last witness.

11328. (*Mr. Cranstoun.*) I think it was this witness who said that before he trusted an apprentice with a barge on the river he would test him himself. You do not agree with that, do you?—No.

*Cross-examined by Mr. Harper.*

11329. You spoke about a lighterman leaving a barge with a valuable cargo in the river during the night. Is that a common practice?—The employer leaves his craft where he thinks he should leave them I suppose. I am not suggesting that anything is done which he thinks ought not to be done.

11330. Take for instance, a cargo like that suggested to you just now of coffee, ivory, and that sort of thing. Do you mean to say a barge with a cargo like that is left without protection at night?—It often is.

11331. As a matter of fact, is it so?—Yes.

*Re-examined by Mr. Horace Avory.*

11332. Is that the lighterman's fault or the employer's?—The employer's.

11333. If the employer chose to pay for a watchman I suppose he would have one?—If the employer told the man to be there and paid him, he would be there.

Mr. EDWARD MILLS called and examined.

11342. (*Chairman.*) You appear before us to give evidence with reference to the licensing system of the Watermen's Company?—Yes.

11343. You represent the pilots of the home trade passenger ships?—Yes.

11344. Will you kindly tell me what are the home trade passenger ships to which you refer?—They are ships carrying passengers anywhere in the home ports.

11345. (*Sir Robert Giffen.*) That includes some continental ports, does it not?—Yes.

11346. (*Chairman.*) Will you kindly proceed with your evidence?—I was apprenticed to my father, who was a waterman, and for many years master of steam-boats. He commanded the "Albert Edward," one of the earliest Gravesend and Sheerness boats, for some years, and subsequently the "Queen of the Thames," the Ipswich boat. I was 15 years of age when I was apprenticed, although I had practically been on the river since I was seven years of age, and I have been employed on passenger steamers as boy before the mast, second mate, mate and master. I commanded the "Alexandra," the "Glen Rosa," and "Queen of the Thames," and I was specially selected to take charge of the "Duke of Edinburgh" when the Shah came to this country in 1899.

11347. Did you prepare your statement of evidence yourself?—Partly.

11348. Who helped you to do it?—The greater portion of it is taken from the evidence that I gave before the Committee on the Bill of 1890.

11349. Did you draft it with the help of the Watermen's Company?—It was taken before a solicitor who helped me partly. I gave evidence of what was done, and it was written down.

11350. Will you kindly go on?—I say that I prefer to have to do with the skilled lightermen of the present day rather than with the masters of sailing barges that come up the river. Masters of sailing barges often lose their heads when they get into the Lower and Upper Pool, where navigation is crowded, and then they down anchor or get into their boats to save themselves, not caring what becomes of their own barge or of other vessels navigating, and who may have shaped their courses for the purpose of passing them in a proper manner had they continued under way or kept their course. Many of them I know use hovellers who are

11334. Did the Committee of the House of Lords before which you gave evidence in 1899 hear very fully all the evidence in support of that Bill?—Yes.

11335. Did they hear evidence on behalf of the Watermen's Company against it?—Yes, and they dismissed it very shortly.

11336. They threw out the Bill?—Yes.

11337. They heard only one witness for the Watermen's Company?—Yes.

(*Mr. Ellis.*) We cannot review the conduct of a Committee of the House of Lords here.

(*Mr. Horace Avory.*) I was only wanting to get the facts.

(*Mr. Ellis.*) We must presume that the Committee heard the evidence.

(*Mr. Horace Avory.*) I should not have asked the question, but the witness has been cross-examined as to the evidence he gave before that Committee.

11338. You have been asked about the apprentice's licence or certificate. Just see if that is the form of it. (*Handing form to the Witness.*)—This is an application form for the licence.

11339. An application form for an apprentice's licence?—Yes.

11340. Do you see that under that he is to be subject to his master's control and direction?—Yes, "subject at all times to his control and direction."

11341. You have been asked about a widow taking an apprentice. Do you know that by the Thames Conservancy Act, 1894, every widow taking an apprentice is bound to employ some person who is a licensed waterman to instruct the apprentice in the business?—Yes.

licensed lightermen, and then their navigation is not so erratic. According to my experience, I think that the lightermen of the present day would bear favourable comparison with any other tradesmen. Of course, I do not say there are not obstinate lightermen, as there are in every other class of life, but as a rule they are intelligent and quick, and ready to assist me when they see me coming up or going down the river with a freight of passengers, and do their best to keep out of my way. If the condition of things were altered, and these dumb barges were in charge of any one whom the master lightermen might like to select, and supposing there was a press of business and the master lighterman or his foreman had to look for labour where he could get it, I think it would be very dangerous for both parties, and I certainly should not like to be in command of a passenger steamer on the Thames, with the lives of many hundreds of people in my hands, if the river were thrown open so that any unskilled person might be put in charge of a barge. For the past 12 years I have been in command of vessels belonging to the Belle Line, and I commanded the "Clacton Belle," "London Belle," and "Woolwich Belle." They traded between London, Clacton, and Harwich. I may state I was very successful the whole time, never having had any collision with any vessel or craft all that time, and I may say I have been seconded in my efforts to work the boats successfully by the mates who have been with me, and who have been mainly licensed watermen of the River Thames. I may state the Belle boats all come to Fresh Wharf, which is the first wharf below London Bridge, so that my experience extends right the way up as far as steamers of their tonnage and size can navigate. When I got back to Fresh Wharf it was as a rule late at night and perfectly dark, and I have always found licensed lightermen willing to assist me, more especially in getting their craft out of the way to allow me to go alongside the pier. I may, for the information of the Commission, give the lengths, sizes, tonnages, etc., of these three vessels respectively:—"Clacton Belle."—246ft. long, 26·5ft. broad without her paddles, 56·5ft. over all, 9·5ft. deep, 182 tons net, 468 tons gross tonnage, 183 horse-power engines, paddles. "London Belle."—280·3ft. long, 30·1ft. broad without paddles, 64ft. over all, 10·9ft. deep, 284 tons net, 738 tons gross tonnage, 364 horse-power engines, paddles. "Woolwich Belle."—200ft. long, 24·1ft. broad without paddles, 52ft. over all, 7·6ft. deep, 109 tons net, 298 tons gross tonnage, 117 horse-power engines, paddles. I may

Mr. H. Gosling.  
24 June 1901.

Mr. E. Mills.

*Mr. E. Mills.* mention that the river yearly gets more congested. During the last 10 years the size of barges has materially increased, and whereas at the time of passing the Watermen's Act in 1859 there was no legislation for barges of over 50 tons burthen, I should say, speaking from my own knowledge, now at least one-fourth of the barges on the Thames are of 100 tons burthen and over, so that it will be seen that whilst vessels are daily getting longer, and by regulation a passenger steamer so long as she does not exceed 300ft. may come up to Fresh Wharf, and the barges being so much larger and bigger and the river itself not being able to be increased in width, navigation naturally becomes more difficult. I have now given up the command of passenger steamers on the Thames, having obtained my pilot's licence in the autumn of last year. I have not at present been able to obtain a regular line with which to work, but I am second pilot for the German Hamburg boats. I may state in conclusion that the pilots have held a meeting, and Mr. Walter Hayward, an exempt pilot, and I were deputed to put the views of the pilots before this Commission.

11361. (*Sir John Wolfe-Barry.*) Are you a freeman of the Watermen's Company?—Yes.

11362. Did you often get into accidents with sailing barges when you were in command of ships?—No, I have been pretty lucky in that respect.

11363. Then granting the luck, do I gather that the difficulty has not been great with regard to sailing barges?—Yes. I have been in paddle steamers a great deal, and when I got amongst the sailing barges like that I generally washed them away clear.

11364. Do you consider that when a 50-ton barge is in the sole charge of a lad of 18 it is under skilled command?—Well, I cannot say that I have seen a 100-ton barge in the sole charge of a young lad.

11365. I said a 50-ton barge?—I consider that there are plenty of young lads on the river at 16 who are capable of navigating barges—lads who have been brought up along the water side.

11366. I suppose a 50-ton barge could do a good deal of harm to the "Olacton Belle"?—Yes, it could do so.

11367. Are you in favour of more towing going on on the Thames?—There is a good deal at present.

11368. I say, are you in favour of more towing going on?—There is no doubt that the towing helps to keep the river much clearer.

11369. The barges that are being navigated under oars can only be moved very slowly to get out of the way of a steamer, can they?—A lighterman can easily move his barge.

11360. But he can only move slowly, can he?—He can only move slowly through the water, but a lighterman will throw his oar over the barge's head and turn her round.

11361. But they are not so much under control as if they were being towed, are they?—Yes, I should think so.

11362. Then towing, you think, is not necessary or desirable?—It is done for quick despatch.

11363. Not for navigating?—No; quick despatch in getting goods to and fro.

11364. You do not care about it for the purpose of navigation?—A barge that is being towed, of course, is out of the way much quicker.

11365. But is it on the score of better navigation that you would be in favour of more towing being done?—No; I do not think there is quite enough towing going

on amongst the larger barges. The tugs are merely used for towing barges for long distances.

11366. You are giving your evidence as commander of passenger steamers, and I want to know whether you think the river would be better or more easily navigated if there were more towing and less navigation of barges?—Yes; the craft would be out of the way much quicker.

11367. Therefore the navigation would be better and easier?—Yes.

11368. You say the river is getting more congested?—Yes.

11369. And the barges are getting larger?—Yes.

11370. If the barges get larger, I suppose towing is more desirable than with smaller barges?—Yes, it is more desirable with the larger barges.

11371. (*Mr. Ellis.*) When did you give up your command of passenger steamers?—Last autumn.

11372. When you became a pilot?—Yes.

11373. You are not connected with any regular line, I gather?—No.

11374. Will you tell me exactly what "second pilot for the German Hamburg boats" means?—If there were two steamers of the line coming in on the same tide I should have the second one.

11375. Does that often happen?—Yes.

11376. Have you piloted in the Thames during the past six months?—Yes.

11377. How many times?—I could not say exactly, but I have had a good number of them.

11378. You have had practical experience as a pilot since you gave up command of the passenger steamers?—Yes.

11379. (*Mr. Ped.*) I suppose when you see a barge in the sole charge of a lad of 16 or 17 years of age you give it a wide berth, do you not?—I endeavour to give all barges a wide berth.

11380. (*Rear-Admiral Hext.*) Have you any experience in any other river than the Thames with barge traffic?—No, not of any importance.

11381. (*Mr. Horace Ivory.*) Have you to do your work at night?—Yes.

11382. As a pilot?—Yes.

11383. Are there a good many barges about then?—Yes.

11384. (*Mr. Harper.*) What dock do you take the German Hamburg boats to?—If there are two steamers coming, one from the dock and one from the tier opposite St. Katharine's Dock, I have the one from the tier.

(*Adjourned for a short time.*)

(*Mr. F. P. M. Schiller.*) Will your Lordship allow me to make an application: You will remember there was a Mr. Andrews whom you intimated it would not be necessary to call. Your Lordship intimated that it would not be necessary to go on with the evidence in support of the Bill, but in view of the evidence that has been called as to how these Rochester barges and Western barges are worked up the river, I ought to say that I have Mr. Andrews here to give rebutting evidence if you think it necessary to call him.

(*Chairman.*) I think you will agree that it was with the consent of Mr. Baggallay that we came to the conclusion that it was not necessary to call Mr. Andrews.

Mr. ADOLPHUS LEWIS SANDFORD called and examined.

*Mr. A. L. Sandford.* 11385. (*Chairman.*) You represent the pilots for compulsory ships?—Yes.

11386. Will you tell us what you mean by "compulsory ships"?—I am a pilot for any vessel from a foreign port.

11387. Will you be good enough to tell us what you have to say?—I have been a pilot going on for 12 years, and I am choice pilot for Macandrew's Line of Spanish steamers, and that is the only work that I do. I pilot 16 vessels either up or down a month. I have been the pilot for this line for the past seven years. These steamers go right up to Fresh Wharf, which, as the

Commission may know, is the first wharf below London Bridge on the north side of the river. These vessels carry on an average about 2,000 tons, the older ones a little less and the newer ones a little more. The last new one, the "Pelaya," will carry over 2,500 tons. The draught of water of this vessel when fully loaded is 22 feet. I have not looked at her register, but she is certainly quite 300 feet long. She is very wide and works with a single propeller, and is, for her size and build, fairly handy. I may say that I am not a freeman of the Watermen's Company, although I have served an apprenticeship of seven years to a freeman of the Company. I have been selected by the river pilots

See 1050  
11446  
11548

to represent them, because my business takes me to the utmost limit up the river to which vessels with river pilots in charge can be navigated. I gained my experience before becoming a pilot in Gravesend tugs, but I was never master of a tug, but before I could obtain my licence I had to go to sea for upwards of three years in a square-rigged vessel. So far as experience teaches me and the body of pilots whom I represent, I should be very sorry to see the river thrown open for anyone to be allowed to navigate a barge under oars on the Thames. The sets of the tides want a lot of knowing, and if an incompetent man were put in charge of a barge I tremble when I think of the mischief he might cause, not only to his craft and himself, but in hampering navigation for larger vessels passing up and down the river. I may say that I invariably receive assistance from lightermen under oars when I request them to belay their heads in any particular manner, and so far as my experience teaches me I believe them to be at heart a very decent body of men. With respect to the evidence given by Mr. Jacobs, the manager to the Thames Steam Tug and Lighterage Company, Limited, and Mr. Lambert, the manager to the Union Lighterage Company, Limited, to which my attention has been drawn, I do not agree with them that the sailing barges navigating up the river are in the hands of the master and mate who bring them from sea. As a matter of fact, to my knowledge when they get in the upper parts of the river they usually employ hovellers, who come on board between Woolwich and Globe Pier, Rotherhithe, and these hovellers are watermen or lightermen who have served their time on the river, and who pick up a good living by piloting these sailing barges in the upper reaches. The ballast barges which are loaded in the Thames above Gravesend invariably have a free-man in charge, so that the contention of the two gentlemen I have named comes to nothing, because when the navigation gets difficult the master of the barge employs skilled labour to conduct him through the intricate parts of the river. As a matter of practice I always know whether a sailing barge has a licensed man on board or not, for I find that when a man in charge of a sailing barge is not licensed and has not practical knowledge of the river, if he gets in any difficulty he downs anchor, without thinking of the consequences to vessels passing up or down, which is a great source of danger in this river. I may say it is now more important to have licensed men than ever, because ships are continually increasing in size; barges are likewise increasing in size, and so are the tugs that tow them, whilst the river is not capable of the same extension, and it must necessarily stand to reason if the water space is only the same and the vessels which are moving on it are considerably enlarged, it leaves less area for navigation. So far as towing on the Thames is concerned, not only are all the masters of the tugs towing lighters above Gravesend men holding licences from the Watermen's Company, but I should say nineteen-twentieths of the masters of the Gravesend tugs that go down below hold certificates from the Watermen's Company. If, then, owners of tugs find by experience it is necessary to employ licensed men when they have the advantages of steam and can move as they like, how much more necessary is it that licensed men should be employed in barges that can only be moved by those in charge of them availing themselves of the sets of the tide and trading with the wind as far as possible in the different reaches of the Thames.

11388. (*Sir Robert Giffen.*) I suppose these difficulties of navigation, where you think it is so important that the barges should be under the care of licensed men, exist say between Albert Dock and London Bridge?—Yes.

11389. That does not apply to the whole river from Gravesend up, does it?—Yes, it does.

11390. But your experience applies to that particular part above the Albert Dock?—Yes, it is more difficult above the Albert Dock.

11391. Below Albert Dock most of the lighters are being towed, I suppose?—Yes, and the river is considerably wider.

11392. So that this difficulty that you speak of applies to that particular part of the river, and you think it important that there the lighters should be under the care of licensed men?—Yes, certainly.

11393. I suppose what you really desire is that the lighters should be under the care of competent men?—I would rather prefer them to be under proper licensed men.

11394. Would the licences of the Trinity House or the Thames Conservancy, supposing they were to do the business, be satisfactory to you, or that of a dock authority?—As long as the men hold a proper licence that is all that the pilots require.

11395. You are not attached in particular to the licence of the Watermen's Company?—No, I do not think so, as a pilot. I think as long as the men are properly licensed and have served their apprenticeship in a proper manner, that is what is required.

11396. That is all that you would require?—I should say so.

11397. These barges, I suppose, that come from Gravesend and go up the river, are without any such licence; is that so?—The barges that come from Gravesend up the River Thames, do you mean?

11398. Yes, that come from the Medway?—Sailing barges you are speaking of. A sailing barge is such a different thing from a lighter, but when she comes in the narrow waters of the River Thames, she is purely and simply a lighter, because they lower the mast down and take the assistance of a proper licensed waterman. They have no occasion to employ them unless they like, but they do. They call them hovellers. They take the assistance of these men and lower the masts down, and she becomes just the same as a lighter.

11399. But if these barges voluntarily get the assistance of competent men, why might not the owners of the barges themselves always have the assistance of these competent men?—I do not think they would do so.

11400. It is a pure matter of choice on the part of these barges, and, if they get competent men, why is it impossible for the owners of barges themselves to get competent men?—I think it will be a question of money. They would not get the competent men. If you could compel them to obtain competent men it would be all right.

11401. They have the same motive to obtain competent men, have they not?—Yes.

11402. (*Rear-Admiral Hext.*) Have you ever had any experience of any other port than London where lighters are employed?—No.

11403. You said you have been three years at sea in a square-rigged vessel. You have never visited Calcutta, for instance, have you?—No.

11404. Then again you said: "When they get in the upper parts of the river they usually employ hovellers." Are all those hovellers licensed men?—See 11387. Yes. That is a special living.

11405. Supposing, for instance, a man has been brought up in ships and vessels, how long would you give that man to acquire the necessary knowledge of the set of tides and the actual handling of a barge on the Thames?—I have been a pilot 12 years and I must admit that it would be impossible for me to navigate a lighter on the Thames. I do not think I could do it. It is the work of a lifetime.

11406. Then how can you account for youngsters being put in charge of barges even at the age of 20. How can they have acquired the experience of a lifetime?—They are practically born on a barge. They come on these barges along with their parents when they are 6 or 7 years old.

11407. Some do, of course?—Generally in the case of a London bargeman, he becomes a naturalised bargeman. It is a profession in itself, and it must be properly and thoroughly learnt. It is not the question of the material damage they may do to other ships.

11408. With reference to barges under oars and barges that are being towed, which are the most dangerous to navigation?—I should say that a vessel towing was the most dangerous to navigation.

11409. Do you say that barges in tow are more dangerous to navigation than barges under oars?—Yes.

11410. Do you mean to tell me, as a practical seaman, that you consider a barge in tow against the tide is more dangerous to navigation than a barge drifting with one or two men in it and controlled by oars?—Yes.

Mr. A. L. Sandford.  
24 June 1901.

Mr. A. L.  
Sandford.  
24 June 1901

11411. (*Mr. Peel.*) You said you were an apprentice for 7 years to a freeman of the company?—Yes.

11412. Did you get your apprentice's licence?—No.

11413. And you did not apply for your freedom?—I did not get my freedom. I got my papers.

11414. You told us just now that you could not navigate a barge up the river?—I do not believe I could.

11415. You are entitled to do so, of course, having an apprentice's licence?—I do not think I should be allowed to do it as an apprentice. I should as a freeman, but I did not take my freedom up.

11416. You said that, after 7 years serving as an apprentice, you were not then competent to manage a barge?—No, because I was an apprentice and would not stop at it any longer. I went to sea instead. My master died, and I would not have anything more to do with it.

11417. What is the difference between a hoveller and a lighterman?—I do not see any difference.

11418. They are the same thing, are they?—They are actually lightermen. They are lightermen who cannot get a living in a lighter because there are rather too many of them, and so they have a little boat, and board the barges and get a living in that way.

11419. What is a hoveller?—There are sailing barges come out of the Medway: they come up the River Thames as far as they think they are capable of navigating a barge. They have unskilled labour and then they wait for these men. If they do not find the men there, they put the anchor down until such time as the men come.

11420. Is a man who assists in navigating a sailing barge a hoveller?—Yes.

(*Mr. Horace Ivory.*) I am told that "hoveller" is a corruption of "hoverer." They hover about for a job.

11421. (*Mr. Peel.*) You say that the masters of the tugs towing lighters are nearly all members of the Lightermen's Company?—Yes.

11422. Do you know that of your own knowledge?—I know it from common conversation that I have had with captains of tugs. I do not know any that are not licensed by the Watermen's Company. The tug owners will not employ them unless they hold a lighterman's licence. I know that. It is a rule laid down between the owner of the tug and the master of the tug that they insist upon that man having a waterman's licence.

11423. (*Sir John Wolfe-Barry.*) With regard to the hovellers that come on board the sailing barges, do you say that they do the piloting?—Yes.

11424. They are at the rudder?—Yes. They take the full charge of the barge.

11425. Do they order the master what he is to do?—Certainly.

11426. Is it a fact that the sailing barges are different from the dumb barges, because the use of the sweeps must be always at the bow?—Yes, the sailing barge's sweep is always on the bow.

11427. Therefore everything has to be done by steering with the rudder to direct the course of the barge. You cannot use the oars astern?—No.

11428. Therefore they are different in that respect from the dumb barges?—Yes.

11429. And, to that extent, they must have an extra man. If they are going to navigate a sailing barge with oars they must have an extra man, must they not?—No, it is not necessary. They can manage it without.

11430. With two men?—Yes.

11431. How could they use two sweeps?—He would use only one.

11432. You say you can navigate a sailing barge with only one man in the bow and one steering astern?—Yes.

11433-4. Is it ever done?—Yes. Not very often, but it is done, because they make provision and employ these hovellers in the narrow part of the Thames.

11435. Supposing the master of a sailing barge wants to take anybody who comes along as a hoveller, is he allowed to take an unlicensed man?—I do not know how far that applies to a sailing barge. I do not know whether he is compelled to employ this man or not above the bridges.

11436. If the master brought a third man all the way, say, from the Medway, he would not necessarily have to take a licensed man on board at all, would he?—I do not think so, but he would do so.

11437. He would take a third man, would he?—He would take a fourth man if he wanted one. It is quite the custom.

11438. If he took the fourth man would he have to be a licensed man?—I do not say he would have to be a licensed man, but for the sake of his own barge, the bargeowner would take one.

11439. But if he came all the way up from the Medway the man need not be licensed?—No, I do not think it is necessary.

11440. (*Chairman.*) You told my colleague, Sir John Hext, just now that you consider a barge in tow against the tide is more dangerous to navigation than a dumb barge?—Yes.

11441. Will you tell me why?—Because she is going faster. The barge is driving and the other is towing. You approach the barge that is driving slowly, and you would pass the tug quickly. She would approach you quickly. You might slightly damage the barge that is driving. I am only looking at the small damage.

11442. (*Rear-Admiral Hext.*) I should like to put one more question to clear up that answer of yours. Suppose for instance that there were no barges towed, would the navigation of the Thames be easier or more difficult?—More difficult.

*Cross-examined by Mr. Cranstoun.*

11443. With regard to these hovellers, do you know the firm of Messrs. Smeed, Dean, and Co.?—No.

11444. Have you never heard of them?—No.

11445. Have you heard of the firm of Messrs. Eastwood and Co., Limited, owners of a large fleet of sailing barges?—I daresay I have. I have had a lot of experience as far as sailing barges are concerned.

11446. Will you undertake to say that these two firms ever employ hovellers at all?—I would say they did if they went through the Tower Bridge.

(*Mr. Cranstoun.*) My Lord, I may mention that evidence was tendered a day or two since and refused by the Commission on these very points.

(*Chairman.*) No; I think you are quite mistaken. We came to the conclusion, in full agreement with Mr. Baggallay, that it was not necessary to call those witnesses.

(*Mr. Schiller.*) I tendered Mr. Andrews again to-day.

(*Mr. Cranstoun.*) On this very point.

(*Chairman.*) It is not in evidence.

*Cross-examined by Mr. Harper.*

11447. It is a fact, is it not, that there is a good deal of litigation arising out of barge traffic?—Yes.

11448. I daresay you have been to the City of London Court?—No, I have not.

11449. As a matter of fact, there is enough litigation out of barge traffic to keep that court going one day a week, is there not?—I do not think so, I do not think pilots are so reckless as that.

11450. There is a good deal of trouble, is there not?—There is a good deal of trouble with sailing barges, I must admit.

*Cross-examined by Mr. F. M. P. Schiller.*

11451. How long did you serve your apprenticeship?—Two years.

11452. Not longer?—No.

11453. Then you went away to sea?—Yes.

11454. You had a licence at the end of two years?—No. I never troubled about it; I gave it up as a foregone conclusion.

11455. Did you navigate barges during that period?—No, I have never been in a lighter in my life.

11456. And yet you had two years' apprenticeship?—I turned it up.

11457. Did you serve two years?—No, not as a lighterman—as a waterman, which is quite a different thing.

11458. Then you know nothing at all about the navigation of lighters?—I do not suppose that the Watermen and Lightermen's Company would give me my lighterman's licence now if I wanted it, though I have been a pilot 12 years.

11459. You do not know anything about the navigation of a lighter at all?—I have never been in charge of one.

11460. Never been on one?—Yes, I have been on one to look at damage.

11461. But not for the purpose of the working of one?—No.

11462. You told us that it would be very disastrous if the Thames were thrown open, and that you would tremble to think of the mischief it might cause. Will you tell me why. You talk of the Medway barges?—I am expressing the opinion of the compulsory pilots at Gravesend generally. They held a meeting. It is their idea. There are 72 of them, and we are responsible to the Trinity House for the damage that we may do. They may deal with the pilot's licence. We are responsible for the payment of the damage that we may do, and we are responsible to the common law of this country for the loss of life. That is what makes the pilots nervous. They would not dare to work the upper pools of the river during the night.

11463. Now, with regard to the sailing barges; how do you know that the sailing barges take licensed men on board?—Because I am there every day to see it.

11464. How do you recognise the fact that the Rochester barges have a licensed man on board?—Because they always tow up a very small hoveller's boat. The hovellers come off in a very small punt.

11465. Do you undertake to say that every sailing barge coming from Rochester takes up a small hoveller's boat?—No; there is only 5 per cent. of the sailing barges coming from Rochester that navigate the narrow waters of the Thames.

11466. Will you undertake to say that all sailing barges tow up a small hoveller's boat?

(Chairman.) These points are very minute.

(Witness.) If they are bound for the narrow waters they do. A man may come from the Medway and turn off into the Albert Dock; then he does not take a hoveller. You must tell me where the barge is, then I will tell you what the barge does. Tell me the position of the barge.

11467. (Mr. Schiller.) The Upper Pool?—He takes a hoveller above Globe Pier.

11468. In every case?—Yes, if he wants to keep out of trouble. He stands a chance of getting sunk if he does not.

11469. How far do you go up?—As far as I can get—London Bridge.

*Re-examined by Mr. Ivory.*

11470. Will you explain why you said the navigation would be more difficult if there was no towing?—Because the trade of the port is increasing; the size of the barges is increasing; the size of the ships is increasing—everything is increasing, and the traffic is getting more; so it would be more difficult.

11471. Do I understand you to mean that there would be more barges singly afloat if there were more towing?—Yes.

11472. (Rear-Admiral Hext.) I asked the question as to what would be the case if there was no towing on the river, and you said a barge under oars was less dangerous to navigation than a barge in tow going against the stream. Then I asked you whether, if there were no towing, the port would be a more dangerous port or a safer port, and your answer was that it would be more dangerous. That conclusively proves to my mind that you regard towage as a very dangerous means of navigation. I do not see how you can get out of that?—I must admit and agree that a barge towing is better, in the usual way, for the navigation of the River Thames, but, of course, as pilots, we do not take much notice of these lighters driving, because we treat the River Thames as a dock, pure and simple. We have to go very slow. But if you should have a collision, the damage would be more if you were to strike a vessel towing than if you were to strike a barge that was driving.

11473. But must you strike? In your experience of the Thames, how often have you been in collision with a barge in tow, in comparison with the number of times you have been in collision with a barge under oars?—I have never touched a vessel in towage. I have hit a barge under oars. It is impossible to prevent it.

11474. You have not touched a vessel towing?—No, only one, and that was nothing to speak about.

*Mr. A. L. Sandford.*

24 June 1901.

Mr. WALTER JAMES HAYWARD called and examined.

11475. (Chairman.) You are a licensed pilot for exempted ships?—Yes.

11476. You corroborate the evidence that has been given by Mr. Mills?—Yes, there is nothing I can add to it except that my experience is a few years longer.

11477. As far as your evidence goes you corroborate all he says?—Yes. I have always found the lightermen a useful lot of men.

11478. Apart from corroborating the evidence you have already heard, you have no fresh points?—No, not without you wish to ask me questions.

*Mr. W. J. Hayward.*

Mr. GEORGE AYERS called and examined.

11479. (Chairman.) You are the Commodore-Captain of the Thames Steamboats, Limited?—Yes.

11480. You are also a licensed waterman and lighterman?—Yes.

11481. You desire to give evidence with regard to the licensing system of the Watermen's Company?—Yes.

11482. Will you be good enough to give us your evidence?—I am the senior captain in the service, and have been a captain of the Thames passenger steamers for the last 50 years. I was apprenticed to the river in the year 1840, and have worked up from call boy to the position I now occupy, and I am now 75 years of age. A meeting of the deck hands employed on the passenger steamboats on the Thames has been held, and at such meeting a resolution was passed asking me to appear on behalf of the men, and directing me to convey to the Commission their view that the present licensing system should be maintained. At the present time my company has a fleet of 34 passenger steamers plying on the Thames. Each boat carries four hands on deck, all of whom are licensed. The vessels are licensed to carry from 400 to 700 passengers each, and work from early morning till late at night between Hampton Court and Woolwich. During the time I have been on the river I have had the King and other members of the Royal

Family on board the steamers I have had charge of. The barge navigation of the Thames is the chief danger that steamboats have to contend with, and if the barges were not navigated by competent men whose methods we knew and understood, our confidence would be shaken, and the danger to navigation very materially increased. The danger is greater when we are navigating in the dark, and unless we felt that the barge traffic was in the hands of competent men whose methods we knew, it would not be safe to run our boats, and I personally should refuse to do it. At the present time, in any reach, and with any wind and tide, we practically know what each lighterman will do with his barge; and it is because of this knowledge that we are able to navigate the river. The currents in the Thames vary with each tide, and with each part of each tide, and to navigate the Thames successfully, a man must know every part of the river at every time of the tide, and he can only learn this by practical experience; and I believe an apprenticeship is absolutely necessary to produce competent men, as it is only by years of training that the navigation of the Thames can be properly mastered. The steamers could not be worked by men who are untrained, as, even if they had the knowledge of working steamboats, they would lack the knowledge of the river that is essential to the working on the Thames. Neither could the boats be

*Mr. G. Ayers.*

**Mr. G. Ayers.** safely run if other craft on the river were being worked by untrained men.

24 June 1901. 11483. (*Sir John Wolfe-Barry.*) I suppose what you really want is that competent men should be employed?—Quite so.

11484. (*Mr. Ellis.*) You mentioned a meeting. When was that meeting held, and how many persons were present at that meeting?—I could not say, as I was not there.

11485. By whom was it called?—By Mr. Gosling.

11486. Is Mr. Gosling the witness we have had this morning?—Yes.

11487. Then you know nothing about the meeting except that they requested you to come here?—That is all.

11488. Was this evidence of yours drawn up by yourself?—I stated it to our solicitor.

11489. And he put it into shape?—Yes.

*Cross-examined by Mr. Claude Baggallay.*

11490. Have you ever navigated a barge?—Yes, but many years ago.

11491. For hire. You were paid for it as a lighterman?—Yes.

11492. How long ago?—It was a long time back. I was an apprentice at the time.

11493. You are still licensed?—Yes.

11494. And therefore you could, if you chose, exercise your calling of licensed lighterman to-day?—I could to a certain extent, I daresay.

11495. We will not go into the physical side of the question, but as far as the law is concerned you could claim to be a licensed waterman?—Yes.

*Re-examined by Mr. Horace Ivory.*

11496. In your experience do you think a man would become a competent lighterman unless he is brought up and apprenticed to the trade?—Men must be brought up to the trade.

11497. And do you think apprenticeship is a proper way of teaching men the trade?—Yes; seven years I think it should be.

**MR. ARTHUR CAMERON HURTZIG** called and examined.

**Mr. A. C. Hurting.** 11498. (*Chairman.*) You are a member of the Institute of Civil Engineers and a partner of Sir Benjamin Baker?—Yes.

11499. You appear before us on behalf of the Commissioners of Sewers for Havering and Dagenham, and other levels in Essex, and the Commissioners of Sewers for Rainham and other levels in Essex?—Yes, and for the Commissioners of Sewers whose jurisdiction extends from Woolwich to Sheerness in Kent.

11500. Your evidence is with the object of seeking protection in the event of any action which may be taken with regard to the river?—Certainly.

11501. You must remember we are not a Parliamentary Committee. We are not here to discuss the merits or demerits of any bill that may be brought before us?—No, but we thought we ought to lay before the Commission any objections we might have.

11502. We are dealing with the Port of London, and

it seems to us that your evidence is somewhat premature?—If your Lordship pleases.

11503. (*Sir John Wolfe-Barry.*) Your evidence would not go to the length of saying that dredging could not be done?—Not in the slightest.

11504. The evidence, I take it, that you wish to lay before us is that certain protection ought to be given to riparian owners?—Yes. The owners on both sides of the Thames think it is possible that damage may be done to them from any action which may follow the decision of this Commission, and they wish the Commissioners to be acquainted beforehand with the dangers they apprehend, and to provide for their protection when the time comes. See 1156

11505. (*Chairman.*) That we perfectly understand. Is that the whole of your evidence?—That is the whole of my evidence.

11506. Will you be good enough to thank in our name the Commissioners of Sewers for having sent that communication?—Certainly.

**THE REV. HARRY MORLAND WELLS** called and examined.

**Rev. H. M. Wells.** 11507. (*Chairman.*) You are part owner of 450 acres land in the parishes of Stone and Greenhithe, having a continuous frontage to the River Thames of two miles in a straight line—6,695 ft.?—Yes.

11508. Will you kindly proceed with your evidence?—A river wall is maintained by the Sewer Commissioners, from Lombard's Wall to Gravesend Bridge, on lands belonging to me and others, and embracing our frontage to the river. Owing to constant dredging

of the River Thames the foundation of a part of this wall has collapsed and caused it to sink. It would seem desirable that those who dredge the river should have the maintenance of walls which the dredging can destroy; that those who pay taxes should be represented on the board that taxes them, and, finally, that if one body is to be charged with the Port of London, the powers and duties of the Sewer Commissioners should be assumed by it.

(*Chairman.*) We are much obliged for your evidence.

**MR. EDGAR WIGHT** called and examined.

**Mr. E. Wight.** 11509. (*Chairman.*) You are the senior partner in the firm of Messrs. John Knill and Co., wharfingers?—Yes.

11510. Which firm you joined in 1872?—Yes.

11511. It then consisted of Sir Stuart Knill, Bart., and your father?—Yes.

11512. And the firm was established in 1827?—Yes.

11513. The firm are the owners of Fresh Wharf and Cox's Quay, which are both legal quays?—Yes; and I should like to hand in a document I have prepared showing the history of the legal quays.

(*The Witness handed in a statement showing a history of the legal quays in the Port of London. See Appendix, 28th Day, No. 7.*)

11514. Do you propose to give evidence with reference to evidence which has already been given by the Wharfingers' Association?—No, I do not represent the Wharfingers' Association in any way.

11515. I understood that you wished to give evidence which dissents from the views they have expressed?—I have not said so. I merely wish to say that I represent more especially the shipping on the north side of the River Thames. I have been put forward by the

Short Sea Traders' Association, and I have been invited by our neighbours, Botolph and Nicholson's Wharves, Limited, who are also legal quay owners, to represent them, and I have the particulars of their trade as well as my own.

11516. Will you tell us in a few words what is the purport of your evidence?—As far as the legal quay owners are concerned, I rely on the evidence as to the creation of legal quays to show that Parliament has never yet established a monopoly on the River Thames without granting compensation to the persons affected. That would add so enormously to the expense of any scheme that is proposed to take over the docks as to make it prohibitive, and therefore the port would be very much less attractive than it is now.

11517. Will you proceed with your evidence?—I am not aware that the Port of London suffers from any defects of a serious character as regards its administration, and certainly none as affecting our business as wharfingers. As a port, London has been economically administered, and both from the Custom House authorities and from the Conservators, our firm has experienced the utmost assistance. Upon all occasions we have found the authorities willing and able to meet the require-

ments of the times. Had this not been the case, we are satisfied that, having regard to the very much larger business performed at our wharf, in connection with loading and discharging steamers of a large size, than at any other wharf on the Thames, it would not have been possible for us to have conducted our business so conveniently as has been the case, particularly bearing in mind the fact that, in addition to the goods steamers a very large passenger traffic, necessitating the passage of some millions of the public to and from the shore and the steamers alongside the wharf, has been carried on for the last sixty years, in fact, ever since steam navigation on the Thames was started, no accident of a serious nature having once arisen. The changes in the character of the craft using the river, and a very large increase in the size of steamers, may render it desirable to form one general body, to include the Conservators and the Watermen's Company and Trinity House, and all other authorities dealing with the administration of the port, and the regulation of the persons using it. In view of the increase of the size of the ships, dredging is obviously a necessity, and everything possible should be done to make the port attractive to shipowners, and probably it would be necessary that the authorities referred to should raise a revenue sufficient for the purpose of maintaining the waterway and channel at an adequate width and depth. To avoid the congestion at the docks and wharves, and further to increase the facilities of the port, additional moorings might be laid down. Fixed derricks, with luffing cranes and floating cranes of varying capacity might be established at the expense of a harbour trust of a non-competitive and impartial character, to be covered by such a rate as might equitably be charged to the users, who should be responsible persons, liable to make good any depreciation of the tackle beyond fair wear and tear. This would give increased despatch. Private moorings should be abolished, and lay-byes for barges in the fairway of the river should be removed. The demand for wharf accommodation is growing, as the convenience to shipowners of getting their vessels to and from the wharves without the delays and expense of docking, is much appreciated. In fact, the only limit to my business is my inability to accommodate more steamers alongside my wharf. Some ships discharge alongside the southern wharves, but a large majority discharge at the wharves on the north side of the river. This is partly owing to the water, and partly to the situation of the wharves as regards the city. There is intense competition between the wharfowners and the dock companies, and from time to time this has been sought to be ameliorated by conferences, especially since the dock strike in 1890, when all expenses were materially raised. But I found myself compelled to withdraw from the conference, which I did, sending to all the members of the conference a circular letter, a copy of which I put in, dated November, 1891.

(The Witness handed in copy of letter from Messrs. John Knill & Co. to the Dock Companies and Wharfingers of the Port of London withdrawing from the Agreements as to the Discharge of Fruit. See Appendix, 28th day, No. 8.)

The reason for my action was that the dock companies sought to draw away from the wharves adjoining London Bridge the monopoly of the green fruit trade and a large and valuable Mediterranean business—by substantial reductions in the rates, whilst they were desirous that I and others should put up our rates for the goods, of which the dock companies have the largest share. An additional reason was that our neighbours (strong competitors) and other large wharves capable of taking ships alongside were not in the combine. It is to be regretted that the dock company have, at the expense of their revenue, so seriously competed with the wharfingers, viz., in reductions in rates, and other facilities which have been given to the public. But the public have greatly benefited thereby, and however much I may individually object to the competition, I feel it has been for the public good. Whatever services the dock companies render shipowners, we do the same, and we have succeeded in satisfactorily maintaining our business notwithstanding all the difficulties referred to, and we urge in the public interest that this state of things should be continued and not be interfered with. Parliament has never yet created a monopoly without granting compensation to injured parties. The maintenance of the present wharf facilities is more than a public advantage, it is a public necessity.

4736.

11518. (Sir John Wolfe-Barry.) It has been alleged before this Commission that all the docks ought to be formed into a Public Trust. You do not express any opinion upon that in your evidence?—No.

11519. Assume merely for the sake of argument that all the docks were formed into a Public Trust do you think that that Trust would be able to compete with the wharves on more advantageous terms than the dock companies do now?—Certainly if the Trust were subsidised in any way by public money they might offer better terms than they do at present where they are in competition with us.

11520. That competition would mainly be in the warehouse department I suppose?—No; for the accommodation of ships. At present the dock companies where they are in competition with wharfingers forego their tolls. They work out ships at unremunerative rates and give rebates and we do the same.

11521. That is *qua* shipowner?—Yes. I may say that by far the most important part of our business is our ability to take ships alongside. We can take ships with a carrying capacity of 3,000 tons.

11522. Would you, in your private capacity, be desirous of seeing dock facilities improved?—If thereby the Port was made more attractive. We have as much business as we can possibly do, and we are not afraid of losing that business unless by obtaining subsidies the Dock Trust would be in a better position to compete.

11523. You are very much in favour of dredging the river and improving the facilities of the port as a river?—Yes, as a member of the public; not as a wharfinger. I should not benefit in that way because I anticipate you could not dredge the river to a much greater extent than up to the London Docks. Of course I am not speaking as an expert.

11524. You personally would not get any advantage out of the dredging?—No. But I should like to make this suggestion for what it is worth—that the dredging is a great expense to the docks and also to some of the wharfingers. We, for instance, paid about £500 two years ago to the Conservancy for dredging. I think it should be done at the public expense. The River Thames should be looked upon as a great highway to be kept in the most perfect condition possible at the expense of this Public Trust, if it is to be created.

11525. Not as a channel, but for wharves?—And docks—the expense of dredging. There should be more dredging, and the dredging should be more systematically done. For instance, that dredging that we did two years ago will require, or may shortly require, to be done again.

11526. That dredging was to enable vessels to get alongside your wharf, I suppose?—Exactly. It was not in the fairway of the river.

11527. Ought the Public Trust to dredge alongside every wharf?—I do not say so.

11528. You would not like that, would you?—We should come in on the same terms. I do not press it in any way.

11529. You would have many competitors then, would you not?—Yes, possibly.

Re-examined by Mr. Harper.

11530. Your appliances are of the most modern type?—Yes.

11531. You have a frontage of something like 440 feet of the river?—Yes.

11532. And you can take ships and actually discharge them by means of your luffing cranes two abreast?—Yes, and more; we can put six cranes on to the inner ship at Fresh Wharf.

11533. From your observation as regards docks, have they any similar facilities?—No.

11534. I think your largest luffing cranes will carry a radius of 70 feet?—76 feet. I had them measured on the 6th June. There are three luffing cranes; one at Hammond's Quay has a radius of 60 feet; one at Cox's Quay has a radius of 50 feet; one at Fresh Wharf has a radius of 78 feet.

11535. Can you find any similar appliances to that in the docks as far as you know?—No.

11536. Do these cranes enable you to discharge from the hold of a ship lying alongside your quay right into the barges lying beyond them?—Yes.

Mr. E.  
Wight.

24 June 1901.

Mr. E.  
Wight.

24 June 1901  
A. ———

11537. Do you do it?—Every day.

11538. Anyone passing London Bridge I think can look down and see the operation performed?—Yes. We can take goods from a ship lying alongside London Bridge Wharf and put them direct into the warehouse at Fresh Wharf, which is 150 or 160 feet further off.

11539. Your trade is principally the green fruit trade?—And dry fruit.

11540. And in that you are a competitor with the docks for the ships?—Certainly.

11541. You give free overside delivery like everybody else?—Yes.

11542. Do you crane it out with your luffing cranes, and put it straight in?—Yes, we sort in the ship, and we can and do put goods directly overside into barges, and at the same time work on to the quays. We very much prefer delivery direct to barges, because our quay capacity is very limited.

11543. But although you put it on the quay side, you make no charge; you treat that as a free delivery?—Free delivery if the barges are there and the papers are in order.

11544. (Mr. F. P. M. Schiller.) The only thing that you desire, I understand, is to keep healthy competition at the docks, but not to put the docks on an unfair basis of competition with yourselves?—Exactly.

11545. What do you say about the practical possibility of dividing the quays from the warehouses. Is that practically impossible?—It would be absolutely impossible with us because the warehouses overlook the Thames, and they are used as quays.

(Mr. Claude Baggallay.) My Lord, might I refer once more to the evidence of Mr. Andrews?

(Chairman.) You see what you said yourself.

(Mr. Claude Baggallay.) Quite so. I know exactly what I said. It was stated that the Commissioners quite understood what was to be said for the Bill, and it was quite useless, of course, to reiterate the same class of evidence. That I entirely agree with, and I should not have thought of afterwards calling either Mr. Andrews or Mr. Stephens or Mr. Heenan, unless it had been that afterwards (I do not know how far it affected the minds of the Commissioners) considerable doubt was attempted to be thrown by Mr. Jacobs and others upon whether the persons who navigate the sailing barges really do navigate themselves or whether

they do, in fact, take on board these licensed men. If I call Mr. Andrews he is prepared to prove that he does not take these men on board. Some of the witnesses have themselves admitted that whilst a sailing barge is not obliged to take them on board, some of them in fact do. What I wanted to prove was that, at all events, Mr. Andrews' barges not only are not obliged to take them on board, but they do not take them on board. If the Commissioners attach any weight at all to that point I should like to call Mr. Andrews. I should not like to leave that point in any doubt.

(Chairman.) From what I and my colleagues understood we did not regard it as a controversial point in any way. We take it that the witness to whose attention you drew the point admitted it. Do you remember referring to Mr. Andrews' statement and my telling you it was not in evidence?

(Mr. Claude Baggallay.) Quite so, my Lord.

(Chairman.) I do not understand the witness contradicted it in any way.

(Mr. Claude Baggallay.) If the Commissioners are satisfied there is no obligation I do not think I could properly press the matter. In point of fact, they do not except that in certain cases a man may take on an extra man to help through a bridge owing to stress of weather. There may be a case of that sort.

(Chairman.) About that we shall have the pleasure of hearing you later on when you make your speech.

(Mr. Claude Baggallay.) Yes; I don't want to argue the matter now.

(Chairman.) We take it as a non-controversial point.

(Mr. Claude Baggallay.) Very well, then, if your Lordship takes it in that way I shall certainly not press to call Mr. Andrews.

(Chairman.) At the same time you will be careful not to draw any admission from us.

(Mr. Claude Baggallay.) Of course, I will not do that. There was a copy of a policy put in at Question 10863 showing that one company attaches advantage to having certain statutory conditions to fulfil. Here is one of the ordinary policies on cargoes carried by barges. This is the actual policy itself. I think it would be convenient that this should be put upon the notes for the purposes of reference.

(Mr. Claude Baggallay handed in copy of a Policy of Insurance on Cargoes carried by Barges. See Appendix, 28th Day, No. 9.)

(Adjourned to Wednesday next, June 26, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## TWENTY-NINTH DAY.

*Wednesday, 26th June, 1901.*

### PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
SIR ROBERT GIFFEN, K.C.B., LL.D.  
SIR JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.

Rear-Admiral SIR JOHN HEXT, K.C.L.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. BALFOUR BROWNE, K.C., and Mr. GEORGE WALLACE, appeared on behalf of the London and India Dock Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNIS appeared on behalf of the Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council.

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. R. W. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

Mr. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. HORACE AVORY, K.C., appeared on behalf of the Watermen and Lightermen's Company.

Mr. CLAUDE BAGGALLAY, K.C., and Mr. F. P. L. SCHILLER appeared on behalf of the promoters of the Thames Lightermen's Bill.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

Mr. JOSEPH SHAW appeared on behalf of the North London Railway Company.

The Hon. J. D. FITZGERALD, K.C., appeared on behalf of the Commissioners of Sewers for the limits extending from Lombard's Wall to Gravesend Bridge in Kent; the Commissioners of Sewers from Gravesend Bridge to Sheerness in Kent; the Commissioners of Sewers for Havering and Dagenham and other levels in Essex, and the Commissioners of Sewers for Rainham and other levels in Essex.

11546. (*Chairman*.) I understand you wish to make an application, Mr. Fitzgerald?—Yes, my Lord, I have been instructed to appear on behalf of the Commissioners of Sewers both on the Kent and Essex sides of the river, to the river, having the river walls under their jurisdiction, and, of course, these river walls protect a very large area behind, which is of very great value indeed. What I have to ask your Lordship and the Commission generally is to allow their evidence to be heard which you excluded at your last sitting, and, I think, under a slight misapprehension as to the exact position we take up. Mr. Hurtzig, who is advising engineer to the Commissioners of Sewers on the Kent side of the river, was called as a witness, and at Question 11504 what was said to him was this. Sir John Wolfe-Barry said: "The evidence, I take it, that you wish to lay before us is that certain protection ought to be given to riparian owners. (A.) Yes. The owners on both sides of the Thames think it is possible that damage may be done to them from any action which may follow the decision of this Commission, and they wish the Commissioners to be acquainted beforehand with the dangers they apprehend, and to provide for their protection when the time comes." Then your Lordship said: "That we perfectly understand. Is that the whole of your evidence? (A.) That is the whole of my evidence." Now, my Lord, from one point of view that is the whole of Mr. Hurtzig's evidence, but it is not the way I should have put it if I had been addressing this Commission, or if the matter had been dealt with before a Parliamentary Committee. One of the matters referred to this Commission is the improvement of the water approaches to the Port of London, and it is suggested that that improvement should be carried out by the deepening

ing of the channel. If the channel is to be deepened in close proximity to these river walls it must, or, at any rate, it may, have some considerable effect upon them. Our position is this: we should object to that deepening being carried out unless under certain conditions. Of course we have no desire whatever to interfere with any improvements of the Port of London, but we should object to a deepening of that kind being carried out, which might very seriously affect the river walls, unless under certain conditions. If I were appearing before a Parliamentary Committee—to take an illustration that I am familiar with—my position would be an opposition on the preamble. I should object to the Bill passing unless certain conditions were put in. I ask your Lordship very shortly to allow the evidence to be heard, to show to the Commission that this proposed deepening might have a very considerable and prejudicial effect upon the river walls, that it ought not to be carried out except under certain conditions which would enable the Commissioners of Sewers if their walls were injured to obtain compensation; and particularly to put on record evidence which would show whether the damage was done by deepening or by some other cause, because that would be the question hereafter.

(*Mr. Ellis*.) Speaking for myself, I should like to ask you this; is not all that covered by the answer to Question 11504. Speaking purely for myself I do not want any evidence to produce an impression on my mind that certain consequences may follow the deepening of the river. I do not want detailed engineering evidence to convince me of that. Is not the whole case covered by the answer to Question 11504?

(*Mr. J. D. Fitzgerald*.) No, I do not think the whole of my case is covered by that answer.

26 June, 1901. (Mr. Ellis.) If you take also the answer to the preceding Question 11503, is it not all covered. Why do you want to carry it further?

(Mr. J. D. Fitzgerald.) One is obliged to bear in one's mind what may be the result of the recommendations of this Commission. The result of the recommendations of this Commission will probably be embodied in a bill. If that bill takes the form of a public bill a private petitioner might not be heard against it at all. On the other hand, if it takes the form of a private bill a petitioner might be involved in an expensive parliamentary contest, whereas the whole thing might be obviated if we are allowed now to suggest to this Commission the difficulty which the Commissioners of Sewers find themselves placed in. The difficulty might be obviated in a very simple way, and if the evidence that we should give commended itself to this Commission, and in their report they included a representation to that effect, the matter practically would be ended.

(Mr. Ellis.) If you suggest to me as a Member of Parliament that a bill of that description would go through the House of Commons, and pass through a Committee of the House, without being referred to a Select Committee, I entirely differ from you. Are you aware that there is a bill on all fours promoted by the Board of Trade in the House of Commons with a motion to refer it to a Committee?

(Mr. J. D. Fitzgerald.) I am very glad to hear from you that it is likely to go to a Select Committee.

(Mr. Ellis.) I do not say that.

(Mr. J. D. Fitzgerald.) One is obliged to keep in one's mind possible eventualities, and although it seems certain that a bill relating to the Port of London would be a public bill, it might be treated as a bill of a hybrid nature and referred to a Select Committee. Of course, bills of that nature have sometimes gone through the House as public bills. I do not suggest that as the most likely course. I agree that the most likely course is that petitioners would be heard against it, but we are rather anxious to avoid the possibility of having to be heard against it. The evidence we ask to be allowed to give would be very short. I should only call two witnesses representing the Commissioners of Sewers, one from the Kent side and one from the Essex side. I respectfully ask that their evidence may be heard.

(Sir John Wolfe-Barry.) Do you propose to put any further evidence before the Commission than this: that if dredging is done in an improper way, or in close propinquity to the river walls of the Commissioners of Sewers, whom you represent, damage might occur. Do you wish to carry it any further than that. I especially asked Mr. Hurtzig whether he wished to carry it further than that, and the Commissioners did not see any necessity for taking evidence with regard to what is perfectly obvious to any sensible body of men. If you wish to make any reference to a special mode of dredging, or anything of that kind, it is another matter, but if it is merely to tell us that deep dredging close to earth retaining walls may endanger the earth retaining walls it is quite unnecessary.

(Mr. J. D. Fitzgerald.) That I quite follow, but what to my mind is the material evidence is this. The

channel, as you know, runs near these walls in certain places, and it is very desirable that before any dredging is done the exact condition of the channel should be ascertained, so that there may be no doubt in any subsequent investigation, as to what has been the result of the dredging. One thing we were going to suggest was that cross-sections should be taken before any dredging was done, and that those cross-sections should form a record, to which either party might refer, showing the state of the channel before the dredging was done. Then you would have evidence upon which you might arrive at a conclusion in the event of a slipping of the wall taking place, owing to the operations done under the powers granted to a new body which might be created, and compensation could be provided if it appeared that the walls had been let down by the dredging operations. That is the whole case I intend to lay before you.

(Chairman.) The Commissioners will consider the matter.

(The Commissioners retired.)

On returning

(Chairman.) The Commissioners fully understand the circumstances of the river walls and of those responsible for the embankments, and they see no necessity for carrying the matter any further. Of course, the learned counsel will have the opportunity, if he so desires, of addressing the Commissioners next week, and emphasising the point.

(Mr. Horace Ivory.) My Lord, may I make one short application before you proceed. I am afraid we shall want your assistance in settling the question of the order in which we address you, for this reason: I am appearing for the Watermen's Company and for the Amalgamated Society of Watermen and Lightermen. My friend, Mr. Baggallay, who appears for the promoters of the Bill that attacks us, enjoys the doubtful privilege of leading me—

(Sir John Wolfe-Barry.) What Bill?

(Mr. Ellis.) There is no Bill before us.

(Mr. Horace Ivory.) The Bill that has been referred to this Commission.

(Mr. Ellis.) Counsel have altogether misapprehended the position all along.

(Mr. Daldy.) I hope you will not say all the counsel.

(Mr. Ellis.) No. I beg your pardon. There is no Bill before this Commission. No Bill exists; it is dead.

(Mr. Horace Ivory.) I withdraw the expression. It is inaccurate. I ought to have said that my friend represents the interests that are expressed in that Bill, and he is, in fact, attacking my clients. All I ask is that he should precede me. It seems to me to be obvious that I ought to hear what is to be said against me before I am called upon to address the Commission.

(Chairman.) Our opinion is that the Docks Companies undoubtedly have the privilege of being heard last. As to the representatives of the other interests, it seems to us that there has been so much courtesy and goodwill shown by all the gentlemen connected with this Inquiry, that an arrangement might be come to between the learned counsel themselves.

Mr. GEORGE LISLE RYDER, C.B., recalled and further examined.

Mr. G. L. Ryder, C.B.

11547. (Chairman.) You are, as we know, Chairman of the Board of Customs?—Yes.

11547A. You desire to give evidence as to the question of Customs control over warehouses of special security?—Yes.

11548. Will you be good enough to proceed with that evidence?—May I first hand in certain documents which the Royal Commission required, which have now been printed. They have a special bearing on the question. They consist of a statement of limits of the Port of London; particulars of warehouses of special security in the Port of London; particulars of Customs bonded warehouses in the Port of London; and copies of the two cases submitted for the opinion of the Law Officers of the Crown and their opinions thereon.

The Witness handed in the following documents:

(A Statement of the Limits of the Port of London. See Appendix, 29th day, No. 1.)

(List of Warehouses of "Special Security" in the Port of London for which no Bonds are required. See Appendix, 29th day, No. 2.)

(List of Customs Bonded Warehouses in the Port of London. See Appendix, 29th day, No. 3.)

(Cases for the Opinion of the Law Officers of the Crown and their opinions thereon as to certain powers of the Commissioners of Customs with reference to the Warehouses at the St. Katharine Docks. See Appendix, 29th day, No. 4.)

Since I had the honour of appearing before the Royal Commission in November, 1900, a correspondence has taken place between the London and India Docks Company and the Board of Customs which I ought to mention. In January and February last there was again a fear that the tea duty would be increased, and very heavy forestalments of tea were made, and a great demand arose for free warehouse room for this tea, which the market was not yet in a position to receive. The dock

company were anxious for the removal of Crown locks from some of their warehouses for the reception of part of this tea. But on learning the objection entertained by the Customs to this step, the company at once withdrew their proposal, and waiving all question of strict legal right, submitted themselves entirely to the wishes of the Board. If this attitude had been adopted in earlier days there would have been no occasion to trouble the Royal Commission with the question of Customs control over London warehouses for the custody of dutiable goods. That question has already been referred to the Commission, but, happily, it may now be discussed exclusively as one of general policy, and in a spirit of complete amity as between the Board of Customs and the company. The Customs Board, therefore, respectfully invite the Royal Commission to consider whether it is not in the public interest that a uniform control should be exercised over all such warehouses, whether bonded or of special security where bond is not required. Accordingly they submit that the peculiarities of a warehouse of special security are such as warrant exemption from bond, but not exemption from control. The peculiarities of such a warehouse are that it is situated in a statutorily defined place of special security, that is surrounded by prescribed walls, protected by gates, and watched by constables, so as to be unusually safe against robbery from without, although perhaps as much exposed as ordinary warehouses to irregularities from within; and, in view of these peculiarities, and of their initial cost, Parliament has seen fit to exempt the owners of such a warehouse from the obligation to give bond for the duty on goods stored therein, such as is required in the case of ordinary warehouses for dutiable goods. Notwithstanding these peculiarities, however, a warehouse of special security is probably in close contiguity to other warehouses, for duty-free goods, and various operations on such goods, and on duty-paid goods, may be carried on continually within the enclosure in which it stands. These may involve more or less risk of confusion between goods awaiting payment of duty and those on which duty has been paid, or which are duty-free. Further, the cost of supervision is directly affected by the number of floors, and area on each floor, occupied by dutiable goods, and the order in which they are arranged, and the precautions observed against unnecessary means of access, or dangerous proximity of certain other goods, and the like. Consequently there is the same practical need for Customs control over warehouses of special security as over bonded warehouses. The second point is that the reasons for giving this control to the Board, viz., economy of supervision and security of the revenue, exist in the case of warehouses of special security as well as in that of ordinary bonded warehouses. This follows from what has been said under the first point. But it should not be inferred that in the view of the Board of Customs both of the above reasons exist in quite equal force in the case of both classes of warehouses; because, undoubtedly, the enclosing walls and gates, and constables of the place of special security in which a warehouse stands, afford a protection to the revenue to a considerable extent, as is recognised by exemption from bond. Nevertheless, the distribution and method of storing different kinds of dutiable goods, and their separation from other goods (being the specific matter in which the Board of Customs claim to exercise control, and the Joint Committee deny their right), necessarily have an important bearing, not only on the number of officers required for supervision, but on the risk of irregularities involving loss to the revenue, whatever kind of warehouse be in question. Then the third point is that the exercise of this control over the former class of warehouses will entail no unreasonable trouble or risk upon their owners, who are also owners of numerous bonded warehouses containing, in the aggregate, goods of far higher duty-value than the warehouses of special security, and which are subject to this control without any difficulty or inconvenience being caused thereby. It is submitted that this is proved by:—(a) The fact that by far the greater part (that is, about 73 per cent. of the whole, in duty-value) of dutiable goods in the custody of the Joint Committee, are stored in ordinary bonded warehouses, subject to the undisputed control of the Customs Board, without any special trouble or expense being occasioned. (b) By the fewness of the occasions on which friction has arisen between the Customs and the Joint Committee on the subject of

control. Of course, there is no longer a Joint Committee; it is now the company. I think, my Lord, I really need add nothing more on the subject. The answer seems almost obvious that it is in the interests of the public and of all merchants concerned with the Port of London that the control of the Customs should be uniform over the warehouses that are intended for the custody of dutiable goods. The answer seems to follow, as a matter of course, that it ought to be uniform.

11549. (Sir John Wolfe-Barry.) Are there any warehouses of special security other than the dock warehouses?—We know of none. Parliament gave power many years ago to set them up, but, so far as we know, none of them were set up except here in London. The policy of setting them up was very soon abandoned.

11550. Are there any warehouses of special security other than dock warehouses in London?—No, there are no other warehouses of special security. Mr. Fleming can speak with more authority on that point than I can, but we do not know of any.

11551. Do I rightly understand that in the warehouses of special security there are undutiable goods and dutiable goods, subject to varying imposts?—There are the warehouses. When once a particular portion of the company's warehouse has been set apart for dutiable goods, and put under Crown lock, we hold that it ought to be reserved for dutiable goods. That was really the original bone of contention, through our having jurisdiction over the warehouses that were under Crown locks, as this would enable us to prevent, we will say, duty-paid tea being put into the Crown-locked warehouses.

11552. I am anxious to understand it. Is there a warehouse called a warehouse of special security which is under lock and key?—Within the enceinte of Millwall Dock, for instance, you will find a great number of warehouses, and some of these warehouses you will find under Crown lock; and, more than that, in a particular warehouse you would also find a floor that was under a Crown lock, and the floor above, perhaps, would be free; but you would also find there were special arrangements for access to the Crown-locked floor independent of access to the other floors, for the sake of security, and you will find every variety of arrangement of that kind within the premises of the dock companies.

11553. Those are not bonded warehouses?—Not in the sense of a bond being required, but they are on the same footing otherwise as bonded warehouses; it is a common term conventionally used for any warehouse into which dutiable goods are placed.

11554. (Mr. Ellis.) I believe your Board passed a Minute on the 9th July, 1900, on this subject?—Yes, that is so.

11555. And that contains illustrations of the inconvenience which from your point of view arise?—Yes, I will hand it in. I think it has been communicated to each member of the Commission. I request leave to formally put it in now.

(The Witness handed in a copy of a Minute of the Board of Customs respecting Customs control over Warehouses of Special Security. See Appendix, 29th day, No. 5.)

11556. I think the Treasury wrote a letter to your Board on the 24th March, 1900?—That is so.

11557. And that is contained in this document which you have just handed in?—It is.

11558. May I take it that the Commissioners will find in that Minute of the Board and in the letter of the Treasury and in your evidence this morning the formal and deliberate opinion on this subject of those two public departments, namely, the Treasury and the Customs?—That is so. I feel quite certain that the Treasury and the Board of Customs are at one on this matter. We appear here really at the desire of the Treasury.

11559. You notice I have used the expression "formal and deliberate." May we take it that this has been very carefully considered by those two public departments, and the Royal Commission has the advantage of all they can say on the subject in these two documents and in your evidence?—That is so.

11560. In a fully authorised and deliberate manner?—I think it may go as far as that, certainly, for ourselves, and I think I may say so for the Treasury too, but, of course, it is open to the Treasury if they think

Mr. G. L. Ryder, C.B.

26 June, 1901.

*Mr. G. L. Eyder, C.B.* the Customs have not fully represented their views, to ask leave to send a further witness.

26 June, 1901. 11561-2. You appreciate what I ask; I want to get it in the most authoritative manner?—Yes.

(*Mr. George Wallace.*) My Lord, with reference to the evidence that has been given by Mr. Ryder, I am instructed by my clients, the dock company, to say that they would exceedingly regret coming into any conflict with the Customs' authority, whose jurisdiction has always been exercised with great courtesy and consideration to the dock company in the trade interests represented in this matter by them. The only questions that have ever really arisen between the Customs and the company that I represent have arisen, as your Lordship will have inferred from the evidence that has been given by Mr. Ryder and I think the document which Mr. Ellis has been asking questions about, with reference to the storage of duty-paid goods when the Revenue has considered that the duty was paid by the merchant to avoid an expected increase in taxation, as in the case of last year on the tea to which Mr. Ryder has referred.

(*Chairman.*) Do you wish to ask any question of the witness?

(*Mr. George Wallace.*) I wanted just to put this before your Lordship.

(*Chairman.*) You will not repeat this when you address us?

(*Mr. George Wallace.*) I can promise your Lordship that I will not.

(*Chairman.*) We think this should more properly be dealt with in your speech.

(*Mr. George Wallace.*) I only wish to say, my Lord, that we thoroughly understand the nature of the control which the Customs authority seek to exercise, and I am very hopeful that a friendly conference between us will enable us to give sufficient assurance to them in the matter that while we preserve our statutory rights they will have all the control they really seek to exer-

cise, and we shall be very glad if your Lordship and the Commissioners will allow me to leave the matter there. On that footing I am instructed not to ask Mr. Ryder any question at all by way of cross-examination.

11563. (*Chairman.*) Have you anything further to say, Mr. Ryder?—I should like to hand in some documents which have been compiled at the request of the Commission by the Board of Customs.

*The Witness handed in the following documents:*

(*Statement of the Total Value of the Imports (including See 61 the goods entered for transhipment) of Foreign and Colonial Merchandise into London, and of the Total Value of the Exports (including the transshipments exported from London) of the same merchandise, together with the percentage proportion the total value of the Exports bears to the total value of the Imports from 1890 to 1899. See Appendix, 29th day, No. 6.)*

(*Statistics of the Imports and Exports at London and See 74 certain other of the largest ports of the United Kingdom of the principal articles of Foreign and Colonial Merchandise, with the object of showing the effect which the competition of those Ports has had upon the entrepôt trade of London. See Appendix, 29th day, No. 7.)*

(*Statistics [so far as they are able to be furnished by See 74 the Board of Customs] of the Imports of the principal articles of merchandise at five leading Foreign Ports for each of the ten years from 1890 to 1899. See Appendix, 29th day, No. 8.)*

(*Return showing for London, Liverpool and Outports See 90 respectively the Amount of Overtime charged by the Customs in the year ended 30th September, 1900, in respect of the landing, shipping and warehousing of all kinds of goods (dutiable, drawback and free), distinguishing the payments connected with landing and shipping from warehousing. See Appendix, 29th day, No. 9.)*

(*Statement showing the Hours and Pay of Dock La- See 76 boursers at the principal ports. See Appendix, 29th day, No. 10.)*

Mr. FREDERICK JOHN DUNN called and examined.

*Mr. F. J. Dunn.*

11564. (*Chairman.*) You are the Traffic Superintendent of the North London Railway Company?—Yes.

11565. You appear in order to give evidence with regard to the Poplar Docks belonging to that company?—That is so.

11566. Will you be good enough to proceed with what you have to say?—The North London Railway Company, whose present title was conferred upon it by an Act of 1853, was originally incorporated by an Act of 1846, under the title of the East and West India Docks and Birmingham Junction Railway Company. The North London Railway has junctions with the following systems:—

London and North Western Railway at Camden.	
Midland Railway	... " Kentish Town.
Great Northern Railway	... " St. Pancras.
"	... " St. Pancras.
"	... " Canonbury.
Great Eastern	... " Victoria Park.
"	... " Bow.
"	... " Poplar.
London, Tilbury and Southend Railway at	... " Bromley.

Great Western Railway	By means of the North & South Western Junction Line (of which the North London is lessee jointly with the London and North Western and Midland)
London and South Western Railway	
London, Brighton and South Coast Railway	
South Eastern and Chatham Railways	

and by means of these railways has communication with every railway in Great Britain, and interchanges traffic with nearly all of them. The railway carried during the year 1899 1,999,076 tons of merchandise and 1,139,021 tons of minerals, respectively. Of these ton-nages the proportion dealt with at Poplar Docks was 594,612 tons merchandise and 192,553 tons minerals, the percentages to the gross traffic being 29.74 and 16.91 respectively. The balance represents the ton-

nages in respect of traffic dealt with at the several goods stations and coal depôts on the railway, and also includes through traffic passing over the line. Exclusive of specials, the total number of merchandise and mineral trains run over the North London Railway, with traffic from all parts of the kingdom direct to the docks, is 72 per day. The position of the North London Company in possessing docks within the docks of another dock company is absolutely unique. In 1897 the North London Company were compelled by the action of the Joint Committee to apply to Parliament for powers to enlarge their entrance, and this resulted in the Act of 1897, a copy of which I can produce. The works authorised by this Act have been carried out at a cost of £19,620 18s. 1d., and an attempt was made by the Joint Committee to claim £75,000 for the piece of land 83 square yards in measurement required for the widening, followed by a claim by the amalgamated company of £34,600. The London and India Dock Company derive considerable revenue from the traffic of the several companies passing over the North London line, and going to the docks, and in respect of which neither the East and West India Dock Company nor the Joint Committee have been called upon to contribute any capital outlay. To show what I mean by this:—in the year 1896 there was paid to the Joint Committee by or through the North London Company for wharfage, rail haulage, and dock dues, no less a sum than £31,347, and to earn that sum not one farthing of capital had been specifically expended by either the dock company or the Joint Committee. All capital expenditure had been that of the railway companies. The amount paid to the Joint Committee for the year 1899 and for pumping (£500 per annum) was £36,762, of which the North London paid direct £5,600. The structural cost of lands and works at Poplar Dock and Goods Station is £444,378, including the provision and equipment of warehouses. This amount is arrived at by actual payments where practicable, and where such information is not available, by measurement. Besides this, the company pay to the Joint Committee £500 per annum towards the cost of maintaining the head of water in the docks of both companies. I have prepared the fol-

following table showing the accommodation provided by the North London Railway Company at Poplar Docks:—

Hand power cranes - 11 viz:— 1 30 ton.  
1 5 ton.  
2 2 ton.  
7 30 cwt.  
11 Total.

Mr. F. J.  
Dunn.  
23 June 1901.

**PARTICULARS OF ACCOMMODATION provided at POPLAR DOCKS.**

Length of old dock - 750 feet.  
Length of new dock - 535 "  
Width of old dock - 310 "  
Width of new dock - 150 "  
Length of quayage—old - 1,865 "  
Length of quayage—new - 1,405 "  
Length of lock - 140 "  
Width of lock - 43 "  
Depth of water at bottom of dock - 20 " T.H.W.M.  
Depth of water at bottom of sill - 21 ft. 6 in. "  
Water area - 7½ acres.  
Maximum dimensions of ships that can be dealt with at lowest neap tides:—  
Beam - 38 feet.  
Draught - 19 "  
Length - Practically no restriction.

**PARTICULARS of BOILERS, ENGINES, ACCUMULATORS, CRANES, and CAPSTANS, ETC., at POPLAR up to 30th June, 1900.**

Boilers - 6 Locomotive type boilers and two feedwater heaters (180 square feet each).  
Pumping engines- 9 viz:—6 pairs of large horizontal pumping engines (60 h.p. each).  
1 horizontal pump for dock water (30 h.p.).  
1 vertical pump for dock water (20 h.p.).  
1 vertical pump for water softening apparatus (10 h.p.).  
Donkey engines - 2 Vertical donkey feed pumps.  
Other small engines 1 Small vertical shop engine (3 h.p.).

Total - 12 engines.

Accumulators - 4 Accumulators ram 17 in. diameter, 17 ft. stroke, each weighted to about 80 tons.

Coal tips - 8 10 tons each.

Swing bridge - 1

Draw bridge - 1

Hydraulic cranes - 73 viz:— 1 30 ton.  
1 12 ton.  
4 5 ton.  
1 3 ton.  
34 2 ton.  
15 30 cwt.  
12 25 cwt.  
2 20 cwt.  
3 15 cwt.  
83 Total.

Hydraulic capstans - 40 1 ton.

Snatch heads - 156

Rollers - 15

Steam dredger - 1

The warehouse accommodation provided in connection with Poplar Docks consists of five blocks of warehouses of a storage floor area of 31,893½ square yards, fully equipped with hydraulic conveniences.

The number of men employed (July, 1900) at the North London Poplar Docks and Goods Station is—

London and North Western Railway Company - 197  
Great Western Railway Company - 203  
Great Northern Railway Company - 154  
North London Railway Company - 96  
Platelayers (North London) - 17  
Brakesmen on Poplar Shunting - 7  
Enginemen on Poplar Shunting - 12  
Signalmen (Traffic Department) - 12  
Waggon Examiners (North London) - 2  
Hydraulic Staff (North London) - 19  
Total - 719

In addition to this there are—

Brakesmen who work into Poplar during the 24 hours - 22  
Enginemen who work into Poplar during the 24 hours (about) - 24  
Beer Companies' Staff working on the premises - 96  
Pickford's Staff (Carmen and others) - 25  
Thames Steam Tug and Lighterage Company's men - 15

Grand total - 901

Happily the railway company have been able to satisfy their customers in conducting the traffic at the dock, difficulties having only arisen on three occasions, when the East and West India Dock Company or the London and India Docks Joint Committee imposed charges on barges. The railway company, to minimise the dislocation of traffic caused by these charges, on the first occasion undertook to indemnify the lightermen, who paid them under protest, and on the next occasion paid them themselves under protest, and on each occasion the charges, being held illegal, had to be abandoned, and the amounts paid under protest refunded. The third occasion was the one referred to by Sir Thomas Sutherland, when the Joint Committee endeavoured to force all goods on to their quays. By Clause 47 of the North London Act of 1865, the docks of the railway company are deemed to be part of the Port of London, and the rights and privileges which belong to such port as regards ships and vessels are extended to the railway docks and premises. Among these privileges I consider the free access of barges to be very important to the trade of the port. I have prepared a comparative table dealing with the total registered tonnage of ships resorting to Poplar Docks in the year 1899. No vessel has been computed twice over in the same voyage, that is, inwards and outwards, but one way only. The table is as follows:—

Name of Dock.	Water Area (Acres).	Tonnage of Shipping in 1899 (Tons).	Tonnage of Shipping per Acre of Water.	Cranes.			Length of Quays (Miles).	Apparatus per Quay Mile.	Railway Accommodation (Miles).	Railway per Quay Mile.
				Mechanical.	Hand.	Total.				
London . . .	40	447,968	11,200	206	27	233	2.25	108	400 feet	180 feet.
St. Katharine's . . .	10	200,731	20,073	88	41	129	1.0	129	nil	nil.
West India . . .	64½	292,084	4,528	327	120	447	4.0	112	12	Miles. 3.0
South-West India . . .	38	182,573	4,011							
East India . . .	33	275,316	8,348	89	51	140	1.5	98	0.75	0.5
Victoria . . .	90	637,492	7,083	306	24	330	9.0	37	45.0	5.0
Royal Albert . . .	87	1,455,024	16,735							
Tilbury . . .	73	839,432	11,499	110	1	111	2.75	40	25.0	9.5
Poplar (North London)	7½	72,233	9,631	121	11	132	0.62	213	14.0	22.6

The total nett tonnage, including barge traffic that entered the Poplar Docks during 1899, gave an average of no less than 111,739 tons per acre of water space in the dock, that is, taking the tonnage of the barges in addition to the tonnage of the ships.

Mr. F. J.  
Dunn.  
26 June 1901.

From this table it appears that the North London Company's docks, with their superior supply of apparatus, are enabled (in spite of the agreed restrictions on the trade carried on in them) to attract a larger tonnage of shipping per acre of water accommodation than do the East India, West India, South-West India, or Victoria Docks, and nearly approach the proportionate tonnage entering Tilbury and London Docks, although all these docks have a greater depth of water over their sills than the Poplar Docks. The Royal Commission having indicated (Questions 617 to 621) that they desired the London and India Joint Committee to give a statement of the expenditure and earnings of their docks, apart from the expenditure on and earnings of the warehouses, I have had the figures very carefully taken out of the North London expenditure, and I find that the capital expenditure, merely in respect of the construction and equipment of the docks, amounts to a total of £135,733, which sum is irrespective of the rental of £1,200 per annum paid to the East and West India Dock Company under the lease. This figure does not include any capital moneys spent on the construction and equipment of warehouses. I have also taken out the income attributable to the docks apart from the warehouses, and I find that the profit earned on a trade restricted by the terms of the lease, after deducting the rental of £1,200 per annum and all working expenses (but prior to the agreed payments to the East and West India Company in respect of wharfares, etc.), show a net return upon the capital cost of 4.34 per cent. per annum, although, of course, under the terms of the lease this profit is not retained by the North London Company, but is almost entirely paid over to the East and West India Dock Company under the conditions of the lease, the ultimate profit left to the railway company in respect of the docks being .58 per cent. on the capital. The following are the figures in tabular form:—

POPLAR DOCK.		YEAR 1899.		£	
Capital expenditure, viz.:					
	Land	Works			
	..	..	..	..	14,429
					121,304
					£135,733
Percentage of balance of receipts and working expenses (Cr. 5.895 8 5)		To capital expenditure, 4.34 per cent.		£ s. d.	
Less half wharfage	..	£3,962 11 10 =	£4,481	5	11
Dues on shipping	..		618	15	0
			5,100	0	11
			£795	5	6

Percentage to capital receipts .58 per cent. 11s. 7d.).

I desire to point out that the payments in respect of wharfage, etc., to the dock company represent neither working expenses nor rental, but are payments out of what would be (in the case of any independent dock company such as the London and India Dock Company) net revenue strictly applicable for the payment of dividends. I now hand in a table showing the earnings and working expenses for the year 1899 of the Poplar Docks.

(The Witness handed in a table showing the receipts and working expenses of the Poplar Dock for the year 1899. See Appendix, 29th Day, No. 11.)

11567. Is this a balance-sheet?—It is not exactly a balance-sheet; it has the same effect as a balance-sheet.

11568. Will you put in a balance-sheet?—Yes, I will do so.

(The Witness handed in the Report of Directors and Statements of Account of the North London Railway Company for the half-year ending 31st December, 1900. See Appendix, 29th Day, No. 12.)

Well-equipped and well-managed docks in London can be made to earn a substantial dividend, even under such restrictions as to class of traffic as exist at Poplar, and this is confirmed by the results shown by the Surrey Commercial Docks.

11569. Have you anything to say with reference to the charges on barges using Poplar Docks?—I have calculated that the charge on barges, irrespective of the charge on goods as proposed by the Bill of last session, would, in respect only of barges using Poplar Docks, afford the dock companies a revenue of £12,763 10s. per annum, and I believe this charge would destroy the trade of the Port of London, and I, therefore, ven-

ture to urge the Royal Commission not to recommend the imposition of any such charge—a charge which, as is clear from the evidence, neither the Poplar Docks nor the Surrey Commercial Docks find necessary for the earning of a respectable profit. No deduction has been made in respect of coal, because coal, to our dock, does not come within the exemptions of the Bill.

11570. Do you wish to say anything with reference to running powers over the Millwall Extension Railway?—I should like to make a correction of evidence that has been given. I notice that on the 4th Day, Mr. F. E. Duckham, in reply to Question 1076, stated that the railway companies have no running powers over the Millwall Extension Railway. This may be the case so far as other companies are concerned, but the North London Company have statutory running powers over that line, and have from time to time suggested putting those powers into force when difficulties have arisen in getting traffic expeditiously carried to or from the Millwall Docks. The powers in question are conferred by the London and Blackwall Railway Lease Act, 28 Vict., cap. c., sec. 11. I have observed that questions have been put to various witnesses, and statements made by them, which show that, in many cases, London is a cheaper port as regards official charges than many of its competitors, and this is undoubtedly the case when vessels are unloaded in the stream, and also, if when lying in the docks, the cargo is delivered overside into barges, and I am informed that it is the right of free access of barges, and free delivery of cargo overside into them, and that alone, which has preserved the trade of the Port of London, and that were this right taken away the trade of London would be driven away to other ports which would then be cheaper.

11571. You say you are informed; do you believe it?—This evidence was prepared by our general manager, Mr. Bolland Newton, who is unfortunately not able to be here owing to illness, and I am, perhaps, scarcely prepared to speak from personal knowledge.

11572. We are extremely sorry to hear of Mr. Bolland Newton's illness. Have you anything to say with regard to the increase of charges as affecting trade?—Trade is not attracted by an increase in charges already heavy, and, as a rule, if trade is to be attracted and developed, one of two courses only is successful, either the charges should be reduced, or if they are maintained, improved accommodation and facilities must be provided adequate for the demands of the traffic to be attracted. I desire as regards the future of the docks, to confine myself to the question of the control and management of the Poplar Docks only. So long as the company's right of egress and ingress through the Blackwall Basin is preserved, I cannot see that any change in the ownership of the West India Docks can make any material difference to the Poplar Docks, or to the trade therein, always provided that it is not for the future to be subjected to annoyance or obstruction, or to attempts to alter the charges to which I have already referred. In my opinion, friendly relations between the North London Railway Company and the owners of the West India Docks are essential in the interests of the latter, inasmuch as the Poplar Docks earn for them revenues from sources, and to an extent that are not, and cannot be, available to the owners of the West India Docks. I hand in a statement giving some indication of the various streams of traffic flowing to and from the docks over the railway, and the whole of that traffic has to be worked in with not only the other very great goods and mineral traffic of the railway, but with, what is more important, the enormous volume of passenger traffic which is carried by the line.

(The Witness handed in a Statement showing connections made between other Railway Companies by means of the North London Railway system, with examples of some streams of traffic regularly passing. See Appendix, 29th Day, No. 13.)

To accommodate the passenger traffic, there are trains between Poplar and Broad Street, still more trains between Broad Street and Bow, on the same branch, on which also are situate junctions with the Great Eastern at Victoria Park and Bow, and at Bromley Junction is also a junction with the Tilbury and Southend Railway, whilst at Dalston Junction come in the services between Broad Street and the western branch of the railway over which pass trains running to Camden, and also trains via Chalk Farm, over the North-Western lines to the North and South Western Junction Railway, and thus

connecting with the North Western, South Western, Great Western, Metropolitan, District, and all the railways south of the Thames, also by means of other junctions with the Midland at Maiden Lane and the Great Northern at Canonbury, over whose line the company run a service of passenger trains. The ordinary passenger service requires no less than 823 trains per diem and the goods trains amount to 514 trains per diem in addition. Besides this regular service special trains for either passengers or goods are frequently required. To secure the safety of this passenger traffic is of course the first duty of the North London Company, and the traffic to and from the Poplar Docks runs over the whole of these lines, and has to be carried along with and in many cases across the passenger traffic. The control and management of the Poplar Docks involves the power to disarrange the entire goods and mineral service, and is so inextricably mixed up with the railway that the possession and control of the water area so as to ensure the proper and regular admission and discharge of vessels, and transmission of traffic must remain in the hands of the railway company, in the first place, to secure the safety of their passengers, and in the second, so as to avoid the utter disorganisation of traffic, not on the lines of the North London alone, but on those of all the other companies over whose lines they run, or to or from whom they deliver or receive traffic. I wish to point out that the goods traffic of other companies is not a mere question of a waggon or so for each company, but it comes and goes in entire train loads coming from, or destined for, almost every part of Great Britain, some hauled by the company owning the train, others hauled by the North London Company, and therefore that punctuality on the North London line directly affects all the other great companies. I would point to the powers granted to many of the railway companies to make docks in connection with their railways, such as the Garston Dock of the North Western, or to acquire existing docks, such as the purchase of Southampton Docks by the South Western Company, as good precedents for the course I desire the Royal Commission to adopt, of leaving the Poplar Docks in the hands of the North London Company, who would, of course, be quite willing to purchase outright the leasehold portion of their docks, and, if necessary, to secure the full and free ingress and egress between their docks and the River Thames; they would be prepared also to purchase the Blackwall Basin. I desire to endorse most emphatically the opinion given by other witnesses that the privileges of the Watermen's Company are a serious danger to the trade of London. Our experience during the recent strike has proved the damage and annoyances which those privileges enable the freemen of that company to inflict upon trade, and, in our view, those privileges should be taken away entirely, and, so far as necessary, for public safety, conferred on the Thames Conservancy, or whatever body may be the future authority controlling the navigation of the River Thames.

11573. You told us that you were put to damage and annoyance during the strike?—Yes.

11574. Can you tell me how many lightermen who were working for you struck?—I cannot at the moment.

11575. Can you tell me any percentage of the number that you had?—I cannot off-hand. We have no lightermen of our own. The lightermen, of course, come into the dock.

11576. The lightermen with whom you were dealing?—I cannot give you the number. We were very seriously inconvenienced in our trade.

11577. During that strike, by the action of the lightermen, was your business paralysed?—Yes, it was practically paralysed. Our trains were running very badly, and our traffic was dislocated very seriously. Our sidings, notably St. Pancras, were blocked up with traffic which we could not deliver. I have read and considered carefully the report of the Rivers Committee of the London County Council, and, subject to due provision being made for proper access to this company's docks (which I gather from the report the County Council do not desire to acquire), and, of course, to the ownership of the Poplar Docks remaining undisturbed in my company, I am of opinion that the scheme outlined by that report presents a basis for constructing a workable scheme for controlling and developing the docks of London.

11578. Do you think that in the proposed scheme of

a Port Trust there should be railway representation?—Yes.

Mr. F. J. Dunn.

26 June 1901.

11579. You urge the representation of railway companies on that Trust or Board?—That is so. We think it is important that the railways should be represented.

11580. (Sir Robert Giffen.) Have you any idea of the proportion of representation the railway companies ought to have. Suppose there are 40 members on the Board. How many members do you think ought to be representative of the railway companies?—We have not considered that.

11581. Should it be a substantial representation?—I think so. The railway companies' interests are very great with regard to this matter. We are very much interested in it, probably as much as the shipowners. We have to carry traffic inland.

11582. You have said that the structural cost of those works at Poplar Dock and Goods Station is £444,378. You say you arrive at that amount by actual payments where practicable, and, where such information is not available, by measurement?—Yes.

11583. How much of the total sum consists of actual payments?—The bulk of it is actual payments.

11584. Would you say 80 or 90 per cent. of it?—There is only a small portion of it London and North Western Railway. The balance is all North London.

11585. (Rear-Admiral Hext.) I gather from your evidence that in the event of a Trust or body officially formed to control the Port and Docks of London, you wish to be the only docks excluded, and you wish to be free of their control?—I understand that the County Council do not want to take our docks.

11586. I am not talking of the County Council. I am asking you this question. In the event of a public body being formed to control the docks and river of London, you wish the Poplar Dock to be excluded altogether, and to remain under your own control?—I am afraid I am not in a position to reply to that definitely. I am informed that our General Manager's opinion is that we should be left.

11587. (Mr. Ellis.) We have had plans of the other docks put in; perhaps you will see that one is put in of your dock?—Yes, I will hand one in.

(The Witness handed in a plan of the Poplar Dock.)

11588. (Sir John Wolfe-Barry.) With reference to the profit earned attributable to docks apart from the warehouses you have said that prior to the agreed payments to the East and West India Company in respect of wharfares, the income would show a net return upon the capital cost of 4.34 per cent. That is reduced to .58 per cent. Is that reduction due to the payments to the East and West India Dock Company?—It refers to wharfage under our arrangement with the dock company, under the lease. I can hand in a copy of the lease if you wish.

(The Witness handed in a copy of the Lease of the Poplar Dock granted by the East and West India Dock Company to the North London Railway Company, July 1st, 1867. See Appendix, 29th Day, No. 14.)

11589. I see it is less than half the wharfage?—Yes.

11590. Do the North London Railway Company retain the other half of the wharfage?—Yes, it is simply an assumed charge; no actual money passes.

11591. At any rate, we may take it that the North London Railway Company only make .58 per cent. on the capital which has been expended in the construction and equipment of the docks?—Yes, practically a half per cent.

11592. A little over a half per cent.?—Yes.

11593. Will you tell us what they spent in the construction and equipment of warehouses?—Roughly £300,000.

11594. On warehouses and equipment apart from construction of the docks?—Yes.

11595. What revenue does the railway get on the warehouse business?—Differential rates.

11596. What do they come to per cent. on the expenditure after deducting working expenses?—Our tenants, the other companies, pay 6 per cent. The Great Northern Railway, the Great Western Railway, and the London and North Western Railway are the tenants.

11597. You do not hold them yourselves?—No.

11598. You lease them to other companies?—Yes, they are practically our tenants.

Mr. F. J.  
Dunn.  
26 June 1901.

11599. They pay you 6 per cent. on an apportioned amount of this £300,000?—It is an arranged amount.

11600. In each case you apportion the amount to each company, and they pay 6 per cent.?—Yes.

11601. Then what is the great interest that the North London Company have in the dock except as carriers of traffic into the dock?—We are the landlords.

11602. But I mean what money interest?—The rent of the warehouses.

11603. But in the dock itself apart from the warehouses?—The railway-borne traffic.

11604. As an owner of the dock, apart from warehouse matters and as carriers, the only interest that the North London Company have is about '58 per cent. of revenue on the capital which has been expended?—That is so.

11605. Do all railway companies' vehicles come to Poplar?—The traffic of nearly the whole of the railway companies comes to Poplar, with the exception, perhaps, of the Midland, who have a warehouse of their own.

11606. I do not recall whether you have told us what companies have warehouses there?—The London and North Western, the Great Western, and Great Northern.

11607. How is the Midland Company's traffic accommodated?—The Midland have a separate place of their own about a quarter of a mile off.

11608. Is that at Limehouse?—No, it is closely adjoining ours, between Blackwall and Poplar.

11609. Have they a separate entrance to the Thames?—Yes.

11610. Can you give us any idea of the proportionate amount of traffic at the Poplar Docks which is barged either from and to the vessel, and the proportion which is taken from ships into warehouses, or shipped direct on to ships?—All traffic.

11611. I want the proportion between the traffic which is barged and the traffic which is not barged?—I have not the exact figures, but I think the whole of the goods traffic is barged. The coal traffic is practically all shipped. It comes by ship.

11612. Can you give me the tonnage of vessels and barges for Poplar Docks?—Yes. It is as follows:—

Statement showing the aggregate register tonnage of vessels and barges entering and leaving the North London Company's Poplar Docks Loaded.

		Year 1899.	
		No.	Aggregate Register Tons.
Steam Colliers	- - -	133	70,734
Sailing Vessels	- - -	21	1,499
Barges—Goods	- - -	13,116	*693,049
Barges—Coal and Coke	- - -	1,377	*72,761
		14,647	838,043

The acreage of the North London Company's Docks is 7.5, therefore

838,043 tons on 7.5 acres = 111,739 tons per acre.

\* Based on the average of 710 barges belonging to 35 different owners, which entered the North London Company's Docks during October, 1899.

11613. (*Rear-Admiral Hext.*) You have referred in your evidence to the event, if a Trust was formed, of your purchasing the Blackwall Basin?—Yes.

11614. Would not that invalidate the entrance to the West India Dock?—I should not think so. Practically there is very little being done in the West India Dock now.

11615. You would not advocate doing away with the whole of the West India Dock?—I take it we should not obstruct that. We should allow the vessels to go into the West India Dock.

11616. What ships go into your own dock now?—Practically all sorts of small ships.

11617. Very small, I presume?—Yes. We have recently had to enlarge our entrance to let the modern coaling vessels through. They are small vessels.

*Cross-examined by Mr. George Wallace.*

11618. You have mentioned a claim made by the Joint Committee in regard to a piece of land of 83 square

yards required for widening, which was followed by a claim by the amalgamated Company. Those claims are, in fact, still pending, are they not, against the North London Company?—Yes, I believe they are. The last one, £34,600, has only just been received.

11619. It is a matter about which a decision remains to be given?—Yes.

11620. Then I shall not discuss it. You have told us that you get from the railway companies, to whom you let your warehouses, a return of 6 per cent. on your £300,000?—Yes.

11621. That rental you got from them by the terms of a lease, or some agreement?—We have an agreement with the company.

11622. They agreed to pay you the 6 per cent.?—Yes.

11623. In point of fact, your relation with the old East and West India Dock Company, and now with the new company, depends altogether upon an agreement, does it not?—The original lease, I take it.

11624. Have you ever seen it?—I believe I have.

11625. I do not mean the original document, but are you familiar with the terms of the document at all?—I cannot say that I am.

11626. In point of fact, I may put it to you shortly, no doubt it depends upon three documents of the 1st of July, 1857, which are extremely long and extremely complicated?—Yes, that is so.

11627. What the particular rights of the dock company or yourselves are upon that, it would require some of His Majesty's Judges to decide?—I think so.

11628. You say that in the year 1896 there was paid to the Joint Committee by or through the North London Company for wharfage, rail haulage, and dock dues no less a sum than £31,347?—Yes.

11629. Have you yourself any personal knowledge on the matter?—I have a return showing how the amount is made up.

11630. Will you just answer this question generally, because I suppose you have inspected the returns before you came to give evidence?—Yes.

11631. Recently?—Within two or three days.

11632. Will you tell us the items of that sum of £31,347?—Yes, I can give you the whole of the details. This is a statement showing direct payments to the London and India Docks for wharfage, rail haulage, dock dues, etc., on traffic passing over the North London Railway to and from the various docks during the year 1899.

Railway Company.	Amount.
	£
London and North Western	- - 14,082
Great Northern	- - 10,828
Great Western	- - 6,252
North London	- - 5,600
£36,762	

These figures are exclusive of the Joint Committee's interest in the direct rail traffic worked by them to and from Millwall Docks and North London Railway, the tonnage of which for the year 1899 was 72,768 tons.

11633. Are the London and North Western, the Great Northern and the Great Western Railway Companies the ones which bring traffic over the North London line?—Yes.

11634. You pay £5,600?—Yes, in respect of Poplar.

11635. We are only dealing with Poplar. Does this table include anything besides Poplar?—Certainly, as stated in the heading which I have given you. It is in respect of all traffic passing over the North London Railway to and from the various docks.

11636. Whatever dock?—Certainly.

11637. Were you here when Mr. Scott was cross-examined?—No.

11638. Perhaps some of your advisers were. There is a suggestion at Question 6169 which I want to put to you.

(*Mr. Joseph Shaw.*) If my friend, Mr. Wallace, will allow me to say so now, I was going to explain that matter when my turn came. I was under a misapprehension at the time. From the papers before me I understood that the £36,762 was only relating to the

Poplar Docks. Since then I have had the matter inquired into; I asked the question afterwards myself, and I had the correct information. It meant all the traffic.

(Mr. George Wallace.) Then that disposes of the suggestion.

(Chairman.) Under those circumstances we need not pursue the point.

(Mr. George Wallace.) No, my Lord; not at all.

(Witness.) The amended figure was put in with a view to clearing up the matter.

11639. (Mr. George Wallace.) I see the amount that you pay of £5,600 includes the North London traffic for all the docks?—Oh, no. The £5,600 is that which we pay the dock company in respect of Poplar.

11640. Do you get no North London traffic from any of the other docks upon which you pay charges?—No, we do not pay charges, but we are instrumental in carrying the traffic which is represented by that £36,762. It passes over the line. It goes through the neck of our bottle.

11641. You have given us some figures as regards income, and you have said the ultimate profit left to the railway company in respect of the docks is 0.58 per cent. on the capital. Do you, in fact, keep a separate account for the dock distinct from the railway company. Perhaps you do not yourself know?—I do not myself know. At the Poplar Station for the goods department we have a separate wages bill in respect of the men who are there; it does not come into the traffic department.

11642. Are you able to tell me yourself how the account is kept?—No, candidly, I cannot tell you.

(Sir John Wolfe-Barry.) Mr. Wallace, you will observe that Mr. Bolland Newton, who was to have given this evidence, but who is prevented from doing so by illness, states that he has taken out the income attributable to the docks apart from the warehouses.

(Mr. George Wallace.) Yes; I wanted to find out how it was done.

(Sir John Wolfe-Barry.) I am afraid you cannot get it from this witness.

(Mr. George Wallace.) No, I have come to an absolute impasse.

11643. Do you know whether, in fact, they make any specific dock charges as against railway charges. I may put it shortly, I am sure you will answer me candidly—you really do not know how the accounts are kept or made up at all?—I have already said so.

(Chairman.) Might I suggest that the account is separated in Mr. Bolland Newton's statement of evidence. He separates the dock and railway charges.

(Mr. George Wallace.) Then, my Lord, I should like to ask a question about it.

(Chairman.) We are in a difficulty, because you see this witness is only appearing for Mr. Bolland Newton and giving his evidence—really Mr. Bolland Newton's evidence. He would have been here but for his illness.

(Mr. George Wallace.) I quite feel that, my Lord.

(Mr. Joseph Shaw.) My difficulty, my Lord, is that Mr. Bolland Newton is not here.

(Sir John Wolfe-Barry.) I suppose we may take it that Mr. Newton had it taken out for him by the proper accountants of the railway company.

(Mr. Joseph Shaw.) As you know, sir, that is always done.

(Sir John Wolfe-Barry.) Then probably it would not be done by Mr. Newton himself.

(Mr. Joseph Shaw.) No.

(Chairman.) Mr. Wallace's point is that he would have liked to ask some questions about it.

(Mr. Joseph Shaw.) I have no doubt the accountants who took out the figures can be produced before the Commission, if desired, and the matter can be cleared up.

(Chairman.) I do not think there will be any doubt about the figures.

(Witness.) This was all taken out very carefully.

Mr. F. J. Dunn.

Re-examined by Mr. Joseph Shaw.

11644. That figure of £36,762 represents the traffic brought in over your line to any of the docks?—Yes.

11645. And that is actually the money that you are instrumental in earning for the dock company?—The London and India Dock Company.

11646. To make it perfectly clear, you are the connecting link, so to speak, between the great railway systems of England and the docks?—We are one of them.

11647. You are one of the most important; in fact, your original start was to be a connecting link between the London and North Western Railway and the docks?—The old London and Birmingham Railway, before the amalgamation, and the docks.

11648. With regard to the question about your traffic, do you mean that all your traffic into the docks is railway-borne traffic?—Yes.

11649. You do not carry on a business such as the other docks do, of warehousing, and so on. All your business is railway-borne business?—We are restricted to that.

11650. You are restricted by your lease to railway-borne business?—Yes.

11651. So far as the warehouses are concerned, you being only the connecting link, do not want warehouses for yourselves; but the railway companies who may want to hold the stuff do want the warehouses, and lease them from you?—Yes, our three tenants.

11652. So far as the barging goes, for your purpose, must that be free, as now?—We think so.

11653. In fact, all the goods that are barged into the dock go on to the quayside, and the dock gets paid for it?—Yes.

11654. (Rear-Admiral Hext.) You have just said that you wish the barges to be entirely free?—Yes.

11655. You would not make any charge at all for out-of-pocket expenses, for increased pumping, etc., which the docks have to go to for the accommodation of barges?—We already pay for the increased pumping.

11656. I am talking of barges. Would you give the barges all the facilities which they have now, which cost considerable sums to the dock company, and would you still give them those facilities free, gratis and for nothing?—Yes.

(Mr. George Wallace.) I do not know whether your Lordship has any further witnesses to call.

(Chairman.) That concludes the evidence, I understand.

(Mr. George Wallace.) I was going to make an application to your Lordship with reference to one or two things which have been said in the course of the evidence. I am sure your Lordship will understand the fact that because one does not cross-examine it does not mean that one accepts every statement that is made by a witness. There are one or two statements that have been made by witnesses with regard to which I should like, with your Lordship's permission, to recall Mr. Hardy. There are, I think, about four points, but they are extremely short.

(Chairman.) Will you tell us what the points are, because this raises the question of rebutting evidence. We do not want to have that. If you have any specific points which you will bring before us, we can tell you whether we will hear further evidence as to them or not.

(Mr. George Wallace.) The first point is in connection with Question 9562. That is in Mr. Powell's evidence.

(Chairman.) Is this a contradiction of a contradiction?

(Mr. George Wallace.) Mr. Scott was asked a question about it, and then Mr. Powell came comparing a rate of 5s. 6d. with a rate of 9s. 9d., which he alleged the dock people charged. I should like to recall Mr. Hardy upon that. It relates to charges I know; but the matter has been started.

(Chairman.) We will not go into any further questions of rate, but as this has been allowed to go in. I think it is only fair to you that we should hear what Mr. Hardy has to say.

Mr. T. Hardy.

26 June 1901.

See 9562.

Mr. THOMAS HARDY recalled and further examined.

11657. (*Mr. George Wallace.*) Will you tell the Commissioners what you say with reference to the answer about the rates of 5s. 6d. and 9s. 9d.?—The rate of 5s. 6d. charged by wharfingers was compared with the rate of 9s. 9d. charged by the dock company. It was alleged that the services were precisely of the same character. The 9s. 9d. rate is one that has been arranged with the leather trade, and includes, as Mr. Scott explained, delivery to the trader's premises in Tooley Street. A good deal of leather, both Australian and American, comes to Tilbury Dock, and the expenses which the dock company has to bear to earn the 9s. 9d. are:—Paid to ship in respect of labour performed on quay at Tilbury, 1s. 6d.; conveyance from ship's side to Commercial Road Depot, 4s. 6d.; cartage from Commercial Road to Tooley Street, 3s. 4d., making a total of 9s. 4d., which leaves a gross profit to the dock company of 5d. a ton. Clerical and other establishment expenses come out of that small profit. Leather discharged at the Albert and Victoria Docks gives a somewhat better return, the rate being the same and the expenses of transit something less; but the 9s. 9d. rate cannot be compared with the rate of 5s. 6d. a ton charged by wharfingers. A wharfinger certainly could not afford to pay the London Clause charge and bear the expense of lighterage and cartage out of such rate. A landing rate of 5s. 6d. a ton is in force at the docks in cases where the goods are delivered from the dock at which the ship discharges.

*Cross-examined by Mr. Rowland Whitehead.*

11658. With regard to the second item that you have mentioned, namely, conveyance from the ship's side to the Commercial Road Depot, 4s. 6d., how is the conveyance carried out?—By rail.

11659. Then cartage from Commercial Road to Tooley Street 3s. 4d. Is that the charge which Mr. Scott said is 5s.?—No; I explained it is rather a better rate for us when the conveyance is made from the Victoria and Albert Docks, because then we can get the goods carted all the way for 5s.

11660. If it comes from Tilbury it is 4s. 6d. rail and 4s. 4d. cartage?—Yes, making 7s. 10d.

11661. I do not quite understand your position. Do you deny that if the leather is taken by the wharfinger his charge to the trader is 5s. 6d.?—I cannot deny it, because I have no knowledge on the matter, but I certainly do dispute that any wharfinger would pay 1s. 6d. out of the 5s. 6d. rate for London Clause charge, and that he would also pay cartage at the other end out of your low rate; he could not do it.

11662. I do not want matters of opinion; I want matters of fact. Mr. Powell has said that the charge to him by the wharfinger is 5s. 6d.; do you deny that?—I believe he pays the London Clause rate himself.

11663. You do not deny it?—I can only argue from a common sense point of view.

11664. You do not deny as I understand that your charge is 9s. 9d.—never mind what it includes?—I get considerable traffic, which shows that the service is a totally different one.

11665. If the leather is delivered by the dock company to the merchant the charge is 9s. 9d. for the services which you have enumerated?—Yes.

11666. That is agreed?—Yes, it is 9s. 9d.; I am explaining how the charge is made up.

*Re-examined by Mr. George Wallace.*

11667. I think you said you get a considerable quantity at that rate?—Yes; nobody would pay us that rate if he could get the same services done for 5s. 6d.

11668. The next matter with which you wish to deal is with regard to Mr. Rouse's evidence as to rates on coffee. There were some questions put by Mr. Lyttelton with reference to a table that was put in at Question 9597, which table is shown in Appendix No. 3 of the 25th Day. What do you say with reference to the charge as regards Brazilian coffee?—As regards Brazilian coffee, very little of this comes to London. None direct, but *via* Southampton, where it is discharged from the Royal Mail steamers or from Continental ports. As regards that *via* Southampton, we collect the coffee by lighter from Nine Elms at a cost of 2s. 6d. a ton, and land it at the London Dock at the

the St. Katharine Dock. Our rate, which includes lighterage, landing, housing, sorting for damage, weighing, sampling, storage for 21 days, and delivery either to land conveyance or to water conveyance, is 7s. 6d. per ton; deducting 7½ per cent. (11½d.), it comes to 6s. 6½d. Mr. Rouse dealt with a rate covering three months' storage, but there is no necessity to pay three months' rent unless the goods are actually stored for three months; but if so stored by the importer, the rent, in addition to the above, would be 6d. per ton a week, say 10 weeks, 5s.; deducting 7½ per cent. (4½d.), makes 4s. 7½d., or a total of 11s. 2½d. Mr. Rouse's figures are:—If delivered by land: Landing, etc., 12s. 6d.; delivery, 5s.; making a total of 17s. 6d. If delivered by water: Landing, etc., 12s. 6d.; delivery, 6s. 8d.; making a total of 19s. 2d. In other words, Mr. Rouse has stated the London charges from 57 to 72 per cent. higher than they really are.

11669. Now, what do you say as regards East India coffee?—As regards the East India coffee there is a consolidated rate which includes lighterage from ship to warehouse, landing, housing, bulking, sorting for damage, filling-in and weighing, storage for six weeks, and delivery to land conveyance or to water conveyance, of 14s. 2d. per ton gross; extra for sorting and lotting (1½d. per bag), say 1s. 4½d.; making 15s. 6½d.; deducting 7½ per cent. (1s. 6½d.), it comes to 14s. There is no necessity to pay for three months' storage. The goods are, in fact, often sold within the six weeks covered by the consolidated rate; but if they were stored by the importer for three months the additional charge for rent would be:—Seven weeks at 6d., 3s. 6d.; deducting 7½ per cent. (4d.), making 3s. 2d., or a total of 17s. 2d. Mr. Rouse's figures are:—If delivered by land: Landing, etc., 18s. 9d.; delivery, 5s.; making a total of 23s. 9d. If delivered by water: Landing, etc., 18s. 9d.; delivery, 6s. 8d.; making a total of 25s. 5d. In other words, Mr. Rouse has stated the London charges from 38 to 48 per cent. higher than they really are. In both cases Mr. Rouse appears to have forgotten the discount, and has added a delivery charge which is in fact never made. The only case in which a delivery charge would be at all likely to be made on coffee would be where an importer took delivery to water from the place of discharge within three days from landing. In such a case the charge would be:—Landing rate, 8s. 4d. per ton; delivery to water, 2s. 3d. per ton; making a total of 10s. 7d. Coffee, however, is never removed under such conditions, and, in fact, never dealt with upon a rate which is exclusive of delivery. Mr. Rouse alleged that the figures stated in the schedule which he put in represented amounts which he himself had actually paid. He never has paid any such amounts as stated under the head of London, and he cannot produce any vouchers in proof of any such payments. I ask to be allowed to hand in copies of three bills that have recently been rendered to Mr. Rouse for charges on coffee.

*(The Witness handed in copies of three accounts rendered by the London and India Docks Company in respect of Charges on Coffee. See Appendix, 29th Day, No. 15.)*

I should like to add, if I may, that Mr. Rouse's evidence is not the only evidence which has been tendered by the Chamber of Commerce on the subject of charges on coffee.

*(Chairman.)* We do not want to go into any other specific charges.

*(Mr. Rowland Whitehead.)* Your Lordship will understand I am placed in considerable difficulty with regard to this. Mr. Rouse made these statements in the presence of counsel for the dock company, and they were at liberty to cross-examine him upon the matter when he was in the witness-box. He would have been prepared to deal with any facts which were within his personal knowledge, but it is rather difficult for me now to deal with facts which Mr. Rouse ought to prove.

*(Chairman.)* It is only fair to say that I think it is the Commissioners' fault. It was the one occasion when we deferred to you by allowing the introduction of evidence with regard to rates.

*Cross-examined by Mr. Rowland Whitehead.*

11670. Mr. Rouse dealt with two articles in his table handed in at Appendix 3 on the 25th day. One was cotton and one was coffee?—Yes.

11671. You have examined the figures he gave?—Yes.

11672. Do I understand rightly that you do not dispute the accuracy of the figures that he gave with regard to cotton?—Yes, I do; I have not gone into cotton, because it is really a negligible quantity in London; it is not worth talking about; but Mr. Rouse is wrong in his figures as to cotton.

11673. Were you present in the room when Mr. Rouse was giving evidence?—Yes, but I had not the material with me for correcting his evidence.

11674. You say that Brazilian coffee all comes to London *via* Southampton?—Or Continental ports.

11675. Is it not true that some has come in within the last two or three years, say, to the Victoria Dock?—It is more than two or three years ago; it must be ten years ago.

11676. But it has come?—Yes.

11677. So that we must modify your statement to that extent?—I do not think so. It is ten years ago; there has been none since. It never comes now, I say.

11678. With regard to the cost to you of 2s. 6d. for doing the lightering from Nine Elms to London Dock, do you do the lightering yourself with your own men?—No, the London and South-Western Railway Company do the lightering, and we pay them their charge.

11679. Is it an all-round charge that they make?—Yes.

11680. For all kinds of goods?—We get a little wool sometimes.

11681. It is not a special charge made with reference to coffee?—No; we pay 2s. 6d. all round.

11682. Does that include lighterage from any other point than Nine Elms?—No.

11683. Simply between those two points—Nine Elms and the London Dock?—Yes.

11684. Your point, as I understand, is contained in your statement that Mr. Rouse has stated the London charges to be 72 per cent. higher than they really are?—Yes.

11685. You arrive at that by comparing the figure of 19s. 2d. with your figure of 11s. 2½d.?—Yes.

11686. Roughly speaking 19s. 2d. is 72 per cent. more?—Yes.

11687. But you also attribute another figure to Mr. Rouse of 17s. 6d.?—Yes; that would be 57 per cent. higher.

11688. But you did not first of all, at all events, consider that that difference of 14 or 15 per cent. was worth commenting upon. You put the case at the extreme as against Mr. Rouse?—I did not do anything of the sort. In giving my evidence to-day you must please take what I have said. I have said from 57 to 72 per cent.

11689. Mr. Rouse, you say, gave certain figures of 17s. 6d. and 19s. 2d.?—Yes.

11690. The figure of 72 per cent. which you put before the Commission is not an accurate figure when you make a comparison with that 17s. 6d.?—No.

11691. There is a difference of something like 15 per cent.?—Yes.

11692. Did you do that intentionally or unintentionally?—The whole discussion on the occasion when Mr. Rouse gave his evidence was as to the additional charge for delivery to water over the charge made for delivery to land; therefore I was specifically dealing with that figure.

11693. I am coming to Mr. Rouse's evidence. I am dealing now with your evidence. Did you regard that 15 per cent. as an important matter or an unimportant matter?—I am quite ready to make Mr. Rouse a present of that 15 per cent.

11694. The same, then, applies with regard to your calculation of 38 per cent. There, if you compare the 17s. 2d. and 23s. 6d. it is a difference of 38 per cent.?—I have said so to-day in my evidence. I have actually used those very figures.

11695. Mr. Rouse's figure you say is 17s. 6d.?—Yes.

11696. Show me where Mr. Rouse gave that figure. Show me any place, either in the notes of evidence, or

in the Appendix, where any such figure was given by Mr. T. Ha., Mr. Rouse?—Are you speaking of Brazilian coffee now? 26 June 1900.

11697. I am taking your statement that those figures are Mr. Rouse's figures?—It will be found in the table. Mr. Rouse showed that the rate on Brazilian coffee was 7½d. per hundredweight, plus a delivery charge of 5s. a ton.

11698. You are not answering my question. I ask you where do you find in the Evidence, or in the table, that Mr. Rouse put before this Commission the figure of 17s. 6d.?—I am telling you where I find it.

(Mr. George Wallace.) My learned friend asks the witness a question, and when the witness goes on to explain he stops him.

11699. (Mr. Whitehead.) You are giving me something quite different; you are giving me 7½d.?—That is per hundredweight, and I have sufficient capacity to calculate and arrive at 17s. 6d.

11700. Then this 17s. 6d. is arrived at by you by calculation?—I am turning into tons what he stated in hundredweights.

11701. You come here to make corrections, as a pattern of exactitude, and I want to find out whether your statement is exact. Those figures are not Mr. Rouse's figures at all?—Do you dispute that 20 times 7½d. are 12s. 6d.?

11702. Are they your figures or Mr. Rouse's?—They are both mine and Mr. Rouse's.

11703. They are not Mr. Rouse's unless you can find some place where Mr. Rouse put them before the Commission. You are suggesting that Mr. Rouse has placed inaccurate information before the Commission?—I say so.

11704. With regard to this 17s. 6d. he never put it before the Commission?—He said that the rates were 7½d. per hundredweight, and 5s. per ton for delivery.

11705. We will deal with what Mr. Rouse put before the Commission. I will ask first of all about your statement. Your rate, which includes lighterage, landing, housing, sorting for damage, and so on, is 7s. 6d. per ton?—Yes, but the "so on" includes delivery.

11706. I will read it: "Storage for 21 days and delivery either to land conveyance or water conveyance is 7s. 6d. per ton."?—Yes.

11707. That is the rate which appears in your book of rates?—Yes.

11708. If, as a matter of fact, the goods are stored for three months, you have to add to that a rent charge for 10 weeks?—Yes.

11709. A charge of 5s.?—Yes, less a certain discount.

11710. I will come to the point of discount presently. If you add 5s. to 7s. 6d. you get a gross charge of 12s. 6d.?—We get 11s. 2d.

11711. If you add 5s. to 7s. 6d. (I am dealing with the gross charges without taking off the discount) you get 12s. 6d.?—Yes.

11712. And 12s. 6d. per ton is equivalent to 7½d. per hundredweight?—That is what I thought.

11713. And 7½d. per hundredweight is the figure contained in the table which Mr. Rouse put before the Commission?—Yes.

11714. So that on that point we are in agreement?—Yes.

11715. Now, take the East India coffee. I want to see how far Mr. Rouse was accurate. There you have a consolidated rate, which works out on your table at 14s. 2d.?—I do not admit Mr. Rouse was accurate in the case of Brazilian coffee.

11716. You made a distinction, and said that he did not include discount?—And he added delivery, which the other rate covers.

11717. Now, take the 14s. 2d.; you have there 14s. 2d. for consolidated rate?—Yes.

11718. That includes six weeks' storage?—It includes six weeks' storage.

11719. And if you are going to include three months you must therefore add seven weeks' rent?—Yes.

11720. At 6d. per ton; that is 3s. 6d.?—Yes.

11721. And 1½d. per bag—say 1s. 4½d.?—Yes.

11722. That comes to 19s.?—Yes.

1 Hardy. 11723. And that works out at 11½d. per hundred weight gross charge?—Yes.

26 June 1901. 11724. The figure which Mr. Rouse put in the table was 11½d.?—Yes.

11725. You say the discount ought to come off those figures of 7½ per cent.?—Yes.

11726. If you take 7½ per cent. off 7½d. it works out to about 7d., does it not?—Yes.

11727. So that, making full allowance for the discount, there ought to be that variation in the Table; the figure ought to be changed from 7½d. to 7d. roughly speaking?—No, I do not agree at all.

11728. I quite understand your argumentative point about adding for delivery or landing. I am not forgetting that, but the figure in the table is a figure of 7½d., which is accurate to this extent: it is accurate if you take off 7½ per cent. in respect of discount?—I cannot take the figure apart from the services which Mr. Rouse enumerated.

11729. The table must speak for itself; I want to speak of the figures. Take the East India coffee. If you take off 7½ per cent. from the 11½d. you get a charge which should be 10½d., call it 10½d., instead of 11½d.?—Yes.

11730. That allows for the discount?—Yes.

11731. Take warehousing. Is it not a fact that you allow discount to the importer?—Yes.

11732. But if goods remain in the warehouse to the order of the buyer you do not allow that 7½ per cent. discount to the buyer?—That is so.

11733. And where the coffee is warehoused by the buyer that allowance of 7½ per cent. should not come off?—If the coffee is warehoused by the buyer he would get 7½ per cent. It would not be warehoused by the buyer, but by the importer.

11734. It may be warehoused in the first instance by the importer, but it remains in the warehouse to the order of the buyer?—He would pay rent; there would be no other charge to the buyer.

11735. The buyer would not get that 7½ per cent. discount?—No.

(Mr. George Wallace.) There is one matter that, perhaps, I ought to deal with with reference to the evidence of Mr. Garratt and Mr. Robinson. It is referred to at Question 9905. It is most conveniently put in the Appendices to the 26th Day, Nos. 1 and 2. That is Mr. Robinson's evidence. It is a very short matter. I do not know whether your Lordship thinks it necessary to go into it. It is about the 1s. 9d. a ton.

(Chairman.) No, I do not think it is necessary to go into it.

#### Re-examined by Mr. George Wallace.

11736. There is one other matter I have to ask you about with reference to Questions 10108 and 10109. It is in the evidence of Mr. Tasker. He gave a recent instance of a transaction in which he made a complaint against the company. I cross-examined the witness as to the transaction, and he was good enough to give us some information about the matter, which you have been able to trace, have you not?—Yes. Mr. H. B. Tasker, in his evidence on the 17th June, at Questions 10108 and 10109, made reference to the alleged heavy charges made by the docks upon export goods, and said that those charges operated against his landing flour in the docks. He illustrated his remarks by reference to a recent instance, particulars of which he did not then give, but which from information he has since supplied I have been able to trace. He had 165 bags of flour, weighing 10½ tons, ex the "Duke of York," which he desired to ship by the Messageries steamer "Baghdad." The transfer charge of 3s. 4d. a ton was quoted to him for carting the flour from one part of the dock to another, and for delivery to the export ship. There must be some misunderstanding as to his being told that we could not lighter the goods, because we actually publish a tariff of the rates at which we undertake to lighter goods to export ships, and the rate for flour in quantities of less than 50 tons is 1s. 8d., and for quantities in excess of 50 tons 1s. 6d. per ton, with a minimum charge of 30s. Mr. Tasker said in his evidence that had the flour been landed at any private wharf in London the transferring would have been done for 1s. 9d. a ton. It is extremely improbable that any lighterman would undertake to convey from a river

wharf to an export ship lying in dock 10 tons of flour at 1s. 9d. a ton, but if he would do so from a river wharf he would equally do it from a dock warehouse, and Mr. Tasker is entirely in error in supposing that he would be at any disadvantage in that respect by landing his flour at the docks. Indeed, as I have shown, subject to a minimum charge, the dock company itself would lighter the goods for 1s. 6d. or 1s. 8d. a ton. Then Mr. Tasker made a very curious comparison between a rate of 8s. 9d. charged by the dock company and a charge of 1s. 9d. for lighterage, and wished it to be inferred that he was comparing like with like. The rate of 8s. 9d. a ton covers collection by cart from any warehouse within the City limits, conveying by rail or otherwise to any of the company's docks, depositing goods in export shed, keeping them there (if necessary for three weeks) until the ship is ready to receive them, and then trucking them out to the ship's side. Mr. Tasker did not in so many words say that he could get all those services performed by a lighterman at 1s. 9d. a ton, but he clearly wished it to be so understood, otherwise there is absolutely no point in his observation at the end of Question 10108 that "the difference in charge of 8s. 9d. to 1s. 9d.—7s. a ton—is a much more handsome profit than we get on our trade in the usual way."

#### Cross-examined by Mr. Rowland Whitehead.

11737. Do you deny the statement made by Mr. Tasker that when he made application to the Dock Company or their officials, he was told that they would not do this lightering for him?—I do not deny it, but I think there must have been some curious misunderstanding, because we actually publish a rate at which we will do lightering.

11738. I have in the room a gentleman who can give evidence with regard to this. I can call another witness who can prove that this did, in fact, take place; but I do not understand you to deny it?—No; I only wish to correct Mr. Tasker's point that he is at a disadvantage when he puts his goods into a dock warehouse.

11739. Then with regard to what you say about the 1s. 9d. and the 8s. 9d. Mr. Tasker said that he wanted certain services performed for him in taking the goods from one dock to another?—Yes.

11740. He was not in the City limits, and he did not want those services, and this was a case where you offered to charge him the consolidated rate, which includes a large number of services, when he only wanted a smaller service. Is that so?—No; I do not think that is so. The 8s. 9d. certainly would have been our charge, and where I think Mr. Tasker has confused two things is in this. He says we said we are not lightermen; you had better go and get it done by some lightermen. That is the answer that would have been given to him if he had said: "What is the rate for conveying it from one dock to another?" We should have said: "We are not lightermen."

11741. And you would have charged him 8s. 9d., the consolidated rate, which covers a large number of services?—We should not have got the business.

11742. (Chairman.) What you mean to say is that the application made to you by Mr. Tasker, you would have replied to by saying: "It is not our business to do it"?—Yes. It is not our business to do it.

(Mr. Rowland Whitehead.) It is a small point, but I should like to get it clear, that the negotiations which Mr. Tasker said took place did, in fact, take place. That is all I have to ask.

(Chairman.) As far as the Commissioners are at present advised, the evidence is closed. Under the circumstances we hope it will be convenient to the learned counsel to begin their addresses on Monday, the 1st July; and we trust that before that date they will make it convenient to send in to the secretary some memorandum as to the order in which they propose to address the Commission. We think they might make an arrangement between themselves.

(Mr. Scrutton.) My Lord, I understand that a very considerable part of an agreement has been come to. I understand that Mr. Daldy, for the County Council, will be ready to speak early on Monday; Mr. Whitehead, for the Chamber of Commerce, will be ready to speak on Monday; and I understand also that Mr. Harper will be ready to speak on Monday.

(Chairman.) As I have said before, the Commissioners trust that the learned counsel will restrict their speeches to the matters which immediately affect their clients.

(Adjourned to Monday, July 1st, at 11 o'clock.)

## ROYAL COMMISSION ON THE PORT OF LONDON.

## THIRTIETH DAY.

*Monday, 1st July, 1901.*

## PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTELTON, K.C., M.P.  
 The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
 Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.  
 Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
 JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., Secretary.

Mr. BALFOUR BROWNE, K.C., and Mr. GEORGE WALLACE appeared on behalf of the London and India Dock Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. R. W. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

Mr. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. HORACE AVORY, K.C., appeared on behalf of the Watermen and Lightermen's Company.

Mr. CLAUDE BAGGALLAY, K.C., and Mr. F. P. M. SCHILLER appeared on behalf of the promoters of the Thames Lightermen's Bill.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

Mr. JOSEPH SHAW appeared on behalf of the North London Railway Company.

Mr. F. P. M. SCHILLER appeared on behalf of the Short Sea Traders' Association.

The Hon. J. D. FITZGERALD, K.C., appeared on behalf of the Commissioners of Sewers for the limits from Lombard's Wall to Gravesend Bridge in Kent, the Commissioners of Sewers from Gravesend Bridge to Sheerness in Kent; the Commissioners of Sewers for Havering and Dagenham and other levels in Essex, and the Commissioners of Sewers for Rainham and other levels in Essex.

The Hon. J. D. FITZGERALD, K.C., called to address the Commission.

11743. (*Chairman*.) You propose to address us on behalf of the Commissioners of Sewers for various districts?

(*Mr. J. D. Fitzgerald.*) Yes, my Lord. You were good enough on the last occasion, when you intimated that you did not consider it necessary to hear evidence on behalf of the Commissioners of Sewers, to say that you would allow their Counsel to address you and put their case before you. I promise to be only a very few minutes, because the case is entirely in a nut shell, and it is a very simple one indeed.

The Commissioners of Sewers whom I represent on this occasion, are the Commissioners of Sewers both on the Essex and on the Kent sides of the river, and just to make it plain who they are and what their jurisdiction is I will say this: On the Essex side of the river, speaking generally, their jurisdiction commences at Barking Creek—they have a little jurisdiction higher up which I need not refer to—and runs from Barking Creek down to Mucking Creek, which represents roughly some 25 miles of river wall on that side of the Thames. On the Kent side of the Thames the jurisdiction of the Commissioners commences at Lombard's Wall, which is close to Woolwich, and extends practically down to Yantlet Creek. Altogether between 50 and 60 miles of river walling is under the jurisdiction of the Commissioners. I should wish you to understand that their jurisdiction is not confined to these river walls, but it extends inland in some places a very considerable distance. For instance, at one place on the Essex side of the river the jurisdiction extends ten miles inland and at another place four miles inland. Altogether there is a property of enormous value protected by these walls, both agricultural property and property of an industrial nature.

Now, my Lord, what the Commissioners of Sewers fear is that in the carrying out of any improvements of the Port of London by deepening the channels there is a possibility of their walls being allowed to slip into the river at certain points. Many of these walls are of considerable antiquity; some of them were originally established 200 or 300 years ago. In some cases the navigable channel is close to the wall, and what the Commissioners are apprehensive of is not any negligence

in carrying out the work, but a risk which is inherent in the work itself, namely, that if you deepen the channel close to the wall, though that deepening may be carried out in a most skilful way, it may result in the walls slipping in, and very considerable damage being done to the walls and possibly also to the property behind the walls. Therefore the Commissioners would respectfully ask this Commission that if they recommend the deepening of the channel, they should accompany that recommendation with a further recommendation providing for the protection of the Commissioners of Sewers and the persons whom they represent. And, my Lord, what they would respectfully suggest as the best way of carrying out the protection is this: that before any deepening of the channel is begun, the authority to be entrusted with it should be under an obligation to make a complete survey of the channel, so that before any works are begun there should be on record a survey to which any party interested can refer, showing what the exact state of the channel was before it was altered. The natural way that occurs to us to carry out that recommendation, if it were made, would be that cross sections should be taken at moderate intervals all along, showing the exact state of the channel. Of course where the channel is nearer the river wall those cross sections might require to be taken at shorter intervals than where the channel is at a considerable distance away. Then you would have this one important factor absolutely determined; that is, the existing state of the channel before the work was begun. If while the work was being carried out or within any short time afterwards the river wall slipped down, you could then by taking a survey of the state of the channel where the slip occurred be practically in a position to say whether the slip was caused by the deepening of the channel or not. That would avoid a great deal of contention and a great deal of possible obligation.

Then, my Lord, of course what we should ask is this, as a matter of common justice. If in carrying out the improvements of the Port of London in the way suggested this damage is caused, the authority charged with carrying out the improvement should be liable to

*The  
 Hon. J. D.  
 Fitzgerald,  
 K.C.*

1 July, 1901.

*The  
Hon. J. D.  
Fitzgerald,  
K.C.*  
1 July, 1901.

make good the damage. The damage may be mere damage to the wall, or it may extend much further; it may be damage to the property behind; but in either case I venture to submit that it is a matter I think I may say of common justice that if that damage is done the person by whom the damage is caused should be under an obligation to make compensation to meet the damage. But unless there is some recommendation from this Commission to that effect, or some provision to that effect in the Act of Parliament carrying out the recommendation of this Commission, a very difficult question of law would arise, because if the Act of Parliament authorised a thing to be done, unless the Act of Parliament contained provisions for compensation no compensation would be payable if the thing authorised by the Act were done without negligence. Therefore in a case of this kind it is necessary that some provision should be carried in that if the accident to the wall is the result of the deepening of the channel, whether that work was carried out skilfully or unskilfully, the authority carrying it out should make compensation to those who are injured by the damage to the wall. That really is the whole of the case. I am not going to take up the time of the Commission by a further address, but I think I may say this. The Commissioners of Sewers, whom I represent, though representing very large interests, are not wealthy bodies, and of course all monies which they have to raise have to be raised by rates on the levels behind and the property protected by the banks; and the Commissioners are naturally very desirous not to be involved in a lengthy Parliamentary contest in obtaining what I venture to submit is a mere matter of ordinary justice in a case of this kind. If this Commission in recommending the deepening of the channel coupled it with such a recommendation as I suggest, then I take it that in the ordinary course a Bill carrying out the recommendations of this Commission would contain those provisions in the first instance, and these Commissioners of Sewers would be released from any attendance on that Committee, except possibly to see that their interests were not threatened by anybody else. At any rate they would be released from attending in any hostile character against the Bill. That to them is a very important matter, and they venture to suggest that the recommendation which I have suggested in general terms should form one of the recommendations of this Commission if the Commission recommend the deepening of the channel in the Port of London.

11744. (*Sir John Wolfe-Barry.*) May I ask what the powers of the Thames Conservancy are with regard to dredging and deepening the river?

(*Mr. J. Fitzgerald.*) I am afraid you must put that question to the representative of the Thames Conservancy, but I think I may say this: I had somewhat in my mind, when I spoke of an expensive Parlia-

mentary contest, what happened when the Thames Conservancy Bill was before the Committee in the House of Commons. The Commissioners of the Sewers were kept there in attendance for some 30 days or more. In the result they did obtain very considerable protective clauses to protect them and to protect their position. Those clauses might really have been accorded at the commencement of the proceedings, but I do not think they were accorded till the Committee had been sitting for more than a month.

11745. (*Sir John Wolfe-Barry.*) You have not referred us at all to those clauses?

(*Mr. J. D. Fitzgerald.*) I have not at the present moment in my mind what the exact position is.

11746. (*Sir John Wolfe-Barry.*) You say you have some protective clauses in the Thames Conservancy Act?

(*Mr. J. D. Fitzgerald.*) I recollect quite well that protective clauses were introduced to protect the Commissioners of Sewers, because I represented them on that occasion; but whether it was in respect of dredging or other matters I really at this moment cannot say. If I had known that the question would be put to me, I would have refreshed my mind by referring to the Thames Conservancy Act of 1894.

11747. (*Sir John Wolfe-Barry.*) My reason for asking was that Sir Frederick Dixon-Hartland produced before this Commission a programme for dredging in the River Thames, and I did not know whether that programme in any way conflicted with your interests?

(*Mr. J. D. Fitzgerald.*) I do not know what Sir Frederick Dixon-Hartland's programme was, but certainly I can refresh my mind by looking again at the Act of 1894, and if necessary I can refer you to the sections there which protect the Commissioners on both banks.

11748. (*Mr. Ellis.*) I think it would be convenient if you would refer us specifically to the Acts of Parliament under which the Commissioners of Sewers discharge their duties. I do not think we have been referred to them.

(*Mr. J. D. Fitzgerald.*) The original Act of Parliament which gives powers to the Commissioners of Sewers is an Act of the reign of Henry VIII., known as the Bill of Sewers, which is still in existence. That Act has from time to time been amended, and there are perhaps some seven or eight other Acts of Parliament. Then finally there is the Land Drainage Act of 1861. I can give you, if you like, the reference to all the Statutes. They are as follows:—23 Henry VIII., chapter 5; 3 and 4 Edward VI., chapter 8; 13 Elizabeth, chapter 9; 3 and 4 William IV., chapter 22; 4 and 5 Victoria, chapter 45; 12 and 13 Victoria, chapter 50; and 24 and 25 Victoria, chapter 133, which is the Land Drainage Act, 1861.

MR. CLAUDE BAGGALLAY, K.C., called to address the Commission.

*Mr. C.  
Baggallay,  
K.C.*

11749. (*Chairman.*) You address us on behalf of the promoters of the Thames Lightermen's Bill?

(*Mr. Claude Baggallay.*) Yes, my Lord, I propose to address you very shortly indeed on behalf of those gentlemen who were the promoters of a bill which is now dead, the Thames Lightermen's Bill. That is a matter which is entirely separate from the matter which I shall have to deal with after the schemes have been put forward with regard to dealing with the river as a whole, when I shall have to address you on behalf of the Thames Conservancy. The two matters are totally distinct. I should like to make these observations at this moment in order that my friend Mr. Horace Avory, who appears on behalf of the Watermen's Company, may have an opportunity of dealing with anything which I say. I think that would be only fair.

I said I would deal with this case very shortly, and I intend to do so, because the evidence with regard to this question of lightering in the river is the most recent evidence which has been put before the Commission, and I think the Commission have paid very great attention to it, and have grasped very clearly what the present state of affairs is. Under these circumstances, it will be necessary to refer to the evidence itself very shortly indeed. What I want to do is really to go to the Thames Traffic Committee's Report of 1879, and, taking that as a starting point, just to see what changes of circumstances there may have been which would lead you possibly to come to a different conclusion from,

or which would lead you to affirm the conclusions of the Committee which made that report. That report, as the Commission know, is the report of a departmental committee appointed by the Board of Trade. It was an exceedingly strong committee, and it is only necessary to call your attention to the names of the gentlemen who composed it to show how competent that committee was to deal with this very question. Their names all appear at the commencement of the report, and, as I say, it is only necessary to look at them to see that they were persons interested in the trade, the shipping, and the conservation of the river, and in every way competent to deal with those particular questions with which they were dealing. That being so, they had a very great deal of evidence before them, and the whole of that evidence is summed up on pages 41 to 48 of the report. I am not going to read it all, but there are two or three short passages which really sum up the conclusions which form the point from which I want to start now. On page 47 you will find this stated very clearly: "But your Committee cannot doubt that the balance of evidence is very strongly against the present system." That is what I wish you to confirm, if you will, having regard to the evidence which is before you. "It proves beyond any reasonable doubt that the monopoly of the Watermen's Company has produced the evils usually due to monopoly, and that it should be put an end to." Then a little further on it says: "It is impossible to hold the owners, either of passenger steamers or of other craft, justly responsible for the manning and conduct of their vessels if they are

restricted in their choice to a class of men who are limited in number, and whose antecedents and statutory qualifications afford no security for competency or behaviour." There followed upon that a passage which I will not read again, because it was read by Sir John Wolfe-Barry before you a few days ago. That is with regard to the difficulty of establishing a satisfactory examination. Then the final conclusion comes at the top of page 48, where the committee report as follows: "We recommend, therefore, that the navigation of barges on the river be thrown open entirely." That I say was a conclusive report at that time. Now I just want to see what changes of circumstances there have been since that report was made. As far as I can make out there have only been two changes of circumstances. One is what has been clearly shown in evidence here, namely, the increased amount of towing of barges. That is one change of circumstance. The other change of circumstance is that since 1879, when that report was made the Thames Watermen's and Lightermen's Act, 1893, has been passed, which has provided for the measuring and the registration of barges. Those, I think, are the only two changes of circumstances which have taken place. There is no evidence before you of any alteration in any other respect that I know of from the circumstances which existed when that report was made.

Now let me see how those changes really affect this question. If there is anything in the evidence which has been put before you as to the necessity of men being brought up under apprenticeship, to work barges by means of sweeps or oars on the river, the fact that barges have come more under towage goes to make the necessity for education by apprenticeship less necessary. That is with regard to the one change of circumstance, and therefore, if anything, the circumstances are stronger to-day in favour of the abolition of this system of apprenticeship and licensing. As regards the other change, that is the passing of the Act of 1893, that was really the carrying out of a suggestion which was made by the Thames Traffic Committee near the foot of page 48 of the report where they say: "If these changes are made, it will probably be necessary to transfer the registration of barges to the Conservators. It is important that this registration should be continued, since without it, and without some name, number, or other distinguishing mark painted on the barges, it would be impossible to identify them, and to enforce the regulations against them." The Act of 1893 was one which provided a very careful system of measuring these barges, providing for the registration of the barges, and for the means of the identification of the barges—I forget at this moment whether it was by names or numbers, but it was by one or other of those means. That was important because it was necessary for the purpose of enforcing the bye-laws of the Thames Conservancy with regard to the number of men who should be carried on barges, to know what the proper tonnage of the barge was. You will remember that bye-law No. 27 is the present bye-law of the Thames Conservancy which deals with this matter, and that bye-law requires that on barges under 50 tons burthen there shall be one competent man, on barges from 50 to 150 tons burthen two men, and on barges above 150 tons burthen three men. That is necessary. Therefore by the passing of that Act you have got fulfilled one of the very conditions which this Committee evidently thought it might be desirable to fulfil if their report led to the abolition of the compulsory employment of the licensed men.

Now that being so let me see what is the evidence which goes to confirm the necessity for altering the present state of affairs. Since 1879 we have had the desirability for altering the present state of affairs confirmed by the report of Mr. Childers' Committee which sat in 1890 for the purpose of considering a Bill which was promoted for the same purpose as the Bill of 1901. It is true that that Committee rejected that Bill; and it is true that they added to their report a provision that whilst it was desirable to throw open the river as regards lightering, the men should be examined. Their report was in favour of having an examination and a more stringent examination than the existing examination. In that respect their report differed from that of the Thames Traffic Committee 1879, but that was the only point affecting this matter in which their report differed. It is really to see, as between those two, which is the best system that I propose now really to direct my attention. I think

you may take it as being conclusive at this moment that some alteration is required. Mr. Ardley, who gave evidence as a foreman lighterman, admitted to me in a series of questions beginning at 11043, and continuing down to 11049, that he himself in employing his regular hands did not look to the licence as a guarantee of the men's capacity. He said it was so at first, but afterwards he said that in nearly all cases he used his own judgment. Of course, for occasional work he took on men simply on the strength of the licence, but for his regular men he always used his own judgment. That is particularly emphasised in the answers to the later questions which I put to him. Mr. Gosling, the secretary of the men's society, also told me, in answer to some questions which I put to him, that one of the objects with which his society promoted the Bill of 1899 for the reconstitution of the Watermen's Company was for the purpose of, if possible, getting a more stringent examination, because they did not consider that the examination at the present time was a sufficiently strict one. I say, under these circumstances, it is clear that there is an admission on all hands at the present moment that things are unsatisfactory, and that some change is necessary.

Now let me see what the alterations possible are. There are three alternatives I think for dealing with this matter which have been suggested, at different times, and in saying this I am trying to sum up the position as nearly as I can so as to try if possible to help the Commission. One alternative is that of throwing the navigation of barges open entirely, which was the recommendation of the Committee of 1879. The second alternative is that of throwing it open wholly, subject to examination, which was the recommendation of Mr. Childers' Committee. The third alternative is the maintenance of the present system with something in the nature of a more stringent examination as suggested by Mr. Gosling. It seems to me that those are the only three proposals which have really seriously been put before you. Now let me deal very shortly with these proposals. First, as to throwing the navigation of barges wholly open. If I can satisfy you on the evidence that you have guarantees of having good men employed, surely it is better to throw it open than to have an examination which may or may not be good in its results, and which may or may not be effective. What is the position of the owners of these barges which have to be navigated? It is clearly proved before you that they have an unlimited liability in respect not only of the goods which they carry on their own barges, subject, of course, to the extent to which they may insure against their risk, but, secondly, they have an unlimited liability as regards the damage which they may do to others. That being so, you have the very strongest inducement to the owner of the craft to see that he has the best men to navigate that he can get. If that be so, will he not take care to get the men who have been regularly working on the river? It does not matter to him whether they are licensed lightermen; it does not matter to him whether they are examined or not by any particular body; the thing is that he wants to get the best men just in the same way that a railway company would go and get the best men it could find to do its work or as the owner of vans working to and from the docks and working about the City of London would take care to enquire into the antecedents of a man he was going to employ and would take care to get a man who could drive and who understood the management of horses. There is exactly the same inducement; there is the very strongest inducement there can possibly be. Is it fair to an owner of craft that having this responsibility, and not being able to free himself from this responsibility, he must employ men from a limited class? I do not speak now of the difficulties which may arise in the event of a strike or anything of that sort. That is all fully before the Commissioners; you fully appreciate the undesirability of having a close corporation if it can possibly be avoided. I am dealing simply here with the question of the protection of the navigation of the river. Remember this traffic on the river is largely, as we have heard with regard to barges going any considerable distance, done by towing; it is only the barges going short distances which are not towed, and the barges which are not being towed can only move when they are all going at the same time in the same direction, practically governed, as the witnesses have said, by the tide; they cannot go against the tide; therefore nearly all the traffic is going in one direction. It is not like a driven traffic in the streets with crossings and so on; it is all traffic which is moving

Mr. C.

with the tide whether it is flowing or ebbing. That being so, I submit this lightering ought to be thrown wholly open.

To come back to this question of examination, how are you going to provide for a perfectly effective examination? Is it to be an examination which is going to be renewed from time to time? If a man was once examined and got his licence would you be obliged, years afterwards perhaps, to still employ him? His examination at one period would be no guarantee of his fitness at another period of his life, either having regard to age or health or anything else, to carry out his work. You would have to have an elaborate machinery for examination, for re-examination and so on from time to time. It would merely come back to this: that even if you examine him, the man who employs men to work his barges would always make enquiries as to the training of the man and as what he had done and as to who he was, and as to his capacity, and so on. The employer might not always do it himself; he would do it by his agents and foremen, and by the various men working under him, but it really comes back to this: that he goes into the personal investigation of the matter, and does not rely merely upon the certificate. There was not a happier illustration of that than that which was given by Sir John Wolfe-Barry at Question 10640, when Sir Edwyn Dawes was being examined. It was with regard to the case of a quartermaster and a leading seaman. Sir John Wolfe-Barry asked this question: "On the subject of examination I suppose the man in charge of a barge is more comparable to a leading seaman or a quartermaster than to a mate of one of your big ships? (A.) Yes. (Q.) You do not have any examination for them, do you? (A.) No. (Q.) You select them from your practical knowledge of their ability to do the work? (A.) Quite so." Yet those are the very men who steer these great liners and transports; those are the men who have really the greatest responsibility upon their shoulders. I say that this matter is comparable here to that case. I submit that it is quite unnecessary to have this examination.

I have no doubt that it will be suggested to you that supposing you throw open this lightering of craft upon the river you may deprive the Watermen's Company of income, which may impair that company so that it will not be able to carry on other functions which it has to perform. Now let me just call your attention to this. There are only two other duties I think which that company has to perform. One is with regard to the measuring and registration of barges; the other is with regard to the watermen. I do not want to say a word against the company; I have not a word to say against them; I do not want to complain in any way of the way that they have done their duty with the powers they have, or anything of that sort. What I do say is that supposing their financial position was so altered from loss of income from the licensing fees and so on that it was impossible for them to carry on their functions in respect of these two matters, then I suggest that those two matters should be transferred as was suggested by the Thames Traffic Committee's Report in 1879. The Committee say: "Your Committee are strongly of opinion that there should be one authority, and one authority only, empowered to make bye-laws for the regulation of the navigation of the River Thames. They think further that this authority should be the Conservancy Board." I do not care what the Board is; it may be the Conservancy Board, or it may be any new authority for dealing with the lower river which this Commission might think fit to recommend. What I would suggest is this, that if dealing with the watermen's question and dealing with the measuring and registration of barges are matters which the Watermen's Company could no longer carry on, those are functions which could well be transferred to the new authority whatever it is, or to the Conservancy Board if the Conservancy Board continue. You would then have all the bye-laws dealing with the navigation of the Thames

made by one body instead of having, as at present, two sets of bye-laws, one by the Thames Conservancy, or whoever their successors may be, if any; and one by the Watermen's Company. There is only one other matter which the Watermen's Company have to deal with, and that is with regard to the question of certain charitable institutions and almshouses which they have. That no doubt is a matter which would have to be provided for, but I think there would be no difficulty whatever, because, if I understand the position rightly, the funds which provide for these charities are not in any way funds which are contributed by the lightermen, but are simply funds which have been bequeathed or given by benefactors at different times to the company as trustees who hold them for the purpose of applying benefits to certain classes. There could be no difficulty in dealing with that matter; it would be necessary, possibly, to appoint certain trustees, but I am quite sure that is a matter which, if necessary, would be dealt with by the Charity Commissioners, and there would be no question of difficulty whatever with regard to the matter.

The only question now is in what form the Commission should report that this change would best be carried out. I am assuming that the Commission would feel that the change is necessary, and ought to be effected. Of course, if it is to be effected, it will have to be carried out by legislation. It has been suggested once or twice that this is a matter which can only be dealt with by public legislation. I do not think that that is so as a matter of fact, and I will tell you why. The Thames Lightermen's Act of 1859, which is the Act which deals with nearly all this matter, was a private Act. That was not a public Act at all. The Thames Conservancy Act of 1894 and the Acts which it consolidated, and which dealt with the question of the contract men, were all private Acts. The Act of 1893, which deals with the registration of barges and the measuring of barges, was a private Act. In fact, the whole of this matter has been dealt with since 1859 by private bill legislation, and I do not think there is any difficulty in the way of this being dealt with in that manner, though I always speak with diffidence with regard to what may be said in Parliament as to dealing with large matters by private bill legislation. But I would ask you if you see your way to suggest that this may be carried out by private bill legislation, to so recommend. If it depends upon public legislation one knows the great difficulty of dealing with matters of this sort at the present time by public bill legislation. One knows how year after year these matters go on. One has only to look to see how the London water question has gone on year after year because of the difficulty of dealing with it in Parliament. I have not the slightest doubt there would be a great difficulty for a long time in dealing with this matter. Now, if you come to the conclusion that this is a matter which ought to be dealt with, and which ought to be dealt with soon, I would ask you, in addition to recommending any public legislation, to say that you think also it is a matter which might, of course subject to any rules of the House, or Standing Orders, or anything of that sort, well be dealt with as the previous Acts have dealt with it, by private bill legislation. I say that because this is a matter which, if the evidence is to be accepted, is one of urgency. You have had before you the evidence of the effect of the strike of 1889. You have had before you the evidence of the strike of last year. You had very strong evidence from Mr. Livesey of the South Metropolitan Gas Company, of what took place. I submit that this is an urgent matter, and a matter which ought to be dealt with at once, and I cannot see that there is any object whatever in the matter being delayed. Therefore I ask you to report in favour of the change being made, and also to report as I suggest with regard to legislation taking place either by public or by private bill legislation. I am sorry to have taken up the time of the Commissioners so long.

Mr. HORACE AVORY, K.C., called to address the Commission.

Mr. Horace  
Avory,  
K.C.

11750. (Chairman.) We understand you appear on behalf of the Watermen and Lightermen's Company?

(Mr. Horace Avory.) Yes, my Lord. I have decided to forego the advantage of hearing what any other of my learned friends have to say affecting this subject, and to address the Commission on behalf of the Watermen's Company and the Amalgamated Society of Watermen and Lightermen, whom I represent. The fact is that everything that can be said against the Watermen's

Company and against the lightermen has been so often and so fully said on previous occasions that I knew it by anticipation. I was anxious to hear whether my learned friend, Mr. Claude Baggallay, had found any additional fact or reason which ought to influence your judgment upon this matter.

The Watermen's Company and the Amalgamated Society of Watermen and Lightermen have a common interest in maintaining the present system of licensing

of the lightermen on the river. But there is, of course, this difference between the two bodies. The Watermen's Company is threatened with extinction; the lightermen are threatened only with a deprivation of the monopoly which they enjoy. I say the Watermen's Company is threatened with extinction for this reason: it is admitted by the accounts which have been put in that their revenue is just sufficient only to maintain the corporation. The abolition of the system of licensing lightermen would so diminish, in fact, or destroy, their revenue that they could not continue to exist. This is a fact which must be borne in mind when suggestions are made that you may report on this subject of the lightermen without touching or infringing upon the existence of the corporation of the Watermen's Company.

Now I apprehend that there are two alternative suggestions to which I ought to address myself—first, should the river be thrown open and the whole system of licensing abolished so far as the lightermen are concerned? There being no suggestion from anyone up to the present that the system of licensing watermen should be abolished, I restrict my argument to the lightermen. The alternative question, as I understand, is this:—Should some system of licensing and examination of the lightermen be transferred to some public authority to be constituted for the purpose of supervising and controlling the trade of the Port of London? I will very shortly deal with those two alternative questions, premising that this question of the licensing of lightermen on the River Thames is a detail of management which is not worthy a report or the Commission. I venture to put in an interrogative form this point which I submit for the consideration of the Commissioners. Would the trade of the Port of London be improved one iota by allowing any man who pleases to work on the river as a lighterman? In other words, does this question of the licensing of lightermen in the least enter into the consideration of the important matter that you are here deliberating upon? Is it not, as I have said, a mere detail of management which should be left entirely to the consideration and determination of some body specially appointed to deal with it? I am quite sure that there is present to the mind of every Commissioner here the fact that an occasion of this sort is very often made the opportunity for the ventilation of individual grievances, and I venture to submit to you that this question of the lightermen is within that category. It is a grievance which belongs to individuals, and it is a grievance at the foundation of which is this question of the strike. You will find, if you read between the lines of the evidence of every person who has spoken against the lightermen, that the strike is at the bottom of the grievance. If it could have been said that these licensed lightermen had abused their privilege by striking frequently and constantly for the mere purpose of extorting extravagant wages from their employers it would have been a legitimate argument; but there seems to me to be no reason to suppose that anything of the kind has taken place. You have it in evidence that these men, although enjoying this privilege, have only struck twice in the last 40 years, and that on the last occasion that strike was due to some dispute between the employer and the employed as to the meaning of Lord Brassey's award. You have it further proved that that strike was not a general strike of all these lightermen, but was a strike limited only to a small proportion of them; that the foremen lightermen did not join it; and, therefore, it is in no sense right to say that these men have abused their privileges by resorting to a strike for the purpose of extorting extravagant wages. Now if it be the fact that the question of the strike is at the bottom of this grievance, I submit it establishes my contention that this is merely an individual grievance on the part of people who want you to say that there should be some legislation to prevent men who work on the river from striking. Of course, put in that way the proposition is an absurd one. You might as well be asked to recommend legislation which would prevent the dock labourers from striking. Can anyone doubt that the strikes of the dock labourers, which have been frequent during the past few years, have caused quite as much and probably more inconvenience to those interested in the trade of the Port of London than any strike of the lightermen? Would you upon such an inquiry as this condescend, if I may use the expression, to any recommendation which had for its real object the prevention of a strike among the dock labourers?

Having said so much as to what appears to me to be the character of this question of the lightermen, I will

very shortly deal with the two alternatives which are submitted to you. First of all as to whether the whole system of licensing should be abolished; in other words whether the lightermen should be required to have any special training or certificates of competency. I do not find that the representative bodies such as the London Chamber of Commerce, the London County Council and the City Corporation have any of them recommended the abolition of this system. On the contrary in the scheme which has been put before you by the London Chamber of Commerce I find a recommendation that those regulations should in effect be preserved. I find by Clause 3 of the scheme of the London Chamber of Commerce that they propose that the Trust should have transferred to it the whole of the powers, duties, &c., of the Watermen's and Lightermen's Company among others. I find by Clause 20 of that scheme that they propose that until new bye-laws are issued, those which are at present in force under the power of any existing body are to continue, and that the bye-laws passed under the Watermen's and Lightermen's Act are to be used as the basis of the powers of the Trust. There I suggest, at all events, is a recognition by that representative body of the necessity of maintaining some system which shall regulate the lightermen on the River Thames. I want shortly now, because I am merely going to make a statement of fact, to point to the history of this question, going back a little further than my learned friend has invited you to go. 1859 is the date of the Act which regulates the Watermen's Company, and I want to call attention to the fact that that Act was the result of a Bill that was brought in to abolish the privileges of the Watermen's Company. The Watermen's Company had been constituted long before then, and this Act is the result of a Bill brought in, as stated in its preamble, to abolish the privileges of the Watermen's Company. That Bill was referred to a Committee of the House of Lords, and the present Act of 1859 is the result of the deliberations of that Committee. In 1864 a public Bill was introduced which proposed to transfer to the Thames Conservancy the control of barges and lighters on the River Thames, and to repeal the Act of 1859 so far as it affected persons employed on those lighters; in other words, to repeal all the privileges of the men and to deprive the Watermen's Company of the powers which had been conferred upon it in 1859. That Bill in 1864 was referred to a Select Committee of the House of Commons, who, after consideration, struck out all the clauses which were in conflict with the Act of 1859; struck out all the clauses, in fact, which proposed to interfere with the Watermen's Company, and to interfere with the system of licensing lightermen. It was under that Act of 1864 that what are called the two years' contract men were created. To increase the number of men working on the river it was provided that a man should be entitled to have a licence after working for two years under contract and passing an examination. That Act of 1864 also provided that any widow of a freeman taking an apprentice should be required to keep a competent man to instruct the apprentice in his work. Therefore the legislature expressly recognised in 1864 that this system of education of the lighterman and of licensing should be continued. In 1870 another Bill was introduced into the House of Commons which was referred to a Committee, proposing again to throw open the navigation of the river. That Committee of the House of Commons decided that the certificate required to be obtained from the Company was still necessary, but they proposed to amend the system by abolishing the apprenticeship, and they provided an appeal to the Conservators if the certificate were refused. The Watermen's Company carried their opposition into the House of Lords, and the result was that the House of Lords' Committee struck out all the amending clauses and left the jurisdiction of the Watermen's Company just as before. In 1881 a private Bill was introduced into the House of Commons with the avowed object of repealing the Act of 1859, and abolishing all the restraints on the navigation of the river. That Bill was withdrawn on the second reading on its being pointed out that the subject ought to be the matter of public legislation, and not of private legislation. The private Bill being withdrawn, a public Bill for the same purpose was introduced in May, 1881.

11751. (*Mr. Ellis.*) Was that introduced by the Board of Trade?

(*Mr. Horace Ivory.*) Either by the Board of Trade or by some department of the Government, because it was either an undertaking of the Government when the other one was withdrawn, or, in fact, the other one

*Mr. Horace Ivory, K.C.*  
1 July, 1901.

Mr. Horace  
Avory, K.C.  
1 July, 1901.

was withdrawn on the undertaking that the Government would introduce a Bill. A public Bill was introduced which was similar to the Bill of 1870 that I have mentioned, but the opposition to it was such that it was withdrawn on the second reading. Then came the Bill of 1890. I have not mentioned in order of date this Committee of the Board of Trade, because my learned friend has alluded to it, but I have a word to say about it now. In 1890 the Bill was introduced, which it is well that you should notice, was again for the avowed object of abolishing all these privileges of the lightermen. It proposed to enact that it should not be necessary that any person acting as a lighterman should be either a freeman or an apprentice, and that it should not be necessary that any barge navigated on the river should be in charge of a licensed lighterman as mentioned in the Act of 1859. That Bill, as you have already heard, was referred to a committee, the constitution of which I need not call your attention to; it was a committee of nine members, with Mr. Childers in the chair. Against that Bill there was presented a petition of master lightermen and barge owners with 253 signatures to it. To that Committee on that bill of 1890, was referred the report and the evidence taken before the Board of Trade committee of 1879. So that not only was this Report of the Committee of 1890 a report which was in direct opposition—on the main question that I am now addressing you upon—to the report of the Committee of the Board of Trade of 1879, but it was after consideration of the report and the evidence which had been taken before the Board of Trade Committee in 1879 that Mr. Childers' committee reported as they did in 1890. You will remember that so far from recommending the abolition of this system of licensing and throwing the river open, the special report recommended that the examination for a lighterman's licence should be more strict than at present. That was the second recommendation of that committee. They also recommended that there should be some alteration in the constitution of the Court of the Company, and that any person should be eligible for a licence if found on examination to possess the necessary qualification, it being no longer necessary that he should be an apprentice, and so on. That was the special report of that committee. In passing, I wish to call your attention to the fact that that bill of 1890 was introduced just after the previous strike of the lightermen, and the dock labourers, and everything that has been said here about the inconvenience of the strike was said on that occasion before that committee. The committee recommended that a bill to carry out their report should be introduced by the Board of Trade; but nothing was done by the Board of Trade on this report. In 1894 the Thames Conservancy Act was passed, which was a consolidation of all the previous Acts relating to the River Thames; that is four years after this report of Mr. Childers' Committee. In 1894 Parliament again recognised these privileges of the Watermen's Company by enacting in this very Act of 1894 the provisions relating to the Watermen's Company. I refer to sections 299 to 313 of the Act of 1894, which, being a consolidation Act, re-enacted the provision about the two years' contract men and the provision about the widows keeping a competent man to teach apprentices. So that that was again recognised in 1894.

11752. (Mr. Lyttelton.) That was the Committee of which Mr. Jackson was the chairman, I think.

(Mr. Horace Avory.) Yes. Then finally we come to the bill of this year, introduced by those whom my learned friend represents, which simply proposed just the same as was proposed as far back as 1864. With that bill, a copy of which was laid before you at Question 10409, there were copies of petitions to (the Board of Trade, sent in by various persons in the autumn of last year, asking the Board of Trade to take some steps in consequence of the inconvenience which was being caused by the strike. It is, of course, open to you to inquire what the Board of Trade did or said upon the receipt of those petitions. If you do I think you will probably find it confirmatory of what was stated by one of the witnesses, that the whole reason of that strike was because some of the employers were not carrying out the terms of Lord Brassey's Award with regard to overtime, and that in consequence the Board of Trade refused to interfere.

11753. (Chairman.) I do not know if you are aware that the Board of Trade referred all those petitions to us; we have the originals.

(Mr. Horace Avory.) Those petitions being referred to the Commission it would be open to the Commissioners to inquire why the Board of Trade did nothing

or what they did when they received them in the autumn of last year, or what answer they gave.

11754. (Mr. Lyttelton.) Was your company represented, do you remember, before that Committee of 1894 of Mr. Jackson's?

(Mr. Horace Avory.) I presume so.

(Mr. Claude Baggallay.) No, I remember they did not appear. I happened to draft that bill. What I did was to reproduce in the bill of 1894 verbatim the clauses affecting the Watermen's Company from the existing Acts which were being consolidated. I did not vary them at all.

11754a. (Mr. Lyttelton.) There was no amendment?

(Mr. Claude Baggallay.) No, there was no alteration. I think in the last part of the bill they were just put in en bloc.

(Mr. Horace Avory.) It was, I am told, because the company found that they were adequately protected by these clauses in the Act of 1894 that they did not appear or think it necessary to take any part. It was upon being assured that those clauses were there that they abstained from taking any part in it.

(Mr. Claude Baggallay.) It was simply consolidation as far as you were concerned.

(Mr. Horace Avory.) Yes. These were the re-enactments of the provisions of 1864. I propose now just to say a word or two upon the chief points which have been urged in favour of this amendment of the law. I will deal with what seem to me to be the more powerful arguments. It is said that these restrictions are limited.

11755. (Mr. Lyttelton.) Are you still on your first point?

(Mr. Avory.) I am still on the point as to the licences. It is said that the restrictions are limited to the barges which are navigating within the jurisdiction of the Watermen's Company, and that the barges which come from without, although they may navigate through the same water, are not subject to these restrictions. At first sight, of course, that appears to be a strong argument. I suggest that the answer to it is that in practice you find, in the majority of cases at least, that a licensed man is taken on board as soon as the barge comes within the jurisdiction of the Watermen's Company. In other words, as soon as it comes within that part of the river where it is recognised that there is exceptional difficulty. It is quite true that in some cases, as the law does not require it, this lighterman is not taken on board. I suggest to you that the result of the whole evidence is that in the majority of cases that help is taken on board. It is a very strong answer to the argument if you find that people avail themselves of this assistance although they are not obliged by law to do it. Then, again, it is said that the practice of towing barges has so much increased that the necessity no longer exists for the licensed man who has been educated and brought up to this trade being on board. With regard to that, I answer that in fact there is always one licensed man on board the tug, and, as was stated during the hearing, tug-owners and bargeowners have apparently never yet suggested that they are not required by law to have this one licensed man on board the tug. The company has been waiting for an opportunity of testing that question if it ever arose, but the bargeowners and the tug-owners have apparently acquiesced at all events in the practice of keeping one licensed man on board. Further, in answer to this argument, I say that the evidence shows that for short distances towing is not available, and it must always continue to be the practice on this river for a large amount of navigation over short distances to be done under oars. At Appendix 4 of the 28th day appears a list of bargeowners who are now in the habit of navigating their barges under oars. That was a list which it was stated comprised half the number of bargeowners, and it was said that probably half the total barges at the present day were in fact being navigated under oars for some distances. If, therefore, it be the fact that this practice must continue, the necessity for the proper navigation, of course, also continues. I call your attention also to the facts that have been proved in regard to some insurance companies at all events. A policy was put in at question 10863 showing that the ordinary policy on the barge contains a condition that the barge has to be navigated in accordance with the requirements of these Acts. It is quite true that my learned friend in answer to that put in at question 11545 a cargo policy which contains no such condition. Finding that that has been put in, I desire to call your attention now to this, because it has an important bearing on the ques-

tion of the Medway barges. I have before me here the Articles of Association of the Rochester Barge Insurance Association, in which many of these barges which come from the Medway are insured, and I find a similar provision there. It is this: "In the event of any barge insured in the Association sustaining or doing damage in navigating the bridges of the Thames, Medway, and Swale, when loaded, without having on board a bridge hoveller or other competent help, a deduction of 25 per cent. shall be made from the amount which would otherwise be allowed by the Association in respect of such damage." You will remember that the meaning of "hoveller" is one of those licensed men who are waiting about for a job.

(Mr. Claude Baggallay.) No, not necessarily. There was no evidence of that.

(Mr. Horace Avory.) The evidence was that a hoveller means one of the licensed men who wait about or hover about for a ship.

(Chairman.) That was your evidence, Mr. Avory.

(Mr. Horace Avory.) I think the witness assented to it, my Lord.

(Mr. Claude Baggallay.) I do not think the evidence was that he was a licensed man. He was a hoverer—I think the term was explained to be a corruption of that—who waited to be taken up by anybody who wanted an extra man.

(Mr. Horace Avory.) If you turn to any references to that individual you will find him described by all the witnesses as a licensed man. Now what is the inference from that article which I have just read? They are to take on board a bridge hoveller or other competent help. All I am citing this for is for the purpose of showing that this association recognises that the bridge hoveller is a competent man—that the very fact of his being a licensed man is evidence of his competence. Then I pass on to call the attention of the Commission to a further point having regard to the opinions of the various witnesses who have been called before the Commission. I am quite sure that the Commissioners will not lose sight of the fact—I am not complaining of it at all—that these opinions have been expressed without the ordinary test of cross-examination. Some persons have come here and expressed an opinion that this system ought to be abolished. If you have regard to their opinions I point to this fact: that some of the leading practical men in this trade who have been called before you say that it is necessary that the present system should be continued. Take for example Mr. Deering and Mr. Fielder, they are both gentlemen who were called as witnesses on behalf of the master lightermen. They were put forward to represent the views of the master lightermen. But in giving their evidence originally they were not asked anything about the Watermen's Company or the system of licensing. They were recalled for the purpose, when my case was reached and both of those gentlemen who are representative men—both of them large barge-owners and master lightermen—in the strongest terms agreed that the present system should be continued and that above all it is necessary not only that the man shall be competent as shown by a certificate, but that the only way in which he can acquire that competence is education on the river, such as is gained by apprenticeship. Dealing with this evidence I submit to you that the preponderance of the evidence is in favour of continuing that system. I find on reference to the proceedings of 1890 that every argument which has been adduced before you was urged before that Committee in 1890. I have read through the speech of my learned friend Mr. Pamber, who introduced the Bill before the Committee and opened the proceedings, and I have read through the evidence of most of the witnesses, and I find many of them were the same as you have heard before this Commission. Mr. Hugh Colin Smith, who gave evidence here, gave evidence also before that Committee. He told me that he gave evidence specifically to the same effect; and every argument that has been urged here was urged in 1890, including the matter of the towing. For instance, one of the witnesses I find was a Mr. Arthur Frey. You will find that almost every point which has been taken here was taken by him in his evidence in favour of abolishing these restrictions. With regard to towing I find this: "(Q.) Is it your opinion that the barging will more and more develop into towing? (A.) Taking the present ratio, it soon will be all towing." None of those arguments availed in 1890 to convince that Committee that this system should be abolished.

The next point which is an *ad captandum* argument rather, is this; why should there be any such system for lightermen when an employer can employ any man he likes as a carman? I submit there is no analogy. A carman is not navigating on a surface which is moving with him; the only resemblance between the two cases that I see is that both the barge and the horse are dumb. The man who is driving the horse has the assistance of an intelligent animal. There is this further difference between them. Where is the policeman in the river to hold up his hand to regulate the traffic, and where would the traffic of the streets of London be if it were not for the policemen at the cross streets to regulate it? If there were any comparison between these two cases I suggest that the proper reform would lie in a regulation which required the carman to be licensed and to have a certificate of competency before he is allowed to drive these heavy vans through the streets of London. When you have regard to the number of serious accidents that are constantly happening it would be an improvement in the law that carmen as well as omnibus drivers and cabmen should have some certificate of competence before they are allowed to drive.

(Mr. Claude Baggallay.) Cabmen do not have a certificate of competence.

(Mr. Horace Avory.) They have licences.

(Chairman.) We must please adhere to our subject.

(Mr. Horace Avory.) I am sorry, my Lord, if I have digressed; I have been provoked into doing so by this comparison. There is one other point I wish to deal with. It was said by one of the witnesses that there is a deficiency in the number of men available for this work on the river. Surely the answer to that is that if there were a greater demand the supply would be equal to it. The number of contract men who could be licensed is almost unlimited, and there cannot be a doubt that they would have been increased if there were any necessity for it. The evidence on the other hand shows that at the present moment there is a large number of these men, something like 800 I think it was stated, out of employment. Therefore it cannot be inferred that there is any real necessity for an increase. That is all I have to say upon the general question of whether some system of licensing and examination of these lightermen ought to prevail.

(Mr. Claude Baggallay.) If you are going to another subject might I just call your attention to this, Mr. Avory. I had not seen these Articles of Association before. I see that the regulation to which you have referred of the Rochester Barge Insurance Association mentions bridge hovellers in respect, not only of the Thames, but of the Medway and the Swale. It cannot mean licensed men in that case.

(Mr. Horace Avory.) No doubt that is why the words "or other competent help" were introduced.

(Mr. Claude Baggallay.) It does not in any way restrict it to licensed men. It is bridge hovellers, applicable to any of the three rivers.

(Mr. Horace Avory.) I think my argument was misunderstood. I only used this for the purpose of showing that the association recognised the bridge hoveller as a competent man, and if they have not a bridge hoveller (which they cannot get on the Medway) then they must have some other competent help. That was all I said.

Now upon the second point, as to whether the company should be abolished in the sense of being deprived of its present duty of looking after the lightermen on the River Thames, I appeal to the same history to which I have already called attention—to those repeated attacks that have been made and which have always been answered in their favour, and especially to the report in 1890, which distinctly recognised that the Watermen's Company were the proper persons to continue this supervision and education of the lightermen and the watermen on the river. When that Committee recommended that the Board of Trade should introduce a bill to carry out the recommendations I find as part of the history that the Board of Trade when appealed to refused to take any steps.

11756. (Mr. Ellis.) Where do you get that statement from?

(Mr. Horace Avory.) I will give you my authority, sir; it is none else than my friend, Mr. Claude Baggallay.

(Mr. Claude Baggallay.) You say you are quoting me, but as a matter of fact speeches of counsel are only the speeches of their clients. It is what I was in-

Mr. Horace  
Avory, K.C.  
1 July, 1901.

Mr. Horace  
Avory, K.C.  
1 July, 1901.

structed to say by your clients of to-day. I do not object, but it is not usual to refer to the speeches of counsel in other matters, because it is not their opinion, but the opinion of their clients.

(Mr. Horace Avory.) I can assure my friend I am not going to read anything like opinion or advocacy of his in 1899, but I am only taking the facts which he mentioned in his speech, and which, I presume, had been verified. It may be worth nothing, as my friend suggests, but I find it is stated that after that report the Board of Trade was appealed to. My friend said: "A deputation went to the Board of Trade, and Sir Michael Hicks-Beach, President of the Board of Trade, said that they were mistaken as to the report of the Committee. It was not a very intelligible report, and he communicated with Mr. Childers, who was the chairman of the Committee. He found that the Committee meant that, while the electors should be in the majority of cases the freemen of the company, yet they also desired representatives of public bodies such as the London County Council, the Thames Conservancy, or the Council of Riparian Owners; but on communication with these bodies he found (that is, the President of the Board of Trade found) that not one of them wished to have anything to do with the matter. Then there was a good deal of further discussion on the subject, and ultimately Sir Michael Hicks-Beach absolutely refused on behalf of the Board of Trade to have anything whatever to do with the matter, and said, 'If you want to promote the bill you must promote a bill of your own as a private bill.'"

11757. (Mr. Ellis.) Was the date of that 1891?

(Mr. Horace Avory.) The date of this deputation to the Board of Trade must have been in 1891; it is not stated here, but it must have been in 1891 because I am going to show you what it was followed by. It was followed by a private Bill introduced in 1892 by Mr. Wootton Isaacson among others. That Bill was thrown out. In 1893 the Watermen's Company themselves introduced and passed The Thames Watermen's and Lightermen's Act of that year. That is the Act that has been referred to, providing for the registration of barges and craft on the river. Why I call attention to it is this; in 1893 the Board of Trade themselves drew up and supplied the schedule for that Act of 1893, recognising in that year the Watermen's Company as the proper persons to carry out these duties. That is all I mention it for because I say that was a recognition by the Board of Trade; they assisted them in passing this Act of Parliament, and recognised the Watermen's Company as being the proper persons to have the supervision of registration, and so on.

11758. (Mr. Lyttelton.) What do you mean by drawing up the schedules?

(Mr. Horace Avory.) The schedules of the measurement of barges and the fees to be charged, and so on. Now, still upon the point as to how far Parliament has recognised the Watermen's Company as being a body that ought to continue to exist, in 1894 I have called your attention to the fact that in the Thames Conservancy Act these provisions were re-enacted, and by sections 309 and 310 of that Act it was provided that the accounts of the Company are to be sent to the Conservators and to the Board of Trade. By section 310 it is provided also that if at any time it appears to the Board of Trade that the income of the Company is more than sufficient to meet the proper expenditure, then the Board of Trade might direct them to reduce the fees which are charged. There again is a recognition in 1894 by the legislature of the Watermen's Company.

(Mr. Claude Baggallay.) I do not think it is quite fair to put it in that way. This was a mere re-enactment, because under the Act of 1893 Parliament imposed an obligation on the Thames Conservancy to introduce a Bill in 1894 repealing all their Acts and consolidating the provisions with amendments, and these provisions relating to the Watermen's Company were only repro-

duced verbatim at the end of the Act without any alteration at all. That is now that came about; it was never before Parliament in the sense of being reconsidered.

(Mr. Horace Avory.) I quite follow that. I am entitled to say that if the Act was passed in 1894 it was a recognition by Parliament of the Watermen's Company as the proper persons to be entrusted with these duties, and it was a recognition of the fact that they derive a certain income from these sources, and the Board of Trade is to regulate that income by reducing the fees if they find it is proper to do so. That is followed in 1899 by the Bill of which you have heard, a Bill introduced and referred to a Committee of the House of Lords, which proposed to alter the construction of the Watermen's Company. The Committee of the House of Lords threw out that Bill. I want to point this out for the consideration of the Commission. Supposing the powers which are at present exercised by the Watermen's Company were to be transferred to some new authority for the Port of London, what would happen in practice? Obviously these duties would have to be delegated to some Committee who would have in effect to perform the duties which the Watermen's Company now perform. Supposing you thought that the lightermen ought to be licensed, and ought to be competent as shown by some examination, it is obvious that such a Committee as this would have to be formed—a Committee of this new public trust. Who would they be? It is not suggested that any practical men such as at present constitute the court of the Watermen's Company are to be members of this public trust, and I venture to say that no Committee of a body who are likely to be appointed would be competent to perform the duties which at present are performed by the Watermen's Company—to examine a lighterman, for instance, practically, in order to ascertain whether he was competent. Is it proposed that the new Port of London authority should exercise this jurisdiction over the lightermen, and that the Watermen's Company is still to exist in order to control the watermen? As I have pointed out, they cannot exist for that purpose, merely because they have not revenue sufficient.

11759. (Sir Robert Giffen.) Might I ask the learned counsel if he could tell us how many watermen there are as distinguished from lightermen.

(Mr. Horace Avory.) About 500 watermen as distinguished from lightermen.

11760. (Sir Robert Giffen.) Are those 500 included in the members which are given at Question 10646, where the number of licensed men is stated as 5,863?

(Mr. Horace Avory.) They are included. You understand, of course, that the individual holds the two licences, in some cases at all events.

11761. (Sir John Wolfe-Barry.) Does the licence apply to the whole of the jurisdiction of the Watermen's Company, or is there any difference between the licence for watermen above and below London Bridge?

(Mr. Horace Avory.) There is no difference. The Commissioners would, of course, consider before making any recommendation which might lead to the extinction or abolition of this Company the fact that during all those years of course numbers of persons have acquired vested interests in this Company. It is not like the case of a company which has large funds at its disposal, which would be available for compensating or pensioning the officials. The accounts which have been put in show that their total fund is a sum of something like £7,000; their revenue is just sufficient only to maintain the offices, and the inspector, and so on; and upon the whole I submit to you that no sufficient case has been made out to justify any recommendation which would be from the history as I have narrated it to you, in direct conflict to the opinion of Parliament expressed over and over again ever since the year 1859.

My Lord, that is all I have to say on those two points, and I am indebted to you for the consideration you have shown me.

Mr. F. F. DALDY called to address the Commission.

Mr. F. F.  
Daldy

11762. (Chairman.) You appear to address us on behalf of the London County Council?

(Mr. Daldy.) If your Lordship and the Commissioners please. Appearing to support before the Commission the case of the London County Council, I think there would be no justification whatever for my attempting to argue or support the points which are already represented by the specific separate interests. Therefore I am thrown somewhat into criticism on the general proposals and outlines of the schemes, and those I am fully aware are points with regard to which

the Commissioners stand necessarily on a somewhat higher level than I can, and, therefore, I wish to make my remarks as short as possible upon those points. When one comes to the heart of a case like this it all resolves itself into the question of what the deficiencies of the Port of London are, and what steps you are going to take to remedy those deficiencies. Really the leading principle of an inquiry like this is to ascertain whether you are or are not in the presence of what I may call an imperative case, an urgent case; as distinguished from what one may call perhaps a secondary

or ordinary case, because, of course, if you once establish what so many of the witnesses have spoken of as an imperative case, then you come into a position which enables you to recommend interference with existing interests and things of that kind, which would not be reasonable in an ordinary current case. I must admit, of course, that to some extent a case of that kind must be shown to carry through the scheme which the County Council have proposed. Of course, if it were a case for readjustment of charges, a case for the purchase of waterworks, or an application by a railway company for further powers, there you compensate every existing interest, and you do not ask any of them to give way. But that is not the case here. I cannot point that observation better than by a short reference to this disputed free water clause. Of course it has come out that in the year 1855 a responsible minister of the Crown in Parliament said this: "There was what I believe is known to the law as a dedication of the created water space for that purpose, the newly created water space being as free as the River Thames." That is Mr. Cardwell's speech in the year 1855.

11763. (Mr. Ellis.) When he was President of the Board of Trade, I suppose?

(Mr. Daldy.) I had forgotten that for the moment, but he was the Government official who was in charge of the bill, and he probably occupied some such office as that. May I say to the Commission that those words struck me as a lawyer very much. I do not think there is any maxim in law less open to question or exception than the maxim "Once a highway, always a highway." It is a maxim which is so inherently strong that it may produce a most extraordinary result sometimes. For instance, take the case of a public pathway which has fallen into disuse, and which people have not been careful about. If a palace had been built across it, say 100 years afterwards, and somebody was able to establish that that was once a footway, then that palace, no matter what it cost, must come down, and the old pathway stand, and be available to the public as it was before. I think there was some suggestion that this was a limited public right or something of that kind, but I do not really find that. It is not a right reserved for lightermen at all, but it is the right of the general public, and that is the way it has been described. If you take that statement that I have read, which was made 45 years ago, as to that public way, and then add to it the fact that in all the Dock Acts you get the same clause over and over again, and the same policy of Parliament right away through, one is in the presence, one feels, of a very difficult case, where it is sought to recommend an alteration in a status of that kind. I am not concerned to argue this point of the free water Clause from one side or the other, and I do not propose to do so from one point of view or the other. All I refer to it for is the purpose of showing the necessity of seeing how far this is an imperative case. In an ordinary case to make an ordinary change of rights, as I say like transferring an undertaking from one waterworks company to another or something of that kind, it seems almost impossible to say that you could justify interference with such a right as that. On the other hand, if you are in the presence of an imperative case, one of necessity, one can see at once that a proposition that the lighters should pay what the dock services are worth to them or something of that kind, does become possible and does become reasonable to some extent. Then again one cannot help seeing this: in this port for some years there has been this free lighterage Clause which must have had a tendency to drive the port into lighterage, and make it a lighterage port. If the Commission, looking into that matter, came to the conclusion that the lighterage in this port was responsible for a great deal of delay, and that there was too much lighterage, it would then be open to the Commission to recommend a modification to that extent only of this free water Clause. Again it might be said that a case could be shown for putting a charge on goods which go to competing warehouses, and not on goods or lighters that do not go to competing warehouses. All those are matters for the Commission to consider, and I simply put them forward without expressing an opinion upon them, merely saying that in the face of such a public declaration as that I cannot understand how the dock companies can possibly be allowed in the interests of their shareholders to clean take away such an eminent public right as that. My Lord, I am not going to attempt to make an argument before the Commission as to the actual state of this port and the urgency of the matters now required. My friend, Mr. Whitehead,

for the Chamber of Commerce, will be able to say anything there is to say with regard to that. I do not think it would be right to go into the whole case and make out a case of unreasonableness in that way. Nor again do I think that I ought to refer, though I leave it with some reluctance, to the evidence which has been given about foreign ports. One takes for instance a matter like this. Looking at Mr. Gomme's figures, supposing you compare the shipping entered with cargoes in the Ports of London, Hamburg, and Rotterdam in the years 1850 and 1899, you find that in London there were 5,155,000 tons in the year 1850, and in the year 1899 something over 15 million tons; so that the multiplier to get the state of things in 1899 from the year 1850, in the case of London, is something like the figure 3, but in the case of Hamburg the figure is nearly 14, and in the case of Rotterdam I think it is something like 18. Those are figures which of course must be looked into, and considerations which must be entertained at some time or another. I do not propose to attempt an argument upon them, because they are matters which are perhaps better considered quietly and carefully, rather than by means of a speech from Counsel. With regard to that I put it in this way; those matters may be very useful as confirming the direct evidence which has been given, but really the matter is most strongly brought forward before the Commission and the public by the evidence of all these leading merchants who have come and told the Commission that the state of things in the Port is not only unsatisfactory, but that a change is imperatively required. So again with regard to the question of the dearness of the Port, that again seems almost too wide to be argued within the limits of a speech by Counsel, and I do not intend to attempt it. It is sometimes of assistance in matters of this kind to see how much really is common ground, and how far you can get from that. I think in this case there is an absolute consensus of opinion in favour of a public authority for the Port. There must be. I cannot really see that there is any substantial opposition to that suggestion at all. If you wanted an authority in addition to that general consensus of opinion I should submit that a very strong one was furnished by the exhibition before this Commission of the various interests, and the extreme conflict in which they appear to be. It is natural enough, of course, that they should each come forward and look after their own rights in the most tenacious manner, and their evidence betrays that they are regarding the matter almost entirely from their own point of view. Take the Short Sea Traders, take every one who has given evidence, and the one matter that they stick at is the thing that affects their own particular trade. That by itself would form a considerable argument, I think, for a public authority being in general control of the Port. I think it is further agreed that the channel of the river must be deepened; as a general thing, I think one would say somewhere up to about the entrance of the Albert Dock. That, of course, is a matter in which our neighbours have been active, and it is not only other ports in this country and adjacent ports, but I think we were reading a few days ago that a 40 ft. channel at New York had been completed. We are a little bit later than other people with regard to that. I invite the Commissioners to consider that that is a matter that ought to be done, as to which there is no question, and from which you can, as it were, start as a foundation and proceed to reason from that to what measures are necessary. I do not think I can put that better than it was put in the words of one of the dock witnesses, Mr. Malcolm, who at Question 1743 said this: "In the interest, not only of this company, but of the Port, it is imperative that the river should be made navigable for vessels of deep draught above as well as below Gravesend, and it is to be hoped that measures may be adopted to carry out the necessary deepening without delay." Mr. Malcolm, you will remember, is the chairman of a dock company. Having once got to that point, of course, the fact of this artificial channel in the river, for I suppose it is an artificial channel, must be taken into consideration. There can be no doubt that such a channel as that made and maintained, to some extent gives rise to a new state of things in the river. I can point out one instance at once. It may not be a very important matter, but when you have to maintain a deep and artificial channel with possibly very great difficulties in maintaining it, a matter like the use of these blowers which have been spoken of to clear out the docks possibly ought to some extent to be under the control of the authority which has to keep that artificial

Mr. F. F.  
Daldy.  
July, 1901.

Mr. F. F.  
Daldy.  
July 1901.

channel going. Then again, assuming you do that piece of work you have to consider the benefit to the docks which will arise from that expenditure. It may or may not be a benefit; it may be that if all the warehouse goods at present come up to the upper docks and you make those upper docks available for deep water vessels there may be an effect upon the Tilbury Dock which is not altogether anticipated. As we know in the history of these docks the movement has been to get the accommodation further down the river. As railway communication and that kind of thing has improved the business has gone further down. It may be that when that deepened channel is made it may make an important difference in that direction. Then, again, I do not know—and it is a matter of engineering knowledge and opinion—whether the ballast which is dredged from this channel may not be disposed of in some way or another in connection with the formation of wharves, or jetties, or things of that kind. If that were so, that again would be an argument for saying that this deepened channel does involve or may involve a further distribution in a number of these matters in the river, of the authorities, and the works which the authorities attend to. But, more important still, there is an influence which follows as soon as you get that deep channel, and that is that in addition to the increased cost of the maintenance of the channel, you have, if I take it at 3 per cent. on 2½ millions a year, a charge of something like £75,000 a year extra. That, of course, is a very serious matter. It certainly seems to say that you cannot stop short of that deepening of the river, because if you do stop there you are putting a charge of at least £75,000 a year and the maintenance without any provision for the docks being connected with it, and the docks being made efficient to serve with it and in that way to enable the full, or anything like the full, advantage to be taken of the deepened channel on which you have spent so much money. I assume for the moment that in addition to that deepening of the river improved facilities to the extent of something like two millions or 2½ half millions will be required in some shape or other, and that the Commissioners will recommend something of that kind in some way. I mean something that will give better despatch in this port, and something that will bring the goods, in cases where it can be done, nearer to the centre of trade. The importance of that is that if you get 2½ millions for deepening the river and 2½ millions for this better accommodation you start with a charge of at least £150,000 a year, taking it at 3 per cent., for which you have to provide, and in addition to that you have to maintain the artificial channel, as I have said, and also to maintain the new works. I think the County Council must have come to the conclusion, though I do not say it in plain words as coming from them, that there is a point up to which it is always worth the ratepayers' while to bring the facilities of the port in some shape or another. And I think we have come to this, or shall come to this, that the condition of this port does urgently call for a remedy, and that this is a case in which ratepayers can give something and the other interests should give something. I will take an instance of this that has come forward very prominently. It is said that if the London County Council take over these docks and the warehouses connected with them there will be competition with the private wharfingers. I should say supposing it does come to that, keeping that competition within reasonable bounds of course, still that may be a point in which, to meet the great state of difficulty which has arisen in this port, one of the interests ought to give way just as the ratepayers have to give way a little. I put it before the Commissioners as a case in which everybody has to give way a little all round in order to get this new work done and the port brought up into a proper state.

11764. (Chairman.) Do we understand that you are authorised by the County Council to say that you raise no objection to contribute by a charge on the rates?

(Mr. Daldy.) No, I meant to say nothing further than the County Council have said in their resolutions, and what Mr. McKinnon Wood said. I stand absolutely on that. My recollection is that Mr. McKinnon Wood was asked about that, and he said we apprehend that there will not be any charge upon the rates, because we think we can make the thing up. That was, I think, in substance what he said.

11765. (Chairman.) You do not go any further than the evidence that has been given?

(Mr. Daldy.) No. I will make that clear, if I may, at once. Of course, one cannot help seeing that if they give a guarantee it is in the nature of a risk. They

may not have to pay ultimately at all, but it is something in the nature of a risk. It is a case in which, as I say, the urgency is such that all the interests must give way a little.

Now there is a point which I should just like to mention in case it has not been put in precisely this way by anybody else. What I want to submit is this; in a port of this kind in the long run the tendency is for any agency which is engaged in distributing goods, or rendering services to goods, to get the value of its services, and no more. Of course you may speak of it in a very wide way: here are ships, here are docks, here are lighters, all rendering services to what I call in the broad sense the distribution of goods. I submit that as an economical principle you do find that in any port the tendency in the long run is for the agency, the means of distribution, to get what its services are worth and no more; and as soon as you introduce a state of things in which the distributing agency is getting more than its services are really worth to the goods or shipping, then you get into a state of things which is very likely to take you off into a wrong direction and get you into serious trouble later on. Of course it is obvious that if you force goods into a particular dock or a particular channel, you may have other channels in the port into which those goods may go, or you may drive the goods away altogether. As an instance of that I find that in the year 1865, speaking of the private wharves, Mr. Capper, who was a dock man, in his book on the "Port and Trade of London," at page 166, says: "Nevertheless, subject as they are to all sorts of disadvantages, the wharves, in consequence possibly of being more economically managed, are enabled to compete to a large extent for the business of the port; and by regulating their rates in accordance with those of the dock companies, and keeping them conveniently lower, they continue to command a considerable trade in all sorts of imports." That was a good many years ago. I do submit that this is a matter which is borne out to some extent by the history of this port. One is aware, of course, that after the monopoly expired, say somewhere about the year 1825, and after the Warehouse Act was passed, the dividends of the company were not what they were. They did not remain at 10 per cent.; but still the dock companies went on for some time charging, I believe, their maximum charges and paying a good dividend to their shareholders. I submit that the fair interpretation of that is this; these people who built the docks at the beginning of the century knew what they were about. I believe there were just as shrewd merchants then as there are now. They knew what they wanted: they built these docks and the docks answered their purposes. In those days there was all this pilfering that we have heard about, and the protection necessary with regard to that and the provision for ships not to load in the river but in some sheltered place. At that time I say the history shows that the services of those docks as a distributing agency rendered to the goods and ships were worth the money they charged for them, and there was a point of time at which they ceased to be worth the same money. I say that really that is what you have to look at as a broad principle, namely, that these charges in the docks have become, and indeed have for some years been more than the dock services are worth. The moment you realise that, I say that any attempt to enable the docks to put still further charges on for those very same services, which are not worth their money now is bound to lead to disaster. I believe that is the fair and right argument. Of course one does not forget that in the history of this port there have been a number of disturbing causes. Of course there has been a very great increase of business which has helped the docks there; there have been these amalgamations from time to time which I daresay have helped matters; there has been a great increase of steam vessels; the geographical extension of the metropolis; and the metropolis growing in point of population, of course, and as a centre of demand; and then there has been this enormous improvement in the means of communication, and so on. All these are very important matters, but when you bear all those in mind you still do not find anything in those disturbing causes to disturb the principle which I have ventured to lay down before the Commission. It has been said over and over again in evidence, that these conditions are due to increasing competition between the docks; then it is said that they are due to want of appliances; then it has been said again that there has been an insufficient capital expenditure and no means of making a sufficient capital expenditure: but those are all, I submit, merely intermediary causes; the real cause standing above them all is that the dock services are not worth the money that is charged for them. How else is it that

the docks are starving, and yet not charging up to their maximum; unable to enforce their bye-laws and keep these barges and lighters in order, and really, I was going to say, honeycombed with these secret agreements. To put it shortly, these docks are valuable things and they ought to make profits, but the dock profits simply go in delay. Of course I need not say that for any satisfactory reasoning on this question, one would have to consider why it is that the Surrey Commercial Dock on one side, and the Millwall Dock on the other, stand in such different positions financially. My suggestion would be that in the Surrey Commercial Dock, where you have something that wants keeping and wants warehousing like timber, timber can go there, and then, of course the services that the Surrey Commercial Dock renders to timber are worth the money; but they are not anywhere else, and that I submit is the real reason for the present financial position in which the Surrey Commercial Dock stands.

Now I pass from the general remarks that I have been making to the proposals of the Corporation of the City of London, and I think I shall be doing what is most useful, both to those whom I represent and to the Commissioners, if I make a few remarks on these schemes in turn. Of course the City of London is one of the largest of our constituent boroughs, and historically it is the most important of them, and I want to attach importance to their proposal if possible. They agree that there should be a public body and a leaven of municipal element, and they also recommend the purchase of the docks. The fact that the Corporation recommend the purchase of the docks is no doubt a weighty fact. But the moment you allow that the consumer is interested in any way in these charges that the Corporation propose to put on, the whole of the Corporation scheme seems to go to pieces at once, because really if it is a matter of representation, is it to be considered that the Corporation, which insists that the consumer is not affected in any way by these large proposed charges, is to represent the toiling millions who are consumers in this metropolis, and to say that those are the views of those toiling millions. I think the Commissioners did ask what the representation of the City was, and we were told with something of a flourish that 29,907 municipal voters elect the Common Council, from whom, of course, these representatives would come. I took the trouble to ask the number of voters who elect the London County Council, and I am told that, exclusive of the City, it is rather over 672,000. Now really to suggest that this municipal leaven is to come out of this select body who are elected in this way by the City, if you put the scheme forward as a scheme which is a representative scheme, becomes absurd. Then you will remember of course that when the Corporation were asked what they meant by the expression "the benefit of the port as a whole"—that was an expression made use of once or twice in their evidence—they said it meant the benefit of the traders of the port, and nothing more. That means, clearly, excluding all the consumers. And they said again in plain terms at Question 7924 that the merchants' interest was the only one which had influenced them in drafting their scheme. How can they affect to represent the consumers after that? If you consider for a moment the evolution of the Corporation scheme, from internal evidence it looks really like this. The first thing they had to do was to keep out the County Council. They started with that, and that is involved, of course, in having no aid from the rates. They never suggested any aid from the Corporation funds. But, having gone to that point, it was necessary to have a scheme which would be a large scheme and worthy of a body like the Corporation of London, and they certainly have proposed a scheme which, as regards such matters as the purchase of the bonded wharves and these jetties, is a great deal larger than anybody else's, perhaps. So that they satisfied that condition. But then there came this very difficult question of finance, and that had to be met by putting the Liverpool rates on the top of the London rates. Of course that produced a very large sum. That by itself would not give, perhaps, a sufficient power of borrowing, or sufficient facilities for borrowing, but they put on that an unlimited power to charge. That is what the Port Committee were to have. Then when one tried to find out what this all really meant, Sir Marcus Samuel said it was not an augmentation, but an adjustment of charges. I may say at this point that I have understood for a long time now that the Commissioners are clearly of opinion that this is not a case which can be met by a readjustment of

charges, because I think if the Commissioners had thought it was merely a matter of rearranging the charges in the port which are imposed now, the question of charges would have been gone into. I gather that the Commissioners are of opinion that something more is required in the circumstances of the present case. The Corporation, having got so far, had to account for the expenditure of this large sum of money, and that they did by saying that there would be a great growth of trade. But they were still in a further difficulty, because people had a difficulty in understanding how such a prodigious growth of trade would occur immediately after the execution of these works as to meet this large expenditure. Then they committed themselves to this: they said that there was gross mismanagement somewhere in London. They cannot mean the Thames Conservancy, because they praised the Thames Conservancy up to the skies. It must mean the docks, and I think the suggestion of the Corporation, which I do not accept at all, is that really there has been gross mismanagement on the part of the docks, and that was responsible for the state of things, or, at any rate, largely responsible for the state of things, in the port now. All that not being sufficient—and I really do not think the Corporation have treated the Royal Commission quite as they should in the matter—the Corporation put on to their scheme a Government guarantee. If you can compare that with anything, compare it with this. Consider for a moment the launching of a ship with a big hole in her bottom, and then the people responsible for launching her putting collision mats on. That would be nothing more nor less than this in the way it has been brought up. There was no resolution on the matter at all. This Port of London does stand on a different footing from other ports. For instance, on the last occasion, as far as I know, in which this river was really in a difficulty—certainly we are free from it now—was in the year 1855-6 when the Main Drainage Acts were passed. Everybody knows that then the river was in a terrible state, and something had to be done. I do not know whether it is present to the minds of the Commissioners or not, but those Acts do contain a power to the Metropolitan Board of Works to borrow on a Treasury guarantee. The moment you get to that you do see that the Government has to some extent treated the Metropolis as being on a different footing from other places. Speaking from recollection I think that if you were to take the case of the Royal Parks—there may be some exceptional reason for that.—to some extent the up-keep of them is provided for out of the Consolidated Fund, and I think if the matter were looked into it would be found that in that and one or two other respects the Government have distinguished in the case of London. One feels that in the present day, of course, apart from arguing from the importance of the Government arsenals and things of that kind on the river, Parliament is not inclined to put London in a different position. But now supposing you do assume that under some circumstances a Government guarantee would be given, I cannot understand how any Government could for a moment give a guarantee where an enormous sum of money was raised on some large charges which might or might not—very possibly not—produce the anticipated revenue. I cannot understand how the Government would undertake to make the whole of the interest good to the bondholders. As far as my experience goes the Government is rather prone to put a limit on its guarantee in all cases. Then I do not understand this proposal for making it a Trustee Stock, for it seems to me that that either comes to a guarantee in disguise, or to nothing at all. You cannot make trustees invest in a stock by calling it a Trustee Stock, and you cannot affect its value in the market by saying that trustees may invest in it. If they will not do so they will not do so. It is a serious question, which the Commissioners have no doubt considered, whether these increased charges which the Corporation have proposed will really produce an increased revenue at all. It does not follow that because you take a larger net you are going to get a lot more fish, because the net may be so large that it will frighten away the fish. I cannot examine the whole of the matter critically, but take Sir Marcus Samuel's table of charges in Appendix 3 of the 22nd day. Amongst charges on the exports of home manufactures he proposes a charge of £12,457 on manufactured iron and steel. I do think that anyone who is acquainted with iron and steel work, even remotely, might fairly ask whether in the face of the American and German competition which we have to meet, steel and iron work would stand an extra £12,457? Surely other people would be able to under-

Mr. F. F.  
Daldy.  
1 July, 1901.

sell us, and the item of charge would disappear in time. That is only one instance, but I think it is a somewhat strong one. Could you ask common-sense people to lend money at a low rate of interest upon such charges as that? Then I do not think the Corporation put anything extra for the up-keep of the channel and the new works. I suppose they must amount to a considerable sum. But whether we have to thank the Corporation for an example of a scheme that will do or not, we will thank them for bringing it forward. They say: "We have dealt with this scheme very broadly indeed," and that is what they have done.

Now, my Lord, I have to say a few words on the Thames Conservancy scheme. Of course your Lordship will understand that in making remarks on these public bodies it is from no want of respect to them, but merely a matter of argument in the course of this case. The chief difficulty about the Thames Conservancy's scheme seems to me to be that it is not a scheme for the Port as a whole, but simply a scheme for the deepening of the river. The result of that would be that suppose you take the Conservators' proposals, which came forward, I am bound to say, rather late, if you take their charge of £160,000 per annum; that is to say, £60,000 a year in tonnage dues and £100,000 on goods, before any other scheme to deal with the rest of the port or the docks can come forward, you find the trade of the port already loaded with this large additional charge, which is not likely, one would think, to assist any other scheme which is required to deal with the rest of the port; that is to say the deepening of the locks and the provision of facilities and all that sort of thing. I dare say it is a possible scheme as far as it goes, but the answer to it is that it does not go far enough. I do think there is a fair comment on that. Ought a body in the position occupied by the Thames Conservancy on this river to bring forward a scheme of that kind without any attempt to deal with the question of the port as a whole? Practically they bring forward a scheme which takes the cream off the ability of anybody else to borrow, and takes it off with a separator. I do think that the Thames Conservancy, even if they did not make themselves responsible for the whole of it, might put themselves in the way of bringing forward a scheme which can be looked at as a whole, because a scheme like theirs, which only deals with a part, is really impossible to criticise in any way, because it cannot stand by itself. But the chief objection to any scheme put forward by the Thames Conservancy is really the inherent unfitness of the Thames Conservancy as now constituted to carry out a scheme in this port. You are not now dealing with what a new body to be created in the future would be likely to do, but you are dealing with the ascertained qualities of an existing body, and you have to consider in the urgent circumstances of this port whether you can look to a body whose qualifications are ascertained as those of the Thames Conservancy are, for energy or initiative. I should like to refer shortly to two or three passages in their evidence. At Question 1384, Sir Frederick Dixon-Hartland said: "With regard to that I may simply say that the Conservators do not consider that the River Thames is a river that is up to date in the same way that many of the rivers are—the Tyne, the Mersey, and various others." That is their own view about it, and surely they must be well acquainted with the position of the river with regard to the docks. Then at Question 1390 he says that the shipowners had wanted them to move in the matter, "but we have been able to point out to them that it is perfectly useless their having the river deepened beyond what we propose to do until the sills of the docks are altered, because big vessels coming up would lie outside the dock and would block the whole of the river, and it would be no use at all unless they could get in." Surely that is the case of Lord Chatham and Sir Richard Strachan. They do not know which of these matters is going to be executed first. That did not carry them far enough, and they had to make an excuse for the top part of the river. They said that could not be done because they would have to spend a great deal of money in strengthening the foundations of the wharves down the river on both sides. That was the reason they gave with regard to the top part of the river. That is Question 1413. Then in answer to Question 1569 Sir Frederick Dixon-Hartland said this, and he said it again afterwards: "(Q.) And you admit that it is desirable it should be done. (A.) I think so, and anything we can do to bring the river up to date we shall be willing to do and glad to do." Then at a much later time, at Question 7484 he said: "We are quite willing to carry out these works." You cannot get this body to any further point than

saying that they are quite willing to do it, and the way they look upon it is, I think, shown at Question 7522: "What resolution have they come to in regard to that. (A.) We wish to be left alone to do our work as well in the future as we have done it in the past; we do not want to interfere with anybody else." Surely, my Lord, with respect to the Thames Conservancy, that is simply the attitude of the eldest oyster, who shook his heavy head; I think we go on to learn that he intended to preserve his connection with that part of the river bed which had hitherto been entrusted to his care.

(Adjourned for a short time.)

11765a. (Chairman.) Will you continue, Mr. Daldy?—Now, my Lord, with regard to the proposals of the London Chamber of Commerce, one feels that everybody before this Commission must be grateful to them for bringing forward what is really the heaviest evidence in the case; I mean the evidence of those leading merchants, the best known men in the mercantile world, who have come forward and stated their opinion as to what is required in the port, and so on. But whatever the weight of the London Chamber of Commerce as claiming to represent the mercantile community in London may be, we must look at their proposals *per se*, and I think we must say that their scheme has this unfortunate defect: they propose a guarantee and they have not got one, and of course no public body would give a guarantee except upon its own terms or upon terms which it has agreed to accept. So that the proposal of the London Chamber of Commerce cannot stand by itself, and I think they must have felt that. But the principal feature of it if you look at the terms of it is, that they would avoid competition by means of the dock warehouses with the private wharves and warehouses. Their point as I understand it, in connection with that is that they would buy these things in the first instance and then sell them off again. Of course this question of the severance of the warehouses from the docks is a question upon which an argument from me would probably be of no value to the Commission, and I shall not attempt to go into it. One feels the great difficulty of it, and one feels that we are committed by our proposal to a competition, a modified competition, but still a competition, going on between public authorities and the owners of private wharves and warehouses. The London Chamber of Commerce practically suggest a means by which that might be avoided, but at the same time they do not as a matter of acquisition and purchase affect to be able to separate the warehouses from the dock part of the undertaking. They say they would buy it and sell it off again afterwards. I do not think as far as that goes that that is inconsistent with any proposal that we have made. I apprehend that if the port authority, expert in all the affairs of the port, came to the conclusion that these warehouses should be gradually disposed of, or let on lease, and so not made part of their undertaking, there would be no difficulty in that being done under the scheme that we propose. That is all I have to say about the London Chamber of Commerce.

Then I would add a few words on the scheme which the dock companies have brought forward, which has naturally been very fully discussed here. In passing to that I wish to say once for all, that before this Commission we have intentionally avoided any question of the value of the docks. That is a question of extreme difficulty, of course, and even if we were disposed on other grounds to go into it one feels that the docks are coming here asking for further charging powers, and are therefore obliged to depreciate matters in their present state to the lowest point, and it would be something like hitting a man when he is down. Therefore we say nothing about it. The Commissioners may take it that we do not want to buy the docks on bad terms, but if we buy them we are willing to give fair terms. That is the beginning and end of the matter. But when you buy an undertaking like that you get something corresponding to the money you spend, and really the more important sum to be considered is the five millions or so which must practically go as further expenditure in deepening the river and providing facilities to the port. I certainly agree that the dock proposals ought to be very carefully considered not only because they have been put forward in a serious, careful way before the Commission, but because of the way in which they have been put forward with great frankness and great care. I have already indicated what seems to be the great difficulty in these dock proposals. They propose to charge the barges, which, of course, must bring the goods to the dock

quays, and then they propose to charge the goods, so I think it will be seen that they are proposing a higher charge than they ought for their services; and I do not think it is at all got over by making an exception for transhipped goods. That really is rather an instance of what no doubt will go on, and what has gone on for a great number of years, in these docks—one interest has had to be cultivated at the expense of others. Of course, if transhipped goods are to be exempt it must mean that the burden of the charges which transhipped goods ought to bear as a matter of payment for services rendered will fall upon some other goods, and the transhipped goods will be assisted at the expense of those other goods. The docks in putting their proposal forward consider that this difficulty about the highway, as it were—the free water clause is resolved by making a case for a charge; and they are bound to assume, and of course to assume, that that clause could be considered, and, if necessary, put aside by Parliament. The first point really to be considered, as I submit, is whether the docks could carry through their proposals on anything like what one may call a reasonable charge answering to the services which they actually render to the goods. Of course, it is going a long way to say that an alteration in the public rights would be made in any way at the instance of private company, but assuming that you do it, and assuming that, as I say, you enable the dock companies to make a charge somewhat corresponding to the value of the services they render, I think the moment it is looked into on that basis one cannot help seeing that so far from a proposal of that kind amounting to a complete scheme for the port, it really would result in a very small sum of money; it would not give nearly enough really to build this extended dock which the dock company put forward as the principal point in their improvements. Then this was pointed out, I think, to the Commission, and it is really nothing more than an instance of the difficulties which the docks have been in and the unfortunate condition which the absolutely insolvent state of these docks has helped to bring about. One finds on looking into the tables of capital expenditure that for the eleven years from 1889 to 1899 the average on the whole of the London and India Docks undertaking was £50,000 or £60,000 for capital expenditure on improvements. In the Clyde on an average of the same years it was over £200,000 a year, and in the Mersey for the same eleven years it was something like £270,000 a year. Those figures may, of course, require some reduction, and some allowance may have to be made, but they do show in the main the unfortunate state into which the condition of these dock companies has brought this port. There is a passage in Mr. Scott's evidence which I should like to call your attention to upon this point. It is question 5850. It is as to the way the Dock Company completed their proposals. Mr. Scott said: "At present the Thames Conservancy do collect certain rates, and I would give the Thames Conservancy or whoever is the river authority the power to continue to collect those rates. I think shipping should pay perhaps a trifle more, but I think that all goods coming into the river should also contribute. I think that body should have the power of levying a small toll, not only on goods coming into the docks, but on all goods brought into the port or exported from the port."

(Mr. George Wallace.) I think my learned friend will see by the answer to the question just before that Mr. Scott was giving his own ideas on the subject.

(Mr. Daldy.) Quite so, I understand that. Mr. Scott is a practical man, and I attach importance to his evidence as that of a practical man. So that it really comes to this: he is going to improve the docks by this abolition of the free water clause, and then in addition to that a further burden is to be put on the trade of the port by the charges to which he refers in this answer. Then I find a great deal of difficulty in understanding how the Dock Company could raise money on anything like the terms they suggest by means of these rates that they are proposing to put on lighters and goods. The comparison was made with the London and St. Katharine Debenture 4 per cent. Stock in the year 1896. I am very much afraid that not only is it a matter of inference from the evidence, but one could almost tell without, that if the Dock Company were enabled to raise any considerable sum they would have to pay for it something more like the six per cent. of the Millwall Dock Equipment Company. Of course as soon as you go into the question of borrowing money on those figures, the difference between that six per cent. and the three per cent.

upon which the County Council could raise it becomes on any large sum an enormous figure.

Then there is another difficulty in the way of the Dock Company's proposals. Their sheet anchor seems to be the provision of an extension of the Albert Dock—a well equipped dock no doubt—but there again there will be charges made in respect of the use of that dock. We hope it will attract a good deal of shipping, but it is by no means certain in the present condition of the port that the provision of facilities at that dock will not take away a corresponding amount of business from other docks. Of course if that is so it will not so far produce an increase of revenue for the Dock Company at all. One feels that if one put one's self into the position of a man who was asked to lend a considerable sum of money for the purpose of these improvements, that certainly would be one of the matters which one would take rather carefully into account. There is evidence, I think, before the Commission that some trades in small goods have already been driven away from this port by the existing charges, and in the face of that it is very difficult to say that higher charges would not have an increased effect in the same direction. It is very clear that the warehousing business is falling off; that the dispatch required is getting quicker, and so on. It is very difficult to see that you can impose higher charges or what in effect amount to higher charges; and as to the suggestion that the money could be raised at anything like four per cent., you must not forget that this undertaking is already burdened with a large debenture charge. I think we were told that it is nearly £3,000,000 on the London and St. Katharine Docks, and nearly £4,000,000 on the East and West India Docks; so that you start with a debenture indebtedness of £7,000,000, or something like that. There is one other thing I should like to say with regard to the dock scheme. They propose, and manfully propose, to apply part of that money to the payment of dividends for their shares. They say the shareholders put money in the undertaking, and ought to get it back. It is all very well to say, "The Commissioners will not stand that, but you may apply it in some other way: you may apply it for the benefit of the port." But the answer to it seems to me to be that when you consider the dock proposal you are bound to consider the terms of it, and it was part of their terms and what they put forward that there must be out of this charge a substantial payment to the shareholders of the Dock Company, and that cannot be done in the present state of things.

I have now a few suggestions to offer to the Commissioners with regard to our own proposal, that is the proposal of the London County Council, which is an attempt, I hope, to pour some oil on the troubled waters of this port. Of course every scheme has its difficulties, and no doubt this is not without them. I wish to say in plain language what is probably already sufficiently well before the minds of the Commissioners, that this is a case of municipal assistance and not of municipal management. Of course some arguments have been put forward in which it has been described as a case of municipal management, or municipal control, or something of that kind. I ask the Commissioners to put any argument of that sort on one side altogether, and let it stand as a proposal for municipal assistance and expert management. That is the way we put it. It has been said as one objection to our proposal that it would have the effect of putting the Port Authority under the tutelage of another authority. That is the word the City witnesses used, and, of course, it was based upon this, that on questions of further capital they would have to come to the London County Council. But I do submit that it is very easy to exaggerate that view of it, and to put it in a wrong way. It is true we propose, in the first instance, to have a certain number of members of the Council representatives on the Port Committee, and then we propose to have a control with regard to capital expenditure. Now, first of all, ought not the consumers to be represented in some shape or other on this Port Committee? Because, if so, if the consumers of this large metropolis ought to be represented there, that alone would seem to give a reason for some of the County Council and the ratepayers being there. That is one point. Then it has been said, of course, that in that way the same people get a sort of double control on the capital, as it were, but that would not be so. We say these ratepayers ought to have not a controlling voice, but a voice in the expenditure of income, and I suppose that would be principally what these elected representatives would be for on the Port Com-

Mr. F. F.  
Daldy.

1 July 1901.

*Mr. F. F. Daldy.* mittee. They would be there to have a voice with regard to the income.

1 July, 1901,

Now the other point I want to make is this. If you are going to constitute this authority, and oblige it to come every time it wants to make fresh expenditure out of capital, and bow down its knee to the County Council, and ask for authority, and so on, it may be that would be a position which might be very undesirable. But, as I understand the County Council proposal, that is not really the position at all. What they say is this: "we are willing to come forward with a large sum for the purchase of the docks, for the deepening of the river, and for the improvement of the port." It may be that after that resolution has been come to, there would be what one might almost call office routine—the various instalments of the capital sum would be sanctioned from time to time by the County Council—but that is mere office work. When a body has distinctly passed a resolution, and come forward and said: "We have made up our minds, and are prepared to vote this large sum of money for this undertaking," and some years later on it may be necessary to make further capital expenditure, why should not that matter go to the County Council and be reconsidered by the ratepayers if that departure is to be taken? I do suggest that this expression, "tutelage," and expressions of that kind may very easily be pressed too far. Then it is said we could not get the men. My answer to that is that it may be that in every case you may not be able to get experienced men, but what you want in this case are men who will take trouble. I do not know whether the Commission know what proportion of the County Council are actually men who are or have been engaged in mercantile pursuits, but I believe it is very considerable. I do venture to say you will find men who are willing to take pains, and if you put a man on such a body without great mercantile knowledge or without a wide grasp of the state of the port, he is there side by side with, and has the opportunity of learning from, men who do know those things and have been there perhaps longer than himself, and it seems to me to be a very small objection to make to say that that is the class of man who would have to represent the County Council on such a body. I have another remark to make that may be worth making. I think it is only an argument against the management, but it has been said that the County Council is a political body. That has been put as an objection. At Question 7921, Sir Marcus Samuel said that no political issue was ever raised either at the election of their members or the business meetings of the Corporation. Then he went on: "And the great importance of this will become manifest when the Commission consider the evidence given on behalf of the Bristol Corporation, the witness, Mr. F. B. Girdlestone, clearly showing the mischief which had arisen from the fact of sometimes one and sometimes the other political body being in power." Sir Marcus Samuel has appealed to Mr. Girdlestone, and I appeal to him too. It is quite true he did say so in a case where the municipal body was managing the undertaking; there had been a turnover of parties; one party had gone on with one work, and then another party came in and wanted to do something else. That I point out is purely an objection to municipal management. Let me refer to another answer of the same witness, to which I attach great importance. This is at Question 4704. Mr. Girdlestone, I take it, is a man in a position in which very few men are; that is to say, he is an experienced dock engineer, a dock manager, and he is well acquainted with this municipal management of docks. Not a great many of his standing have that experience in this country. Will the Commissioners look for a moment at what he says, expressing his views about the municipal management of the docks. He says: "There is one great advantage, and I think there are a great many disadvantages. That is my personal opinion. I think that the advantage is that a municipal body owns a dock and borrows its money at the very lowest rates, having the security of the Borough Fund." That advantage, quite apart from municipal management, of course, there will be here, if this suggestion is acted upon. Then he proceeds: "I think also a municipal body gives no concessions or anything of that sort with regard to rates; that is to say, that the rates are fixed, and absolutely adhered to as regards both dues on ships and on goods." Surely the port authority of the kind which it is proposed to constitute would have at least the strength of a municipal authority as regards clearing away a great many of these agreements and preferences and allowances and things of that kind, which Mr. Girdlestone seems to think so undesirable.

Then he goes on: "Then I think as the municipality is not working for a dividend, they are more anxious perhaps than a private company to maintain the dock concern in a high state of efficiency." Surely that is no argument against the port authority here—that they are likely to maintain the dock concern in an undue state of efficiency. Then he turns to the other side of the question and points out the disadvantages of which he had spoken before. He said first there was a difficulty in managing commercial concerns efficiently when tied up by the Borough Funds Act. That does not arise here. Then he said that the Committee's proceedings often met with fractious opposition in the Town Council. That, of course, does not arise here, because we have no municipal management. These questions do not touch the London County Council. Then he said: "I do not think in regard to labour that a municipality gets as much work out of the men as a private employer would." That may be so; I do not know as regards labour. Then he says, "There is very often a want of continuity of policy in a dock concern managed by a municipal body, the Board being constantly changed and many of the men elected to the Town Council having no great stake in the City property. I think there is occasionally timidity on the part of Town Councillors to act for the real interest of the dock concern, against public opinion. They are rather inclined to listen to public clamour, because, of course, they have to seek their seats every three years, and sometimes the fear of losing a seat makes them give way too readily to public opinion. Then there is a tendency in a rate aided concern to extravagance in capital expenditure." Now I have exhausted the whole of his objections, and all those things with the possible exception of labour seem to be the very things that do not, and cannot arise here. The last of them, the tendency to capital expenditure, would, I hope, be met by that control for which we are asking in the matter of the rates. The scheme we have put forward is that there would be the guarantee and the money would be raised, and we hope by re-adjusting rates and carrying on the business at a better profit that there would not be the need for further rates. But supposing that adjustment should be required, I think I am right in suggesting what is correct when I say that there would seem to be a very great advantage in a scheme under which you could make these alterations gradually, readjusting the burdens and so on by degrees, as compared with a scheme such as the Dock Companies' Scheme, or the Corporation Scheme, or the London Chamber of Commerce Scheme. It cannot be a desirable thing to put on the trade these large burdens all in a moment if you can possibly avoid doing so. There is room for considerable argument on many grounds for the management of the docks and the river being in the same hands, but I do not attempt to elaborate that before the Commissioners now. As regards the terms on which we could raise this money if our scheme were accepted, I think the Commissioners probably have it sufficiently clearly that the whole sum required could be raised at something like 3 per cent. within a very little, one way or the other. One need scarcely point out that on this fresh expenditure, which I put roughly at about 5 millions alone there would be a saving of £50,000 a year. I wish to point out one difficulty in our scheme, which is that we are unable to see our way to saying that the warehouses can be separated from other parts of the dock undertaking. We are not speaking as an expert body in the matter, but we have formed the best judgment we could upon the evidence, and really the dock companies and the Commissioners, who have the fullest information, are in a very far better position to judge than we can be. Not having been able to satisfy ourselves that these matters could be separated, our proposal is to purchase the whole of the dock undertakings. It may be that that lays us open to the suggestion and criticism that we shall be carrying on warehouse undertakings in competition with private wharves and warehouses. That, of course, is an objection, and the way we meet that, or try to meet it, is this; first of all this competition will be carried on by a public body of the highest standing who will not fight like directors do for a private interest, but who will be bound to carry on the concern—not only will be bound to do so, but who may be trusted to carry on the concern—in the interests of the port, as a whole, not in the interests of a particular undertaking, but with due regard to the common interests of all, wharfingers and warehousemen too. Then I think we are also entitled to remind the wharfingers and warehousemen that by the deepening of the river and the

consequent improvements which will take place, as far as one can make out their property will not be depreciated. Probably the improvements in the dock will be a very good thing for them. One feels it is a difficult question if you take a case like Tilbury and you sever the warehouses. It is in evidence that the warehouse business goes mostly up to the top, and if you deepen the river and then sever the business in the Tilbury Dock one does not know quite what would happen to the warehouses there. But probably the chief objection for the present purposes, and at the present time to the separation of the two things is the impossibility of apportioning the value of the dock undertaking on the one side, and the warehousing on the other, and dealing with them satisfactorily as a matter of purchase.

There are a great many things that I do not deal with. There are the suggestions for amalgamation of authorities and things of that kind, but I do not think it is in the least necessary for me to trouble the Commissioners with an argument upon them, more especially

Mr. ROWLAND WHITEHEAD, called to address the Commission.

11766. (Chairman.) You appear to address us on behalf of the London Chamber of Commerce?

(Mr. Rowland Whitehead.) Yes, my Lord. In addressing you on behalf of the trade interests as represented through the London Chamber of Commerce, I must confess to your Lordship that I approach my duty with a considerable sense of responsibility; partly because the problem before this Commission is very complicated, but still more so because the interests which are entrusted to me to represent for the moment are of the very greatest kind, and the task is undoubtedly a very great one. Of course there are other points of view than the point of view of the trader. The historic claims of the Corporation must be considered; the vested interests of the dock companies and the established rights of wharfingers, lightermen, and others are all elements to be considered. But, after all, the paramount consideration, the consideration which must be present, I submit, to the mind of every thoughtful person is; how can this inquiry benefit the trade of the Port of London? When I speak, therefore, on behalf of the traders I feel that I am representing, perhaps, in a sense the most important interest that is before the Commission. In dealing with their case there are certain broad considerations of public policy which were touched upon now and again in the course of the evidence, questions of the balance of trade power, and, intimately associated with that, the balance of financial power, which are considerations which cannot be absent from the minds of the Commissioners, but which I should not think of touching upon, as being altogether too wide for any discussion here. Nor will I touch upon any of those interests which are separately represented. It may be that here and there the scheme put forward by the London Chamber of Commerce clashes in certain details with the schemes, or the proposals, or the interests of other parties whom you have heard, or will hear, but I do not propose to deal with the question in that minute way. I should submit that the matter must be looked at broadly as one big question. In dealing with it I would like first of all to touch upon one point which Mr. Daldy mentioned, and that is this. He said it is incumbent upon counsel here to show an imperative case for change. Now, my Lord, an imperative case for change has been shown. I think the evidence gradually accumulated through the last 29 days makes up such a case; but I am not sure that it is incumbent upon us to put the matter as high as that. It is true that the Terms of Reference use the words "necessary for the promotion of the trade of the port"; but I do not think that the word "necessary" is used in any pedantic sense. "Necessary" in its strict sense is a very strong word. What I submit it means is that it is sufficient for us to show such grounds of expediency—expediency of so high an order that it almost amounts to necessity; if we can show considerations of that kind it is sufficient.

Now, my Lord, what are the questions which are before the Commission? They are really two-fold. First there is the question of whether any change should be recommended. Upon the first of those two questions it seems to me there is no real difference of opinion. For instance, take the question of structural and physical improvements in the port. The question of the depth of the water has been touched upon by my friend, Mr. Daldy, and there was a large volume of evidence from shipowners and others which was

as you have present the special representatives of the interests in a great many cases. We have said that the Government ought to give some help, and I have mentioned one or two matters in which I think the Government have distinguished between London and other ports. It may be that in regard to the Woods and Forests dues, or in some other way, and perhaps to a larger extent, the Government may be able to help. We have placed it distinctly on our resolution, and it is distinctly part of our opinion that the Government ought to do what they can.

I now conclude what I have to say. I hope the scheme we have put forward will be found in many respects to be a very valuable scheme. A great feature of it is raising the money at a cheaper rate. I must conclude by admitting what I think I have said before, namely, that we do put it forward as being applicable to a state of things where all the different interests must, if necessary, give way. With that recommendation of the scheme I leave it in the hands of the Commissioners.

Mr. F. F. Daldy.  
1 July, 1901.

carefully considered by the Commission in the earlier days of the proceedings, showing that at the present time the depth of water is insufficient or is very close up to the margin of sufficiency for the big vessels which are coming more and more into use. This is what Sir Thomas Sutherland said at Question 1992: "I think with regard to the port, in the first place, that it is a very great danger that large vessels such as we and others now employ should not be able to lie with safety off the dock entrance or in any part of the river above Erith." Mr. More, when he was examined, at Question 271, by Sir John Wolfe-Barry with regard to the delay which vessels have to suffer in the river, admitted that there were several hours of delay incurred by the shipowner in the event of a ship arriving at low water. You have the matter summed up in a certain sense by two shipowners. Mr. Anderson at Question 2094 said: "What we find is that most of the owners will try to avoid London; they will want to be paid more if they are to come to London; they will certainly prefer an open charter, which gives them the chance of not coming to London, rather than a charter where there is the option of sending the ship to London direct."

Mr. Rowland Whitehead.

Mr. Pembroke, another shipowner, at Question 8331, said: "Now and for some time past all owners of tramp steamers, unless they have full cargoes of grain in bulk, do what they can to avoid having their vessels at London, owing to the large expense and delay incurred there." Looked at even from the point of view of the docks themselves, Mr. Baggallay, who was the engineer of the dock company, said at Question 843 that if the Thames were deepened throughout 30ft. it would assist the docks very materially, because, although ships coming on the top of the tide come up now, it would be a very great advantage if they could remain in the river a longer time. So I take it upon that point it is a sort of common factor in the discussion—common as between shipowners, traders, and the dock companies—that there must be a deepening of the channel, if not in the immediate future, at all events in the very near future.

Then passing from the channel of the river to the question of the docks, you have to consider the matter as a whole. The river and the docks really form one complete whole so far as the port is concerned, and it is important to consider what structural changes or improvements are necessary there. I will not deal with the minutiae of the thing. There were lots of little details discussed about storage sheds, cold meat stores, improved machinery, and things of that kind. But here you have the London and India Dock Company, who came before you, and through their chairman saying, first, that there is, as I understand his statement, a present necessity, or almost a necessity, for a dock in the vicinity of the Albert Dock, and then he sees looming in the distance a very much bigger matter. Then he says at Question 5663 that in ten years time he thinks that the authorities of the Port of London will have to face the question of an extension down at Tilbury. As it seems to me, if it merely stood upon those three great structural changes the case for an alteration of some kind is proved, and the vital question before the Commission on that aspect of the case is: is it possible for the existing administrations, such as they are, to carry out those important changes? There are two great authorities to consider. There is, first of all, the Thames Conservancy, and then there is the London and India Dock Company. The other docks are smaller, and I

**Mr. Rowland Whitehead.** think for practical purposes we may treat the London and India Dock Company as representing that interest. Now what is the case with regard to the Thames Conservancy? I am not going over the whole history; it has been adverted to, and it must be within the recollection of the Commission. Here you have a public body which makes something which is almost in the nature of a Parliamentary bargain in the year 1894. They have certain powers entrusted to them, and the exercise of those powers was carefully considered by a very responsible Commission, and their report was made. The recommendations of that Commission are not carried out. True, because the Thames Conservancy lacks what is financially necessary. I am not going to criticise or say a word with regard to the conduct of the Thames Conservancy in that matter. It is not a question I would submit, for any individual officer of the Thames Conservancy; it is a broad question of public policy pursued by a public body. You have the fact that for seven years after the passing of the Act of 1894 they have abstained from taking any steps to carry out what was in the mind of Parliament at that time, and what was recommended subsequently by the Commission of Inquiry, and that fact does seem to me so eloquent that I do not propose to deal with it any further.

Now with regard to the dock companies. The Mill-wall Dock Company admit that although they have the legal power of raising money, or legal authority to raise money, their credit is exhausted. With regard to the London and India Dock Company, I am not going over the ground which has been gone over by my friend Mr. Daldy, but it must be quite clear upon those statements that they have put before the Commission, showing the state of their capital and the state of their credit, that their financial position is not so rosy as to enable them to raise the necessary money on reasonable terms or upon any other terms than such as would constitute a real burden upon the trade of the port. But, my Lord, apart from the question of finance there is a much wider issue as between the traders of the port and the dock companies, which has a very direct and material bearing upon this question, and that is the question whether, in recent years, the dock companies have shown a real grasp of the situation, and whether, at the present day, they are sufficiently in touch with the requirements of the trade of the port to justify you in recommending that they should have increased powers of any kind whatever. Let us take the year 1891, because, although that is ten years ago, the individuals are to all intents and purposes the same—I mean the individuals who at that time governed the administration of the docks. In 1891 the dock companies, in consequence of the labour problem which faced them, gave up, to a large extent, the discharging of vessels in the docks, or, at least, not entirely—but they initiated that change, and they did so, as Mr. Scott informs us at Question 6496, with only approximate data before them. It was a very momentous change in the administration of the port, and they adopted that policy without seriously considering whether, from the financial point of view, the policy which they were about to pursue was a wise one or not. Now, this is, if I may say so, the great point against the administration of the docks with regard to this question; for the whole of the succeeding ten years they have gone on developing that line of policy without ever considering whether it was a wise one financially or not. My authority for making that statement will be found at Questions 6503 and 6504. I asked this: "Since you began this course, in the year 1891 or 1892, have you ever considered the possibility of making a profit for yourselves on the work of discharging vessels?"—(A.) No, of course not, because we surrendered the right to do it—a right that we always claimed. (Q.) And from that, do I understand you have never gone into the question to consider whether you could make a profit upon the work?—(A.) Of course not." The mere form of the answer seems to me to suggest an extraordinary want of appreciation of the details of administration in these matters. At the present time you have 82 per cent. of the goods in the docks discharged by others than the dock company. They still discharge 18 per cent. themselves, and that 18 per cent., according to the evidence of Mr. Hardy, does show a profit which is reasonably satisfactory.

Then, passing from that particular point to the agreements with the wharfingers, those agreements have been challenged frequently in this room, and they have been the subject of very anxious inquiry amongst the traders. What is broadly the effect of those agreements? This

is another branch of the dock companies' business—the warehousing branch. You have got two trading interests which are in direct competition with one another—the wharfingers' interest and the dock companies' interest—and you find that the dock company, as it were, cut themselves off and hamper themselves, in what should be a trade competition, by agreeing with the wharfingers that their rates which they would charge to the traders shall always be higher than the rates charged by the wharfingers. That is, I submit, directly cutting themselves off from a source of profit. Take for example the evidence given by Mr. Rogers, when he was speaking on his own behalf in respect of his individual trade. It is at Question 8684. He said: "Most of our goods liable to these charges are lodged not in the premises of the dock company, but in the public waterside wharves along the Thames. The reason for this is that the charges at the public wharves in our trade are on the average about 10 per cent. less than at the docks. The wharves are also nearer the centre of business, and their system of delivery is much quicker than that of the dock. If it were not for the lower charges at the wharves, we should, in most cases, prefer to store goods at the docks in order to save the delay caused in lightering up and down the stream." I will not cite any further evidence upon that point; but I think that the mere fact of their entering into such an unprofitable, or such an extraordinary, agreement is one that throws considerable doubt upon the wisdom of the dock administration.

Then I want to come to more recent history. In 1896 they propounded a bill, and after considerable discussion in public meetings, they withdrew that bill. In 1900 they introduced another bill, and in 1901 they introduced yet a third, which was a very substantial modification of those proposals which they put forward in 1900. The bill of 1900 had never been before a committee or been threshed out, and yet in that twelve months the dock company made very substantial modifications in their scheme; and what it seems to suggest to my mind is that in the year 1900 they came forward with proposals which were very inimical to the interests of trade, which they had not fully considered. So that within the short space of five years you have the dock company twice propounding schemes which frighten and alarm the trading interest of London, and they did so without full consideration of their schemes which, when the thing comes to the pinch, the dock company cannot, or will not or dare not support. Now, my Lord, the reason why they felt bound to go back from those two schemes I think is very obvious. They are out of touch with the feeling of the traders in the port. In the long run an administration of this kind must depend for its prosperity upon meeting the requirements of the trade, and upon being in touch with what the traders want. Then it is because the dock companies are not in touch with the trading interest that they feel themselves so weak that in the year 1896, and again in the year 1900 they are obliged to abandon proposals which they seem only to have partially considered. There is plenty of evidence to show that they are out of touch with the trade. As Mr. Scott said, they assisted to alter the form of the bill of lading. When I was asking him a question about that he seemed to doubt whether he had used the word "assist," but at Question 5596 he did use that word. They did that notwithstanding the congestion upon the quays which the new system of discharging involves. That congestion and the piling up of cargo upon cargo and the delay which they cause to the trader are very serious items indeed to the trader; they affect him day by day in the conduct of his business; they throw upon him a very serious expense, and yet in spite of that very important consideration the dock companies being, as I say, out of touch with the interests of the trade in the port, carried through that scheme and assisted it to the best of their ability in spite, as Mr. Scott said, of very strenuous opposition.

Then take the question of consolidated rate. That question cropped up time after time in the evidence given on behalf of the Chamber of Commerce. Mr. Rogers, in his evidence at Question 8701, said; "This consolidated rate includes a number of services which are not required in a vast number of cases. For instance it includes one, two, or three months' rent, according to the nature of the goods. In former years the system of warehousing goods for comparatively long periods was very convenient; goods only arrived at certain times of the year, and were kept in the docks until wanted. Customs duties also were heavy, which rendered it desirable to keep goods in bond, in order to save interest on capital. In modern trade pro-

longed warehousing is quite unnecessary, but, while the system of business has changed, our dock companies have not moved with the times." That is not an isolated opinion of Mr. Rogers'. He was speaking, I think, then on behalf of the Chamber of Commerce. I say it is not an isolated opinion, because you will find that Mr. Blackburn, speaking on behalf of the wool trade, at Questions 8890 and 8891, said that although the system of business in the wool trade had changed materially in recent years there had been no modification either in the charges, or the system adopted by the dock company. Then there was that still, if I may say so, more dramatic evidence given by Mr. Powell with regard to South American hides, at Question 9534. He explained how that trade was entirely lost to the Port of London by the want of facilities here. He told us how it had gone to Antwerp, and he was very closely examined by members of the Commission with regard to it, so as to test the value of what he was saying. At Question 9537 Sir John Wolfe-Barry asked him this: "And you say London stands alone in not granting these facilities? (A.) Yes." Then later on he went on to explain that this was a very large trade, and he said it requires systematising, and that it is because at Antwerp and elsewhere systematic arrangements are made for dealing with the trade that the whole of that trade has deserted London and gone to foreign ports. Then, my Lord, there is another witness to whose evidence I should like to draw attention, as it bears on the same point, and that is Mr. H. B. Smith, who gave evidence with regard to the dried fruit trade. He was dealing with currants, almonds, dates, and other commodities of that kind, and he was very carefully examined by Sir Robert Giffen. At Question 9884, when he was asked a question about raisins he said, "London buyers are the cheapest buyers, and would be able to compete against any other buyers. Merchants here can buy cheaper than anybody else, because they buy larger quantities. If we could get the facilities for discharging the goods here without any great cost we should still do the business. The matter practically is so hampered by the heavy charges, and more particularly by the delays, that the trade has gone for that reason." My Lord, these are representative witnesses. I think nobody could have been in the room and heard Mr. Smith's evidence without feeling that he was a man of considerable ability and knowledge of what he was talking about. Then at Question 9886 there is this: "They are dealing in Greece and Smyrna with people that they do not know very much about, and they very often get badly treated. You may take it that in all cases if London could work on equal terms they would get the business." I do not want to go over the whole ground, but you heard a great deal of evidence from the traders. I ask you, is not that cumulative evidence to show that the present administration by the dock company is so out of touch with the necessities of the case that the dock company ought not to be trusted with increased powers lest by any means there should be any such injury to other branches of trade in addition to those injuries which have already been detailed before you. There was evidence given on our behalf with regard to the congestion of the barges. I will not deal with that; I have no doubt that other counsel who represent their interests more particularly will address you upon that point. That congestion is a most important matter to the trader, because, as you have heard, he has to pay for the demurrage. It is not in the interest of the trader that there is that congestion. It is a very serious imposition upon him in the conduct of his business that he cannot get his goods sometimes for a week, sometimes for a fortnight, sometimes even for three weeks, and has all that time to pay demurrage for a barge which has to be in attendance waiting for his goods. I think I have directed attention to sufficient of the evidence to show that, at all events, in the opinion of the London Chamber of Commerce, the two existing authorities, the Thames Conservancy and the dock companies, against whom, of course, we have no hostility in any sense, have not shown themselves in their respective spheres so wise and far-seeing and so prudent in their administration with regard to safeguarding the interests of the port that they are worthy of any further confidence or any further powers. But supposing that all those facts that I have referred to were entirely different, there is this further problem which you have to consider, that is: must not this question of the Port of London be taken as one comprehensive whole? Now this question comes up for discussion; is it wise any longer to have these different

divergent jurisdictions, all dealing with different parts of what should be one complete and united whole? The defect and the disadvantage of having different jurisdictions was evidenced very clearly by what happened with regard to the Yantlet channel, which is dealt with at Question 460, quite early in the proceedings. Yantlet Channel was dredged by the Thames Conservancy, and then, having been dredged, was not buoyed by the Trinity House—

11766A. (Sir John Wolfe-Barry.) It was not dredged, it was found to exist.

(Mr. Rowland Whitehead.) I must apologise. There had been directions that it should be dredged, and it was found to exist as a channel, and was not then buoyed by the Trinity House. I do not want to go into the question as to which policy ought to have been pursued, and whether that channel ought to have been made effective by buoying or not. That is neither here nor there for my purpose. Here you have two co-ordinate jurisdictions. There may have been good reasons for it, but when the wisdom of the general policy came to be discussed with the representatives of these different interests you will find that Mr. Kent, the Secretary of Trinity House, said, at Question 495: "It is no use doing certain things below a certain line if they are not also done above that line at the same time." Then Sir Frederick Dixon-Hartland, at Question 1391, speaking for the Thames Conservancy, when he was referring to the question of dredging, says: "I do not think it would be much use unless you make a recommendation that the dock sills should be so lowered that the ships could get in," and Mr. Scott himself, at Question 5852, feels that there is this unity and necessity for as it were single-handed treatment of the subject, because he says it would be necessary to have the river improvements going on side by side with the dock improvements. That is the question put to him, and his answer is, "Certainly." It is a proposition which might almost be said to be self-evident. Here you get the three great interests which are concerned, and which are now in separate hands, all concurring in the view that these improvements of the river, dock, and so forth, ought to be going on in co-ordination with one another. I submit that the only right inference from that is that you cannot get complete co-ordination unless you have one body with a directing mind, and that was the view taken by Mr. A. L. Jones, the eminent shipowner. At Question 4947 this matter of unification was put to him by a member of the Commission. "I am going rather to the point of unification? (A.) Certainly, I would be very strong on unification; I would be very strong on undivided responsibility. (Q.) Then you do agree with Sir Thomas Sutherland? (A.) Certainly. (Q.) It is a very important point. (A.) It is. I think that where you have divided responsibility you do not get the same working; that is to say, that one-man concerns do generally a great deal better than others." Now, my Lord, I have endeavoured as far as I can to raise the inference in the minds of the Commissioners first of all to prove that it is undesirable to grant extended powers to the existing organisations, and then that it is necessary by inference from that that you should have some new authority constituted, which can deal with these improvements from the point of view of trade. But before passing to consider, as I must do, the form of the proposal which the London Chamber of Commerce placed before the Commission, I ought, I think, to say something at all events with regard to the proposals which have been propounded by the dock company. There are only two points upon these proposals which are really of vital importance, and those are these; first, the suggestion that the exemption clause should be abolished; and then, secondly, the suggestion that a certain tax or charge should be placed upon the goods. With regard to the exemption clause, surely the evidence before the Commission is clear enough that a system of lighterage and ready access for lighters to the ships, whether in the river or in the docks, is absolutely essential for the conduct of the business of the port. I will not cite you any trader's evidence with regard to that point, but I take the evidence of Sir Thomas Sutherland, the shipowner. At Question 1982 he says this: "What I say is that it would be impossible for us if we wished to do so to put the whole of our cargoes into these temporary sheds, and therefore we are compelled, whether we like it or not, to discharge a large portion of our cargo overside." Then Mr. Anderson, speaking for another large line of steamers, was asked by Sir Robert Giffen at Question 2117: "To keep to the

Mr. Rowland Whitehead.

Mr. Rowland  
Whitehead.

1 July, 1901.

actual fact for one moment, you say as a matter of fact that your business in Tilbury Dock could not be carried on without the barges? (A.) I think I might go that length, certainly," and even Mr. Hardy himself, the manager for the dock company, at Question 6908, said this: "I do not think that the practice of the port will admit of fewer barges being brought into the docks than come in now, except, of course, that barges sometimes come in for the purpose of harbourage, in which case they pay." I am not going over the considerations with regard to this that were referred to by my friend, Mr. Daldy, but I do think that it is an important consideration that here you have both the consignees of goods and those who are themselves owners of barges, and also shipowners, all concurring in the view that this system of lighterage is an absolutely essential feature of the port. And it seems very odd indeed that the dock company should come before the Commission and attempt to penalise what is an absolute necessity for carrying on the business of the port.

Then there is this important consideration which I must refer to, because it was dealt with by certain important witnesses called on behalf of the Chamber of Commerce, and which is obviously a matter which has a direct bearing on this proposal; that is, the very serious depreciation which would accrue to the property of traders who have purchased waterside premises. You had a great deal of evidence on that subject—Mr. Rogers, Mr. Carbutt, Mr. Blackwell (of Crose and Blackwell), Mr. Spicer, and others—all to the effect that they had relied upon the historical right to have this free entry to the docks, and had purchased waterside premises and expended large sums of money on those premises, and incurred various obligations which, as I submit, this Commission would not be justified in recommending they should be deprived of without very careful consideration indeed. Take the case of Mr. Blackwell alone. At Question 9121 he explains how his firm had taken a long lease for 999 years at a very large rental—I think over £1,300—and had expended on those premises £40,000 for the purpose of making them suitable for their trade; all upon the faith of this exemption clause. I am not going to argue the question of compensation, but if the question of compensation did arise, if the question as to whether that clause should be abolished or not did come before this Commission, and that became a serious and practical issue, I think the Commission would have to consider very carefully whether the sum of £50,000 or £60,000 a year, which is practically the sole benefit which would accrue to the dock company from that proposal, is an adequate return, considering first of all the question of compensation—I might almost say the right to some form of compensation—to those owners of waterside premises who had purchased on the faith of the exemption clause, and considering next the very serious injury there would be to trade for a result which is comparatively small.

Then the other feature of that proposal was the charge upon the goods. I do not propose for a moment to discuss what the effect of the charge would be upon imported goods. That might vary, of course, with different trades, and the extent to which any individual would approve or disapprove of any such proposal would depend very largely upon the prosperity of his individual trade. But take the question of exports. I put that point to Mr. Scott. It seemed to me to be a matter for very serious consideration indeed. Here was a proposal which amounted in substance to the taxing of the export trade of the country so far as it goes to the Port of London, and it is serious for this reason. Mr. Anderson, the shipowner, explains this to the Commission at Question 2099. "The ships that are willing to come to London are ships that expect to get cargoes from London; and if they do not expect to get cargoes from London they do not wish to come to London, and they try to avoid it." So that the question with regard to export cargo is one that has to be very carefully weighed. As Mr. Scott explained, 80 per cent. of the exports are delivered direct from craft into ship. So that under the proposals of the dock company the export trade would to the extent of 80 per cent. of it be doubly penalised. It would be penalised by virtue of the charge on the barge, and it would then be penalised by virtue of the charge on the goods. But take the evidence of Mr. Sargent with regard to the metal trade, because it is important to consider the thing in detail to a certain extent. At Question 9136 he said: "The margin of profit at which the business is carried on is, owing to Continental competition, extremely small, probably one quarter to one half per cent., and the imposition of the proposed

charge would be specially onerous on metals and minerals of low value. The trade would practically be diverted to foreign countries, and thus many large industries, which at present afford employment to many thousands in London, would be destroyed."

Then evidence was given by Mr. Elborough with regard to chemical manure. He pointed out the keen competition there was. Then Mr. F. C. Hill at Question 9176 dealt with the question of lead, and he explained that if the proposals of the dock companies were put into force as regards his trade he would be obliged to move the trade to Antwerp, Australia, or some other place where the facilities were better and the charges lower. Then Mr. Spicer in dealing with the question with regard to paper, explained to the Commission most carefully how that is an article which follows other commodities. Sir Robert Giffen ascertained from him by a series of questions that it represents a very large employment of labour in London and in the country, and that it would be a very serious thing indeed if articles of that kind were rendered subject to the additional tax which the dock companies propose by virtue of their scheme. My Lord, as I understand the ground upon which the dock companies proceed is this; they say, "Oh, but look at Liverpool. They have a charge upon the goods at Liverpool." It was very difficult in the course of the evidence to keep the line of inquiry perfectly clear, but it is no good taking some isolated feature of some other scheme and applying it to the condition that you find in the Port of London. You must consider that as a whole, and the essence of the scheme at Liverpool is, as was pointed out by the evidence of traders; you have a low quay rate, and you have certain facilities at Liverpool which encourage trade. It may be that under other circumstances—I am not going into them in any detail, because I am not at liberty to do so—and in a different port, a charge levied in that particular mode might be fair. But then does it not after all come back to this; not what is the name of a charge, not in what form precisely it is levied, but how does it bear? What is the incidence of the total charge or charges upon the trade. That is a consideration of course which was excluded from inquiry, but it seems to me that the dock companies are not at liberty to import just one instance, as it were, of a different system, and say that instance works well under different conditions, and then say: "Apply it to these conditions and you must therefore necessarily get a beneficial result." It seems to me that you must take the thing as a whole or else you must not take it at all. The fact is, if I may say so, that the dock proposals of 1900 or 1901 will not be of any advantage to the port. My friend Mr. Wallace was much perturbed because some of our witnesses did not care very much whether they criticised the scheme of 1900 or the scheme of 1901. What did it matter. They are both dead. The point is not whether the dock companies are now going forward with either of those schemes; they may go next year before Parliament with a fresh scheme and even a more onerous one. The point is whether the proposals which they put forward in 1900 or 1901 were wise or unwise, and I think the evidence of the traders must have convinced your Lordship and the Commissioners that those proposals were injurious to trade, and that they would confer upon the dock companies powers which an authority of that kind ought not to have. The true remedy in the view of the Chamber of Commerce and the traders generally throughout London is that the best solution for the difficulty which your Lordship and the Commissioners have to solve is to be found in the establishment of a Port Trust, broadly speaking, after the pattern of that which you find at Liverpool. There is a very remarkable unanimity with regard to that. I do not say that that is so with regard to the details. When you come to discuss some details there is always inevitably an opportunity for difference of opinion between individuals, but the great broad unity of all parties who are really interested in the success of the port is a most extraordinary feature of the present inquiry. First of all, for the shipowners, at Question 2005, Sir Thomas Sutherland says: "I also venture to say that the future interests attaching to this question are too grave to be committed to the hands of private individuals, such as the dock directors are, whose policy must necessarily be based on the desire of their shareholders to secure a market value for their property, which it certainly does not possess at the present time, and is not entitled to obtain at the expense of shipowners." Then Mr. Anderson, of the Orient Line, says this at

Question 2104: "I generally agree with what Sir Thomas Sutherland said, that what is wanted is a public authority to take over and administer the whole system of docks and waterways of the Port of London, as has been, I believe, successfully done in the Mersey and elsewhere." Then what does Mr. Williams of the Atlantic Transport Company say? I suppose if there was any shipowner in the world who, according to the case the Dock Company have put forward, would have come forward to bless them and their proposals it would have been the gentleman representing the Atlantic Transport Company. Mr. Williams says at Question 2165: "I have given consideration to the subject and the present condition of the Port of London, and I have come to the conclusion that that condition requires to be amended, and that the formation of a Harbour Trust of a character similar to that created in Liverpool should be carried out." Then there was evidence given on behalf of wharfingers. I will not read any of that. No doubt it will be cited by other counsel. Mr. Moore at Question 2740 dealt with that point. Then over and above that you have practical unanimity as between the Corporation of London, the London County Council and the London Chamber of Commerce, each representing important interests, each having given this question very careful consideration. I agree there are differences as to detail; one body thinks that special prominence should be given to one factor in the representation, and another body thinks that some other interest should receive special treatment; but that does not affect the great broad principle, and with regard to this great broad principle I think there can be no doubt whatever—that the traders and the representatives of the important interests of London are all agreed that there ought to be one single administration on the lines of the Liverpool Trust. I do not wish to go into the matter more than I am obliged, but I ought perhaps, while I am dealing with this topic to refer to the position of the Chamber of Commerce as being really representative of the trade. The witnesses did not on each occasion state to the Commission the exact degree to which it could be said they were representative of the interests of their group in the London Chamber of Commerce, nor could they always go over the history of the evidence which they were about to give; but take an instance like that of Mr. Sargant, because he was typical. The extent of his evidence was the collective opinion of two hundred firms engaged in the metal trade. Mr. Spicer, when he was giving his evidence (at Question 9296), was careful to place before the Commission in full detail how it was that his opinion, when he came to speak on behalf of the private wharfingers committee, was really representative of a large body of opinion which had been carefully collected by means of meetings, circulars, and in other ways. Of course, you do not expect when traders come to give evidence that there would be absolute identity of view. I think that, perhaps, I ought to say, on behalf of the Chamber of Commerce, that when they, as it were, allowed themselves to be the medium through which evidence should be offered on behalf of the trade, of course, they were very glad to be of any service to the Commission in that way, but, as the witnesses have stated, there were minute differences of view amongst the traders, and the Chamber of Commerce felt that the whole case from the point of view of the trader ought to be fairly placed before the Commission, so that they, as the tribunal to adjudicate upon the matter, might be in possession not merely of the broad view of the traders as a whole, but so far as there were individual dissentients from that view they also should have an opportunity of being considered and heard. Take, for example, Mr. Carbutt. Mr. Carbutt was carefully examined by an honourable and learned member of the Commission. He was careful to explain that, although he did not approve of any charge whatever being put upon his trade, still, in that respect, he differed from the point of view of the Chamber of Commerce. I feel bound to refer to this because there were undoubtedly minute differences of view taken by different trades with regard to the proposals of the dock companies. What I would like to draw your attention to upon this point is an observation which fell from your Lordship. The Commissioners seemed to be under the impression that there was a disinclination on the part of certain traders to help towards the improvement of the Port of London. Take, for example, Mr. Carbutt. He suggested that a tax would be a very serious and onerous burden in his trade. Speaking on behalf of the traders, I do not think that that is really their view, and I can only

regret that any such impression should have been conveyed to the minds of the Commissioners. The point is this—it was brought out, I think, by Mr. Rogers—that if you get a public trust which is sensitive to public opinion and which is in touch with the trader, then probably you would get a readjustment of charges of such a kind as would produce an increased revenue from certain sources. That increased revenue would probably be sufficient to meet increased charges which are necessary for the improvement of the port. But suppose that were not so—it must be a matter of conjecture to some extent—suppose it were not so. Then Mr. Rogers, speaking with all the authority of the London Chamber of Commerce, said that whilst they strongly disapproved of any power being placed in the hands of private individuals representing shareholders to impose any fresh burden upon the trade of the port, they were perfectly prepared, if need be, to bear any increased charge so as to improve the condition of the trade in the port, always on the understanding that that power was vested in a public authority which was amenable to the representations of the trade representatives, and would be in touch with the needs and requirements of trade.

Now I pass from that matter to our own specific proposals. I do not propose to go into the matter in any detail except so far as may be necessary to point out certain matters of difference. The general views of the Chamber of Commerce were laid before the Commission by Mr. Rogers, I think, on the fourth day of the proceedings. He came at a later stage on the twenty-sixth day, and expounded the scheme which had been considered by the Chamber of Commerce. He expounded it with so much detail that it is not necessary for me to go over it in any way. I ought perhaps to say this; one fundamental condition of that scheme is that you must have a full and adequate representation of the trading interest. This is essential for the reasons I have detailed in dealing with other branches of the case. The next consideration is that which I alluded to only a moment ago—the expectation that there would be a readjustment of charges of such a character as would produce increased revenue. There would be probably the possession of a low quay rate and other facilities which would bring the dock administration into harmony with the spirit and movement of the day. Then there are two great and important details. They are not principles exactly, but they are certainly what may be called organic details in our scheme which I must press upon the Commission, and those are these; first, that there should be no tax upon exports. That seems to the Chamber of Commerce to be a fundamental point in which their proposal differs from the proposals of the dock companies, and differs materially to the public advantage. Then there comes this further point, the question of the separation of the warehouses from the docks. Once you come to consider a practical scheme that is a question of very great difficulty in a certain sense. There are two difficulties to consider. There is, first of all, the commercial difficulty as to whether it would be possible to carry on the business of warehouseman entirely distinct from the business of dock owner. Then there is the physical question as to whether the construction of warehouses and docks is such to-day that such a distinction could be effected. On that point I must, of course, be quite fair in pointing out to the Commission that there was no unanimity of the Chamber of Commerce. Mr. Rogers pointed out the extent to which there was agreement, but there was a division of opinion. At the same time the overwhelming opinion of those who considered this question in the Chamber of Commerce was that it was possible to separate those two businesses, and that it was desirable in carrying out any scheme for the administration of the port by a public authority that those two businesses should be kept distinct. I think I ought to address myself to the question of this possibility, because it seems to me it is a very important and practical problem.

Mr. Hugh Colin Smith, a wharfinger, gave this evidence at Question 2531: "(Q.) Do you think it would be an easy matter to separate the dock business proper from that of the warehouse business? (A.) Quite so, just the same as my own business is separated from the dock company. (Q.) The suggestion has been made that the business of the wharves should be put under the central authority and warehouses as well as dock business should be put under that? (A.) It would be a large job. (Q.) You do not agree with that? (A.) Not at all. (Q.) Not merely is it a large job, but it is an interference with private enterprise to a large ex-

tent? (A.) Yes, I think so; and I think it would be almost impossible, because its magnitude is so great; and really and truly a wharfinger's business is principally made successful or unsuccessful by looking into the minutest details. It is very difficult to carry on a large business of this sort at all. It must be done on a small scale more or less, and every item looked into most carefully. I think if it was done on a large scale it would be ruined." Then Mr. Major, who is another wharfinger, dealing with this question of competition between a Trust and wharfingers was asked this at Question 2969: "(Q.) Supposing the two were separated, although it would be a very large warehousing interest you think that it would not be too large for fair competition with the other warehouses? (A.) The fact of its size would be rather, I am inclined to think, a detriment to the warehousing company itself than to ourselves as wharfingers." Mr. Douglas Owen expresses the opinion that it would be advisable to keep them separate. This is at Question 5271: "(Q.) And I think you go as far as to say almost necessary? (A.) Yes, and inevitable." Mr. Rogers' evidence upon this point throws considerable light on the matter, because he is a practical man engaged in the trade. At Question 10166 he was asked this: "(Q.) If you think that the warehouse business is a declining business, what grounds have you for estimating the purchase value of these warehouses at nine millions when acquired? (A.) You must recollect that it is a very special business in many respects, and that what might not pay a general Trust, might pay a company or an association of a particular trade. For instance, the wool trade is an important trade. It might be worth their while to buy a block of warehouses and to give a very fair price for it, in consideration of their working their own trade. They would understand their difficulties and their advantages better than a general trust would, and they would be more flexible in their regulations. (Q.) Do you then wish to modify the opinion you have expressed as to the declining nature of the warehousing business by saying that you would not expect that it would increase or maintain itself in the hands of a public trust. (A.) Yes, that is what I mean. (Q.) The Chamber of Commerce do not anticipate that the warehousing business in private hands would decrease. (Q.) No; I think not. The great tendency is for people to take goods into private warehouses at present because the goods have to be sorted, weighed and measured out, and so on; and that would always take place." So much for the commercial wisdom, and to a certain degree, the physical possibility of carrying it out. As I understand, so far as the physical possibility is concerned, the crux of the problem is to be found in the St. Katharine Docks and the London Dock. That seems to be the effect of the evidence. It seems to me strange that in these days there should be any engineering impossibility of adjustment or re-arrangement, or that the engineering possibilities are such that there can be no alteration at these docks which would render feasible the separation of these two businesses. Considerable light was thrown upon it, even as regards those two docks by an answer which Mr. Scott gave at Question 6672, where

he explained that even in these particular warehouses, the goods arrived there very largely not by ship at all, but by barge. That, if I may say so, is a very substantial modification of the difficulty, and goes in no small way to meet the difficulty such as it is. Mr. Scott, I admit, regards the separation of the two businesses as being a practical impossibility. He said so. Of course great weight must be attached to Mr. Scott's opinion. He gave his evidence very fairly throughout, and no one can fail to speak with great respect of anybody like Mr. Scott, who has formed an opinion upon a point of that kind; yet it does seem to me that if you look through the evidence you will see that the great volume of the evidence is against Mr. Scott. You have wharfingers; you have ship-owners; you have responsible traders like Mr. Rogers and others; and you have not exactly the direct opinion of Mr. Coke, but you have the opinion of the Chamber of Commerce founded upon Mr. Coke's experience as Member of the Mersey Docks and Harbour Board and in Bombay—you have all this evidence which is in direct conflict with the opinion of Mr. Scott, and I do ask the Commission to consider that on that point the balance of opinion is against him, and to regard this separation of the warehouses from the other parts of the dock undertaking as being both practically possible and commercially expedient. Then you have in addition the evidence as to what takes place at foreign ports which was put in on behalf of the dock companies themselves through Mr. Broodbank, where he explained (it is given in great detail in Appendix 2 of the 25th day) that at Rotterdam, Bremerhaven, and other places, you have in every case these two things separate, even where you have municipal assistance or State control. That is the effect of the evidence and the appendix to his evidence.

Then there is one other point which we regard as vital. I will just mention it so that I may keep before you the points in our scheme which we regard as vital; that is the continued maintenance of the exemption clause that I have spoken of in detail. I will not go over any further details of the scheme nor the proposals of the dock company. It all seems to me, if I may say so, to come back to this one point; that in the consideration of these problems the paramount interest is the interest of trade, and that when you are weighing as you must the relative value of all the different considerations that have been put before you by the different interests which are represented, the final standard which you must always have in your mind so to speak, is this standard of possibility of maintaining and possibility of improving the trade of the Port of London. Speaking on behalf of the Chamber of Commerce I may say that we have no desire to inflict any hardship upon any individual or upon any company such as the Dock Company or the Lightermen's Company, or any other company; but the paramount consideration which I would ask the Commissioners always to keep in mind is this consideration with regard to the maintenance and improvement of the trade of the Port of London.

Mr. T. E.  
Scrutton, K.C.

Mr. T. E. SCRUTTON, K.C.,  
11767. (Chairman.) You propose to address us on behalf of the Corporation of the City of London?

(Mr. Scrutton.) Yes, my Lord. I am not sure who is entitled to the greatest sympathy—the Commission when the fifth Counsel rises to address them with a knowledge that seven Counsel more are waiting to follow him, or the Counsel who rises to address Commissioners who have listened to his lengthy and learned brethren for four hours already. I will endeavour as briefly as I can to put before the Commission the point of view which is important in the opinion of the Corporation of the City of London whom I represent with my friend Mr. Porter, and I will endeavour to remember, as I am sure the Commissioners will wish me to remember, that they are gentlemen connected with business who have been carefully listening to evidence for 29 days, and must, in the course of that 29 days have mastered somewhat the point they have to consider.

I appear on behalf of the third important public body that puts before the Commission a scheme for a public trust. I think it is of considerable importance that there should be that amount of unanimity among three very important bodies in London. When one gets to details naturally those bodies differ. Each of them, as is to be expected from human nature, has an idea that its own particular body should play the most

called to address the Commission.

important part in the scheme that is proposed; but that there should be a general agreement in regard to the solution of the difficulties on the line of a public trust is, I venture to think, of very considerable importance in approaching this matter. For the intervention of the Corporation I offer no excuse; none is needed. For centuries they were the historic body who had the government of the river under statutes. When the commerce of London developed so enormously that there was too much for one municipality, they promoted the Conservancy. They are still the sanitary authority of the port, and when the proposals made by the docks and objected to by the wharfingers first came before Parliament, each body interested came to the Corporation to ask for its support. I do not think it is possible for those bodies who then came to us, thinking our support of some value, to now complain if we give the Commission such independent and honest criticism as we have been able to make of their proposals.

I venture to think the first most striking feature when one comes to consider the mass of evidence that has been given to this Commission is the absolutely unanimous agreement that the river ought to be deepened substantially and quickly. It is a most striking feature of the evidence that you have practically no conflict when you come to look through the various bodies who disagree on every other point: body after body comes

before you and says that a substantial deepening of the channel of the river at an early period is of vital necessity to London. Of course, it has been the duty of counsel to abstract this evidence and put together the evidence upon various points. No doubt that is being done for the benefit of the Commission, or they have done it for themselves. But one was struck when one came to do it with the way in which witnesses after witnesses came and agreed upon that particular point. The only witnesses to whose evidence I wish to call the Commissioners' attention particularly are the witnesses of the dock companies, as to whom one was not so sure beforehand, that they would have come and said that the deepening of the river was an urgent necessity. I find that Mr. Baggallay, at Question 892 (in reply to one of the questions, which I cannot help observing as I read the evidence, Mr. Ellis has frequently put, summing up a page or so, that one would otherwise have had to read) said this: Mr. Ellis asked, "To sum up this matter, may I take it that you wish to leave us with the impression that, in your opinion as an engineer, a great and continuous deepening of the channel of the Thames ought to take place? (A.) Certainly." Then comes Mr. Duckham, of the Millwall Docks, at Question 1040: "Have you considered the Thames Conservancy programme. They propose to dredge to a width of 300 feet from the Albert Docks to Millwall Docks, with a depth of 18 feet? (A.) Yes, I saw that. (Q.) I gather from your evidence that you consider that insufficient? (A.) 18 feet would be an improvement, but it would not be enough for the reason that I was giving you just now. Vessels that are fog-bound would probably get stranded or have to go back, say, 20 miles down the river, and then come up again." Then came Mr. Malcolm, of the Surrey Commercial Docks, at Question 1836: (Q.) "As I understand, you have come here as the chairman of this prosperous company, and you say to us: 'In the interest not only of this company, but of the port, it is imperative that the river should be made navigable for vessels of deep draught above as well as below Gravesend,' and so on. Do you lay great emphasis on that? (A.) I do lay very considerable emphasis upon it. I have found that vessels which ten years ago we should have treated as beyond the bounds of possibility in any of our trades are to-day vessels that we think nothing of; and I think that very possibly in ten years more we shall find the same state of matters prevailing again, and that the vessels of ten years hence will show an equivalent advance upon the vessels of to-day. (Q.) And would you wish us to infer that the desirability of deepening the channel of the Thames is growing more urgent year by year? (A.) Distinctly, I think so." Then Mr. Scott, who came to present the case for his dock company, at Question 5852 says: "It would be folly for us to build a dock such as we contemplate putting on the south side of the Albert Dock, a dock which, so far as we can see, will accommodate anything that can ever come up the Thames, unless the river were improved to such an extent as to allow these big ships to come up." So you have every dock company that comes before the Commission saying that it is vital to them and to London that the river should be deepened. You have all the shipowners coming. As they came before Sir John Wolfe-Barry's Commission, so they have come to this Commission to say that, urgent as it was in 1894, it is still more urgent to-day that the river should be deepened. The Chamber of Commerce comes; the London County Council comes through Sir Alexander Binnie; bargeowners come, and pilots come. Every interest connected with the river comes and says the deepening of the river is an urgent necessity. And last of all the Thames Conservancy comes—a little belated, a little stirred up by the action of this Commission—but the Conservancy itself comes and makes the most surprising statements. I should think it was unique for the governing body of an important river on which the capital of an empire was situated to come after the river had been under its control for 40 years and to say that the Conservators did not consider that the River Thames is a river that is up to date in the same way that many rivers are—the Tyne and the Mersey, and various others. They are the gentlemen who have been managing it for 40 years, and that is the record of their 40 years' work—that the Thames is not up to date in the way that many of the rivers are.

11768. (Chairman.) Will you give us the reference to that?

(Mr. Scrutton.) It is Question 1384. Then the reason

that the Thames Conservancy gave is this. They gave two reasons for the river, which they are in charge of, not being up to date. One is that they must wait for the docks. Sir Frederick Dixon-Hartland said near the end of Question 1384: "I should like to point out that until the depth of the water over the sills of all the docks is very much increased there would be no practical advantage in forming such a channel, as vessels would have to wait at the dock entrances until the tide had risen sufficiently to enable them to enter the docks." Then again, Question 1391: "We quite admit that it ought to be done, but I do not think it would be much use unless you make a recommendation that the dock sills should be so lowered that the ships could get in." The second reason, which perhaps is the more important one, is that they have not any money to do it. This is Question 1389: "(Q.) Then why has nothing been done? (A.) We have increased the depth very largely, and we have increased it to the utmost of our means. We have got no further means whatever, and, as I pointed out in my evidence, it was only a pious wish expressed in the report—it was not an order." So that the body in charge of the highway of London comes and says: "It is not up to date; we cannot make it up to date; we have not any money." And whereas their income is £100,000 a year, they say the cost of the necessary improvement will be about £1,700,000. They said in effect: "The extra annual income we shall want, instead of our £100,000 that we at present have, will be another £160,000. We propose to levy that by dues on ships and by dues on goods, which will more than double our present income, and it will be necessary, therefore, to change our constitution. To a body which comprises already 38 members, we will add nine more, making 47 members in all sitting on the Conservancy, of whom 12 only would be shipowners and merchants. So that we get to this point; the river, it is admitted by everybody, needs most drastic measures as to deepening; and admitted by everybody, including the body in charge of it, that it cannot be done without a largely increased taxation and without a change in the representation at present controlling the river. Then that brings the Commission, I submit, at once to this question; when you are going to give this additional taxation, when you are going to make this change of constitution, is the present Conservancy the body that you would entrust with this work? I think in the last six years the present Conservancy has had ample opportunity of showing whether it is a body that should be entrusted with this great work. I was the junior counsel for the shipowners in the Conservancy Bill of 1894, Mr. Pember leading me. We thought we had done, and our clients had done, a very good day's work for the Port of London when the House of Commons accepted Sir Thomas Sutherland's instruction to the Committee that they should have power to deal with the dredging of the river below Yantlet Creek. The Conservancy, after the passing of that instruction in the House, consented to the clause that has been read to the Commission on to or three occasions binding them either to carry out the recommendation of the Commission which was to be appointed by the Board of Trade, or to come to Parliament for further powers in case they could not do so.

Now what was the history of that? It is well within the memory of the Commissioners what the history was. The Commission, which will always be known by the name of Sir John Wolfe-Barry, though one would not forget that Mr. Lyster and Sir George Nares were members of it, reported with the weight of those three names, after hearing a very large number of shipowners, and taking a good deal of evidence, that so far as their jurisdiction was concerned over the Leigh Middle Shoal, the 30ft. channel was necessary, but that there was a still larger area where they had no jurisdiction to make recommendations, because it had not been referred to them by Parliament, and that was the river above Yantlet within the area of the existing body of the Thames Conservancy, and though they could not recommend, they thought it highly desirable, as the shipowners pointed out, that above that limit too a channel should be provided. That report went to the Conservancy, in 1896, and they had four years, from 1896 to 1900, to consider and to deal with that report. They clearly had not the funds to carry out the recommendation; that was quite clear. They had an alternative of going to Parliament, which was the other alternative provided by the clause to which they had consented. They did not go to Parliament. The reason that they gave, and I am bound to say, as

Mr. T. E. Scrutton, K.C.  
1 July, 1901.

Mr. T. E.  
Scrutton, K.C.  
1 July, 1901.

one of the counsel concerned in the Thames Conservancy Bill, it was a very forcible reason to everybody who had been concerned in it, was that that bill had taken, I think, 28 or 29 days of the House of Commons Committee, and it must have cost an enormous sum of money to every interest concerned in their representation before that Committee, and the Conservancy were not inclined to face a second bill of that description and a second expenditure of money. But this, I think, is a matter which will impress itself upon the Commission; in their annual reports they took no steps to make clear to public opinion the necessity of the matter and the difficulty of their acting. They made no representations to the Government that a private bill was too expensive a procedure, but here was an urgent matter waiting, and an urgent matter which should be dealt with, if not by their body with limited funds, by means of some public bill that could be passed through the House. From 1896 to 1900, until this Commission was appointed, nothing was done. Then I will not call it a death-bed repentance, because that might be prophetic, but it is a surprising fact that shortly after this Commission was appointed, a number of public bodies, including the docks, did find that there were improvements which ought to be made at a very early period, in favour of which it was desirable to pass recommendations. To anyone who reads the evidence in those days when counsel were, unhappily for themselves, excluded from taking part in the proceedings, it is curious to see the stages by which the Commission screwed up the Conservancy to definite proposals as to what should be done for the purpose of deepening the river.

Now, my Lord and gentlemen, I think if you look at the history of the Conservancy during that six years, from the time that the Wolfe-Barry Commission was appointed to the present day, it is in itself a reason why when you are granting new taxation, which you must do, and new representation, which you must do, you should not grant it to the Conservancy. There is a further reason, I think, why the Conservancy is not the body to which this new power should be entrusted, and that is the constitution of the Conservancy itself. I doubt whether there is any other body in the United Kingdom which has power put upon it by the wisdom of Parliament, both to manage a harbour and the enormous up-river interests connected with pure water in the upper river valley with the control of the navigation. The attempt to put on to one body those two entirely distinct functions leads to a representation of the most extraordinary kind. You must not make

your body too big—it is 38, I think, as it is—therefore you cannot give a large number of representatives to any particular interests, and the number of interests that want representation is enormous. So you go through a large number of County Councils which have nothing whatever to do with the Port of London, but all of which came to the Conservancy and asked for representation—Oxfordshire and Berkshire and Buckinghamshire; and Hertfordshire, too, I remember, got a member through the persistency of their counsel before the Committee, and the county borough of Reading and the water companies and all sorts of bodies which have no interest in the Port of London find themselves upon the body which has to regulate the Port of London. If the Conservancy were cut into its two natural divisions, one which should deal with the tidal part of the Thames—it might be a question of some difficulty as to whether it should be at London Bridge or Richmond—and another body which would deal with the pleasure navigation and the water supply of London and the part relating to the water companies, one could understand the division; but to put into one body dealing with totally distinct functions these members representing all manner of conflicting interests and then to leave them each fighting for their own respective interests, to between them sort out some scheme which should benefit the harbour of London is, I submit, a task almost beyond the wit of man for anybody to achieve. Therefore, as a second reason I find in the constitution of the Conservancy itself a reason why it should not be entrusted with these additional powers. Just to conclude this part of the subject, the opinion of Sir Thomas Sutherland, given at Question 2072, is very striking as to the position of the Conservancy in London. Here is the chairman of the biggest shipping company in the Port of London speaking of the body which controls the port so far as the river is concerned. He says: "The reason why the Thames Conservancy could not feel very much confidence in coming before Parliament is, in my view, because the Thames Conservancy does not, as a body, command the confidence of those at large who are most deeply interested in the welfare of the Port of London." Then he advocates the division of the control of the upper river and the lower river into separate bodies. One does not wonder at the shipowners having a somewhat strong feeling on the subject. Here are they providing the whole of the income for the lower river navigation by their shipping dues, and with three representatives on a body of 38. Such a provision of funds, and such a representation is in itself sufficient to condemn the existing state of things.

(Adjourned to to-morrow morning at 10.15.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## THIRTY-FIRST DAY.

*Tuesday, 2nd July, 1901.*

### PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTTELTON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.  
Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. BALFOUR BROWNE, K.C., and Mr. GEORGE WALLACE appeared on behalf of the London and India Dock Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council.

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. R. W. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

Mr. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. HORACE AVORY, K.C., appeared on behalf of the Watermen and Lightermen's Company.

Mr. CLAUDE BAGGALLAY, K.C., and Mr. F. P. M. SCHILLER appeared on behalf of the Promoters of the Thames Lightermen's Bill.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

Mr. JOSEPH SHAW appeared on behalf of the North London Railway Company.

Mr. F. P. M. SCHILLER appeared on behalf of the Short Sea Traders' Association.

The Hon. J. D. FITZGERALD, K.C., appeared on behalf of the Commissioners of Sewers for the limits from Lombard's Wall to Gravesend Bridge in Kent; the Commissioners of Sewers from Gravesend Bridge to Sheerness in Kent; the Commissioners of Sewers for Havering and Dagenham and other levels in Essex, and the Commissioners of Sewers for Rainham and other levels in Essex.

Mr. SCRUTTON, K.C., recalled to further address the Commission.

11769. (*Chairman*.) Mr. Scrutton, will you continue your speech?

(*Mr. Scrutton*.) My Lord, last night I had got to this stage in my argument. I had pointed out to the Commission the obvious agreement as to the necessity for deepening the river; the fact that large additional taxation was necessary in order that that deepening should be carried out; that obviously with that taxation a considerable increase of representation of the body paying it must be made; and that it was undesirable that the increased powers should be given to the Thames Conservancy for the reason of the extremely varied powers that that body has at present to carry out, and its extremely composite character owing to the number of interests it has to represent, and the fact that it has found, owing to the small funds at its disposal, very great difficulty in doing anything during the ten years it has had the powers. Of course, one sees the difficulty that the Thames Conservancy has been in. They had very limited funds. The one Bill that they had been engaged in in Parliament in 1894 had been a very expensive one, and one can understand their reluctance to indulge in that struggle again. When one comes to consider their constitution and the desirability of separating the Upper and the Lower River, I suggest to the Commission that a very strong case has been made, so far as the deepening of the river is concerned, for entrusting those powers to a new body, and not to the existing Thames Conservancy.

Now, when one has got to that stage in the argument, there comes a new and very important feature in the problem. The largest Dock Company in London comes to the Commission, and says in effect: "We are in such

a position that we cannot deal with the needs of the Port of London so far as they affect us without very large additional powers of taxation being conferred upon us." The considered language in which that is put by the representatives of the London and India Dock Company is very strong in the sixteenth reason that Mr. Scott gives for his proposal, which you will find at the end of the answer to Question 5771. It is this: "That the utmost care and economy have been unable to make the London Docks a financial success, in face of wharfage and warehousing competition carried on against them, with all the advantage on the side of their opponents." He says that the utmost care and economy have been unable to make the docks a financial success, and when one looks at the grounds that were put when they came with their printed documents to the Corporation, the vice-chairman of the Dock Company, in a passage which was not merely the irresponsible rhetoric of a barrister speaking without notes, but the printed statement of an important body, said this, which you will find at Question 6019: "The dock companies of London are in a very serious financial position. It is unquestionably unsatisfactory to have the docks of the Port of London managed by companies which cannot develop it as it should be, and which cannot meet the demands for capital expenditure commensurate with the size and importance of the port." Then in Question 6021 Mr. Scott, recognising whose the language is, says it accurately states the present position, and that is why he wants to get relieved from that position. Then he speaks with regard to the extent of the expenditure that is necessary at Question 5637 in answer to Sir John Wolfe-Barry: "(Q.) We have had a description of it, but

*Mr. T. E. Scrutton,*  
K.C.

2 July 1901.

Mr. T. E.  
Scrutton,  
K.C.  
2 July 1901.

I wanted to get from you as Chairman of the Dock Company, what amount of capital you had in view as necessary, within, say, the next ten years, for bringing the Port of London up to what may be called modern requirements?—(A.) I think the £2,000,000 will quite cover all we want within the next ten years." So that the Dock Company is face to face with a position in which without further taxation they cannot meet the necessities of the port, and want a capital expenditure of two millions within the next ten years.

(Mr. George Wallace.) I am sure my friend will not object to my reminding him that that was further dealt with the next morning by Mr. Scott, particularly at Question 5662. Your Lordship will see that that question was put at the end of the day, when Mr. Scott had been all day in the box.

11769A. (Chairman.) Yes. He qualified that on the next day.

(Mr. Scrutton.) The way in which Mr. Scott proposes to deal with that as representing the dock company is that he asks for powers to put a rate on barges, which will raise for him £56,000 a year, and a rate on goods which will raise for him £177,000 or £178,000 a year. His proposals are contained in the answer to Question 5626: "Power to charge dues on barges with a maximum rate of 4d. per ton, estimated on the basis of 3d. per ton to produce the sum of £56,250; and power to levy dues on goods estimated to produce the sum of £177,833." That is £234,000 a year in all. That is the proposal of the dock company, and this comes, of course, in addition to the extra tax which is necessary for the deepening of the river. The object for which this dock company levy is necessary is stated with the greatest frankness in the answer to Question 5626. The first matter that they mention is that they will not pay a higher dividend on their stock than 4 per cent. That is the matter that they put foremost. There is the capital on which sufficient dividend is not being paid, and they want to pay a dividend which shall not exceed 4 per cent; and in answer to me (Questions 6042-3) Mr. Scott said that if they paid up to 4 per cent. it would absorb £150,000 out of the £234,000 that they were asking for. So that the greater part of the increased levy that they ask is appropriated in their view to increasing the dividend on their present capital up to 4 per cent. They are ready to bind themselves to certain improvements which they estimate to cost £720,000. That is dealt with in Questions 6602-9, in which in detail Mr. Scott goes through the matters, and proposed to put himself under obligation to carry them out in ten years. If that £720,000 were raised at  $\frac{3}{4}$  per cent. it would mean an annual expenditure of £25,000 a year in interest, and of course there would have to be something for sinking fund as well. So that £160,000 is to go to make their dividend up to 4 per cent., and a capital expenditure is proposed in ten years, which can be dealt with, including a sinking fund of £40,000 a year. That is the position in which the London and India Dock Company come before the Commission, and they are one dock company out of four or five existing in London. So that at present you have some powers to be given to some body for deepening the river. That is the first increased taxation, the second increased taxation being a request from the London and India Dock Company that you will give them the power to raise a tax of £230,000 a year. When they got so far it was obvious that the Commission would say, "What about the other dock companies? Is this tax which you, the London and India Dock Company propose on goods and barges peculiar to you, or do the other companies want it?" Then we get face to face with a really very comical situation. See what happened next. There come the Surrey Commercial Dock Company, the Surrey Commercial Dock paying regularly 6 per cent., with the exception of last year, when because they were blocking one of their entrances and making a new dock, they reduced it by one per cent, and were able to pay 5 per cent. The Surrey Commercial Dock are able to raise, and are raising, £800,000 for their new dock on their existing credit. Their existing credit is so good that they can raise £800,000 necessary for their new improvements, without any recourse to additional taxation. They come to the Commission and ask for power to levy a tax on barges and goods. They make no proposal to the Commission to spend the money so raised on any additional works. They give no estimate to the Commission of what they expect to raise by the tax on barges and goods, so far as represents their docks. They show no necessity to the

Commission for such a tax, so far as regards their works. They are paying a good dividend, and they can raise all the money they want. They do not want any more improvements, but simply because the London and India Dock Company have come and asked for this tax, the Surrey Commercial Dock come and ask for it, without any pledge as to what they will spend it on, and apparently the only place to which it will go is the pockets of the shareholders, who are receiving 5 per cent. this year, who have been receiving 6 per cent., and who will probably in the future receive more. As far as the Surrey Commercial Dock is concerned I venture to think that is a most amazing proposal to come before the Commission with. That was the first act in the comedy. The second was the performance of the Millwall Dock Company. They also had to consider what course they should take. The Millwall Dock Company were in this unfortunate position owing to causes which one does not wish to go into too much connected with their managing director. They found themselves in a condition of complete exhaustion of their financial resources. No doubt, partly to blame is the trust reposed in their managing director; still more the absence of supervision of that managing director, which resulted in his not being found out during a series of years, but when Mr. Duckham explained the position of the Millwall Dock he had to say (Question 1027), "The Millwall Dock Company have exhausted their resources, and have no capital." Then at 1066 he says, "We have been struggling (and they have been struggling at the other docks too) year after year to make both ends meet, and we have scarcely done it." Then at Question 1084 he says, "At present it (the dock) is very much starved." Then at Question 1081 about £50,000 or £60,000 is wanted to make up for leeway. At Question 1087 £70,000 or £100,000 for a new lock; and they have a million and a half of capital on which no dividend is received. In spite of this unfortunate position, when Mr. Trotter, their Chairman, came before the Commission he did not ask for any increased powers of charging. The first question I asked him in cross-examination, Question 7053, was this: "The London and India Dock Company have come forward with proposals for increased powers of charging. Do you ask anybody for increased powers of charging? (A.) We have not asked for any such powers yet. (Q.) Neither on lighters nor on goods. (A.) We ask for nothing at the present time. (Q.) Is increased money wanted for improving the entrances? (A.) No, I do not think so at the present time." That, of course, would not suit the position of the London and India Docks, because it is very odd that there should be certain docks in the port which were having these powers granted to them, and certain other docks which were not, and so something took place underground. We do not know what it was, but at the beginning of the 23rd day, Question 8463, there was one of those little incidents which have happened at the beginning of some of the days' proceedings of the Commission. A witness whom one does not quite remember, but thinks one has seen before, suddenly appears at the table, and says he wants to correct question number so-and-so, and before the Commissioners or the Counsel have found out what the statement is that he wishes to correct he has got out of the witness-box and the next witness is going on with his evidence. This is what he said: "It has been represented to me that my answer to that question was interpreted as meaning that the Millwall Dock Company did not feel that there was any grievance in regard to the amount of goods that come in in barges and do not contribute to the expenses of the dock." Then he goes on to say they ask for powers. "We hold exactly the same opinion on that point as has been put forward in the evidence of the London and India Dock Company. (Mr. Ellis.) What you really wish to say is that it does not depend on the decision of the London and India Dock Company; it depends rather on the decision that may come to by the Commission? (A.) That is so. (Mr. Lewis Coward.) If the decision should be favourable," etc. So that in consequence of "it has been represented to me" by someone unknown, but someone who I fancy is sitting on my right at the present time, Mr. Trotter does come forward, and he asks, as I understand now, for powers to put some unknown dues on barges and goods. He also gives no estimate as to what it will produce to his dock company if such powers are given him, and he also gives no account as to what the money shall be spent on if it is granted. You have then up to this time the London and India Dock Com-

pany asking for a specific sum with the pledge as to what part of it shall be spent on; you have the Surrey Commercial Dock asking for a sum not mentioned, with no pledge as to what it shall be spent on; you have the Millwall Dock asking for a sum not mentioned with no pledge as to what it shall be spent on. Then you have the two minor docks. The Regent's Canal Dock (Question 3630) say they do not ask for any charge on barges or goods; they say they would like it, but it is no good to them, because if there were such charge on the barges, barges would not come to their docks at all; therefore they do not ask for it. As I understand, the Poplar Dock objects altogether to charges on barges. That is the position in which one finds oneself as to these increased charges which are asked for by the various dock companies.

Now, one of the matters which, no doubt, the Commission will have to consider, is whether, if they have to grant to a body, which I suggest should be a new body, increased powers for taxation on the river it is necessary or desirable, in addition, to grant a separate power of imposing taxes to the existing dock companies, or whether the necessity for creating a new body for the deepening of the river is not the opportunity for putting the whole port under one authority, constituted for that purpose, and for the purpose of purchasing the dock business. I suggest if one approached the matter even with perfect dock companies, that the opportunity given by the necessity for creating a new body for deepening the river would be an opportunity for making one port trust for the whole river, and avoiding the duplication of authorities which exists at the present time. I think that position is strengthened when one considers a little the relation of the dock companies to the trade of the Port of London. I am almost afraid to say that I and my clients do not take a position of hostility to the dock companies, because that statement is always received with most incredulous smiles by the dock companies' representatives who sit on my right. The fact is, I think, that the gentlemen from the dock companies have got into such an autocratic position that they cannot conceive of any criticism except that which is hostilely directed to them personally. The position my clients wish to take is simply this. The dock companies have done their best, or what they thought to be the best, for their shareholders, to whom they are directly responsible. It is inherent to their position as people who have to satisfy shareholders, and have not sufficient funds to work their docks, that they should, in endeavouring to satisfy their shareholders, have caused great friction in the trade of London. It is that position which is felt to be undesirable and which we think would be removed were one port trust constituted which would deal with the whole matter. It is a remarkable thing, I think, that so far as I have been able to trace, not a single shipowner has come forward to express satisfaction with the management of the docks. So far as I have been able to trace, not a single shipowner has come forward to say that the docks are managed satisfactorily. Some of them have said that they manage them as well as they can with the funds at their disposal, but I do not think one of them has said that they manage them satisfactorily. Now, may I take the three or four sample shipowners who have been called. I will take first Mr. Pembroke, whom I myself called. His evidence was given on the 22nd day. My recollection is that Mr. Pembroke was examined towards the close of the afternoon, and that several members of the Commission were not at that time present. I may perhaps direct—I think I am entitled to direct—the attention of the whole of the Commission very carefully to the evidence given by Mr. Pembroke. Those members of the Commission who are engaged at all in the city will know the standing of Mr. Pembroke as a commercial man. Those of us who are engaged in commercial litigation are well acquainted with his position as a commercial arbitrator; he is one of the gentlemen most often chosen in the city to deal with commercial disputes owing to his great knowledge of commercial matters. Those members of the Commission who were present when he gave his evidence, I think I am justified in saying, must have been impressed with the business-like way in which he gave that evidence. He came before you as a representative commercial man; he has been president of the Chamber of Shipping of the United Kingdom, and he is one of the men whom one would like to see on the new port authority if it is created. Now, see what he says at Question 8332: "In common with most other lines, the number and size of our vessels has increased largely, but the berth and quay accommodation has remained as

it was, and our repeated requests for more room have always been met with the answer that there is none to give. We have had to curtail the dimensions of the steamers we are now building, because the length of the boat must not exceed the dimensions of the lock which forms the entrance to the Albert Dock, and the depth of the vessels for loading purposes is limited by the draught of water available there. A single berth and shed on the south side of the Albert Dock is allotted to us for the discharge of our steamers. This is only 385 feet long, and only four of our fleet of 14 vessels can be accommodated there without overlapping our neighbours' berths. Our berth is practically continuously in use by us, and we often have two, and sometimes three steamers arriving about the same time; the result is that we have to berth two vessels alongside of each other, to the great delay of the discharge of both, or to let one lie with her cargo untouched until the other vessel is emptied. The shed accommodation is inadequate to receive the cargo of more than one vessel. The berth is a considerable distance from the meat stores, and the frozen meat for the dock stores has to be loaded into trucks, and the handling and risk of damage, especially in the hot weather, are most detrimental to the cargo. The berth alongside the meat stores, I may say, is quite unsuitable for the discharge of our vessels, as it is in the narrow cutting between the Albert and Victoria Docks, where the water is too shallow, and the width insufficient to allow of barges lying at either side."

11770. (Chairman.) We have all this evidence before us. I do not know whether you think it necessary to read it fully?

(Mr. Scrutton.) As the Commission have it before them, perhaps I need not read it at length. I call the attention of the Commission to that answer as representing Mr. Pembroke's view of the accommodation of the dock. Now take Sir Thomas Sutherland, at the end of the answer to 1991. "We feel strongly under the present port system and dock system that shipowners are not on solid ground at all, but are very liable to have their business further interfered with in the interest of the dock shareholders, and without increased efficiency or advantage to the shipping world." Then Question 1996: "The docks are poor we know very well, and have to manage their business with most rigorous economy, but undoubtedly if you walk through the docks and see the state of their quays, and if you look at their tugs, which are pretty well coeval with Noah's Ark I think, and their appliances in general, you will see that the expenditure is kept down to its lowest possible point, and one which I should myself say is hardly compatible with efficiency." Again, at Question 2005, he urges the appointment of a public trust. Without reading all of it, I may point out that Mr. Anderson, of the Orient Line says the same thing at Question 2104, and also Mr. Williams, of the Atlantic Transport Company, at Question 2165. I do not think my friends will find any shipowner taking a different view from that taken by these four representative shipowners as to the present relation of the dock company to the trade of the port.

11771. (Chairman.) Are you going to refer to the evidence of Mr. Jones at all; I notice you have missed him out?

(Mr. Scrutton.) I had not taken a note of that. I took those four as samples; there is Mr. Beckett Hill as well, of course. I will tell your Lordship at once why I did not refer to Mr. Jones specially, and that is because the Elder Dempster Line, represented by Mr. Jones, is not specially a London line. The Elder Dempster Line is rather a Liverpool line than a London line. I was referring more especially to the London lines; the Orient Line and the P. and O. Line are especially connected with London. There was a matter I was going to deal with, but as time is going on I content myself with indicating it rather. I read the passage of Sir Thomas Sutherland at Question 1991: "We feel strongly under the present port system and dock system, that shipowners are not on solid ground at all." That was not enlarged upon at that time because Sir Thomas Sutherland was not asked any further questions that brought out what he meant, and possibly it was not quite in the knowledge of the Commission to what he was referring. But in my cross-examination of Mr. Scott I put a series of changes of system during the last ten years which have rendered it exceedingly difficult for trading interests to know what is the position they stand in from time to time. The dock company has been short of funds; it has tried every expedient it could to increase its funds.

Mr. T. E.  
Scrutton,  
K.C.  
2 July 1901.

Mr. T. E.  
Scrutton,  
K.C.  
2 July 1901.

Doing its duty to its shareholders it has been continually making fresh proposals by which it might raise more funds. That is very justifiable in the interests of its shareholders, but it is most difficult for the trade of the port to be carried on if continual attempts in one direction and another are being made to raise more money often without regard to what existing contracts with the trade may be. Without going through it in detail I put to Mr. Scott a series of matters that had gone on in the last ten years, beginning with proposals which were referred to in the London Association case, which I mentioned, in which the proposals put forward by the Dock Company were condemned by the Court of Appeal as an imposition on the public, a matter which I think Mr. Scott had omitted to keep in his mind when he said his only crime was poverty; then going on to the proposals in 1896 which caused some very crowded meetings in the City of London, proposals to deal with wharves and taxes on goods; continuing in 1899 when the tax was put on barges and levied for 5 months, until it was declared to be illegal, when the money had to be repaid on Mr. Justice Mathew deciding against them. That series of attempts to make up for the financial position of the dock by levying taxes in various directions could not but affect the trade of the port. Ship-owners and traders did not know from year to year, or from month to month what their position might be, because the Dock Company were continually trying to raise new revenue, and that must affect the trade of the port. I do not go into that further; it is a matter of considerable importance to the trade; it is a matter which has to be considered in seeing whether to the company, which has carried on this business in that way, further powers are to be given, or whether this friction is to be relieved by making one body which can deal with the whole trade of London.

Now another matter which I want to say a word about is this. I am aware of, and have accepted loyally, the decision of the Commission not to deal with matters of charge, but I do want to emphasise this. I think the Commission must have been struck by the number of traders who came up and wanted to raise the question of charges. You have shut that out. I agree you would have been here for another year or two if you had gone into it, but is it not a most significant matter that trader after trader, representing traders from section after section, should come saying, "The thing I complain of is the charge."

11771A. (Chairman.) We must be consistent and not go into that.

(Mr. Scrutton.) I am trying to accept your Lordship's ruling, and dealing with it from the point of view of the system.

(Chairman.) It is obviously what they would come to say. It would have been very remarkable if they had not said so.

(Mr. Scrutton.) If the Commission had been considering the Liverpool system I do not think there would have been representative trader after trader coming to complain of the Liverpool charges.

(Chairman.) I do not follow you, but at all events I think we will not discuss the charges to-day any more than we have on other days.

(Mr. Scrutton.) If your Lordship pleases. I think I may point out this, and I want to say this one sentence and no more. It may be that you have left one side of the Port of London untouched in not having dealt with that question.

From that I pass to a question which is one of system. Traders have been allowed to say one thing, and several of them have said it—that what they complain of is the system by which a large management rate is charged on goods, when they get into the hands of the dock company, for a number of services many of which are not wanted. That has been compared with the Liverpool system by which goods lying on the quay for a short time, 24 hours or 48 hours or 72 hours, incur no charge except the dock and general dues which all goods pay, and are then liable to charges if they stay longer than that time, which has the effect of making the consignee take his goods away quickly. Now when the dock companies come before you, as they do, in support of their claim and put this case: "See the number of goods that are coming into our dock, going overside into barges and paying us no dues at all," one question which one might ask one's self as a question of management of the dock is: "Have you made it worth their while to take goods through the

quay and by carts, or are you charging for everything that goes on to the quay the full management rate, with rent for two months and a number of other services which may not be required?" Again, I am not going into figures, but the rice people came and said that the management rate for rice was so much—4s. 2d. I think it was; and the answer that was made by the dock company was: "What is the good of talking about rice; none of it is put upon the quay." Surely the answer is obvious: "None of it is put on the quay because the rate you charge if it is put on the quay is such that it is impossible for rice to bear it; you assume that all rice going on the quays is going to stay there for two months, and have all manner of services done, which it does not want."

(Mr. Balfour Browne.) There is no rent charged for rice.

(Mr. Scrutton.) There is a consolidated rate or a landing rate on rice.

(Mr. Balfour Browne.) A landing rate, but not a consolidated rate or rent for two months.

(Mr. Scrutton.) It was the landing rate that they objected to, which covers a series of services, and which they all said was too high, and then the dock people said: "What is the good of having a landing rate, because you never put it on the quay, and none of it becomes liable?" Then the answer is: "For what you would do your charge is too high, and it would never do to put the goods on the quay." As I gather, Mr. Scott's suggested solution for the difficulty seems to have been the adoption of the American clause for all trades. I cannot help thinking there must be considerable misunderstanding about this if that American clause is supposed to be the solution of the difficulty. In the report of the case of Borrowman, Phillips and Co. v. Wilson, which has been put in evidence, and which is in the Appendix No. 17 to the 27th day, you have the custom of the Port of London found as it was in 1891, which was before the year that the American clause was introduced. This is paragraph 10: "It was the custom of the said Port of London that a consignee of goods had the right to delivery of his goods overside, and therefore free of landing charges if he were ready and willing to take delivery of the same within 24 hours after the arrival at her place of discharge of the vessel in which the goods were borne." That has been the custom of London for many years, but another custom has been grafted on it which has been the subject of judicial decision. I am not going to read reports to the Commission. There is a legal member on the Commission who, if the reference is given, will be quite competent to verify the reports. I refer first to the case of Petrocochino v. Bott, which was in 1874, long before this American clause was introduced. That is reported in Law Reports, 9, Common Pleas, at page 355. That was followed by the case of Marzetti v. Smith, which is reported in 49, Law Times Reports, at page 580. It will be seen that long before any question of this American clause had arisen in the Port a definite custom had been established by which the ship arriving put all her goods on the quay because it meant quick despatch. Then if the goods owner came with the barge within 24 hours from the time of arrival and said, "I want my goods," the shipowner must deliver at his expense from the quay. If he came after the 24 hours the dock company could keep the goods and charge their rates upon them. And the liability of the shipowner was discharged when he put his goods on the quay as to loss. That was the first case of Petrocochino v. Bott. So that there was nothing particularly new in this American clause when it was introduced in 1891 except that there were two things which were different. Up to that time the goods owner had had to come within 24 hours of arrival. The American clause gave him two days longer—72 hours. It was in his favour. It gave him more time to come. The Dock Company did not under the American clause get the goods paying charges on them till 72 hours after. Under the old custom they got them 24 hours after arrival. That was the first difference in the American clause. The second difference was that the cost of putting the goods from quay to barge was levied as a separate sum of 1s. 9d. distinct from the port. I think, as Sir Robert Giffen pointed out, that merely comes to a matter of book-keeping. If, for instance, you are going to pay freight for delivery to a barge, it does not make any difference in the system that you separate it into two sums, and say that you pay freight and then for

transport from quay to barge you pay so much. You will not pay more in the whole, because if the consignee has to pay something for part of the process separately, it reduces the freight. He does not have to pay the same freight. It is really only a matter of book-keeping. It would be a difference on the price at which the man in England buys the goods on the Bill of Lading from the man in America. To suggest, as Mr. Scott did at one stage, that it is this introduction of the American clause which has made the prosperity of the American lines, and which will change the whole future of the Port of London, when it is merely a very trivial variation of the custom which will be found to exist in the two previous cases is, I think, to make a suggestion which is quite inadequate to the solution of the difficulties which have to be met. As a number of our own witnesses have said, supposing that every ship in London had all its goods put out on to the quay and put none of them over the side into barges, the only result would be that you would have all the quays blocked and the ships blocked, and the barges if they came to take away the goods, would get in the way of the next ship which came to discharge her goods. So much for the solution of the American clause which is suggested.

Now, assuming that the Commission are of opinion that they have to make a new body for deepening the river, I would suggest that it is desirable that the new body should take the sole control of the port and docks rather than that a series of five or six different powers should be given to five or six different docks. If one comes to face the question of a public trust, there seem to me to be three questions which the Commission has to consider. First, what shall be its constitution in principle—I am not going into detail; secondly, from what source is it to raise its funds; thirdly, from what source is it to get the purchase money with which it is to purchase the docks to start with? Of course it can go on raising its funds once it has got the docks, but it has to get the funds to purchase the docks before it can begin to raise funds for carrying on its work.

11772. (*Mr. Ellis.*) You really mean capital and revenue?

(*Mr. Scrutton.*) Yes, that is really the way I put it. Where is it to get its capital from—the expenditure which it is to start with, and how is it to get its revenue after it is set on its feet? With regard to its constitution, I submit to the Commission the working of other ports, and the expenditure of other ports, points to this being substantially a body governed by the dues payers; that a substantial power on the new port trust should be representative of those who provide the money, whose direct interest it is to get the thing efficient, because it is their ships and their goods that are using it; to pay sufficient money to make it efficient, because it is their ships and their goods that are using it, and not to do more than is necessary to make it efficient, because they are the people who are paying. When you look at the three ports which are conspicuous examples of success in that way, you find Liverpool with six-sevenths of its representatives who are dues payers. There are 24 out of 28, the other four being representatives of the Conservators of the Mersey. You find the Tyne, with half its number dues payers, and that the dues-paying element is increasing because the Tyne began as a municipal body, and the dues-paying element has increased until half its number are dues payers. You find the Clyde, with 15 dues payers to 10 municipal representatives, and with the proposal now before it to put on six more dues payers to two municipal, which would make it two-thirds dues payers. I do not know whether that Bill is through Parliament yet, but, if it is carried, it will make it two-thirds of its number. All of those are bodies spending large sums of money on dredging; the Clyde and Tyne largely, and Liverpool spend money on the Bar of the Mersey. All of them you find to be bodies having no aid from the rates, raising their revenue simply through their dues on ships and goods. All of them you find to be bodies which have been able in the administration to reduce the charges they are making on trade, while maintaining the highest efficiency. I say that those facts of experience point very strongly to the fact that the new body, if one should be appointed, should be a body on which the dues payers should have a large majority of representation. Now, would you look at the figures that are given by the three schemes before you; the Corporation, whom I represent, propose 24 out of 40 should be representatives either of the dues payers or underwriters. The London County Council propose that 10 out of 30 should be representatives of the dues payers,

which I suggest is much too small a proportion. The Chamber of Commerce propose 25 out of 48 should be dues payers. The comment which I make on those figures is that a body with 50 members is probably too large a body for careful administration. Another comment which I make upon the constitution of the body is this: I find that the London County Council propose that on this body they should have a third of the number; that is to say, they should have a number equal to the dues payers; they should have 10 out of the 30, and that, in addition to that assistance, which I think was my friend Mr. Daldy's phrase for it, they should also have the control of all the capital expenditure. That is a matter which the Corporation does consider is a very serious blot upon the system, and it is a matter which I want very carefully to put shortly before the Commission. It is a proposal that one-third of the body shall be representatives of the London County Council, and that, in addition to that control or assistance, all capital shall be controlled by the London County Council. Now, there is an aspect of the matter which, I think, does demand very careful attention by the Commission, because it was recognised as a very serious matter by the representative of the London County Council, who gave evidence. Every member of the County Council, except the aldermen, is elected by popular election—by a large constituency. Both sides say that no politics enter into the elections for the London County Council, and each side uses the political associations of its respective favourite in conducting the elections, and one knows from the history of the London County Council that there has been a very large labour element upon that body. Mr. Gosling came before the Commission and gave evidence as the Secretary of the Watermen and Lightermen's Trades Union, and also as an Alderman of the London County Council.

(*Mr. Daldy.*) Not as an Alderman of the London County Council.

(*Mr. Scrutton.*) At all events he said in his evidence that he was an Alderman of the London County Council. Mr. Tillett, the leader of the Labour Party, was I believe, an Alderman of the London County Council. Now the Corporation does think it a serious matter if at the time of any labour difference affecting the administration of the port, say a docker's strike or the recent watermen's strike, there should be an element on the Port Trust directly connected with that labour dispute, and which has to go for election to a constituency largely affected by that labour dispute. Mr. Gosling naturally does his best for the interests of the union of which he is secretary, and I have no doubt would always do his best for the interests of that union. The same applies to Mr. Tillett. Assuming that during that strike one-third of the body which is managing the Port of London is directly elected by the constituencies to which it will have to go at the next election to justify its action in this particular strike, and with a body controlling all the capital expenditure, every member of which (except Aldermen) has to go to a constituency and justify his election in a case where a matter particularly appealing to popular prejudice may be raised at the election, the Corporation do feel it to be a serious matter, and they submit to the Commissioners as a serious matter whether it would not be desirable to keep this body controlling the Port of London as far as possible free from popular election, and any danger that might involve coming into the administration of the port. One need only think for a moment to see what might have been the effect at the time of the docker's strike if the port had been managed by a body of which numbers were members popularly elected who would have to justify to their constituents their action during the strike. If it is said: "Oh, but you have one side already, because you have the shipowners on the body," the answer is that the shipowners are providing all the funds. In drawing up the scheme, should the Commissioners propose a scheme for a Port Trust, I hope the Commission will give great weight to the consideration which seems to the Corporation of great importance, that is, the desirability or undesirability of having such a popular element as this on the management of the body. Now, that I am not putting forward a matter which merely appeals to the Corporation, may I just read to the Commission the evidence of Mr. Wood himself on this point. At Question 7308 I asked him about this matter: "Now one other question. Have you considered the difficulty of a publicly-elected body which might have a large constituency, managing an undertaking which employed a large amount of labour, in the case of strikes? (A.) Yes. (Q.) Do you think it is a serious

*Mr. T. E. Scrutton,*  
K.C.  
2 July 1901.

Mr. T. E.  
Scrutton,  
K.C.

2 July 1901.

matter? (A.) It is a very important matter. (Q.) In the time of the dock strike it would have been a serious matter, would it not, if the dock had been managed by a publicly-elected authority? (A.) Yes. Of course I cannot tell what might have happened. They might not have had a strike. (Q.) It is a serious consideration? (A.) It is a serious consideration; but I am not advising that the County Council should be the authority." So that Mr. Wood admits it to be sufficiently serious. He will not advise that the County Council should be the authority which should manage this matter, but he does advise that a third of the body should be the County Council, and that the County Council should have the whole control of the capital expenditure, although he feels it to be so serious that the County Council should not manage it themselves simply because of the difficulty that they might get into.

Now one other comment I want to make on the question of representation. My friend Mr. Daldy justifies the representation of the County Council on the ground that they are representing the interests of the consumers. Mr. Daldy on several occasions during the sittings of the Commission has asked the question of witnesses; are not many of the goods coming into the London district? and when he has asked that question and the witness has said "Yes," he has, he thinks, established the basis for having members of the County Council on, representing the consumers. It occurred to me to ask one witness what he meant by "the London district," and the witness promptly said that he meant from Ipswich to Southampton. Well, the jurisdiction of the County Council is extensive, but I do not know that they can represent or claim to represent England from Ipswich to Southampton, which is the justification for their being put on as representing the consumers. So much for that point of my friend Mr. Daldy. That is what I want to say about the constitution.

Then the second matter is the question of finance, or "revenue," to use Mr. Ellis's phrase. When one finds Liverpool, the Tyne, and the Clyde all raising a very large portion of their income by dues on goods, irrespective of services rendered, one is, I submit, forced to the conclusion that a very considerable element of the revenue of the new port trust must be a due on all goods entering the river, not depending on the way in which they are carried—whether by barges or not—a due on all goods entering the river—in the same way as the Tyne and the Clyde already levy the dues; and when one sees the enormous quantity of goods that do enter the river I think one is justified in saying that in all probability the dues on goods would enable the trust to pay its way. On that I want to refer to a little more evidence later on. I want to say this now; it is suggested that the dues on goods alone will add an exorbitant and unnecessary burden to the trade of London. It certainly is the hope of those who are concerned in this matter, that together with dues on goods will come such improvements in administration as will cause the quicker discharge of ships and the lowering of freight, so that what the goods pay in their increased dues it is hoped they will gain in the smaller freight that they will pay. Just to illustrate that, let me say this; when Mr. Pembroke gave his evidence he gave some comparisons of his actual ships at London and Liverpool. I will only take one instance, that of the first ship he gave, to show the Commission by figures how it was the London ship discharged 2,300 tons in six days at a cost of nearly £700. The Liverpool ship discharged 500 tons more goods in two days less, at a cost to the ship of nearly £300. So that there the ship was saving some £400, but in addition to that the ship took two days longer. Then I asked "What was the cost of demurrage," and he said £60. So if you cut down the discharge in the case of that London vessel from six days to four days you would save £120 on the voyage of the ship, irrespective of any saving in the cost of goods, and, as Mr. Pembroke said in his evidence, we should hope to take less freight if we could make quicker discharge at London. He said they do take less freight for Liverpool than for London, because they are employing the ship for a less time. Therefore it is not right to say that we are going to make the port more onerous, if it is accompanied by a system which will make the ship pay less freight. Then with regard to the question of barges—

11773. (Sir John Wolfe-Barry.) Before you leave this question, when you say "dues on goods," do you mean

dues upon all goods, whether they go into dock or discharge in the stream.

(Mr. Scrutton.) Yes. Like the Liverpool Town and Harbcur dues—anything that comes into port.

11774. (Sir John Wolfe-Barry.) Using the word "port" for the whole river and docks combined?

(Mr. Scrutton.) Yes.

11775. (Mr. Ellis.) In the sense that Mr. Pembroke used it in his answer to Question 8363?

(Mr. Scrutton.) Yes. That is exactly the way I wish to use it. That is the proposal which the Corporation desire to make: not merely on goods coming into dock, but upon all goods which come into the port, as being a river where vessels can lie and discharge, whether in the stream or in the dock.

11776. (Sir John Wolfe-Barry.) Or alongside the private wharves?

(Mr. Scrutton.) Yes.

11777. (Mr. Lyttelton.) Your phrase is "entering the river?"

(Mr. Scrutton.) Yes; entering the port in the sense of the port over which the port trust will have jurisdiction. Now if that is the main source which is to be added to the present revenue, that leaves me only the very important and difficult question, the capital question. The port trust must start by buying the docks at a fair price. Where is the capital expenditure to come from?

11778. (Sir John Wolfe-Barry.) When I interrupted you I think you were going to say something with regard to barges.

(Mr. Scrutton.) I am obliged to you, Sir. What I was going to say about barges was this; the Corporation do not consider, if such a duty on goods is imposed, that it is necessary to charge the particular vehicles carrying them. The ship that brings them in will have paid the shipping dues, and the goods brought in will have paid what is analagous to the town and harbour dues. It does not seem to the Corporation that it is necessary at present to decide to charge in addition the vehicle or the barge which takes them away from the ship, any more than it would be necessary to charge the cart which takes them away from the quay. It is not a matter upon which they express a final decision, because it might be that the new port trust, considering all the matter, might consider such a thing desirable. No doubt they must have the barges controlled by careful bye-laws, and bye-laws which are enforced, but they do not propose anything in the nature of a tax on barges except with regard to the question of a possible licensing fee, which might arise if the functions of dealing with the barges were put under the new port trust.

Now, thirdly, I come to the question of capital funds, and I wish to say this before approaching that question. I think Mr. Daldy was a little unfair to us in criticising our scheme as unworthy of the body that put it forward, and useless to the Commission. I do not find that Mr. Daldy has put forward any scheme at all. The first question I suppose is; how much will this trust have to spend? I agree you cannot settle it accurately, but about what capital expenditure do you contemplate to set up that trust? When you ask the County Council that question they say: "We never discussed this matter. If we have to buy it afterwards it is inexpedient that we should discuss it. Therefore as far as we are concerned we deliberately leave you in the dark as to the amount of funds which as capital expenditure we think will be necessary to set up this new trust." They have the figures: they said they had made the calculation; but they did not give the figures to the Commission: they intentionally abstained from giving them to the Commission. When you say the source is to be the rates, the boundless patience, and I suppose the unlimited pockets of the ratepayers, you are of course again relieved from saying how much you are going to spend on the port trust. Now what do the Corporation do? The Corporation have attempted roughly to put before the Commission figures which show that this scheme can work, and I shall deal very shortly with those figures in a moment. I have not heard from Mr. Daldy any serious criticism on those figures. The criticism that I heard was this; he said, I see from Sir Marcus Samuel's table you propose to put a due of £12,000—that is 1s. a ton—on steel and iron exported. How do you think the trade can stand that? The answer is

simple. If he looked at Liverpool he would find the same due on steel exported was put on at Liverpool, and that the quantity of steel exported was double the quantity exported from London, which at present does not suffer from the 1s. a ton due on steel. Now what does one find as to the question of capital expenditure in the other ports? Both Liverpool and the Clyde and the Tyne are able to pay their way with a tax on ships and on goods entering the port without any assistance from rates, and without any allowance from the Government. They are able on that security to raise very large sums of money. Liverpool has raised nearly twenty millions of money on the sole security of dues on shipping and goods with no rates behind and no Government guarantee, and has done that although there are only eight millions of goods per year in Liverpool as compared with some fourteen millions in London. The Tyne finds it unnecessary to have any rate assistance or any Government guarantee to raise the large sums of money which have been necessary for the deepening of the Tyne. The Clyde has been able to make all its improvements in the same way without coming on the rates of Glasgow or asking for a Government guarantee. Now can London do the same? Mr. Pembroke expressed his very careful opinion in answer to Mr. Ellis at Question 8361, that London could do the same. Mr. Ellis was putting to him the possibility of the rates not proving sufficient. Question 8361 is: "Supposing that were insufficient, have you any other reserve in your mind? (A.) I cannot conceive that it can be insufficient. The amount of cargo is so enormous, and the rate could be made sufficient, and it would not bear heavily upon anybody in my opinion." Then at Question 8368: "(Q.) If one guarantees a thing one may have to pay? (A.) Yes, but I think if a large trust, with an important body in connection with it, had the power to put a small tax upon goods, they could raise amply sufficient for all purposes. (Q.) And you give us that very useful information from your experience as a trader of the port? (A.) I do. (Q.) You have long years behind you, and a great amount of business? (A.) Yes, I have seen a good deal of it. (Q.) You have no doubt whatever that there is no necessity for either rates or taxes? (A.) No; that is my opinion. It would be a great advantage, of course, to have a Government guarantee; no doubt the money would be found somewhat cheaper. (Q.) Do you put it in this way? If you put a charge you could make a balance sheet without going to the exchequer or rating? (A.) I do." That is the opinion of one of the most experienced commercial men in the City of London. As to the ultimate working of the trust, Mr. McKinnon Wood agrees with him. At Question 7298 I was asking him as to the differences between Liverpool and London. "(Q.) In Liverpool they are able to pay their way and make large improvements solely by dues on ships and goods. You propose to go on the rates. Do you not think that London might do it on ships and goods? (A.) Ultimately I do. The difference is in the origin of the body. Now we are face to face with urgent improvements in the river on which money must be spent." So that Mr. McKinnon Wood thinks when a trust gets to work it will find itself perfectly able to get on with the revenue that would be raised from dues on ships and goods without coming on the rates. Sir Marcus Samuel takes the same view in his evidence.

(*Sir John Wolfe-Barry.*) Mr. McKinnon Wood's answer at Question 7299 is, "Not to come on the rates, but to use the rates as security."

(*Mr. Scrutton.*) Yes; to have the rates behind in the first instance. Our suggestion is that neither Liverpool nor the Tyne nor the Clyde have found that necessary; neither in Liverpool nor in the Tyne nor in the Clyde are the rates behind as security, yet Liverpool has been able to raise nineteen millions of money. But if there is any doubt about it the Corporation have thought first of all if this stock was made a Trustees' investment stock, one obstacle to raising that money would be removed. The making a stock a Trustees' investment stock does not make people invest in it; there will be many business men in London acquainted with the goodness of the security who might be able to invest in that case if it were a Trustees' investment stock.

11779. (*Chairman.*) Is the Corporation sufficiently confident of the ability of the proposed new body to work the Port and the finances of the Port at a profit to suggest that the new stock should be made a Trustees' stock before any actual proof is given that it is a good security?

(*Mr. Scrutton.*) That is the suggestion of the Corporation, and it is the suggestion of Mr. Pembroke. Mr. Pembroke knows the security, and he says he is perfectly confident with regard to it.

11780. (*Chairman.*) I was asking whether it is proposed that it should now be made a Trustees' stock?

(*Mr. Scrutton.*) Yes, my Lord, that is the suggestion of the Corporation.

11781. (*Mr. Ellis.*) From the very beginning?

(*Mr. Scrutton.*) Yes, from the very beginning.

11782. (*Chairman.*) Before there is any profit and loss shown for the year's working?

(*Mr. Scrutton.*) There is no profit and loss shown for the year's working, but there is a trade coming in to London of fourteen millions. Now, you start with that.

11783. (*Chairman.*) There is the question of working expenses. Whether you could show a net profit sufficient to guarantee the stock is the point.

(*Mr. Scrutton.*) The Corporation believes with Mr. Pembroke as to that.

11784. (*Chairman.*) He does not say anything about Trustees' stock?

(*Mr. Scrutton.*) What Mr. Pembroke said was to this effect: "I am quite confident, knowing the trade and the cost of working as I do, that the thing can pay its way simply with a tax on goods and ships without any guarantee and without any rates." Here is a man who is very well able to form an opinion, and if he is right in that, and if the Corporation take the view that he is right, they are prepared from the start to say that it should be a trustees' investment stock. It is a question, of course, whether he is right. He knows a good deal about it.

(*Chairman.*) I was only asking the question in order to clear up the point.

(*Mr. Scrutton.*) That is the proposal of the Corporation. I am not speaking on my own authority here. If the Commission look at the report of the Corporation it starts with, "Shall be made," not "shall be made in the future," but "shall be made now," a trustees' investment stock. Of course there is the further suggestion that the Government should be asked to guarantee, in view of the importance of the Port of London and of Woolwich Arsenal. That is a matter which is also before the Commission.

With reference to the margin of security, which is really, of course, the question, may I point out the significance of the figures which were given in Appendix No. 1 of the 22nd day. I am not going through them, but what they show is this; if you had in London what you have at Liverpool—that is to say, if you put on town and harbour dues analogous to those of Liverpool (for which no work is done at Liverpool, because all work is paid for by the payments made to the master lumper and the master porter, and the payments at Liverpool are payments for the goods coming into the river), you would have a surplus of £700,000 a year. That is simply calculating, on the goods which come into London, that they pay the dues on goods which are paid at Liverpool. Mr. Daldy thinks he has disposed of that by saying "Oh, but you are putting the Liverpool dues on goods on to the top of the London dues on goods, and, of course, if you multiply by two you get a surplus." But that, respectfully, quite misunderstands what the Liverpool dues on goods are. They are not dues for goods. When the goods come to Liverpool the master lumper takes them and puts them on the quay, and he is paid for doing it. The master porter does all the sorting and delivery, and he is paid for it. When all the work is paid for there come the dues, for no work done at all. Therefore, if you take the present dues on London goods into the dock as analogous to the master lumper's charges, and the master porter's charges, and the charge for rent after three days, which I think it is at Liverpool; if you take them standing on the same basis, you still have Liverpool goods paying a sum for which there is no equivalent in London at present for town and harbour dues. If you just assume that the London goods pay the town and harbour dues as well as the Liverpool goods, you still have, according to Sir Marcus Samuel's evidence, a surplus revenue, after paying the capital on all the money raised, of £700,000. Of course that leaves an ample margin for the matters which Mr. Daldy mentioned about keeping up the channel and improvements and matters of that sort. We have put those

*Mr. T. E. Scrutton,*  
K.C.

2 July 1901.

Mr. T. E.  
Scrutton,  
K.C.

2 July 1901.

figures before the Commission in order that the Commission may see that the Corporation has good grounds for this suggestion, which is Mr. Pembroke's suggestion also, that the dues on the enormous quantity of goods coming into London make an ample security without the necessity of going to the rates. Of course this is a matter of figures, but we have endeavoured to put before the Commission some financial justification for the proposition which we put before them, which is contained in the tables handed in by Sir Marcus Samuel, giving the effect on the Port of London of the imposition of dues on goods similar to the Liverpool port and harbour dues. It would also have this advantage in the view of the Corporation, that it would not be necessary, if you did not charge the rates, to have a representation through the ratepayers of a popularly elected body. That some representation might be thought desirable one may assume, because we find both the Tyne and the Clyde think it desirable to represent the municipalities, although Liverpool does not, and although Liverpool, curiously enough, does not think it necessary to represent the consumer, as Mr. Daldy thought ought to be done. Having dealt with those three points, we submit to the Commission that the conclusions which the special committee of the Corporation have drawn are justified, and should be acted on by the Commission. To summarise the matter, we submit that the causes which at present operate against London are the diversity of the administration, which we ask to be remedied by one port trust; and the inadequacy of funds, which we ask to be remedied by giving that port trust a power to impose a taxation on dues. That the port trust, when constituted, "should have the appointment of pilots, and the superintendence of pilotage, the fixing of their charges, the regulation of watermen and lightermen, and, in fact, the whole of the powers at present exercised on the Thames by the Thames Conservancy below Richmond, the Trinity House, and the Watermen's Company, and also those of the dock companies, and any other bodies having control over the river or docks, except the port sanitary authority." Now, it will be said: "Are you not very inconsistent in absorbing every other body except the one you yourselves have?" Now the Corporation have considered whether it would be desirable to suggest that the port trust, in addition, should be the sanitary authority. The port sanitary authority is not a body specially dealing with trade; it is dealing with the sanitary condition of the river and port in the interests of the inhabitants of London. These interests may be directly opposed to a trading body. It is the interests of ships *quâ* ships to get rid of their ashes and their rubbish by throwing it overboard, and for the trader it is an extremely convenient and economical way of doing it. It does seem to the Corporation that it is desirable that that particular function which is not a trading function, which is a sanitary function connected really with the metropolis, should be left in the hands of a body independent of the port trust. If that is done, you, I believe, are in this fortunate position, that nobody has come to this Commission to make any complaint of the administration of

sanitary matters by the Corporation. It is not done at any expense to the rates. It is done without complaint, it has been done very successfully in the past, it is not a matter directly connected with commerce, so that it might be put under the same administration as other commercial matters; it is a sanitary matter, standing on a different footing from commerce, and that, in the opinion of the Corporation, justifies the exception that the port trust should have those functions, except that of the sanitary authority.

11785. (Mr. Ellis.) Would you mind explaining a little more clearly to me what you mean by the phrase, "in the interests of the inhabitants of London." Does London, in your mind, mean within the ambit of the control of the City Corporation, or do you mean the wider London? You see the point in my mind?

(Mr. Scrutton.) Yes.

11786. (Mr. Ellis.) You use the expression "in the interests of the inhabitants of London"?

(Mr. Scrutton.) Yes. I was thinking at that particular moment largely of the interests of those persons bordering on the Thames below London Bridge, because the ships above are very few, and it is not a serious matter. It is below that it is important; the ships lying in the pool and lying in the docks, throwing rubbish overboard.

11787. (Mr. Ellis.) You see what is running in my mind. I want to clear it up?

(Mr. Scrutton.) Yes. The two points that I should submit for the consideration of the Commission are the two really that I have practically made one, that the functions at present exercised are not commercial but sanitary, and therefore stand on a different footing from the other functions which it might be suggested were part of the functions of a port trust. Secondly, that you are dealing with a body which is now exercising them without any expense to the rates and without any complaint made against them, and therefore a body which there is no *prima facie* reason to disturb, as it is at present doing the work well, without expense to the rates. Those are the two points I wish to make with regard to the sanitary authority.

In conclusion I would wish to say this, the Corporation have put forward this scheme as an honest endeavour to deal with a very difficult question. Should the scheme, or anything like it, find favour in the eyes of the Commission, the Corporation will do its best to bring it to a successful issue. They feel that the condition of the Port of London, both as regards the deepening of the river and as regards the improvement of the docks (giving credit to everybody for trying to do their best on limited means) is most unsatisfactory, that it is urgent that it should be remedied, and that the remedy should be one body substantially on the lines of the Liverpool body, which shall deal with the whole Port of London, including the docks, with one policy, instead of its being dealt with piecemeal by different bodies with different policies, and should deal promptly and on a large scale with matters which are extremely urgent, in its opinion, for the welfare of the country.

Mr. JOSEPH SHAW called to address the Commission.

Mr. Joseph  
Shaw.

11788. (Chairman.) We understand you appear on behalf of the North London Railway Company?

(Mr. Joseph Shaw.) Yes, my Lord, if your Lordship will permit, I should just like to address a few remarks to you on behalf of the North London Railway Company, the owners of the Poplar Docks. As you know, the Poplar Docks are part of the Port of London. I have never seen a case similar to it; the Poplar Docks are a dock within a dock, and that makes the questions raised before you, or some of them, of very great importance for the North London Railway Company, who own this dock, and not only to the North London Railway Company, but all the other railway companies who have access to Poplar Dock over the North London Company's lines. As you know, originally this railway, which is now the North London Railway, was formed to be a connecting link between the river and the docks and what is now the North-Western Railway. The Dock Company were then part owners in this company. They held shares which, I believe, they have since sold; but the importance of this is particularly great to all these railway companies, because, as a matter of fact, all this trade has grown up in this peculiar way in this dock. Poplar Dock has been, as you have

heard, a prosperous concern; it is well equipped, and it has been doing a large business. I will only just refer you to one question and answer in the evidence. I am not going to refer you to the evidence; you have heard it all so carefully, my Lord, and I do not think it worth while to refer you to it. But Mr. Scott appreciated the enormous importance of the barges coming in and out of the Poplar Dock. It is at Question 6178: (Q.) "Now I just want to ask you a few questions about the barges. It is almost essential, is it not, to the trade carried on in the Poplar Dock, that barges should come in? (A.) Yes, I should say distinctly so." Of course, that will show you that the main point I am on is the question of the barges coming in free. The way in which this question has got before you as a Commission is that it is said the Port of London is ailing, and all the physicians are called in to see what can be done to remedy it. No doubt, from reading the evidence of Sir Thomas Sutherland, Mr. Alfred Jones, and other big shipping people, something must be done. The question arises how it ought to be done. You have heard various schemes of various people, and you have heard Mr. Scott's suggestions on this point. Mr. Scott's suggestions are to make further charges.

As a business man I have never found, when a business is ailing and failing, that the best way to cure it is to put an extra charge on. That is not the way that we suggest that this ought to be dealt with. If you look at the evidence of Mr. Alfred Jones and others, you will see they want more equipment and better facilities. Instead of acres of water space lying idle, as you will see for yourselves if you go down to the India Dock, what they want is to put up such equipment and such plant as will enable it, with the capital already expended, to be utilised to the best advantage. With regard to the suggestion of putting charges on the barges, everybody knows that London has grown up a free lighterage port. The trade has grown up under those conditions. Look around the world, and you will find that any alteration in the conditions under which a trade has grown up very often puts a bar to the trade itself. The Port of London has grown up as a free lighterage port. The only other case I know of which is comparable to this (which is also a free lighterage port) is the Humber. All you have to do, my Lord, is to look at the Acts dealing with the Humber, and you will see attempts have been made to do away with the free lighterage there, and they have always failed. Also in the case of the Port of London attempts have been made from time to time to do away with this free lighterage. So far they have always failed, and I hope they will fail again. This free lighterage is more essential for the Poplar Dock than perhaps for any of the others, for this reason; we are the connecting link between the Midland and all the other railway systems and the river. The Poplar Dock is the terminus of this big railway system, and it is treated, of course, as a railway terminus. Anybody who had gone a short time ago to the docks would have seen enormous quantities of ammunition coming from the Midlands going into the barges and sent down the river to Tilbury to vessels going to South Africa. Every ton of that was paid for by the railway companies to the dock, because for every ton of stuff that goes over the Poplar Wharf under the agreement a payment is made over to the dock companies. All our trade is an over the staith trade. We are not allowed to do the other trade by our agreements. So that it is essential, if anything is done to the trade of the Poplar Docks, that it should still remain for us a free lighterage port. My Lord, of course the point that I want to make is in answer to the question as to how the money is to be raised for equipment and so on. I am going to make a suggestion. You have heard the suggestion from our witnesses. The North London Railway Company are prepared to buy up the lease of the Poplar Dock. You have heard that from Mr. Dunn. Under the lease we are paying a little over £5,000 a year to the docks. It is a lease of 999 years: that has nearly all to run, of course. That will give a sum of ready money to whoever you choose to hand over the Port of London to. Let us buy our terminal station, but not only must we buy our terminal station, but we also ask leave to buy the entrance into the Blackwall Basin; because owing to our unique position we cannot use our dock without going through the Blackwall Basin. We have no entrance by ourselves into the dock. One of the Commissioners raised the question whether it also is the entrance to the West India Dock. Of course the Board of the North London Railway Company did not then consider it worth while, and I will tell you why in a moment; but I am instructed now to say that if this suggestion of mine on their behalf is found favourable

in the eyes of the Commissioners, they will consider the advisability of also taking over and equipping as a railway dock the West India Dock. Up to the present moment they thought so little of it that it was not worth while practically considering that question, because they (the dock companies) are practically doing nothing. I believe a ship an acre a year is about what they are doing. I want you to consider the suggestion of the purchase of the Blackwall entrance. I will refer you to Section 45 of the London and St. Katharine's and East and West India Dock Act of 1888. "Provided, nevertheless, that nothing herein contained shall authorise the East and West India Dock Company to sell or dispose of the site of their Blackwall entrance and basin, or of their south dock eastern entrance and basin, and the North London Railway Company and their tenants shall have at all times the same facilities and rights of user for the purpose of access to their docks of the south dock eastern entrance of the East and West India Company as they now have in and over the Blackwall entrance." We have been protected by Parliament so that they were not to have the power to sell that without our having a voice in the matter. Parliament has recognised the importance of this. I want also to point out to you that that proviso has been repeated so late as last year.

There was just one argument of Mr. Scott's I should like to mention, and that is the argument about the old monopoly. I am not going into it; I am only going to mention it to say I join issue. Of course the monopoly of the East and West India Docks your Lordship will remember, and that was the reason put forward by Mr. Scott that free lighterage was granted in those days. All I ask you to do, my Lord, is to look at the history from then; look at what Parliament has done since then. They have always maintained the principle of free lighterage in other cases. Even in cases at the very time that that monopoly came to an end, you will find in Acts of Parliament that free lighterage is kept alive. It has always been kept alive right up to date. I do not want to go into the whole of it, and I only want to point it out. There is just one other point on that. You will always find that that is in the rating part of it, and not in the other part. I think I have shortly put the points that I want the Commission to consider on behalf of this railway company. I do not want to take up your time by referring to the evidence further. Those are the points that I hope, my Lord, you will consider, and the suggestion that I have made I do think will be of some assistance in order to help in this question of finding anyhow some money to start with, that we are prepared to assist to that degree and find some of the capital.

I would remind your Lordship also that at Liverpool the North-Western Railway have their own dock. In a trust of this kind the shippers are, of course, at one end of the string; the dock is the conduit from the consumer, the railway company is the other end to get to the consumer. The railway facilities are of a great deal more importance now than in the old days, and in dealing with this thing we ask not only for the North London, but the other railways connected with the North London, that some railway representation should be given to any trust you would be pleased to recommend.

(Chairman.) That came out very clearly in your evidence.

Mr. F. P. M. SCHILLER called to address the Commission.

11789. (Chairman.) You address us on behalf of the Direct Short Sea Traders' Association?

(Mr. F. P. M. Schiller.) Yes, my Lord; in presenting my credentials I desire to point out that the Direct Short Sea Traders' Association are not only shipowners on a very large scale, but they are also wharfingers on a very considerable scale, and their wharves extend from just above London Bridge for a long way down the river. In order to give you some idea of the importance of the Short Sea Traders in the Port of London, I may mention that their tonnage, although of course in comparison with the ocean liners it is a small one, in point of fact becomes important, because their voyages are very frequent, so that the amount of goods tonnage that they bring into the port is very large. In fact, it is

more than the ocean liners. They actually contribute towards the expenses of the port 50 per cent. of the money that is at present paid. The Short Sea Traders carry, as I say, more than half the tonnage of the port, and the dues which are levied on those vessels are smaller than those levied on the ocean going ships, which pay three farthings a ton, whereas the Short Sea Traders only pay a half-penny a ton. Of course, that being so, they do represent the major part of the trade of London. Those tonnage dues are levied under section 155 of the Thames Conservancy Act, 1894, which Act contains certain exemptions which we think ought to be removed. There is one matter further which I should like to deal with at once, and that is the argument from analogy of other ports. My clients do feel

Mr. Joseph Shaw.

2 July 1901.

Mr. F. P. M. Schiller.

Mr. F. P. M.  
Schiller.

2 July 1901.

very strongly on the matter, because it is a matter which interests them, and, as I hope to be able to show, interests the general prosperity of the port. The analogies which have been drawn from the Tyne, the Clyde, and the Mersey, and foreign ports, are wholly fallacious, because London differs from these ports. Take, for instance, Liverpool. There is no analogy between London and Liverpool at all as regards the imposition of dues. If London were a new port, and you were going to arrange an ideal port from the outset, very possibly it might have to be worked on the Liverpool lines, but what you have to do is to adapt the old port to the new requirements, and it would be an exceedingly dangerous thing, as we submit, to levy anything like town dues. The effect would be most disastrous, because London labours under this disadvantage, it has far more competing ports, both home and foreign, at its doors. Liverpool is geographically in a very much better position to be able to stand those town dues.

(Mr. Ellis.) The witness did not deal with this at all. This is not founded on evidence. It is a speech at large now; it is purely in the air.

11790. (Chairman.) Kindly keep to the evidence given by your representative. Why did not your witness tell us this at the time? His examination in chief should have pointed out the differences between London and the other ports, not counsel afterwards.

(Mr. F. P. M. Schiller.) I do not think at that time the question had arisen.

(Chairman.) The port is no different from what it was a fortnight ago.

(Mr. F. P. M. Schiller.) I do not think the question of this analogy between Liverpool and the other ports had arisen at the time Mr. Cattarns was giving evidence. My Lord, the reason we are here is to keep as far as possible the port in its present state, simply bringing it up to date. We have propounded a scheme which you will find in Question 3527. As far as we understand, it has been objected against the port that it is a dear port. Let us see where this objection comes from. The objection comes from the people who use the docks. We do not use the docks. On the other hand, what we say is this; London is not a dear port at all. If it is a dear port, and that objection is well founded, then it is a dear port by reason of the dock dues, and nothing else. We say, we who discharge into lighters find London a very cheap port, and a very good port for our purpose, and we do not want to have any further taxation put on unless we are going to get in return for that taxation attractions that will bring further trade. Now a large amount of the proposals amount to this. What we say is; we do not complain of anybody, we do not complain of the Conservancy, who have done their work so far as they could, exceedingly well; but what we do feel is this; we say a central authority unquestionably is needed. That you will see is the first resolution which was handed in by Mr. Cattarns. We say it is desirable that you should have a central authority to control the matters of the port, and not have it divided. The details of that central authority can be left for future discussion. We say, in all probability the proper way to constitute that central authority would be to have the traders who have to pay the expenses represented as largely as possible upon that central authority. Then, the next thing we say is, that it would be disastrous to apply any part of the funds thus raised to the purchase of any of the existing docks or wharves. Putting it quite shortly, what we say is this; the dock company are the people, if anybody, who can manage docks. They have been at it all their lives, and it is not likely that the new central authority which has been suggested, either by the Chamber of Commerce, or the County Council, or the Corporation, will be any more competent in managing the affairs of the docks than anybody else. We say that the result of buying the docks by any port trust will lead to this disadvantage. Either you will get the municipal competitive trader, which is not a desirable thing, or else you will get a total destruction of competition; and what we say upon that is that the very life and soul of the port, and the prosperity of the port is due to competition being kept alive. We do desire to impress upon you that it is most important that nothing should be done which will interfere with the competition of the traders. Then we say that we ought to have no taxation on the lighters, and no taxation on the goods, because that would lead to the very monopoly which we say is destructive of the trade of the port, and I will show you in a very few words how that will work. The docks used to have a

large amount of warehousing; they lost it, it is no matter how they lost it, they have, in fact, lost it by the evolution of trade, the introduction of steam, and so forth. It has gone away. What are they asking to do? They are coming here and asking you to recommend to Parliament that they should have these fresh powers. They have got the old unexhausted powers of levying money on shipping, and they are asking you to give them a new power to tax goods. Either those unexhausted powers are useless, in which case they ought to be struck out, or they serve some purpose; they can be put into force and then they do not want new ones. If they do not want new powers, it looks very much as if what we feel is in point of fact the real cause which has induced the dock companies to apply for those powers is their real motive, and that is this; at the present moment the lighters go in free, and, mark, those are the lighters which carry the goods from the docks to our wharves and to our ships. What will be the effect of imposing a tax on those lighters or those docks? Why, it will put the docks on the basis of unfair competition with the wharves and with the Short Sea Traders. They will be able to warehouse these goods, and they will have to warehouse them, and it will destroy the competition between the wharfinger and the dock company. The effect of that will be very disastrous to us, because we want to get our goods as cheaply as possible, as our trade is to a large extent merely a transshipment trade, and of course it is plain, that being so, the more goods we can get into the Port of London the more prosperous we shall be, and therefore from the peculiarity of our position our prosperity is really synonymous with that of the port. The more prosperous we are, the more goods it means coming to the port, and *vice versa*, the more goods coming to the port the more prosperous we become.

Under those circumstances what we say is, that whatever money is raised and whatever money is spent, ought to be spent in order to make the port more attractive. We want more despatch. As far as the docks are concerned we say we cannot help them; the docks for us are never any use, because they are and always must be too slow. The shippers come in every week and we cannot afford to wait while we can get in and out of the docks and discharge. It is an incident which we do not complain of as mismanagement on the part of the docks at all. It is an incident of dock trade. We say that the Port of London is not a dock port; that the main portion of its trade is a wharf trade and a lighter trade; that it always has been so, and always must be so. What we want to have first of all is a central port authority. We recognise the necessity of that. We want increased facilities and attractions for the port. What we suggest is this. We want, of course, greater depth of water. We want the water made so deep that we can attract and bring up to London the large steamers which at the present moment are only capable of going to the Port of Liverpool. We want to bring those large steamers here; and we are quite willing to run the risk of foreign competition so long as the taxation which is imposed offers further facilities for bringing up goods. We say the proper way, or, at any rate, one way of doing it, is to establish in the river jetties and T piers, and to dredge the channel out to such a depth that at low water these large steamers can come up at any time and at all tides and discharge their goods from their holds into lighters alongside the jetty. If that is done we say it may hurt the docks. I daresay it will hurt the docks; we are prepared to face that; but if the facilities required hurt the docks, in the interests of the trade of the port, we cannot help it. The docks, after all, are only a commercial undertaking, and what we look to is to bring the largest amount of goods that we possibly can into the Port of London. We say that the proper way of doing that is by way of dredging this channel and supplying facilities as cheaply as possible, because, as we say, we users of the port will have to pay our fair share of the expenses incurred. What we say is this, that the expenditure on T piers and jetties is infinitesimal in comparison with the expenditure of making the docks really do their work such as is suggested by the Port Trust taking over those docks, and that it is equally effective, because the lighterage system is already in vogue and well understood by everybody; and that those goods can come from the big vessels by lighter just as easily as they can come by lighter now from the ships that unload into the docks. We suggest, therefore, that among other things the money should be

raised first of all by a tax on the ship. We are perfectly willing to bear our share of that; and we suggest that the dues raised should not be more than enough to meet the interest on capital expended, and enough to pay for maintenance and depreciation. That is all we want, and these gentlemen who have experience of the port feel confident that the port is fully equal to meet the expenditure of deepening the river and affording these facilities, and they think that the result of that would be that more trade would be attracted to the port, and that even if there were extra expenditure, owing to the increased facilities, they would be able to compete not only with ports at home, but also with the foreign ports at their door. That is what they have recommended, and that is what the resolutions which were handed in by Mr. Cattarns at Question 3527 go to show. Upon the question of the possibility of working these T piers a certain amount of evidence has been given which is important. Mr. Cattarns himself, I think, was not cross-examined about it by anybody, but Mr. Jones in the Questions from 4993 onwards, deals with that matter, and he deals with that matter in connection with Antwerp. He puts it that the system of T piers works very satisfactorily in foreign ports. Sir Thomas Sutherland goes to the same point. The advantages of that as we say are obvious. We are not going to involve our ratepayers, or anybody else, or the port, in any very great expenditure. A certain amount of substantial expenditure, of course, there must be. What we say is that we can by that means avoid having to take over out of municipal funds or other funds what practically amounts to the dead capital of the dock company, and it is that against which we are struggling, because what the Short Sea Traders' Association does feel is this, that all these schemes that have been put forward, with the exception of their own, do not tend to cheapen the port. What they desire as far as possible is to have the port cheapened, and they think that if you can substitute other facilities which would cheapen it, in the interests of the port it should be done. At the present moment every one of the schemes put forward involves an enormous amount of capital, and of taking over that capital which has ceased to be remunerative. The short sea traders say the docks are perfectly competent to manage their own business, and sufficiently competent to earn a sufficient income to meet all requirements provided they will write off that dead capital and set their house in order. After all they are only an ordinary commercial undertaking, and if a man engaged in commerce loses his capital he has to write it off. Why should not the dock companies do the same? Why should they, to the peril of the port, demand extra powers of taxation, and why should they give rise to a general scheme of taking over an undertaking which they themselves complain of as not being sufficiently remunerative for their capital, and taking it over at a valuation for the dead capital? Another objection which we have against the present dock scheme is this, which is dealt with in the tenth paragraph of the resolution in Question 3527. It is not only the question of outlay. At the present moment there is no guarantee at all, if you look at the Bill. There is absolutely no guarantee at all on the Dock Bill that one single penny piece of the money that they collect from these dues is money which will go in improving the river or in lowering the sills. I will ask the Commission to look at the fifth paragraph of the resolution in Question 3527.

(*Chairman.*) I do not think we need ask you to discuss these matters further. The resolution put in by Mr. Cattarns as representing the Short Sea Traders' Association seems to clearly express it, and we understand it. It seems to us that you have touched on the principal points.

(*Mr. F. P. M. Schiller.*) What I was going to say

about it was this; there is nothing in the Bill to compel them to lower the sill.

(*Chairman.*) We do not want to discuss the Bill.

(*Mr. F. P. M. Schiller.*) If your Lordship pleases. The danger is this; that if the ship comes up in a deepened channel, and the sills have not been lowered, it can come up at all times of the tide, and if it cannot get into the dock it has to anchor in the fairway, or the channel, which at the outside is 600ft. wide, and the ship is nearly as long as the channel is wide. The ship anchors, swings with the tide, and two results may happen. It may be a fruitful source of collisions, and the ship may also get its nose fixed in the mud and either capsize or break its back, as has happened on more than one occasion down at Bristol. That is a danger which we wish to point out, because our ships coming in there frequently are particularly exposed to that danger. Then we say—and I think it is agreed on all hands—that the channel should be deepened and broadened, and the suggestion which the Short Sea Traders make is that it should be a minimum depth of 32 ft. Then there is a question which arises with regard to the embanking of the sides of the river. As to that the Association says this; it is very possible that there may be engineering difficulties in deepening and widening the channel, and very likely it may be that retaining walls would have to be constructed in order to avoid that evil. Then no doubt there would have to be capital expenditure on that. But at the same time they want to point out that that land so utilised for forming that retaining wall is a very favourable place for the building of jetties and piers. So that not the whole of the capital expenditure employed for building those retaining walls would be unremunerative, and as to the portion that is unremunerative they say that it enables them by offering superior facilities to compete with other ports; and not being a very large expenditure it is worth while making it. Then as regards the taxation of lighters and goods what we say is this; it is simply an attempt on the part of the shipowners or the dock companies to saddle the payment of that tax upon the cargo owner. He is the man who pays the lighter, and it is suggested that for no advantage that he gets the cargo owner is to pay a tax on the goods; he gets no services rendered and he gets no corresponding advantage. We say that is bad, because it destroys the competition by enabling the warehousemen to be competed with by the dock companies. Under those circumstances what we say is that if the Commission can see their way to it, this is not a case for any very drastic change, but what we desire in the interests of everybody, owners of ships, owners of cargo, and owners of quays and wharves, is that the existing state of affairs should be disturbed as little as possible consistently with the efficient working of the port. What the Short Sea Traders, who use the port more than anybody else, say, is this: "You will not improve matters by a dock scheme. The proper thing is to dredge the channel of the river and to dredge it deep enough to afford attractions to trade which has not yet come to the port." We say: "Spend the money on affording attractions to bring trade which has not yet been to the port, and, if the money has to be raised, spend it on fresh objects which are not burdened with debts already, and raise the money not out of the public funds, but raise it from the shipping of the port which uses the port." The Short Sea Traders say they are perfectly willing to contribute their quota. If there is any more wanted you must not go to the public funds, but in the first instance tax the shipping of the port; and if there is to be a tax we say that the proceeds of the tax ought not to go into the pockets of a private corporation to swell its dividends, but they ought to go into the pockets of the public authorities, and ought to be used and spent in improving the facilities of the port.

*Mr. F. P. M. Schiller.*

2 July 1901.

Mr. R. W. HARPER called to address the Commission.

11791. (*Chairman.*) We understand you address us on behalf of the Wharfingers' and Warehousekeepers' Association?

(*Mr. Harper.*) Yes, my Lord. I appear for the industry which has a very large value, as your Lordship has heard. It is one which is in a sense the attacked body here, because the original proposal is a proposal by the dock companies to place

a tax upon the lighters frequenting the docks, and a charge upon the goods, the direct effect of which would be to divert business now going to the wharves and to impound it so to speak in the dock warehouses. Except so far as I am attacked with regard to that, I disclaim any hostility with regard to the docks. We have had to work with them in the past, and unless the result of this Commission should be that the docks are replaced by some public trust we shall have to work with them

*Mr. R. W. Harper.*

Mr. R. W.  
Harper.  
2 July 1901.

in the future. Therefore, except in so far as it is necessary for answering the case that it is sought to make in attacking us, I shall not attempt to attack them; but perhaps I may just clear the ground with regard to many of the topics that have been discussed here by saying this as regards one or two of them, which will only have an indirect bearing on my clients' interests. For instance, take the question of the deepening of the channel. With regard to that, while we should be glad of anything that assisted the Port of London in that way, it would not directly benefit us so much. We conceive that that would be properly met, as has been suggested, by a tax upon all goods coming within the limits of the port—coming physically there by water—providing that the funds so provided were applied by some authority which could not devote any portion of it to fostering competition with us or any other body. Of course, in any proposals to alter the course of trade which has existed for a great number of years, there are very great difficulties, and there is danger that you may drive it away. It is a very delicate thing, and very susceptible to any change which may be brought upon it which is not brought about by any commercial requirement. It is very well illustrated by what Mr. Ryder told us about the habits of the Customs with regard to bonded warehouses generally. He told us that they tried as far as possible to follow the trade, and to do what the trade wanted, instead of forcing upon it the placing of the goods in particular places; but as was pointed out by Mr. Rouse, speaking for the coffee dealers, the trade would not go except to certain wharves. In fact, people have preferences; it is just what you find in London with regard to all particular trades. Why is the dry goods trade found at Wood Street? Why does Colonial produce go to Mincing Lane? Why does corn go to Mark Lane? You cannot divert these things from their regular places. You must accommodate yourselves to those requirements if you are going to do business there.

Now, starting with that as a basis, what I am concerned to maintain here is what has sometimes been termed the privilege of free water. I do not call it a privilege, I say it is the other way about; that the dock companies got privileges against the general public, and against bodies that were then in possession of the rights of taking bonded goods, namely, the legal quays which had been in existence for some centuries before, and the price which it was suggested was paid was not paid by a tax levied upon them, but paid out of the consolidated fund and collected from dues, and was paid solely for the time during which they were given an absolute right to have all West Indian produce of a particular kind warehoused as well as landed in the docks. The Commission has not yet had its attention directed specifically to the statutes, and at the risk of wearying you for a few minutes I should like to direct your attention to them, because I do think there are a few leading characteristics there to which attention may well be drawn. The first is the Act of 1799, and in that Act, after making provision for what I think has been sometimes called the City Canal, which, although it is now the southernmost of the docks, does not materially affect the matter, you will find by section 56 the directors were empowered to make wet docks. Section 57 provides for the warehouses, and then come two rather material sections. This is with reference to a question put by Sir Robert Giffen to one of the witnesses, I think Mr. Scott, as to the power of getting materials from the bed of the river. Section 66 of that original Act provides that, but Section 65 which immediately precedes it, provides for a still wider power, namely, the power of getting materials from the land of adjoining owners which have not been acquired. Without going into detail through them all, I may say that you will find that again at Section 90 of the London Act of 1828, and you will find the powers again in Sections 51, 52 and 53 of the East India Act of 1803.

11792. (Chairman.) What is your proposition on this?

(Mr. Harper.) My proposition is, shortly, this; that Parliament has there given a power which habitually has been given to no other body except the surveyors of highways, for the repair of highways. It shows, therefore, that in making these docks Parliament has not treated them as a part of the Port of London in the loose and general way in which we sometimes now use the phrase, but as a part of the general highway.

11793. (Mr. Ellis.) This is connected with the free water to your mind?

(Mr. Harper.) Yes. In point of fact, Parliament has

made it part of the Thames, and every right which any individual possessed of going on to the Thames was to continue to exist in those docks, and the docks got special rights and special privileges of a character precisely analogous to those given to public officials who have charge of public highways of going on private lands for materials; adversely to the private owner, making, of course, such compensation as should be found proper. I do not say that is found in all the Acts. I do not wish to weary the Commission with details; it is found in almost all of them. The notable exception that I have is the London Dock Act of 1800. But that was the old London Dock, and it was, I take it, even then immediately surrounded by buildings from the description of what had to be pulled down, and the sand from the river was probably a more important thing then. That is my proposition with regard to that. You are here having Acts passed, so to speak, to widen the accommodation of the river, and I think the original preamble of the Statute of 1799 shows that. The preamble related more particularly at that point to the old City Canal; it reads: "Whereas from the very great and progressive increase of the number and size of ships and other vessels trading to the Port of London, the River Thames in the said port is in general so much crowded with shipping, lighters, and other craft that the navigation of a considerable part of the said river is rendered tedious and dangerous, and there is a large want of room in the said port, for the safe and convenient mooring of vessels and access to them. And whereas great inconveniences are also experienced in the said port for want of regulations concerning the navigating and mooring of vessels in the same. And whereas want of accommodation for the landing and shipping of goods, wares, and merchandise has for some years past been experienced by reason of the confined and crowded state of the legal quays in or belonging to the said port. And whereas great delays, accidents, damages, losses and extraordinary expenses are sustained from the aforesaid causes, to the hindrance of commerce and the great injury of the public revenue. And whereas the said evils might in a considerable degree be remedied if a navigable canal for ships and other vessels were made," and so on. Then it provides what is to be done. That shows that there was then a congestion of trade generally, which was being met in this way, and that the public convenience as well as the private profit of the undertakers was present to the mind of Parliament. In 1800 the London Dock Act followed. In that there was a provision for compensation to the owners of legal quays which was found in the Act of 1799 and which we have had detailed in evidence. It resulted in somewhere about £600,000 being paid to the various interests, wharfingers, lightermen, and others who were proved to have been prejudiced by the erection of the West India Docks under the Act of 1799. By Section 110 of the Act of 1800 the Treasury had power to purchase the legal quays between London Bridge and the Tower of London. There again there was a provision for making warehouses and docks, which it was felt would come into competition at this particular point, and the Treasury had power given to do that. So things went on. In 1803 came the East India Docks; in 1825 came the St. Katharine's Dock. But in 1823, as the Commissioners will remember, there had been the Committee upon foreign trade, to which reference has already been made. I think it very remarkable what followed immediately upon that Committee. There is very great difficulty in getting access to that report, but immediately after that Committee had sat, and I presume reported, I think it very remarkable what we find in the preamble of the very next Act of Parliament. It must be remembered that Mr. Scott, who is the spokesman of the docks here, is the lineal successor in title of the company that was established in 1825 under that Act. The preamble reads thus: "Whereas it is expedient, for the further encouragement and extension of commerce, that the accommodation of the Port of London should be improved by the construction of additional wet docks, with proper gates, sluices, locks, inlets, and outlets, for the reception and discharge of ships laden with merchandise; and that additional wharves, quays, vaults, warehouses and other places of secure deposit, should be constructed for the landing, housing, bonding, and shipping of goods, wares, and merchandise. And whereas it is desirable that such docks, wharves, quays, vaults, warehouses, and other places of deposit, should be situated as near as may be to the City of London, and established on the principle of free competition in trade, and without any exclusive privileges or immunities, but under proper regulations for the secure deposit and warehousing of

merchandise, and for the protection and convenient collection of the revenue," and so on. There you have as early as 1825 that further principle enunciated—that they should be established on the principle of free competition in the trade, and without any exclusive privileges or immunities. Mr. Scott's company is the successor in title now of that one. It takes the rights and burdens given by that statute. One of the burdens is the preamble, which shows distinctly, as I submit, that it was not, as he described it, an accidental survival. I think his exact phrase was that it had been overlooked, and had accidentally survived. It is to be found in No. 2 of his reasons, which are given at Question 5771: "The history of the wharfingers and warehousemen's businesses, which shows that when they first received the privilege of exemption it was in return for the compulsory diversion of business from their premises, that when the dock monopolies expired, the unimportance of these claims left them unnoticed either by the dock companies or the Government, but that when the expiry of the monopolies was followed by the extension of the legal quay and bonded warehouse system, those clauses largely assisted to enable the wharfingers and warehousemen to compete with the docks on advantageous terms, and had, therefore, become both inapplicable and inequitable." How does history support that claim? From that date, at any rate (I will refer to a slight change in the form of the clause which took place about that period), down to the present time uniformly with one exception, and, again, a most significant exception, Parliament has inserted the free lighterage and free delivery clause. The exception is this: In the year 1850 the Victoria Dock Act was passed. I fail to find in that Act the exemption clause. There then follows the Inquiry in 1853, and you do find in the 1853 Act the exemption clause inserted at section 45. You have, therefore, another dock started originally getting its Act without lighterage exemption, which had been in all other Acts up to that time, you find the Committee of Parliament in 1853, you find the clause inserted by Parliament, and then you find the dock company coming in 1855 and seeking to repeal this exemption. You have the debate in the House which follows. You, therefore, have the sequence of events. A bill allowed to slip through, the attention of Parliament drawn to it, the Committee dealing with it, the clause inserted, and then, in 1855, you have a debate in Parliament, and the House, by a large majority, on the initiative of the Government, declining to repeal the clause. You have the whole of these events happening within the compass of five years. What is the position of the port now? As everybody has said, and as I think it cannot be denied, it must be a barge port. What is the main feature of water traffic as distinguished from land traffic? It is its cheapness. I do hope that nothing that this Commission may advise Parliament to do will have the effect in any way of strangling the use of the waterways. We have in the past had quite sufficient illustration in this country of the way in which canals may be crippled by their being handed over to bodies which have distinct adverse interests, and which aim at promoting the use of their railways in preference to promoting the cheap form of transit for heavy goods by water. Anything which would have a tendency to divert traffic from the cheap form of movement on the river, either to carting or to railway traffic, would be a serious matter.

Now, I promised before I left it, to say one word on this point. We found originally that there had been an alteration in the shape of the exemption clause. As originally framed, it provided simply for the access of the lighters to the dock free; the reason, of course, being that those particular docks were being given the monopoly of the West India trade. Therefore, giving them the monopoly, and giving them extensive powers of charging in respect of that trade, you could not at the same moment take them away by saying that the lighter might go in free itself, and take away the goods. But when the 21 years had expired, for which, as I say, their encroachment on the public rights was permitted, the privilege of free entry was retained with the words added which gave freedom to the goods which the lighters carried. That has continued in that form since. Perhaps, though it is rather drifting away to another topic, I might, while I am dealing with the statutes just say what I have to say with regard to one or two other matters on them. There has been a complaint made by the dock officials of their trouble in dealing with barges. Now, again, an examination of the statutes will show that most of these statutes gave powers

of dealing with barges as well as vessels, and imposed penalties upon offenders. I do not think I need trouble your Lordship's Commission with the details. I take typically as a late example the Act of 1874, when the East and West India Docks amalgamated, and when apparently it was present to their minds that some of their powers had not been as drastic as they might have been. In the preamble of that statute, the West India Dock Act of 1874 we find this.

(Chairman.) We need not trouble you to read it if you give us the reference.

(Mr. Harper.) It is simply that they found inconvenience arise from the practice of leaving lighters unattended in the docks. It is the last paragraph of the recitals. Then at Section 15, Section 104 of the principal Act is repealed, and fresh and more drastic provisions are provided for dealing with any obstruction by lighters, or the leaving of lighters and barges unattended in the docks. So there are powers in existence which at any rate will apply to Tilbury; I do not know in fact that they will apply to the Albert Docks; I think one would have to search through the older Acts, but there are in the older Acts provisions of an analogous character, though, perhaps, not so drastic.

(Mr. George Wallace.) May I tell your Lordship, by way of information, that that section which my friend refers to was repealed in 1879.

(Mr. Lyttelton.) There is power to deal with the management of the barges in the docks, and penalties.

(Mr. George Wallace.) There is, no doubt, and if I may be allowed to say so as a matter of information to the Commission, there was a question about a bye-law which cropped up in the course of the evidence. My friend, Mr. Cranstoun, was against me in that case, and the question was whether we could enforce the bye-law or not. We found we could not because the section of the Act of 1879 was not so strong as the bye-law, and we found that the Act of 1879 was not sufficient. We tried the bye-law, and the High Court in the last few weeks has said the bye-law was bad.

(Mr. Harper.) In other words, having got the Statute in 1874, they went again in 1879 apparently (I take it from my friend's statement, I have not the Statute before me) they repealed this and took powers to make bye-laws, and on it they have made a bad bye-law.

Now, my Lord, I said I represented a large interest, and I think it has been put by several of the witnesses that the river-side interest, wharves and warehouses generally, represent from eight to eleven millions of money. The docks have been put variously, but I think the figure for them is some 17 or 18 millions of capital actually expended upon them, from the tables that have been put in. I think the Stock Exchange valuation is about 14 millions. At the present time, taking as I understand the dividend that it pays over all, I think in answer to Sir Robert Giffen it came out that the average dividend was somewhere about 1½%. Now I represent here an industry which has been in active competition with the docks, and has this merit and this claim to consideration, namely, that we are successful traders. We have never come asking anything. All that we find fault with in the docks is that they do not give us greater dispatch. I mean that as a body; there are individuals who have minor complaints which in the course of trade could easily be remedied, but want of dispatch means this in the case of goods coming to wharves; the wharfinger sends his lighter; his lighter is kept waiting indefinite times, and I am sure it will be in the recollection of the Commission that curiously enough the longest delays of barges in the docks that were handed in by some of the witnesses arose with vessels discharging on the American Bill of Lading, showing at any rate that it is not the universal remedy that it has been held out to be for the evils that have been complained of. What we want is an efficient regulation of the barges so that we can get our goods rapidly. That delay we must pay for ultimately, because although in the first instance we may have a running contract with our lighterman to fetch the goods, and that contract may prevent him charging more in that instance, yet it will come back on our heads afterwards if he finds that in the practice of things he cannot get his goods away as rapidly as he estimated. Now what are the docks proposing to do? They are in the position of monopolists as

Mr. R. W.  
Harper.  
2 July 1901.

Mr. R. W.  
Harper.  
2 July 1901.

dock owners practically. Of course a small dock like Hay's Dock is practically only three wharves with room for a ship at each. The docks are non-monopolists as regards warehousing. As you remember, Mr. Holland in his memorandum tells you, it is the warehousing that pays. They are proposing to pay still more and to feed that which is not paying, namely, the dock part of their undertaking, out of our pockets. There will, as Mr. Scott admitted, probably be some diminution—I could not expect him to admit a great one of course—in the number of barges that would go to the docks if a tax were placed upon them. There would also be a considerable diversion of goods, and so they would get the advantage both ways, all to the detriment alike of the public wharfinger, whom I more particularly represent, and all those private traders who have erected their own wharves for their manufacturing and other businesses.

In some cases the tax which is proposed would be absolutely prohibitive, and in any case it comes to this; that here is a body with special statutory privileges which it is not exercising, which is seeking to ask this Commission to report that they should have further powers of taxing in another direction in order to make that competition more effective, in order to make that portion of their business which is admittedly paying, pay still more. I venture to submit that is a thing which should not be encouraged. We had it from Mr. Scott that he wanted about £356,000 to pay his preference and debenture interest, and that the taxes that he is proposing to put upon barges and goods will, he estimates, produce about £234,000 more. One has to consider what sort of displacement of trade is meant when one speaks of a sum like £234,000, which is raised by the comparatively small tax which was suggested. It means a very considerable disturbance, and, of course, if in addition to that the dock company can by that scheme get the warehousing of these goods that remain in the warehouses for longer periods, there is a still further source of revenue, because they are filling up those spaces which are at the present time vacant. In other words, they are feeding their warehousing business with a bounty in competition with outsiders, and they, as privileged persons, are asking for further rights, which is practically giving them a bounty at the expense of other people. I venture to hope that the Commission will not assist them in that. At the present time they do about one-third of the warehousing business according to Mr. Scott, and they could not do it all. But I am sure the Commission will not lose sight of the remarkable change that has been deposited to by so many different witnesses before this Commission in the course of trade in the last few years—the greater rapidity with which goods arriving in the docks or at wharves or elsewhere go into consumption, and consequently the diminution in the quantity of goods that require warehousing for any length of time, in addition to the fact that that which is called shedding will for much of the rougher class of produce do just as well as warehouses, will prove just as efficient and enable them to get their goods just as readily as if they had a form of warehouses built specially for the accommodation of such goods.

So that in fact there is a danger of an increasing diminution. On this particular point the interests of those whom I represent, the public wharfingers, are at variance with the interests of the private wharfingers. The private wharfinger is a man who, having got a piece of land adjacent to the river, puts his wharf there, takes his goods there for his own consumption, and gets the same benefit as I do of this free lighter clause and this free delivery clause. He takes his goods straight away and puts them into consumption at once. All that again has tended to diminish the business going to the wharves, but in spite of all that, we exist. If, as I trust, this Commission, before it reports, will take an opportunity of seeing the equipment of the wharves at the present time, and comparing that equipment with the equipment of the docks, I think the prosperity of the one as compared with the other will be explained in a moment. I believe the Commissioners have seen the docks, but I do not know about the wharves. If you go to the docks you find a type of crane with a fixed jib, therefore, having a fixed radius of delivery. They were apparently all put down at one time. You will find in some of the larger docks they are practically all one size. Therefore the limitations imposed upon the ships that they can discharge, and the distance to which they can discharge into barges is a very serious

thing. But when you go to the wharves you find quite a different state of things. You find there the most modern appliances and luffing cranes. You find there, as Mr. Edgar Wright told you, at Question 11534 that they can take goods out of the hold of a second ship lying in a tier at the wharf direct and can swing the goods a distance of 78 feet from the quay on either side; or if goods come straight out of the hold of a vessel discharging at the wharf he can discharge right over the vessel into a barge on the other side. As a matter of practice this is not done; as a matter of practice the goods are put on the quay. There was Mr. Birrell of the green fruit trade, who was, I think, a gentleman who impartially devoted himself to litigation both with the docks and the wharves. Mr. Birrell told us at Question 9411 that he got all his goods delivered overside at Fresh Wharf, and then took them away to another wharf, and he was cross-examined by members of the Commission as to how he got them, and it turned out that they were absolutely put upon Fresh Wharf, sorted there for him, and then put back again as all part of the free delivery. My Lord, that is exactly what the docks do not do. That is exactly what they have sought to evade by the introduction of the Atlantic Bill of Lading. As I have referred to that, perhaps I may just recall to your mind that case and judgment which was put in at Question 10863. I refer to the case of Borrowman, Phillips and Co. v. Wilson. The question as to how far there was any arrangement between the Dock Company and the Shipping Company was not in any way gone into. Mr. Lytton asked me a question as to exactly what the decision was upon. The decision was simply upon this, as I read it, that where you have a privilege established in favour of any one man by Act of Parliament he can renounce that if he chooses. It is quite another matter, I think, when you come to look at the North American Bill of Lading, to find exactly what craft have to do, and exactly how it is arranged goods should go on to the quay, and how they should be dealt with. The North American Bill of Lading is part and parcel of the scheme by which the docks were seeking to get the warehousing, and if you look at Appendix 2 of the 18th day for the terms of that, in Sub-clause B of the London clause you will find that "Craft which are in attendance for delivery, under above clauses and stipulations, shall wait free of demurrage their regular turn to receive goods or grain as required by steamer owners either from steamer or quay, or captain's entry craft." And then, when you turn to the monthly and other agreements, you find that exempted from all that are the goods of the company—that is, the dock company. Clause 11 of Appendix No. 1 of the 17th day says: "The company shall be entitled to free delivery to barge (either from quay or direct from ship) of any goods intended for warehousing with them elsewhere than at the wharf or quay at which the ship discharges, and in respect of which the conditions of overside delivery, save as modified by clause 9 hereof, shall have been complied with." That is the 72 hours for delivery. You have there a deliberate attempt to get that warehousing, and you have heard how in 1895 the commercial world was up in arms at it, and one has to consider what would be likely to be the effect of an attempt to force upon them any such general result as was aimed at by that clause. My Lord, it would mean dislocation, and I do not know what the ultimate result might not be—certain industries in the port would be ruined. It would destroy the industry I represent. It would cripple and prejudice those private wharfingers who, on the faith of this free water, have spent those large sums which I have mentioned. I may remind your Lordship, to take, for instance, Mr. Humphrey, of Hay's Wharf; he has recently spent a quarter of a million on the acquisition of premises, and all on the faith of this free water. Practically it is the only approach to the premises. Practically nothing comes to a wharf by road, and nothing comes by rail; it is their sole mode of approach. The dock companies themselves have throughout taken bills with exemption clauses time after time ever since the case referred to by Mr. Ellis in 1864, and therefore everybody who has spent money on wharves, be they wharfingers, dock companies, or private manufacturers, have spent money on the faith of that clause being there, and to alter that will be to alter the whole foundation on which the business has been built up. I am afraid I have occupied a very long time, but the interest I represent is very large, and

very important, and one which has survived in spite of these continual attempts to encroach upon it. I do not think, however, myself, and I told my clients so very early when they came to me, that mere criticism of a proposal of that kind is the proper way to deal with the matter. We ought to be prepared, where others have brought forward proposals, to say what we think. If the docks are not interfered with, we personally think that a small charge on all goods entering the port, if it was devoted to the improvement of the waterways of the port, using the word in the largest sense, the water of the docks as well as the water of the navigable channel, is a thing which would not only be justifiable, but in the general interest of the trade and commerce of the city and the surrounding country, would be most highly beneficial. To that extent that would receive our support, subject always to this qualification, that the funds so collected should go into the hands of a public body, should be administered by that public body for the general benefit, and should not be placed in the hands of our competitors in trade, who might use the fund adversely to us by employing as capital in one branch of their trade in which they are competing with us, that which was intended to be used in the other. We do not want anything, to use Mr. Scott's phrase, which can be smothered up in some way. We want an independent body to deal with it, and if an independent body has that, it seems to us the first essential has been gained for the improvement of the Port of London.

Now, my Lord, we possess advantages and we have disadvantages, and so have the docks. The docks first of all get the larger ships in the ordinary course of business, and they get the first chance of the warehousing of the goods. Then against the wharfing it is just possible that the barges may not arrive within the 24 hours, and the ship may then land the goods on charges. In that case our right goes, of course. I will refer in a moment to the 463rd Section of the Merchant Shipping Act, 1894. The consignee may not be quite ready with his freight, and in that case, because he cannot discharge freight, the goods may have to go into the warehouses of the dock company. Then, again, there is another point which Mr. Balfour Browne put. It was with quite a different intention, because his aim at the moment was to show how much more valuable the dock property was than it was represented to be on the basis of rateable value, but, as he put it, the docks, by which I take it he must mean the docks and the warehouses immediately adjacent which are rated with them, and as part of them, are rated at one-fourth of their value. A wharf is rated at full value with one-sixth reduction, and private manufacturing premises are rated at full value with one-third reduction.

Therefore again we are handicapped on that. Then there is another point that I put to Mr. Scott. The ship may outstrip her bill of lading. He does not think that will happen so frequently as formerly. I put a case to him of goods from Zanzibar, and he says he does not attach much importance to that. There is a case I merely mention as an illustration. It is not a thing for anybody to boast about, of course, because apparently it is utilised only to get rid of some portion of contribution to the National Revenue. The point is referred to by Mr. Ryder on the last day's evidence. Apparently the Treasury gave way on the point, but the Dock Company claimed they were entitled to have the Customs locks removed from any of the bonded warehouses whenever they did not require them for dutiable goods, and to use them for goods which were either duty paid or non-dutiable. The effect of that was that they were in a position to give facilities for the prompt clearance of tea, or any other commodity upon which an increased taxation might be expected, and, therefore, they got advantages there over the private warehouseman. That will be found in Appendix No. 5, put in on the 29th day by Mr. Ryder; and the point to which I refer with regard to the dock company is this, that in that Appendix there is a letter of the 14th of March, 1900, from the Secretary of the Joint Committee, Mr. Morgan, from which the following is an extract:—"The wording of that letter hardly indicated our position, and has led to some little misunderstanding. The docks, as you are aware, being privileged under Act of Parliament, are in a different position to warehouses for which bonds have been given, and the warehouses of this Committee are available for free or duty paid goods when clear of dutiable goods."

That is a special privilege which they have over the wharfingers. We do not want to have that privilege extended to us, but we should prefer to see that particular advantage go, as we are all taxpayers, and we are none of us, I trust, inclined to facilitate operations which tend to injure the revenue.

Those are, substantially, their advantages. On the other hand, our advantages are, proximity to the markets. I think Mr. Fleming, the Surveyor of Customs, spoke of that as well as others. Then there are the advantages of proper appliances for discharge, and the advantages of early and late work. Several witnesses called by the London Chamber of Commerce laid stress on that. At Question 9877, Mr. H. B. Smith specifically speaks of that. With regard to the appliances for discharging, you had Mr. Bennett and you had Mr. Isaacs. I think Mr. Bennett's phrase was that there was no finer market in the world than Tooley Street for provisions. You have advantages of that kind resting with the wharfingers, and it is on the balance of these two that one has to see where trade would go if any disturbance took place. I do not think anyone can foresee the extent of the disturbance with regard to a thing like provisions. The produce is heavy; it comes in large ships very frequently; it has to be lightered, and if lighters and goods have to pay this tax it may be a very serious thing, and may mean ultimately the transfer of the market from Tooley Street elsewhere. Those are material considerations affecting the docks and ourselves with regard to the scheme put forward, supposing your Commission should report that the docks should not be trusted with either the whole or some part of their undertaking. There has been once or twice a suggestion made that the whole of the riverside property should go, but I think in the eyes of all practical men that must be too visionary almost for consideration. It involves a huge expenditure of capital. You cannot separate from the public wharfing the private individual who has put up a wharf for the purposes of his own business; the whole must go, or none must go, and, as I have said, it is certainly too visionary almost for consideration. But, supposing you think that the docks and their warehouses should go, it is obviously impossible, I should think, for anyone to contend, and I certainly was surprised to hear from Sir Marcus Samuel, and I was not surprised to hear Mr. Scrutton this morning slide gently over it, the suggestion that the docks and warehouses should be bought, and that certain bonded warehouses, to be determined by the trust proposed to be created, should also be purchased, which he himself admitted should in some degree compete with the other bonded warehouses which were left. My Lord, has ever in this country such a principle been allowed as that? Most of those gentlemen concerned with this matter are in some way concerned with commerce. How would Sir Marcus like to have a competitive business, possibly founded more recently, possibly with a greater amount of capital, bought up by a Government trust, and run with a Government guarantee at its back, in opposition to him? It seems almost impossible to find a business man putting such a thing forward. I must confess I was astounded to hear the Corporation of the City of London put its seal on that suggestion. I shall not say anything more upon that, because I think it too visionary for words.

Then comes the suggestion of the London County Council. We do not like the notion of municipal control. I admit that the control proposed by the London County Council is of a modified form, but it is very real in spite of that. The practical work is to be left, according to their theory, to practical men, and that, so far, is sound, but when you find that the man who holds the purse-strings is to be elected by a popular body, you may at the precise moment when expenditure is necessary find those purse-strings closed, and you may find yourself in the very greatest possible difficulty. We do not like the notion of municipal control in any shape or form, and we do not think it necessary. We agree (and I will draw your attention in a moment to what Mr. Pembroke said) that the trade of London can support its own docks and support its own business, limiting that in the way I have proposed. Taking the proposal of the London Chamber of Commerce, that we are more in accordance with; but, there again, the proposal seems to us to err in giving undue representation to what I may term possibly nominated members. It errs in that it might compel the trust immediately to sell the warehouse property which it had acquired from the docks, which warehouse property it is perfectly obvious the docks, having received that large

Mr. R. W.  
Harper.  
2 July 1901.

Mr. R. W.  
Harper.

2 July 1901.

sum for the purpose of their whole undertaking, might buy back at a comparatively small figure which the necessary slump in the market would occasion, and enter into competition in an aggravated form with us. We find fault with that; and supposing the Commission should think it contained the germs of a sound scheme, we should suggest that it needs very careful limitation of the manner in which the sale of the warehouses should be safeguarded in order that such competition should not be set up. It is suggested that there should be six representatives of the Corporation, and six of the London County Council, one of the Admiralty, one from the War Office, a representative of the Board of Trade, a great number of official representatives, and 25 elected members representing the body landing goods in the port, and the underwriters and others. My Lord, we infinitely prefer the Liverpool body, which has the merit of having stood the test of practical work, and having stood it successfully. Men whose livelihood depends upon the success of an undertaking like that are certain to take more real interest in it, and to work harder for its welfare than anybody gathered from the outside as representing any popular body; and we trust that in any decision you may come to with regard to recommending a scheme for a trust you will bear in mind according to our view what is wanted is the practical control—not that mere visionary control which was suggested by one of the witnesses, to put on one or two shipowners because they had the practical experience, and, if there is any leaven of officials, let that leaven be small.

Then, my Lord, there is the scheme of the Short Sea Traders' Association, which I need not say much about, because, practically, I do not think it differs very much from mine. There have been suggestions made to the Commission about public wharves to be created at which no warehousing should be done, but at which ships should land as they do at Antwerp. Possibly it would be more correct to call them quays. That, again, if it could be made possible by practical people, would have the support of the body I represent. Of course, we are not shipowners, and we do not understand these matters as to where a ship should lie safely down the stream; and, therefore, we do not attempt to make any suggestions to the Commission as to whether that is practical or not. We desire to say this, that it seems to us that the soundest mode of division is to divide the waterways from the warehouses. It will occasion the least possible friction, and the least possible displacement of trade, or alteration in the channels of commerce, and will leave the dock company with that which they themselves have described as the most profitable source of their undertaking. It will hand over to the public that which is essentially public, as I have pointed out, and which has been stamped with that character from 1799 by successive Acts of Parliament; and will, by the levying, as I suggest, of a tonnage rate upon goods, be provided with a fund for the maintenance of those ways. My Lord, we do not propose to interfere with the docks, on that scheme, levying their ship dues; and when we have heard from Mr. Scott a long account of how dividends have fallen with regard to these two companies, I think it right to remind your Lordship that within a year or so after the destruction, or, rather, the expiration of the monopoly of the West India Docks, the dividend of the West India Dock began to fall. The 10 per cent. was not maintained, I think, for more than three years after the expiration of the monopoly. At the time of the monopoly—I do not think your Lordship's attention has been drawn to this—they had power to charge no less than 6s. 8d. per ton registered tonnage. That is what monopoly brought. It carried with it 6s. 8d. per ton on the ship's net registered tonnage. Nobody can wonder that with such a power they paid 10 per cent. dividend. I do not suppose anybody would propose to give them a power to pay 10 per

cent. again under such a privilege as that. I am trying not to give references to anything, because I am not stating anything except in the most general terms.

Complaint was made of the increased size of the barges, and the extra expense, therefore, of locking in and out. The deeper a barge is, the more comparable it is to a ship; and when an increase of 6d. a ton on the net registered tonnage of ships, as Mr. Scott says, which is still within their statutory powers, would produce them a revenue of £100,000 a year, it is extraordinary that he has not done it, when, turning to Mr. Duckham, you find at Question 981 exactly what is happening with regard to ships, because it is to be remembered that ship dues are still levied upon registered tonnage. Said Mr. Duckham: "With the introduction of steamers a large addition was made to the hull to accommodate the propelling engines, and the tonnage due to the actual size of the ship requiring dock space became so much more than the net tonnage upon which the dues were paid. During recent years the designers of ships have chiefly aimed at so forming them as to carry the greatest amount of cargo on the smallest amount of registered tonnage, and so it comes about that steamers having a carrying capacity of 4,000 tons, and a gross register of 2,500 tons, now pay dock dues upon a net register of 1,600 tons only."

So that, my Lord, Mr. Scott is keeping down his charges on shipping at the time the ship designer is concurrently scheming to produce a ship which shall remain of the old net registered tonnage, while her carrying capacity is enormously increased. A very striking illustration of that is provided by one of these ships using the Victoria and Albert Dock under the American bill of lading, the "Minnehaha." The "Minnehaha" has a tonnage of 13,403 gross, of 8,647 net, and she actually has a dead weight of 13,000 tons carrying capacity. So that there you have in one of the ships coming in under the American bill of lading, which they are letting in under the favourable terms—because you will remember on the 1s. 9d. discharging rate Mr. Scott himself said there was a considerable profit—something like 4,000 tons which is paying nothing.

My Lord, there is practically little more I have to say, because I have indicated my views with regard to the schemes which have been before the Commission; but there are just two matters. One is compulsory pilotage. It may be within the memory of the Commission that Mr. Hugh Colin Smith, who has been twice before the Commission, gave evidence on that point.

(Chairman.) We have a very clear recollection of Mr. Smith's evidence.

(Mr. Harper.) I was only going to say, my Lord, that that has the support of my Association.

(Chairman.) That we understood from the evidence.

(Mr. Harper.) Then there is one further matter which was referred to by Mr. Ryder, and it was the extension of the Customs hours. We trust to have the support of the Commission in asking for that.

My Lord, there was a misconception that arose with regard to the ship landing goods on the quayside. Section 493, Sub-section (4) of the Merchant Shipping Act, 1894, which is a general statute, provides certain conditions under which goods can be landed, and it expressly enacts that: "If any goods are, for the purpose of convenience in assorting the same, landed at the wharf where the ship is discharged, and the owner of the goods at the time of that landing has made entry, and is ready and offers to take delivery thereof, and to convey the same to some other wharf or warehouse, the goods shall be assorted at landing, and shall, if demanded, be delivered to the owner thereof within 24 hours after assortment; and the expense of and consequent on that landing and assortment shall be borne by the shipowner."

(Adjourned for a short time.)

Mr. JAMES CRANSTOUN called to address the Commission.

11794. (Chairman.) You propose to address us on behalf of the Association of Master Lightermen and Bargeowners.

(Mr. Cranstoun.) Yes, my Lord. with your permission I will state the case as it affects my clients. I need not occupy much of your time, because many of

the arguments that have been used by my friend Mr. Harper are arguments that I intended to use. There are one or two points, however, to which I might draw your attention.

My Lord, we feel keenly on this question of the clause under which we are exempted from paying any

tax whatever. Our reason for doing so is that the right of free entry has lasted for one hundred years, and free delivery is now part of the custom of the Port of London. We say that the free admission of barges into the docks was absolutely essential at the time when the Act of 1799 was passed. The reason (as has been pointed out many times during this inquiry) was that the quays, the wharves, and the warehouses were full. Putting it shortly, the harbour itself was inadequate for the amount of shipping that came. For that reason the legislators and merchants at that time deemed it necessary to extend it. That was done by means of docks, and our case is that the docks were intended to be not only a place for the warehousing of goods, but also a place into which ships might go and discharge into lighters as they had done in the river. It was impossible for docks to supersede the necessity of having craft into which goods should be discharged, and we submit that it was not the intention at that time or any other to impose a tax upon the barge itself. It has been said in this case that remuneration or compensation was paid to lightermen. I do not think that there is any proof of that statement. Section 121 of the Act of 1799 expressly describes to whom compensation is to be paid. If I may put it very shortly, it was to persons connected with or employed at the quays, wharves, or other tenements which were taken away or rendered of less value. I think that the sole object of the compensation clause was that certain persons who had exclusive privileges (namely, those connected with the West India trade) had their privileges taken away from them and were to be compensated for the loss. Any person who was connected with that trade—not a lighterman, because he could not be said to be connected with that trade—who came forward and made his claim got the compensation. A lighterman required no compensation, the extension did not injure him; in fact it rather benefited his trade because there had been great congestion in the river. Barges lay there, we are told, for six weeks, and goods could not be lightered and there was little or no work for lightermen to do. Therefore the removal of numbers of ships from the river into the dock was rather to the advantage of the lighterman than otherwise. Lighters simply floated into the docks with the ships as their necessary attendants. I think it is perfectly clear that there is no satisfactory proof that compensation was made to lightermen as such. A case has been mentioned on this point, but the applicant may have simply described himself as a lighterman, or he may have had premises on the land that was taken for the dock, and it may have been for that reason that the compensation was given.

My friend has just informed you that in every Act of Parliament except one this exemption clause has been inserted. I think he was referring to the Victoria Dock Act, 1850. But I venture to submit that there is no exception. Section 42 of the Victoria Dock Act of 1850 says that "It shall be lawful for the company, from time to time, to take or receive for or in respect of every vessel using or entering the dock or lying therein or departing therefrom such reasonable rate or sum for every registered ton of such vessel as shall not exceed the rates or sums then usually paid in the Port of London for or in respect of any vessel using, or entering, or lying in, or departing from any docks in the Port of London surrounded with walls, and any such rate or sum shall be payable by the master of such vessel." It might be argued that the words "rates or sums then usually paid in the Port of London" could not include rates by way of a tax on the barges themselves. But I go further and say that the docks could not have taxed the barges under that clause because a barge is not included under the word "vessel." We may take it, therefore, that for a hundred years we have had this clause in every Act of Parliament, and as my friend has pointed out the custom of the Port of London has grown on the privilege that was given by Parliament in the year 1799. Vast sums of money have been laid out by reason of these Acts of Parliament, and the whole business of the Port of London has been carried on on the faith of that clause being retained. The question, therefore, of taxing barges is one of public importance. Our submission is that nothing short of absolute public necessity would warrant the Legislature in repealing this exemption clause. What we say is that the dock companies, after misfortunes which it is not my business to discuss, have no right to come on a particular occupation or trade such as the lighterman's, and impose a tax upon that particular trade to recoup themselves the moneys they have lost. We think it

a great injustice that the thousands of pounds which we should have to pay should go out of our pockets into the pockets of the shareholders of the dock company. For what purpose? Not for the purpose of improving the whole Port, but for the purpose of assisting a particular dock company. Mr. Scott says: "The Committee now ask not to sweep away vested interests, but to be allowed to make a small charge for the use of their own legally vested property, which would enable the dock company not only to live, but also to bring the docks to a state of high efficiency." Can anyone imagine for a moment that this tax on barges alone, or even combined with the tax on the goods lightered in barges, is sufficient to bring the docks into a state of high efficiency? Although this proposed tax might practically ruin a great many lightermen, it certainly would not put the docks into a state of high efficiency. The income to be derived from a tax of 4*l.* on the tonnage of the barge and 1*s.* 6*d.* on the goods that are carried in the barge, although it would be a very heavy tax upon us, would be entirely insufficient to carry out the purposes which the dock directors have in view. Why is it that we are called upon to pay this tax? The suggestion is that it is for services rendered to us. The service that is suggested is connected with locking in and locking out. I do not think it has been mentioned by any of my learned friends, but you must remember that over all these locks there are public bridges. The docks are placed on land over which public highways went, and Mr. Baggallay has pointed out over and over again in the evidence he gave on the first occasion he was before the Commission, that with the exception of the Tilbury Dock there is not a single lock attached to the whole of these docks that has not a public highway of some description or other going over it. Before obtaining their concessions the docks were put under the condition that bridges were to be placed across the locks, and that these bridges were not to be kept open any longer than was absolutely necessary. Besides, in section 100 of the Act of 43 George III., chapter 126 (that is the Act of 1803), it was distinctly stated that: "The East India Dock Company and their successors shall, and they are hereby required at their own costs and charges, to construct and make or cause to be constructed and made such locks and other works as shall enable lighters and other craft loaded or unloaded at all times of the tide in a reasonable manner to pass and repass to and from the River Thames into and from the said docks and basins, and the said ships or vessels loading or unloading therein." There was the legal obligation on the part of that dock company to make and construct such locks or ways as to enable lighters or craft loaded or unloaded to go out and in at all states of the tide. Now how does that compare with their present position? The docks do not pretend to let us in at all states of the tide. Our complaint all along has been that if they would let us in as that Act of Parliament says they should let us in, there would not be this congestion that is spoken of. At the present moment they lock in three and a half hours or four hours before high water. Hence the congestion, for the barges have to be there for some considerable time. The dock officials say that all they are bound to do is to open the gates and let us in; that that is all the right we have. We do not claim any more. What we want, however, is, that control should be exercised by the dock company over the barges that are at the entrance of the dock in the same way as the traffic in a public thoroughfare is controlled. Now let me return to the question of bridges. Our contention is that if services are rendered to barges when being locked in and out, these services are rendered for the purpose of enabling the docks to carry out their own obligations. They are bound to do it. The evidence on this point (and we could not have better evidence) is that of Mr. Baggallay. This question was put to him (Question 6844): "Where is it that you lend assistance to the barges? (A.) I may say at all entrances where there are public road bridges, and where, if we did not hurry the barges through and render them every assistance, we should be causing great inconvenience to traffic along the roads. The Blackwall instance is a good one; if we did not get the barges through quickly there we should get miles of traffic on the road blocked; therefore we use our capstans and all the machinery we have, and put a tug there to help them through. But we do not do that at Tilbury, where there is no public inconvenience. If a man takes an hour coming in, it does not really affect us very much." Again, in answer to Question 839, in which he was describing to the Commission the various docks, he said: "I mention all these bridges over, because having

Mr. J.  
Cranstoun.  
2 July 1901

Mr. J.  
Cranstoun.  
2 July 1901.

to open so many swing public road bridges is sometimes a great factor in the delay at the docks. To Questions 916 and 917 he says that these bridges cause considerable delay to the locking and are a continuous source of trouble and annoyance, and in the answers to Questions 925, 929, and 948, he says they interfere very much with the locking of vessels.

11795. (Sir John Wolfe-Barry.) Cannot the lighters go underneath the bridges?

(Mr. Cranstoun.) I think not.

11796. (Sir John Wolfe-Barry.) They surely can at many states of the tide?

(Mr. Cranstoun.) Certainly they do not go underneath the bridges if the tide is full. They could not. I am not quite sure whether in some states of the tide the lighters could not get underneath the bridges. At all events, in dealing with the claim for services rendered to barges the existence of these bridges must be taken into account. Our contention is that the rendering of these services is obligatory. The docks are bound to render them in their own interests to carry out their own undertaking.

11797. (Mr. Ellis.) In order to get this clear—you have told us that there is a public right over those locks in the shape of a road. Do you put it that the public right not only ensures that the gate shall be opened promptly and closed promptly in order to avoid the long lines of traffic that would ensue, but that it increases your original right to enter the locks. Does it touch your right?

(Mr. Cranstoun.) No, it does not affect my right at all.

11798. (Mr. Ellis.) It assists it practically as you have explained?

(Mr. Cranstoun.) Yes. Indirectly it assists us, but it cannot be said that the services are voluntary services rendered to the barges. Mr. Scott is claiming this tax for services rendered. He said (Q. 5387): "If the lightermen pay us a certain sum for the service we render naturally a certain obligation must fall on us which to-day does not exist." We contend that the obligation is already in existence, and that there are other reasons than the congestion of barges that call for these services.

11799. (Mr. Ellis.) You point to the traffic?

(Mr. Cranstoun.) I point to the circumstance that the roads going across these locks necessitate their prompt opening and shutting, and that barges are assisted in order that that work may be carried through. Now, while I am on the point of congestion I would refer to the 1879 Report of the Committee appointed by the Board of Trade on the Navigation of the River Thames, which has been mentioned more than once, in these proceedings, and in which the crowding of barges on the river was to some extent gone into. In the minutes of evidence I find that the principal dock master of the East and West India Docks was one of the witnesses called. In speaking of the towing out of barges there was no suggestion of any congestion so far as the docks were concerned. In answer to Question 4698 he said: "We have towed 30 or 40 out of the entrance at once, just to give them a start into the river." The dock master of the Surrey Commercial Dock was called, and Question 5178 was this: "But I suppose that the inconvenience in your docks of local crowding only takes place at the dock entrances?—(A.) Yes, just at the dock entrances." Mr. Maitland was called; I think he was connected with the London Dock. He was asked: "Do you find any inconvenience from the aggregation of barges so near the entrance?" His answer was: "Yes, that is where we do find inconvenience with the ships." That was in 1879, when I do not suppose the state of things was very different from what it is now. It was difficult for the dock companies then, and it may be difficult for them now, to perform their statutory duties, but for this the barges are not to blame. Under the Act of 43 George III., chapter 126, section 100, the East India Dock Company was under an obligation at their own costs and charges to assist barges out and in at all proper states of the tide.

The next expense that the docks say we put them to is the pumping of water to supply the loss which is occasioned by locking in and locking out, and the cost of dredging.

Now, is this an expense that is caused by barges only, or for which barges are responsible? I submit not,

because when you have a large ship, say, of 10,000 tons, coming into the docks you have only to consider the displacement of water that she causes in the dock in which she is placed. The weight of water she displaces equals the weight of the vessel with everything she has on board. A barge has no such displacement as that. So far as the barge is concerned, it would be simply the cargo that it carried, plus the weight of the hull. It has no engines or machinery of any kind, and it would require a very large number of barges to go into that dock to displace anything like the amount of water that is displaced by a vessel of the tonnage I have mentioned. With reference to dredging, I submit that the barges are not responsible for that. It is a necessary consequence of the increased work in the docks, and it is in evidence that it may be owing, to a very great extent, to the faulty construction of the entrances to the docks. Another piece of evidence that was given by Mr. Baggallay was that the Thames water is muddier now than it ever was. If that be so, whether the water is pumped in or enters in the ordinary way upon the flood tide, it follows that more mud is collected than formerly, and more dredging is required. It does not follow that there has been a great increase in the locking in and locking out of barges. Upon this point, the very great expense of conveying the mud to Barrow deeps must be borne in mind. That is a distance that they were not bound to carry to until recent times. Under these circumstances, I submit to you that these expenses are not to be attributed to barges. Now as to the number and tonnage of barges that enter the docks. Mr. Scott has said that in the year 1899, 137,193 barges entered the dock, and taking these as of an average of 60 tons, the aggregate tonnage would be 8,231,680 tons. I desire to remind the Commission that this calculation is based not on the net registered tonnage (as in the case of ships), but on the burthen tonnage of the barges. It was pointed out to you that the gross tonnage of a ship is sometimes  $2\frac{1}{2}$  times more than the net tonnage. The principal witness on that point was Mr. Girdlestone, who (Question 4697) made this remarkable statement, which I will read. "There are two other matters I should just like to call the attention of the Commission to in regard to revenue. The first is that the present system of measurement of tonnage has led, and is leading still more than formerly, to great anomalies in regard to the weight of goods carried in the ship. The modern liner now brings 2 to  $2\frac{1}{2}$ , sometimes even 3, tons per register ton, which is the unit of taxation in regard to the vessel. The consequence is, as regards the Port of Bristol, that as compared with the measurement in force in 1888, we are losing £6,282 per annum by the clever way in which shipbuilders manage to build vessels of small registered tonnage, but tremendous carrying capacity. I can submit figures to the Commission illustrating this matter so far as Bristol is concerned, but it is a very serious matter for all ports, because the modern vessel requires an enormous expenditure, a bigger lock, a deeper sill, and prodigiously increased shed accommodation as compared with the vessel which was in vogue ten or twelve years ago. All the dock revenues of the country are suffering from this system of measurement." Now, it has been given in evidence (Q. 3707) by Mr. Jacobs that 79 tons is the average burthen tonnage of a barge. The register tonnage being to the burthen tonnage in the proportion of three to five, the average register tonnage will be 47 tons. 137,193 barges would, therefore, aggregate only 6,448,071 tons—nearly two millions less than Mr. Scott's figures, and if we reckon the tonnage of barges in the same way as Mr. Scott reckons the net tonnage of a ship, the average tonnage would be  $39\frac{1}{2}$ , and on this calculation 137,193 barges would aggregate only 5,419,123 tons. On this point I would also refer the Commissioners to what is said in the Preamble of the Dock Company's Bill of 1901.

Now another point that I have to deal with is the amount of the tax that is intended to be placed upon us. The proposal is that there should be a tax on the barge at the rate of 4d. a ton, and in addition to that there is to be a tax of 1s. 6d. on the goods that are carried in the barge. Now, compare that with what a ship has to pay. A ship of 1,000 tons register carries at least 2,000 tons of cargo. That ship may enter a dock with 2,000 tons at 1s. a ton, and she may also leave with 2,000 tons without extra charge. She pays only for coming in, and although she may carry 4,000 tons (2,000 in and 2,000 out) she pays 1s. on 1,000 tons only. That is £50. How will it be with a barge? If a barge

takes in 2,000 tons and brings out 2,000 tons, she would not be charged on 1,000 tons only, but she would be charged on 4,000, which is the burthen tonnage. So that the barge has to pay more than four times as much as the ship has to pay; 2,000 tons at 4d. for the barge, and 4,000 tons at 1s. 6d. That is, she would have to pay, if full, £333 6s. 8d., whereas the ship would only have to pay £50. That we submit is an anomaly that is absolutely fatal to this proposal. Why is the barge-owner to be taxed on the burthen tonnage of his barge, that is, on the full carrying capacity, when a ship is only taxed on her net tonnage, which is sometimes as much as two and a half times less than the gross tonnage. Besides, the exemption is still to hold good with regard to the docks' own barges, and these I am told are one-tenth of the number frequenting the dock; to barges engaged in transshipping goods; and to barges carrying coal. With regard to all these there is to be no tax. Now, when I point out to you that in one particular business alone, the Thames Steam Tug and Lighterage Company, a penny a ton on the goods that they carry would represent 5 per cent. on their share capital, that would mean £5,000 a year, which is the whole of the dividend the shareholders get, you will at once see how unreasonable it is that such a tax as this should be put upon us. As to a tax of 1s. 10d. on the ton, I am informed that it would be quite impossible for the lighterage business to bear it. The proposition of the dock companies, so far as the amount goes, must at all events be very greatly reduced, and as I said before, even if it be only a small tax that is to be placed on barges, that will cripple our trade, and will certainly not be sufficient to carry out the improvements that the dock companies desire.

The only other point that I have to deal with is the question of compulsory pilotage. We have no complaint to make against the pilots themselves, but what we do consider a great hardship is that the legislature in the event of a collision has relieved the ship of all liability when she has a compulsory pilot on board and has transferred liability to the pilot who frequently cannot pay, and if he can, is only liable for £100. We think this a point that we may well submit to the Commissioners, seeing that in foreign countries a ship under compulsory pilotage is not exempt from liability. I will refer to three cases on the question of the employment of pilots, one under French law, one under Dutch law, and another under the law regulating the navigation of the Lower Danube. In all these cases, although the shipowner was bound by law to have a pilot on board, the ship was not exempt from liability for damage occasioned by the negligence of the pilot she had

on board. The first case is that of "The Augusta" in Aspinall's Reports, Volume 6 (new series), page 58, and page 161. It decided that although the employment of a pilot by a vessel entering the Port of Havre is by French law compulsory, such pilot does not as of right, as is the case in England, supersede the master and take charge of the ship, but, according to French decisions, the master remains in charge, the pilot being merely his adviser, hence, though the master may allow such pilot to take charge in fact the owners are not exempted from liability for damage done to another ship by the negligence of the pilot. The next case is the "Prins Hendrik" decided in 1899, and reported in Aspinall's Reports, Volume 8 (new series), page 548. The decision in this case was that although certain vessels navigating the River Scheldt are compelled by Dutch law to take and pay a pilot, nevertheless pilotage in those waters is not compulsory in the sense in which it has to be compulsory according to English law in order to discharge the owners from liability for the fault of the pilot. The last case is the "Agnes Otto" in 6 Aspinall's Reports (new series), page 119, where it was shown that the provisions of Articles 85, 89 and 92 of the regulations for the navigation of the Lower Danube making the employment of pilots by steamers compulsory, but confining their duties to pointing out the local peculiarities of the river and leaving the responsibility of the navigation with the master, do not relieve shipowners from liability for damage solely caused by the negligent navigation of the pilot. We have also to submit that a limit should be put on the liability of a master lighterman for damage done by his barge. As you are aware, he is compelled to have a licensed man on board, and if the barge comes into collision or does damage through his fault the master is liable to the full amount of the damage that has been done. On this question the Commission have had the evidence (in an answer given to Question 3772) of Mr. Jacobs, who cited an instance where a master lighterman was compelled to pay £2,000 for damages done by his barge to a steamer and her cargo, whereas, if the barge had been propelled by sails and registered under the Merchant Shipping Act, her owners' liability would have been £588, and no more. We contend that the right to limit his liability is as strong in the case of the lighterman as in the case of the shipowner. My Lord, I have nothing to say with regard to the particular Trust or governing body that should be appointed to regulate the Port, but whatever that Trust may be I submit that so important a body as the Master Lightermen and Bargeowners should be represented on the board of Directors or Trustees.

Mr. J.  
Cranstoun.  
2 July 1901.

Mr. CLAUDE BAGGALLAY, K.C., called to address the Commission.

11800. (Chairman.) We understand you appear now on behalf of the Thames Conservancy?

(Mr. Claude Baggallay.) Yes, my Lord. I do not propose to follow some of my learned friends into much of the detail that has been given before the Commission. What I want first of all to draw the attention of the Commission to is this. Of course, representing the Thames Conservancy, I am in a sense in the position of being on trial. There have been, no doubt, a great many accusations made against the Thames Conservancy, and a great many suggestions as to their shortcomings and wrongdoings, but I have been most carefully through the evidence, and it seems to me that when one comes to look at the matter and summarise what the complaints against the action of the Thames Conservancy in the past have been, they come simply—if I may put it in that way—to an alleged indifference to the necessity for improving the channel. That is the sum and substance of the whole of the complaint. I have looked very carefully through the evidence, and I cannot find from beginning to end any fault-finding with the Thames Conservancy as regards any one of the number of duties they have to perform throughout the length of the river, from Cricklade, in Wiltshire, down to the Nore, except that one with regard to the channel of the Thames. I do not deny that that is an important one, and I am going to deal with it, but that is the only complaint. There was one suggestion, by a Mr. Matthews, a member of the London County Council, and a member of the firm of Matthews and Luff, ship brokers, about some moorings. That is a complaint made at Question 2334, which I think you will find, if it is a matter which is really worth con-

sideration when you have all these important matters to consider, is sufficiently answered by Mr. Philipson's evidence at Questions 7544 and 7545. That is the only complaint I can find, and the whole complaint comes down to this; that the Thames Conservancy has not kept pace with the times in providing a navigable channel, either as regards the width or the depth suitable or sufficient to meet the requirements up to the docks. That is the whole complaint, and that is what I want to deal with; and in dealing with that I want first of all to assure the Commission that there is no object on the part of the Thames Conservancy in neglecting any such duty. They are not a financial body; that is to say, they are not a body like a dock company even, or a shipping company, or anybody else who have any dividends to look to, or anything of that sort. They are not a financial body in any sense of the word. They are simply a body of trustees, and nothing else, and, therefore, they have no pecuniary interest either in starving the river, or in increasing the charges they make for any services for which they have power to make a charge. Therefore any neglect which there may have been in respect of performing that one duty of the many duties which Parliament has put upon them must *prima facie* be attributable to some inherent want of power to perform that duty. I think you will find that that is so when you come to look into it. Now let us just see what the history of the Thames Conservancy has been, and this will be material when I come to deal shortly, as I shall do, with some suggested schemes made by some bodies here for a new authority to deal with the river. Only as recently as 1857, only 44 years ago, Parliament created the Thames Conservancy. Why? Not as my friend Mr. Scrutton said yes-

Mr. C.  
Baggallay,

terday, at the instance, or at the promotion of the City Corporation. Nothing of the sort. Parliament created the Thames Conservancy in order, as appears from the preamble of the bill (the preamble of the bill is set out pretty fully in the evidence by Mr. Philipson at Question 3, and, therefore, I do not read it now) that they might take over the duties of the river with regard to the conservation of the river, and that they might take over not only from the Corporation, but also from the Crown, all rights in the foreshores and in the bed of the river itself; and that those duties of conservancy which had hitherto been performed by the various bodies—some by the Trinity House as regards the ballastage and various other matters, some of those as regards dredging by the Trinity House, and some of those as regards various matters by the City Corporation—should be placed in the hands of one body. That was the object of it, and Parliament created that body without any reference to the upper river at all. The City Corporation's limits of jurisdiction at that time were limited, so far as the upper river went, to the City boundary stone at Staines, which about a century ago was the top of the tideway of the Thames, because all those locks below that point have been made within the last 100 years or so. That was where the tail of the tide went up to at that time, and Parliament placed the whole of the tideway and the waters which were still under the jurisdiction of the City Corporation in the hands of the Thames Conservancy and under their control. The Thames Conservancy was a body of gradual growth. Parliament at first created only a small body of twelve members, but as early as 1864 they increased very largely—as you will see if you look at the Act of that year—the powers and the duties of the Conservancy Board, and at the same time they increased the representations of various interests upon the Board. Of course all those Acts now are consolidated in the one Act of 1894. All I want now to show is that what you are now asked to do is to go back and to separate this and take away from the Thames Conservancy what was the original cause of the Thames Conservancy being created. A very strong Committee of the House of Commons—a Committee of 15 members presided over by Mr. Gibson Milner—sat in 1865 and reported that the control of the upper Thames, on account of its impecunious position, should be added to the jurisdiction of the Thames Conservancy, and they were made the body to control it. What that Committee said in their report is all summed up in one short sentence. They said that the navigation of the upper and lower Thames should be placed under the same management. It was in consequence of that that in 1866 the Board of Trade introduced a bill, which became the Act of 1866, and which placed the upper navigation under the control of the Thames Conservancy. That is how it came about that the body which was originally created to deal with the tidal waters and the port came to be the body which had the upper river work to deal with. As I said, you have not had any complaint whatever with regard to the performance of their duties by this body except this one with regard to dredging. On behalf of the Thames Conservancy I am going to admit that the channel wants further dredging both as regards depth and as regards width. It would be of no use to deny it. No one questions that. The difficulty that the Thames Conservancy has had to deal with has been that they have not had the funds, and they have no funds available for this dredging. I think the evidence before you shows that the funds which they have at their command at the present moment are used to the full. There is no suggestion that they have any money which is free to carry out any further work. Now let me first see what took place in 1894 and 1896. In 1894 no doubt a reference was made by Section 189 which has been referred to several times, to a Commission, the Chairman of which was Sir John Wolfe-Barry. Now I know a good deal about that clause, because I had a great deal to do with the fighting of that clause on the bill of 1894.

11801-2. (Mr. Ellis.) Are you the Mr. Baggallay who brought up the clause?

(Mr. Claude Baggallay.) Yes, I am, sir. I had a great deal to do with the drawing of this clause, and I will tell you what it was founded upon; the Ribble Navigation Clause, which I had also had to deal with a few years previously. This particular clause provided for two things. No doubt the Commission found a great difficulty in fully reporting upon that clause. I do not make any complaint whatever of that Commission not having been able to report in a way which

the Thames Conservancy would have liked; in a way, that is to say, which would have helped them. There were two matters referred to; one was whether there was any dredging or other operation practicable for a certain portion of the river; the second was as to the probable cost of such dredging, and the means by which the funds necessary to meet such cost should be provided. The final clause, which was one about which there was a deal of argument, was this: "If any dredging or other operations shall be recommended in the report of the said Commission the Conservators shall, as soon as may be reasonably practicable after a copy of such report shall have been received by them as aforesaid, either proceed to carry out such dredging or other operations, or apply to Parliament for all such powers as shall be desirable to enable them to give effect to the recommendations of the said Commission." But the condition precedent to the carrying out of that last portion of the paragraph was never fulfilled. I am sure the honourable member will not mind my criticising that. I do not complain. There may have been very good reason for the report not having been made. I am only concerned now in showing how we, the Thames Conservancy, were in a difficulty in going to Parliament under that section, because, if your Lordship looks at paragraph 49 of the Commission's Report, they sum up their report in these words: "Having come, with some regret, to the conclusion that works in the river between Thorney Creek and the Nore cannot at present be recommended, we have found it unnecessary to proceed with the second branch of our inquiry, namely, the source from which funds should be provided for works of improvement within that area." They do not inquire into that; they do not report upon that; and, therefore, the very backbone which the Thames Conservancy required before they could go to anybody to get the money with which to carry out any work, was withheld from them. It would be no use for them to go to Parliament for powers at that time to tax the shipping, or anything else. It would have been said to them at once when they had gone before Parliament, "Why, the Commission said themselves that works in the river cannot at present be recommended." That would have been the answer if they had promoted a bill, or asked the Board of Trade to promote a bill. I am speaking of this matter as being a matter of dereliction on the part of the Conservancy in not complying with Section 189, because that is a matter which was argued. You, sir, will know, because you had some part in the Thames Conservancy Act of 1894, you know I had a great deal to do with that bill.

(Mr. Lyttelton.) The chief part, I think.

(Mr. Claude Baggallay.) That was one of the reasons why we resisted that clause at that time. I think I cross-examined Sir Thomas Sutherland myself upon it, because where were the funds coming from to carry it out.

11803. (Mr. Ellis.) You admit that Section 189 of the Thames Conservancy is the crux of the whole matter?

(Mr. Claude Baggallay.) I quite agree.

11804. (Mr. Ellis.) May I take it from you that the reason this mandatory enactment that the Thames Conservancy should apply to Parliament under certain circumstances was not followed up by them was that you considered the Wolfe-Barry Commission an inconclusive report in that respect?

(Mr. Claude Baggallay.) That is absolutely what I am instructed.

11805. (Mr. Ellis.) It did not contain, in fact, such a recommendation, according to your judgment, as was meant by this last paragraph?

(Mr. Claude Baggallay.) That is absolutely my point. You have grasped my point exactly. That seems to me to go to the root of the whole complaint, which has been made with regard to the Thames Conservancy here. It practically goes to the root of the whole complaint against them as a body, which is of being in default as regards a duty which they had got to perform. That is absolutely the position.

11806. (Mr. Ellis.) Of course you will not take it that I assent?

(Mr. Claude Baggallay.) Of course, I quite understand that you are only asking me whether that is the position I am taking up. Now let me just follow that up for a moment, because that now brings me to my

second point, which is, would it have been any use for the Thames Conservancy, if they considered dredging was necessary, or would it have been any use for the Thames Conservancy if they were pressed to do so, we will say, by a strong body of shipowners or others, to have gone to Parliament to ask for money after that report? In the first place I say it would not, for this reason, because that inconclusive report would have been used by their enemies (we know there are hereditary enemies of the Thames Conservancy) against them. Another point it would have been used for would have been this; it would have been used to say (and I think I have perhaps dealt sufficiently with this just now), that it having been referred to that Commission, and that Commission having made that report in paragraph 49, the time had not arrived for placing any burden upon the shipping and upon the trade in excess of what existed. But I will assume for the moment that Section 189 of the Act of 1894, and that the report of the Lower Thames Navigation Commission—I purposely do not use an expression which has been often used here, the Wolfe-Barry Commission, because I think, from a question I saw, that Sir John Wolfe-Barry put, he would rather it should not be called the Wolfe-Barry Commission—it was the Report of the Lower Navigation Commission—

(Sir John Wolfe-Barry.) Quite so. I do not want to absolve myself of the responsibility in any way. I had the assistance of two very able men, and I do not want it to be called merely my report.

(Mr. Claude Baggallay.) There is one question on the notes which makes it look a little stronger than that: I am alluding to Question 171, because there you are made to say that it was really the joint report of Admiral Nares and Mr. Lyster.

(Sir John Wolfe-Barry.) Oh, no; I ought to have included myself. I signed it, and it was mine as well as that of the other gentlemen. You may take it, Mr. Baggallay, that that Commission was entirely unanimous.

(Mr. Claude Baggallay.) I quite understand that, you would rather treat it as a unanimous report?

(Sir John Wolfe-Barry.) Undoubtedly.

(Mr. Claude Baggallay.) That being so, let me imagine for a moment the Act of 1894, Section 189, not acted upon, and the report of the Commission away. Let us eliminate them altogether from consideration for a moment, and see then whether the Thames Conservancy are liable to lay themselves open to a fair attack for not having gone to Parliament for further powers, because I quite admit that it might be that they had got a duty outside that section. I think the existence of that section would have made it very difficult for them to go to Parliament, having regard to that report, but I just want to see what would have been their position apart from that. Of course, they have got extensive dredging powers under certain sections of the Act, to which you have been referred over and over again, and as regards certain portions of the river, I do not think they would require any further statutory powers than they have got now to carry out the deepening. I do not know how that may be at the very lowest portions of the river, but, certainly, as regards certain portions of the river they have ample powers to carry out such dredging operations as are required.

11807. (Mr. Ellis.) Have they money?

(Mr. Claude Baggallay.) No, they have no money. The spirit is willing and the flesh is willing enough, but the pockets are not deep enough. They have not the money to carry out this work. Now, in order to have carried out this work, they would have had to go to Parliament, and, assuming that difficulty could have been got over, which I have mentioned with regard to the existence of the Act and the inclusive report, they would still have had this difficulty. They must have gone very soon after their Act of 1894, when an attempt was made to settle all matters excepting that which was particularly dealt with by section 189, for many years to come. It was regarded then as being a settlement of all these questions for some time to come; I do not say for all time, of course. Parliament does not bind itself for all time.

11808. (Mr. Ellis.) Have you in your mind the debate which took place in the House on the third reading of the Thames Conservancy Bill, which is alluded to in Sir Thomas Sutherland's evidence. Let me refer you to Question 2075: "Especially the statement that was made

on the 10th July, 1894, that this Act must not be regarded as a final settlement of that matter?—(A.) Yes," and I put that to him, which was admitted by Sir Frederick Dixon-Hartland.

(Mr. Claude Baggallay.) Of course, I quite admit that. No settlement in Parliament is a final settlement in that sense. What I meant was that this was a matter which was regarded as being finally settled for some time to come. I know it was so regarded on many hands. That is the only way I am putting it; and, of course, this would be a very early date to revise that settlement of 1894, unless there was some important change of circumstances which had arisen. But it would have been impossible, I believe, for the Thames Conservancy to have introduced a bill for providing the money. We will assume for the purpose of this, that the sum which Sir Frederick Dixon-Hartland gave in evidence of about £160,000 a year would be necessary in order to carry out this dredging scheme. I think I have given you the figure right, £160,000. If they had come forward that would have meant putting burdens upon both ships and goods, or ships using moorings for loading or discharging, or for various purposes such as were suggested by Sir Frederick Dixon-Hartland. I have a grave doubt—and I have been this morning looking at Sir Erskine May's book on Parliamentary practice—whether that bill could have been promoted as a private bill at all. I have got a grave doubt as to whether it would have passed the House authorities. The magnitude of the interests which are affected, and the extent of the area, and so on, would have made it very doubtful whether the House of Commons would have allowed that to go forward as a private bill. But, even if it did, what should we have had to meet? We should have had to meet, in the first place, our sworn enemies of 1894, the London County Council. They would have been there again immediately. They did all they could to wreck the bill of 1894; and their report, which I was looking at just now, which was signed by Mr. Fletcher Moulton, as the chairman of the committee of the London County Council on the bill, and which he put in evidence, shows that they were determined to resist any attempt whatever to increase any of the charges or dues or burdens upon the trade or navigation in the lower river. What he proposed, and this was one of the things we had to fight out in 1894, was to take rating powers over the whole of the Thames Valley in order to find the finances for the Thames Conservancy, and for that purpose to take a majority of the representation of the Thames Conservancy. Of course, that was what became one of the great battlefields which had to be fought upon in the House of Commons before Mr. Jackson's Committee, when all the up-river counties resisted this proposal to tax. We should have had to fight the London County Council on any question of that sort, and we should have had to fight the London County Council on that question of whether the rates of London were not the proper source to which to go to secure the finances of the Thames Conservancy. Directly we had fought that out we should have had to fight it over again, and that bill cost in 1894 £12,000, according to the evidence, and the Thames Conservancy could not afford to fight it, and afford to promote a bill which would probably have been stopped on account of its not being a private bill. What the Thames Conservancy could not find was money, and that is all they have ever wanted. It is only from want of money that they have not performed this duty as they have performed all their other duties, and as they have performed all their other duties without complaint, and they will never get that money until they get the support of a body like a Statutory Commission, such as that of 1894, which, unfortunately, did not help them, or until they get the support of a Royal Commission like yourselves.

11809. (Mr. Lyttelton.) Before you pass from that have you noticed Section 35 of that report?

(Mr. Claude Baggallay.) I have read it.

11810. (Mr. Lyttelton.) "Whatever may be done towards improving the upper river we recognise that it is highly important that all homeward-bound vessels should be able to reach, and foreign-going vessels able to leave, Gravesend at any time of the tide. We concur then with the view of the shipowners and others that much public advantage would be gained, if a navigable depth of about 30ft., suitable for vessels of the largest draught, were afforded, at least up to Graves-

Mr. C.  
Baggallay.

2 July 1901.

Mr. C.  
Baggallay,  
K.C.

2 July 1901.

end." Armed with that could not you have approached Parliament again with that recommendation?

(Mr. Claude Baggallay.) I do not think it would have helped us against our adversaries, who were willing to take advantage of every weapon they could, because that was dealing with a part of the river which was outside the limits, which were between Thorney Creek and the Nore Lightship.

11811. (Mr. Lyttelton.) I quite understand your point about that, that there was a certain condition to be fulfilled which was not fulfilled before the imperative duty which was laid upon you of carrying out these obligations. That imperative duty under Section 189 you say never arose, because it lacked the fulfilment of the condition at the end of the Clause; but I am looking at another Clause which did not lay an imperative duty upon you, but brought the weight of this very powerful Commission to bear upon the view of the shipowners that "much public advantage would be gained, if a navigable depth of about 30ft., suitable for vessels of the largest draught, were afforded at least up to Gravesend."

(Mr. Claude Baggallay.) I do not think that would have helped us under Section 189.

(Mr. Lyttelton.) I entirely agree.

(Mr. Claude Baggallay.) And I do not think it would have materially helped us if we had gone to Parliament, unless it had dealt with the probable cost or at all events with the means by which the funds necessary to meet such costs should be provided, which is in the upper part of that Section 189. I do not think that would have been strong enough to have carried us through. You will see the latter part of paragraph 49 I think would over-ride that, because the Commission there report that: "It seems to us that the financial powers of the Conservators, whenever the fitting time arrives for undertaking the works"—that is the works which they are dealing with between Thorney Creek and the Nore, at the top of paragraph 49—"should be dealt with as a whole; for though we think it is expedient to provide a deep water channel to Gravesend (or even possibly to the Albert Docks), it is of equal, and perhaps greater, importance that no financial burden should be so placed as to damage the commercial interests of the Port of London in the present severe competition with other ports in this and foreign countries." I do not think that in the face of that we could possibly have gone to Parliament with a bill even if we had got over all technical difficulties, unless we had been supported by a recommendation dealing with the sources from which the fund should come from that Commission, and dealing with the question of the works which ought to be done in that particular reach of the river.

Now, my Lord, whatever the complaints may be which have been made against the Thames Conservancy, whatever there may have been in those complaints there is no question of this that on the evidence which you have got before you the tonnage of the ships has been increasing, and the number of ships which frequent the port have been increasing. You will find this set out in Appendix No 5 put in by Mr. Phillipson on the first day. He says that there is a 12 to 14 per cent. increase in the period of five years ending 1899, I think it was, so that I do not think that the complaint in itself can be said to have any substance whatever.

Now, my Lord, let me come to the future. I have dealt rather with the past and the present, and I have dealt rather with trying to point out the difficulties which have been in the way of the Thames Conservancy in getting the money to carry out what they know is required, and what they would wish to be able to do. Let me now come rather to the question of the future, and I may say this at once. You have it in evidence from Sir Frederick Dixon-Hartland as to what the Thames Conservancy would be prepared to do if they got the money. I am not going to labour that again, but it is the money we want. I am speaking of course purely of the question of the channel; the dock question has nothing to do with me; if you are going to deal with the docks, the Thames Conservancy do not want the docks or the wharves and so on. We only want to deal with the question of the channel and to justify ourselves. Now, with regard to that. I may say at once, supposing they leave the work to be performed by us, we should welcome the Commission indicating what dredging should be done. Let them indicate

what width of river should be dredged, and the depths at certain places. We should welcome it, if they would only couple it with such a recommendation as would enable us effectively to get the money to carry it out. With regard to that, I have very little doubt that in a matter of this sort the recommendation would have to be for a bill introduced by the Government. I do not think myself that a private bill could pass through, dealing with this matter. Sir Frederick Dixon-Hartland or any person connected with the Thames Conservancy would be very happy to give all the assistance in their power to carry such a bill through; but I am quite sure it would not be any use to attempt to deal with the matter by private legislation. We ask you to recommend the provision of the funds on the lines which were laid down by Sir Frederick Dixon-Hartland in his answers to Questions 7483 and 7484. I will not read all the details of it, but that includes a proposed increase of tonnage dues on vessels, a proposed abolition of the exemption from tonnage dues of certain vessels which are now exempt, a proposal for the imposition of dues for use of river and mooring, by vessels not paying tonnage dues, and a proposal for the imposition of dues on vessels for the use of moorings, for loading or discharging cargo in the river. That is really what we ask you to do with regard to the future, if you come to the conclusion that you will leave the management of the river in the Thames Conservancy hands.

Now let me come to another point which I will dismiss in a very few words, and that is as to the three schemes of these three bodies which have been put before you, one by the London County Council, one by the Corporation of London, and one by the London Chamber of Commerce. With regard to the way in which the schemes and the proposals of the London County Council and the London Chamber of Commerce were put forward I have not a word to say, but with regard to the manner in which the Corporation of London launched their case I think I am entitled to complain a little, and I think I may say that Mr. Scrutton seems to have forgotten that at the present time he is only representing the Corporation of London, and not representing his father's shipping firm, which he represented on the Bill of 1894. That, I think, excuses all he said. Now with regard to those three schemes, all I am going to say is that there is so much difference in them that I am perfectly certain you would never reconcile any of those three bodies in a joint scheme, and you would never get the other two to accept one of those three schemes. If you go for creating this new body, or trying to create, or recommending the creation of it, in the place of a body which has been tried and which exists, I am perfectly certain you will put off the formation of a body for the Port of London to take over these new duties to as long a period as has elapsed since they first tried to create a Water Trust for London. It will be no nearer next year than that was 50 years ago. There are only one or two criticisms I want to make upon these schemes.

11812. (Chairman.) You are going to limit yourself, I suppose, to matters that touch the Thames Conservancy?

(Mr. Claude Baggallay.) Quite so, because I do not care a bit about this Board. I would only say this about the Corporation of London. The Corporation of London complain that Sir Frederick Dixon-Hartland said he could increase the number of the Thames Conservancy Board, and they said it would be an unwieldy Board. I do not know whether they were remembering at that moment that Sir Frederick Dixon-Hartland's suggestion that it should be increased by nine members at the outside, would make it 47, while the Corporation are proposing 40 members. But the 40 members which the Corporation are proposing for their Board are to deal wholly with this part of the river. In the case of the Thames Conservancy they have two committees. It is on the evidence, so I need not labour it at length. I have got the existing committees here before me. They have got 38 members on their Board; of those, 20 act as members of the Lower River and General Purposes Committee, and deal with the port, and they include the shipowners, dock owners and wharfingers, and so on, as representatives. Then they have got another Upper River Committee, which has 20 members, two or three of the members being common to both; for instance, the chairman is ex-officio member of both, and so on; but for all practical purposes they have separate com-

mittees for the two parts of the river. Perhaps the Commission would like to look at that. The question of making statutory committees was very fully gone into before the Committee of 1894 (Mr. Jackson's Committee), and I remember that my friend Mr. Scrutton and I had a good deal of wrangling about it. There was a proposal then to make a statutory Committee, one for the upper part and another for the lower. That was gone into very fully at pages 1393 to 1403 of the evidence in 1894, and the Committee decided, after hearing the matter fully, that they would not provide for statutory committees, because they found from the evidence which was given before them that in practice the Conservancy Board always did keep two committees. They put on the committee for the one part of the river those who were directly interested in the one part, and they put on the committee for the other part those who were mostly interested in the other part. Therefore, the practical working of a statutory committee by a separate committee managing the length of the river who were directly interested in that part of the river was already amply provided for.

There was another suggestion which was made by the London County Council, I think in their scheme, and in one of the others also. I may treat that in this manner. I think it will be found that at no time, certainly not for a very long time past, has the Government made any grant out of public funds in aid of any harbour works at all in England. In 1861 an Act was passed for facilitating the construction and improvement of harbours, by authorising loans to harbour authorities by the Public Works Loan Commissioners, repayable in 50 years. No loan has ever been made under that Act. A loan has been made under other powers by the Public Works Loan Commissioners, to the Tyne Improvement Commissioners, and that has been repaid, but under that Act to which I have referred no loan whatever has been made. I may also state that a Royal Commission was appointed in 1858 to consider the question of the establishment of harbours of refuge. That Commission reported in favour of a grant of £250,000 to the Tyne Improvement Commissioners, for the purpose of the construction of piers at the entrance to the Tyne, and also a further sum of £250,000 for the purpose of improving navigation; but neither of those advances or gifts has yet been made. So that the probability of getting any support from public funds in that way is exceedingly remote. I do not think there is much chance of the London County Council even being able to get power to charge the rates of London for the support of an undertaking which is really a distributing centre for the country generally. I ought to remind the Commission that if any division of the river is made I think it would be no doubt far better that the division should be made at Teddington than at any other point. That that is so, I am instructed by the officials of the Thames Conservancy, and it would be just as well perhaps to bear that in mind.

There is only one other point I want to clear up; it does not form part of my argument, but I mention it in order to clear up a matter on the notes. It refers to a question asked by Mr. Ellis early in the proceedings. It was about the action of the London County Council members on the Thames Conservancy when a resolution was brought up and an amendment was moved by Mr. Charles Harrison, immediately after the Lower Navigation Commission made their report. It was in Mr. McKinnon Wood's evidence. It begins at Question 7266 and goes down to 7,278. Mr. McKinnon Wood was evidently under the impression that the representatives of the London County Council supported the action of Mr. Harrison in the moving of his amendment, which was hostile rather to the report of the Committee of the Thames Conservancy. I need not read the amendment, but I have here the division list. The division list shows that for the amendment three voted. These were Mr. Harrison, Mr. Idris, and Mr. Steadman, three of the London County Council members. Those were all who voted for the amendment. Against the amendment 25 voted. I need not read all their names, but they included Mr. Bates, a dock owner, both the Board of Trade representatives, Mr. Cory-Wright (a shipowner), Mr. Cox (a representative of the City), Mr. Alderman Halse (a representative of the City), Sir Reginald Hanson (a representative of the City), Sir Stuart Knill (a representative of the City), Mr. McDougall (a member of the London County Council), Mr. Paul (a shipowner), Mr. Payne (a member of the London County Council), and Mr. Alder-

man Samuel (a shipowner). So that the opposition included all the three shipowners' representatives, four of the City representatives, and two of the London County Council's representatives.

11813. (Mr. Ellis.) To the extent that in Question 7276 Mr. McDougall and Mr. Strong, the representatives of the London County Council, are represented as supporting the second amendment, that was a mistake?

(Mr. Claude Baggallay.) That was an amendment on a different resolution.

(Mr. Daldy.) My friend is really giving evidence now, and it may be that importance may be attached to it. If so, it should be put in, otherwise it comes to nothing.

(Mr. Lyttelton.) It is a very minute point.

(Mr. Claude Baggallay.) It was a minute point, but as there was a column of cross-examination on the point I thought it as well to clear it up.

11814. (Chairman.) Do you wish to put this in?

(Mr. Claude Baggallay.) I must put it in if my friend takes objection.

(Mr. Claude Baggallay handed in an Extract from the Minutes of Proceedings at a meeting of the Conservators of the River Thames on Monday the 22nd Day of June 1896. See Appendix, 31st Day, No. 1).

With regard to all the members representing the upper part of the river, they are perfectly satisfied with the present position of the Thames Conservancy. There is no question on their part with regard to making any alteration; they would infinitely prefer the present relations between the upper and the lower.

11815. (Chairman.) Could you tell me whether the upper river members of the Thames Conservancy agreed to what Sir Dixon-Hartland said before us—whether it was with their approval?

(Mr. Claude Baggallay.) Whatever was said on behalf of the Board as a whole, I should certainly say so. I could not tell with regard to every detail, of course, but with regard to what was put in in statements and evidence on behalf of the Board as a whole, I would say that the witness spoke absolutely on behalf of the Board.

11816. (Sir John Wolfe-Barry.) Let me put this to you in order to prevent misunderstanding on the report of 1896. You do not put it to us that there was the least doubt what the Commission wished to be carried out?

(Mr. Claude Baggallay.) I do not know whether I should like to express an opinion upon that. Does that quite affect this question?

11817. (Sir John Wolfe-Barry.) I mean so far as regards making a navigable channel of 30ft. up to Gravesend?

(Mr. Claude Baggallay.) I quite understand that in your view the making of a navigable channel of 30ft. up to Gravesend would be very desirable.

11818. (Sir John Wolfe-Barry.) And Sir Frederick Dixon-Hartland said himself that he fully understood that was the wish of the Commission, but that the Commissioners were precluded by the terms of the reference from dealing with the river further than Thorney Creek?

(Mr. Claude Baggallay.) That is so; I am not complaining at all of the report.

11819. (Sir John Wolfe-Barry.) I only want to prevent any misunderstanding when your speech comes to be read. There was no misunderstanding on the part of the Thames Conservancy or anybody who read the report as to what the Commission desired?

(Mr. Claude Baggallay.) I do not suppose there was: I do not complain at all of the form of the report. What I say is that the form of it did not help us on a financial question, which was our difficulty.

11820. (Sir John Wolfe-Barry.) I know that point, but there is no question whatever that the Commission recommended, so far as an expression of opinion went, that the channel should be 30ft. deep up as far as Gravesend?

(Mr. Claude Baggallay.) If you put it in this form; that they showed that they thought a channel thirty feet deep up to Gravesend was desirable, I agree; but I do not agree that they recommended that.

Mr. C.  
Baggallay  
K.C.

2 July 1901

Mr. C.  
Baggallay,  
K.C.  
2 July 1901.

11821. (*Sir John Wolfe-Barry.*) As far as opinion goes—I do not mean to say anything further than that—they expressed a very definite opinion that a channel up to Gravesend thirty feet deep would be a public advantage?

(*Mr. Claude Baggallay.*) I gather through reading it myself, and I have no doubt they did too, that that was their view.

11822. (*Sir John Wolfe-Barry.*) Question 1497 in this inquiry was a question asked by the Chairman, which puts it very well. He refers to the difficulties about restriction of limits, and says: "That, of course, made it difficult for them to recommend it being done; but there is no question about it, if you read it as plain English. They came to the conclusion that the shipowners wanted what is stated in paragraph 35?—(A.) Quite so. We admit that point." That is Sir Frederick Dixon-Hartland.

(*Mr. Claude Baggallay.*) Yes.

11823. (*Sir John Wolfe-Barry.*) The only other question I wanted to ask you is this, Sir Frederick Dixon-Hartland, at Question 1505, said this in answer to a question put by me: "Therefore we may take it in this way, that for any works or matters requiring Parliamentary sanction nothing has been done? (A.) No. It is only the question of funds. We have got powers to do the whole of the other things." As we have had some evidence from riparian owners and some appeal for protection, I wanted to ask you if you have now the powers to excavate a channel 30 feet deep up to Albert Dock if you had the money?

(*Mr. Claude Baggallay.*) If we had the money, except in so far as it maybe restricted by a saving clause, section 221 of the Act of 1894, which is this: "Except the provisions of this Act relating to pollution, nothing in this Act shall take away, prejudice or affect any of the rights, powers or authorities vested in any Commissioners of Sewers, or the Mayor, Aldermen, and Burgesses of the Borough of West Ham as successors of the Commissioners of Sewers for the Havering and other levels with respect to their works or the regulation of sewers." Whether by dredging we should in any way prejudice or affect any of the rights, powers, or authorities vested in the Commissioners of Sewers I could not tell you at this moment; it is rather, I think, an engineering question.

11824. (*Sir John Wolfe-Barry.*) My point is that at the present time the riparian owners are exposed to these dangers of dredging, subject to the protecting clause, which they might be exposed to if the report of this Commission eventuated in an Act of Parliament?

(*Mr. Claude Baggallay.*) I should think they are.

11825. (*Sir John Wolfe-Barry.*) But there would be no new risks created for them that do not exist now?

(*Mr. Claude Baggallay.*) I know; I did not think there would be. Of course, if you said absolutely "you may dredge to a depth of thirty feet"; if that were put into an Act of Parliament without any such saving clause as this, it might possibly override some right

I could not tell without looking at their Acts and seeing what their Acts are.

11826. (*Sir John Wolfe-Barry.*) My point is this. If you have the money you might dredge to 40 feet, subject to not doing damage.

(*Mr. Claude Baggallay.*) Subject to not doing damage, yes, and also deepen and improve the bed of the channel. We have power under Section 83 to dredge the Thames.

11827. (*Mr. Lyttelton.*) Dredge, cleanse, and scour?

(*Mr. Claude Baggallay.*) Yes. That is even wider than the next paragraph about deepening the channel.

11828. (*Sir Robert Giffen.*) I should like to put one point to you in order to hear what you have to say, because I think you have put the point rather higher than Sir Frederick Dixon-Hartland himself put it, that the Thames Conservancy have discharged all the public duties. I should like to refer you to Questions 1655, 1656, and 1657, in which, I think, Sir Frederick Dixon-Hartland admitted that the Thames Conservancy had not done all that they might have done towards removing the deficiencies of the river.

(*Mr. Claude Baggallay.*) I do not think there is any difference between him and myself. He may not have made it so public as I have made it now, but I do not see that he admits any failure to perform public duties there. The question is: "Have you taken the opportunity of that annual report to call the attention of Parliament and the public to the deficiencies of the river, and to what is necessary to be done in order to bring it up to date? (A.) I do not remember that we have done so. We have mentioned what we proposed to do, but we have not mentioned what were beyond our powers." I do not think that goes any further than I said, or that I have gone further than that. (Q.) It might be of advantage, if you have a certain policy to carry out, to state it in public, so as to get the support of public opinion in favour of what you think ought to be done? (A.) I quite agree. (Q.) But you have not taken advantage of your annual report to do that? (A.) We ought to have done so, I quite admit. I think we ought to have done so." That is to say, stimulated public opinion by calling attention to deficiencies which they were wanting powers to make good.

11829. (*Sir Robert Giffen.*) But the suggestion is that there is a certain obligation of public spirit on a public body, to do the best they can in the matters entrusted to them; and he admits that there was a certain thing which they might have done, and which they ought to have done, but which, in point of fact, they have not done.

(*Mr. Claude Baggallay.*) I do not think that conflicts at all with what I was referring to, namely, that they had done their duty in regard to executing powers and doing work which they ought to do so far as their money went. This rather goes to show that they perhaps had not exhausted every means of stirring up public opinion to enable them to do more.

Mr. BALFOUR BROWNE, K.C., called to address the Commission.

Mr. Balfour  
Browne, K.C.

11830. (*Chairman.*) You address us on behalf of the London and India Dock Company?

(*Mr. Balfour Browne.*) Yes. I will remind your Lordship of what was the Instruction to this Royal Commission, which I will refer to very shortly. It is this: "To inquire into the present administration of the Port of London"—that I will concern myself with—"and the water approaches thereto"—that the Thames Conservancy have to deal with—"the adequacy of the accommodation provided for vessels, and the loading and unloading thereof." I am going to say that up to our means, we have given adequate accommodation for the loading and unloading of vessels; that we are desirous of doing more in that direction, and that in order to do so we must have money to do it with. I do not think that proposition can be denied. Then the terms of reference go on: "The system of charge for such accommodation, and the arrangements for warehousing dutiable goods." With regard to that, I do not think I need say a great deal. You have had various attempts made on the part of the Chamber of Commerce to go into questions of individual rates. Even this morning Mr. Scrutton made another attempt to go into

that matter, but that was stopped. Therefore, I do not propose to go in any detail into that, but to refer to what this Commission arose out of; that is, the proposal of the London Dock Companies to charge a certain sum on lighters, and a certain sum on goods. Then the terms of reference say the Commission is "to report whether any change or improvement in regard to any of the above matters is necessary for the promotion of the trade of the port, and the public interest." That is the direction to this Commission, under which you have been considering the question of a trust. I will deal with that I hope fully, and I hope to be able to convince you that no advantage will be given to the public by turning these docks over into the hands of a trust. I hope to be able to convince you that private enterprise is able to do everything that is required for this port, and do it better than any public body. What was the proposal of the dock companies that led to this Commission? It was the charge on lighters of 4d. a ton, which was to raise \$56,000 per annum; it was also the charge on goods, which at present use the docks and pay nothing, of certain sums which amounted to \$177,000 per annum, and the clause in the Bill was

to the effect that nothing was to be charged which is not otherwise chargeable by the company. Now, we have it as a fact proved before you that at the present time 25 per cent. of the goods using and profiting by the London Docks pay the whole of the charges, and that 75 per cent. of the goods pay nothing. If the money is to be raised at all, I will ask this Commission to come to the conclusion that it is equitable that it should be laid on the shoulders of those who do not at present pay, and who do at present profit by the use of the dock; and that it is not equitable that any further charges should be paid by and laid upon those who do contribute large sums for the maintenance of the docks. I pass over all the questions of private rates, which, if necessary, it would have been my duty to deal with. You see they have made very serious mistakes on the other side, and you had before you on the last occasion Mr. Hardy, dealing with three separate matters, which took the greater part of a day to deal with, and I believe in the prophecy made by Mr. Lyttelton, that it would take three years to thresh out that matter. I pass from that because my object is, if possible, to deal with the broad issues of this matter rather than details. The details you know better than I do. The details are here, and have been spoken to with great clearness. The broad issues I hope I may help you, to some extent, to solve. First of all, the question raised in this inquiry is as to the administration of the dock, and I could understand, not the minute criticisms that have been made, not the trivial complaints that Mr. Scrutton has ventured to hurl at us to-day, but I could understand this Commission being very much impressed if they thought that under the management of the London Dock Companies, the trade was falling off. If the other side could make out that there was a decay in the trade of London, I think that would go far to establish the fact that the management ought to be changed. As a *prima facie* matter, however, I venture to say that, seeing that the docks are managed by practical business men, whose names are before you, in their own interests and in the interests of the shareholders, I believe this Commission will come to the conclusion that it is managed in the interests of the shareholders. Practical business men know that to manage any concern such as this in the interests of the shareholders, they must serve their customers, the public. I hope that the day of private enterprise is not over. I will point out that in very many directions already, Parliament has gone too far to municipalise—trustee, if there be such a word—very great undertakings, and I will ask you to consider very carefully, before you entrust what is a trade, pure and simple, which is not a matter of public health, such as water supply, to the hands of a trust or public body. But I was going to say that I would even face that difficulty if I saw that this dock company was ruining the trade of London. But is it? It is not. The trade of London is under its management growing and increasing. Let me refer to one table which proves that incontestably. It is in Appendix No. 29 to the 16th day. You will see that in 1890 London had 23 per cent. of the fifteen ports shown on that table. In 1898 it had the same, but in 1899 it had managed to secure 25.5 per cent., and therefore it had increased its trade. You will have to take these percentages from me, but the figures are shown on these tables, and I will refer to one immediately. Let me look upon it in a double aspect. If we compare London and Liverpool, which you will find stated on that table, you will find comparison of private enterprise with a trust. They are always saying that things are better done in Liverpool. Are they? What is the result of that table? I find that London had in 1890, 13,480,767 tons out of 58,187,000, that is to say, as I said before, 23 per cent. of the total of the fifteen ports. Liverpool had in the same year 10,941,801 tons, or 19 per cent. Now you get the comparison for the year 1890, 23 per cent. London and 19 per cent. Liverpool. But look at 1898. Look at the decadence in this port of London. London had 16,596,202 out of 70,612,199 total, or 23 per cent. Liverpool had 12,168,802, or 17 per cent. London had held its own absolutely at the same percentage, and Liverpool had fallen off 2 per cent. Is the Port decaying? I admit that we are not able to do all that we want for the trade. I admit distinctly that a great deal more might be done, but at the same time, with all our disadvantages, we have held our own as against Liverpool, and as against the 15 ports on that table, which was put in by Mr. Scott. It is only Board of Trade returns made into a table. Now, again, let us see if there are really any serious complaints as to the

management of the dock. If you will look at Mr. Cattarn's evidence at Question 3430, you will see what they amount to. He says that "traders that work to the upper docks have, we some of us think, very fair and liberal arrangements with the dock companies, which enable us to go and work in the upper docks—the St. Katharine's Dock and the London Dock—on a satisfactory basis." Then, again, at Question 3411, he says, "There is no sufficient justification for complaint against the practical management of the docks." Then, again, at Question 5216 Mr. Douglas Owen says that practically the only complaint was as to the impecuniosity—"I see no present advantage in a trust. It will take years to bring the docks up-to-date, and the present experienced managers can do the work better than anybody else. All they want is money." Then Mr. Becket-Hill, at 2284, says "The dock charges are not excessive, and the docks themselves, as regards their entrances and management, from a navigation point of view, leave little to complain about. But they are certainly deficient in facilities for despatch." I admit that, and we are going to remedy it. Now I am going to refer you to what Mr. Scott said in Question 5616. Of course you have gentlemen in the lighterage interest objecting to any imposts being put on them at all, and as one of them admitted, in answer to a question put to him by one of the Commissioners, he did not want to bear any portion of the burden of making these docks satisfactory. It is human nature, but it is very paltry human nature. They want everything done without paying anything for it, and I venture to say that under the circumstances this Commission will not report upon that class of evidence against the proposals that we make. Then Mr. Edward Pembroke had certain complaints which he put before you at Question 8332. He refers to the insufficient length of the berths and the area of the quay space, the shortness of the lock and dry-dock, and the quantities of barges floating about unattended. We also complain of the quantity of barges. Then he says that they want more facilities and much more quay and shed space. All those improvements it must be our object to supply to the public, but how are we to do it? If the Commission can suggest any method by which money can be raised—properly raised, because I venture to say it would be most improper, as I will show you, to pledge either Government funds or the rates of London to raise these sums for the benefit of shipowners in the Port of London—if anybody can suggest any means by which the money can be more properly raised, I wish they would do it. We thought, and think still, that the right persons to put it upon are those who have had exemptions extending over hundreds of years—quite improper exemptions. I do not know how it arose, but I know as a fact that they are enjoying the use of docks which cost millions of money for nothing, and I know the only other case where that took place was in the Port of Hull and the result was absolute bankruptcy. For five years before the Hull Docks were passed over into the hands of the North Eastern Railway Company, they were subsidised out of the pockets of the North Eastern. Then they came to Parliament and said: "We cannot do anything. We have no money," and the North Eastern (who did not care to make the dock pay because they got the traffic on the railway) took over the docks, although, as some of the Commission know, there is a Standing Order which makes the Committee specially report as to the transfer of a dock into a railway company's hands. Our impecuniosity is proved by our dividend. For the last 13 years the London company has earned 2½ per cent., and the India Company 13s. 4d. Under these circumstances it is absolutely impossible for this company to raise the money which is necessary for those various things that we want. What do we do for these lighters and for the goods that have the use of the docks free? We police—and that is done for them as well as for the ships and the other goods—we pay rates and taxes; the cost of dredging, as you have heard already, is enormous; we have the extra pumping because of the water that is taken from our docks, and we help the barges in and out. We do all that, and get absolutely nothing for it. Now, Sir, as a broad principle of equity, I ask this Commission to disregard what was done a hundred years ago: to disregard what was done when we applied to Parliament for a Bill in 1853, when we were not impecunious, when we had the money—and it was upon that ground that it was rejected—and to say that it is proper and equitable that barges and goods should bear some portion of this burden of making

Mr. Balfour  
Broune, K.C.

2 July 1901.

Mr. Balfour  
Browne, K.C.

2 July 1901.

the docks better and fitter for the Port and trade of London. We have power at the present time, I know, to lay further charges on shipping, but is it fair to lay further charges on shipping? We are not charging up to the hilt. We charge one shilling a ton, including four weeks rent. We could, without doubt, charge 2s., and that would bring in almost precisely the same sum that we are asking to have from the barges, lighters, and from the goods. But again, what we want to do—and remember that we have tried to get it from Parliament, and we have to show both to you and Parliament that we are reasonable—is to distribute the burden equally over all. I confess I listened with considerable astonishment to some people who came and told you that ultimately the consumer did not pay for everything. Sir Marcus Samuel told you that a large amount of burdens were borne by people who were not the consumers of the goods. I still believe that everything will fall on the consumer, and I will ask you to look at one of the most curious pieces of evidence in this case, which is in Appendix No. 40 of the 16th day, which shows the whole history of the ship that bears the ominous name of "Politian." There it was stated at first that it would have been much better treated at Liverpool than at London. As a ship it would have paid £552 13s. 4d. as against the charges in London £1,001 9s. 10d. But that was only half the story. If you will look at the other side you will find the whole of the story, and you will see that the London charge which falls on the shipowner is £1,001 9s. 10d., while the shipowner at Liverpool only pays £552 13s. 4d.; but there is paid by the consignees £794 11s. 4d., making £1,347 4s. 8d., or a difference in favour of London of £346. That is what the consumer has to bear. He has to bear the whole of those burdens, both what is paid on the ship and what is paid by the consignees; and I will ask you to come to the conclusion that that shows that, in comparison with Liverpool, we are a cheap port; and that we can easily lay those burdens on without dislocating the traffic of this particular port or sending it elsewhere. There is one curious fallacy that I ought perhaps to have mentioned, because it has been made a good deal of. That is the statement that the trade may not be falling off in itself, but that the relative proportions are less than they were before. That is an obvious fallacy. If, for instance, there were a new port started to-day and a line of steamers established between London and that new port, the new port would increase by leaps and bounds, while London, seeing that it has an enormous trade, would not increase at all. There was, I believe, in the year 1897 a steamer started between Ostend and Tilbury. The tonnage of that was 41,049 tons for the half year. If you look at that as compared with the small trade of Ostend it shows an enormous increase, but, if you look at it in comparison with the enormous trade of London, it shows nothing at all. That is the fallacy of my friends with regard to the relative improvement theory. I was giving you the figures, of course, from the Board of Trade Returns, which deal with the whole of the Port of London, but if you take the London Dock I have here the figures in 1871. The London and India Dock, then, had 10·2 per cent. of the foreign tonnage. In 1899, these docks had 11·8 per cent. of the foreign tonnage, or an increase of 1·6 between 1871 and 1899. Under those circumstances, I say, we are not a decaying port; but, at the same time, we do fully admit, and we put it before you, we cannot give all the requirements of the port. We have been as candid as we can. Of course, it is to our interest to keep the port well abreast of every other port in this kingdom. What are we going to do? For the money that we get we are going to carry out very, very extensive improvements. You have had a schedule of them before you, and, if the Commission care to have the company pledge itself more fully than it has, it will pledge itself to carry out those whenever it gets the powers; but until we get the money we cannot do it. "In the interest of the public?" is the question you have to consider under your instruction. What interest of the public would be served by merely changing this undertaking from the hands of a dock company into the hands of a trust, *quo ad*, the real matter that is before you—that is the charging of lighters and the charging of goods in the docks. Would not they have to charge them just as we have? They cannot get money any more than we can, unless they have a revenue. What do we hear from the Thames Conservancy, a model trust—a trust that was created long ago, and which has been, with the assistance of my friend, Mr. Baggallay, rehabilitated in the year 1894.

But even it cannot do anything without the sinews of war, and they are asking you to put £160,000 more on the ships using the river in order that they may have the improved waterway. The ships that use the waterway and benefit by the waterway, ought to pay for the waterway. I venture to say that the right people to bear these burdens are the people who profit by the expenditure. Who profit by my docks? The lighters. You have heard of the enormous increase in their size and the enormous increase in their numbers; you have it proved before you how they cumber our docks. Without our docks they could not carry on their trade. And the goods ought to bear the burden. I do not want, although I know I have the power, to put further charges on ships, but I venture to say that, if we have no other remedy, we may have to charge ships more in the future than we did in the past; because we must have the money to equip our docks better than they are equipped at the present time, and, of course, provide further and better dock accommodation than we have, up to the present time, been able to do. They say, however, that, if this great impost is to be laid upon the public, there ought to be a change of hands, and that it ought to be in the hands of a public trust. What more a trust could do with regard to this particular matter, I do not know. They would provide the dock accommodation that they say is required, and that we are going to provide. They also say that they would be able—and this is the invariable argument in all those cases whenever a public body wants to get anything—to raise capital at a lower rate. We have to some extent cured that, because we are quite willing to limit the dividend upon all the stock to four per cent. If we could see our way to do it at a lower rate we would accept that from the Commission, but I do not think, having regard to the position of the dock, that we could get the money unless we gave them a 4 per cent. dividend. Now what would they have to do? First they would have to buy out our dock. Some suggestions have been made that they would buy us out cheap, but that I do not think Parliament would allow. They are to buy out our dock, and I venture to suggest to this Commission that that will be a very serious matter indeed for any trust to perform. They all see that the trust, which is merely to have the dock revenue, cannot buy the dock. That is quite obvious. And if it did buy the dock it never could, unless it got money from elsewhere, raise a penny more money, because, after all, there is no magic in it. If they buy my docks for full worth they have got my docks and can do no more with them than I can. But they all want a Government guarantee, which seems to me an absolutely ridiculous thing, and one of the members of your Commission asked why, if there is to be a Government guarantee for London, is not there to be a Government guarantee for Glasgow, Liverpool, and all the other ports? And the answer was, I think, that the Government had something in the Thames, which did not convince me at all. But, my Lord, the thing is ridiculous. I venture to say that any port in this country would have a very serious right to object to London being subsidised out of the public funds because it has not increased relatively to the rest of the ports of the kingdom. That is the whole of the argument. But, if the Government is not to step in, how is it to be done? The suggestion is, first, that the London County Council should guarantee it. What is that? That means that the householders of London are to guarantee the dock, which is simply a trade carried on at the Port of London. I, as a householder in London, protest against that. It is all very well if the docks are booming, but take them as docks which we know very often are not booming, but are failing. What becomes of your 30 millions, if you have paid for the docks, then? We know, of course, that however you subsidise, however you bribe people to go into a dock—because subsidising to go into a dock is really bribing to go into a dock—the centre of trade shifts, and you cannot stereotype it. What has become of the Port of Greenock to-day? Greenock is a trust, and Greenock is bankrupt, because the sugar industry has failed at Greenock, and I venture to say that, if this London dock system were bought by the rates of London, London might some day find itself in this very awkward position; that it had docks which were half full, and had to pay for them out of the rates. Is that a right thing at all? My Lord, I have the greatest respect for municipalities so long as they keep within their own province, but I venture to think that the supplying of a dock, trading in ships, trading in goods in that sense, is not the proper function for a great city like this; and that is a kind of thing that ought not to be guaran-

teed by the rates. You have it as a fact that the Port of Bristol, which is a trust, and a municipal trust, is the dearest port in this country. How was that brought about? In 1848 Bristol got the town docks in the town of Bristol. What took place? A dock was started at Avonmouth by a company to compete with the docks in Bristol, and almost immediately afterwards another dock was started at Portishead on the other side of the mouth of the Avon, a little south, and they did compete, and they reduced the town docks to absolute ruin. This is your trust. Who was to guarantee that? Nobody. What had Bristol to do? They had to come for a Bill in Parliament and say: "They are cutting our rates to pieces. The competition cannot be stood. The town has to pay for it. We must buy up those two docks." And Parliament allowed that. Then what do some of these people in their schemes put before you? They want a trust, but they want a trust and a monopoly. In the scheme of the Chamber of Commerce they say, "new docks." It is an amusing heading when you find that there are to be no new docks. Then they say, "On and after the formation of the trust, no new dock or docks is or are to be formed within the limits of the port save by the trust itself, and for its benefit." If that is their scheme, it is absolutely ridiculous. What has taken place in the case of another trust? Only two years ago certain gentlemen close to Glasgow came to Parliament for a dock called the Renfrew Dock. Sir John Wolfe-Barry will remember something about it. The Clyde Trustees said: "For any sake do not allow our trust to be competed with. We cannot stand that." But we got the Committee of Parliament to believe that the trust should not be competed with, and the Bill was rejected. They came again next year, and by this time the Clyde Trustees saw that they must put their house in order, and they came for a dock close to Renfrew to supply the wants of the public. What happened? The one which was in the hands of the Clyde Trustees was rejected, and the independent dock, in the hands of Mr. Spiers and another gentleman, passed. And with what result? There was competition allowed. Contrary to this suggestion, competition was allowed with a trust—a secret trust. And only the other day—within the last month—the Clyde Trustees got the chance of buying Mr. Spiers' dock at Renfrew, and had agreed to do so, but the municipal element upon the Clyde Trustees rejected it, and would not have it. And that dock will be made independently. Is that good for trade? You are not to consider what is good for a trust. You have to consider what is good for the trade of the country generally. And I venture to think that, if you have every port a monopoly, you will very soon find one monopoly going against the other. At the present time just let me assume, for instance, that the London Docks are guaranteed by the County Council. We know that the London Docks are in active competition with various ports. We had to complain for the London Docks to the Railway Commissioners of the enormous diversion of traffic that was taking place to Southampton by reason of the London and South Western Railway Company carrying traffic from Southampton to London for next to nothing. They carried it at 6s. a ton from Southampton, while they were carrying from places intermediate at 18s. a ton the same goods, and we got no relief. There is active competition. How are we to prevent that? You would not have merely to say, "There shall be no docks on this river." You have to go further, and say, "There shall be no docks anywhere," if you gave them either a Government guarantee or a County Council guarantee. But have not the County Council enough on their hands? Whenever anything is mentioned, the County Council want to get it into their hands. I have an enormous respect for the County Council. We know that they have been wanting to get the water supply into their own hands. There is some reason for that, because water is an absolute necessity, and there can be no competition in the case of water. But what has happened there? They have not succeeded up to the present time. I believe there is a strong case for the municipalisation of water. But what did Mr. Cripps say the other day with regard to the Tubes Bill. That is being promoted in a Committee and there Mr. Cripps proposed that the promoters should stand aside, and that a great many tubes or underground railways should be made which would not be remunerative; and he said under those circumstances the London County Council would have to guarantee them. Here it is, one mistake after another; first water: then, tramways; then the tubes; and, last of all, the docks. Now is a dock a proper thing

to be connected with a municipality at all? I venture to say, "No." I venture to say that any such guarantee as is suggested here would probably land the ratepayers of this great city in a very bad bargain indeed.

Now with your Lordship's permission I should like to say just one or two words about the various schemes that have been put before you. There are three separate schemes and I should like to say a word about each of them. The one I will deal with first is that of the Corporation of London. I do not criticise the constitution because you have that before you. You see that in each case the person proposing the trust always remembers himself. In this particular case the Corporation are to have ten representatives upon this trust which is constituted in the way you see. But why is the Corporation to have any representatives? It is not to guarantee anything, as I understand. It looks, for the money that is to be supplied, to the Government. Then why is the City of London to be represented to the extent of ten members of the Board to manage this trust? Would they manage it a bit better than the directors of the company? What is their qualification, especially that they should be entrusted with these large powers? Again, why put two railway companies on the trust, and the Admiralty and the Board of Trade? I venture to think again that it is an utterly anomalous thing, mixing up either the Admiralty or the Board of Trade—Government departments—with a private enterprise. Then there are two representatives of Lloyd's, and then shipowners. Then the Government is to be empowered to contribute, but not necessarily to contribute, as you will see. Then again they propose—but I think that has been sufficiently exploited to-day—to make it a trustees' stock at the very first go off.

(Chairman.) We asked about that.

(Mr. Balfour Browne.) Yes, and you also elicited the fact that no other dock trust stock in this country was a trustees' stock. Therefore I leave that. But further in their evidence they say that 25 millions will have to be raised; 18 millions for the purchase of the stock (without any valuation); 3 millions for their improvements and extensions; 2 millions for dredging; and 2 millions for jetty and quay space accommodation. Then again, the question of taxing or how to tax barges is to be left to the body when formed. If that is the recommendation to this Commission, I cannot help thinking very little of it. It is merely that your recommendation should be that the Corporation should have ten members on the trust, and that they should determine the taxing power. No taxing power could be given without an Act of Parliament, and they would have to promote a bill just as we have done. Then they say no charge is to be included in the figures for barges, but a licensing fee was suggested. The objections to these schemes are very shortly these. The scheme is full of contradictions. The Corporation want to buy up such bonded warehouses as they think fit. We cross-examined as to that. Elsewhere they say, "as Parliament think fit." In fact I do not think really they ever considered or digested their own scheme. They want unification of authority, but will leave the Port Sanitary Authority separate, obviously because it is one of their own existing privileges. They say the dock company cannot keep pace with the needs of the port by reason of their being unable to charge barges. That you will find at Question 7919, and they speak of leaving the question of charging barges to the new authority. Then they take credit for not including charges on barges in their proposed revenue account. If that is the way that a body like the Corporation of London helps a Commission like this, it seems to me to be of no assistance whatever. They are not helping you to solve the problem you have to solve, which is this; how are these things to be provided which the trade wants? Now, may I read this, which is from the evidence of Sir Marcus Samuel, at Question 7927: "I wish to say that we have dealt with this very broadly indeed. The position we have taken is that your Lordship and your colleagues are a body of such knowledge and experience that beyond giving you as much assistance as we can, we must absolutely leave you to draw your own deductions; we do not presume to say what they should be." Well, I presume to say that any more futile suggestion to a Royal Commission never was put in print.

I do not think I need say more about that proposal of the Corporation, but I should like to examine with you, at some length, the proposal of the London

Mr. Balfour  
Browne, K.C.  
2 July 1901.

Mr. Balfour  
Browne, K.C  
2 July 1901.

Chamber of Commerce. Again I venture to say that there is no solid piece of rock that you can lay hold of in this proposal. I have the draft before me. They begin (see Question 10133) by saying, "The objects of the trust are to acquire the control of the whole of the waters of the port, and having done so, to control them and the traffic thereon so as to promote the trade and commerce of the port for the benefit of, and in the interests of the whole of the inhabitants of London, and not of any section thereof." I do not know what that means. Do they say that the Port of London has been worked not for the benefit of the whole of the inhabitants, but for a section thereof? Then it goes on: "In particular the object of the Trust is to render the waters of the port accessible so far as is reasonably practicable to the vessels of all sizes of all nations." That is a very broad general principle. That is our object and the object of the Thames Conservancy, too, I should have thought. "And to promote their entry, unloading, re-loading, and sailing to the best of their ability, levying only such rates, tolls, and charges as may be absolutely necessary for such purposes, or for extensions of the works of the Trust"—again we are entirely at one; that is our object—"and using all surplus revenue (left after paying the expenses of administration, interest on borrowed capital and amortization thereof), in the reduction of such rates, charges, and tolls, with the aim of rendering and keeping the port of London as the chief mercantile mart of the world as well as of the Kingdom." I will not read the "Powers of the Trust," or the "Constitution of the Trust." You are pretty familiar with that, but there are one or two matters with which I will deal. First, as to what I have read with regard to a new dock, they demand a monopoly, and then further they say: "The Trust to have power to take over such property on or near the river as it may think desirable to acquire, the power to be compulsory, subject to due compensation to owners." Again, is not that too vague to be of any use to this Commission? What property are they to acquire? What they think desirable to acquire. Then with regard to the revenues of the Trust they say: "The revenues of the Trust to be those now levied with power to add to, diminish, vary, or extinguish such charges, rates, or tolls as are or may be levied by: (a) The Conservators of the Thames; (b) the Watermen and Lightermen's Company; (c) the Dock Companies or others whose interests have been or may be acquired." And here again instead of telling you what they do they merely ask you to hand to this Trust the whole powers of raising rates on everything. Again I venture to say that this is an absolutely grotesque and unconsidered scheme for the future dealing with this Port of London. Then it says: "The Trust to be empowered also to make such charges as may be reasonably levied on any goods, wares or merchandise whatsoever that may be landed in or on any public or private wharf, warehouse, quay, foreshore, shore, banks, road or path within the jurisdiction of the Trust from any ship, vessel, lighter, barge, tug, boat, raft, or floating receptacle." There again they are proposing the very charges that we seek to authorise, but apparently unlimited. But again they are faced with the difficulty of finance. How do they deal with it? "Should such rates, charges, or tolls as are hereinabove enumerated be insufficient for the maintenance or development of the port, the London County Council, and/or the Corporation, on the request of the Trust, may if it so please, levy a rate of not more than in the pound sterling on the property liable to rates within the jurisdiction of the Council." Again, my Lord, is that any good to you? To leave it to the London County Council or the Corporation if they please to levy a rate. Then their next paragraph determines the question of Trust, because it goes on to say: "As security for a loan or loans to be guaranteed or raised by the Corporation of the City, the London County Council, or by the Trust, with its or their authority for the purposes named in the preceding paragraph, such loan or loans to be for a period for each of not more than years, interest to be duly paid thereon at dates to be fixed; and if interest be not duly paid, the Corporation or the London County Council may enter upon, seize, and become possessed of and enjoy the whole of the property, rights, powers, privileges, tolls, charges, rates, rents or fees of the trust, and administer the trust thereafter in the interests of the inhabitants of London." So away goes the trust. It again means that the London County Council or the Corporation

is to become the owner of the whole of the docks of London, if there is any default in payment—without a word of guarantee of the money being raised—after they have, if so pleased, agreed to levy a rate in aid of this grotesque suggestion. Now, my Lord, I do not think there is much more that I need comment upon, except that you find this in the next paragraph of this draft scheme. "Provided nevertheless that, if it be shown to the satisfaction of the Corporation or the County Council that any or certain works are essential to the development or maintenance of the port, and that the rates, charges, tolls, fees, or rents levied, or which may be levied by the trust, are insufficient for the due execution of such works or would only be sufficient at too great a cost for the trade of the port for the time being to bear, then the Council may in its absolute and unfettered discretion, make a grant to the trust of such sum or sums as may be necessary for such works, either by way of a free gift or a loan, seeing only that the trust use such grant or grants for such works and for no other purposes." Well, here is another absolutely new departure in legislation. That any public body should be allowed to give a grant or a free loan to support these docks in London seems to me contrary to the very first principles of trade. What would be the result as compared, for instance, with Liverpool? That the shipowner here and the merchant in London having this free gift and loan given to the docks would be charged less than at the other ports. You would absolutely be subsidising the merchant trading to London out of the public purse, which is absolutely contrary to the first principles of trade. I will not read any more as your Lordship and the Commissioners have the scheme before you. There is only one thing I should like to refer to in sub-paragraph (c) of paragraph 19 of the draft scheme. You will see there again that monopoly is their object. None of these trusts can stand the fair free fight of trade, and that is one of the errors that they all fall into, because they say "So that such property shall not unduly compete with the public and private wharfingers of the port." They are to compete with the public and private wharfingers, and they put in a sop by saying that they shall "not unduly compete." As Mr. McKinnon Wood pointed out, there would be competition of a limited sort. Again, you will remember that all the Chamber of Commerce witnesses that were called in support of this magnificent scheme came and said "My trade cannot bear any more," and they have absolutely asked to repudiate their obligation to contribute anything to the improvement of the port. Now let me say this; if a port cannot pay upon its own trade it should not pay at all, and it should not exist. The only justification for a port is that it pays. If it does not pay I think it ought to cease to exist. That would be the result of guaranteeing this out of the public purse. I have shown you that every other port would come and complain and say "Why is the public purse to subsidise London, and not Leith? Why is the public purse to subsidise London and not Barrow-in-Furness?" and I cannot see the answer to it. On the other hand, what is the real fact that is at the bottom of all trading? It is that the trade supplies a public want. If it does not it is of no use at all. The docks in London do supply a public want. There is no doubt that the trade is going on, but it wants to supply a further public want. How is that to be paid for? It is by the public that uses the accommodation that is given, otherwise I see no end to this system of trust and guarantee. The mere fact, as I said before, that they can raise money at 3 per cent. (we will say it is 3 per cent.) as compared with our 4 per cent. is no reason at all. If so, that might be a reason for co-operative stores being kept by the Government; it might be a reason for taking over all the bakeries in a town, because no doubt the Government can raise money at a cheaper rate, but you must draw the line in municipal trading at simply municipal duty.

The way the duties of a municipality have grown has always been, up to the present time, legitimate. First of all, the first duty of a public authority was to dispose of the refuse of a town, the sewage, and also to keep the public highways in good repair. It was from that that the second duty of a corporation arose, namely, the lighting of the highways. From the lighting of the highways with public light, Parliament did entrust to them the power of supplying gas to private consumers, and for the obvious reason that the pipes being laid in the street it was easy

to supply the public with gas at the same time as lighting the public streets. That was a legitimate extension. Water I have already dealt with, and it seems to me really a proper municipal function. Let me say the way that tramways have got into their hands also seems to me natural. They were running upon the public streets, and they were carrying the traffic, and they were strictly limited to the town in which the rate-payers were supporting the tramways. Latterly, however, Parliament has gone a little further, but only upon special cause shown. They allowed the Corporation of Huddersfield to make tramways outside their own district, but that after a Committee of Parliament, presided over by Mr. Jeffreys, had rejected the bill. The House of Commons again reconsidered it, and on the ground which was then proved before the House, that the places outside could not possibly get their tramways unless Huddersfield supplied them, that was allowed. But Parliament has been very strict not to allow the Corporation to act as traders; it was to bring people into the town by this tramway, Huddersfield being their centre, and its being demonstrated that the outside people could not make it for themselves. Again, here it is a totally new departure. What right have any public authority to carry on what is virtually a trade? I do not see how a dock differs from any other great trade in the country. A railway seems to me precisely the same thing. You can always quote precedents; Parliament has been inconsistent in many cases. It allowed the Hull and Barnsley Railway Company in the first instance to be subsidised to the extent of £100,000 by the Hull Corporation, and that might be quoted as a precedent, but it is clearly wrong, and Parliament has never done it since. But if railways are important, docks are equally important, and I do not see in the least why you should not have trusts for railways if you are to have trusts for docks. I say they are both in exactly the same category. We are receivers into a harbour, a terminal station; they are carriers, and they are precisely on the same basis; so long as they serve the public they ought to be allowed to charge certain rates to remunerate them fairly and fully I will say, because I think there is no benefit to the public in having impecunious lines like the London, Chatham, and Dover; it is against the interests of the public; they ought to have rates that are fully and fairly remunerative, but I deprecate entirely subsidies to derelict railways out of the pocket of the public. It is exactly the same thing with regard to the docks.

11831. (*Sir Robert Giffen.*) We shall have to consider the evidence that has been put before us as to the subsidising of foreign ports with which London is in competition. That may affect our judgment upon certain points, and some of us, at least, would like to hear all you have to say?

(*Mr. Balfour Browne.*) I am quite aware that very likely foreign ports are subsidised; I know that foreign steamboats are to a very large extent, and if you once begin to subsidise the ports, you will have to subsidise the steamboats, too. We know Germany, at the present time, does subsidise a very large number of her steamboats. Are we to do that? I venture to think that after all, the sound old economical rule will pay the country in the end, and if we once begin to enter into competition in sugar bounties with other countries, I think we shall very likely come to grief. Of course, I cannot say whether this country should not, as a stroke of policy (that is a totally different matter, and far beyond my power of arguing), retaliate possibly upon other countries, but in the meantime I have been confining myself entirely to the Port of London. If you subsidise one port you will have to subsidise them all against those foreign countries, it seems to me, otherwise you would find all the trade coming to one particular port, and the rest of the people of this country complaining very much of your action. I find in Appendix No. 13 of the 14th day the result of subsidising. You will find the United Kingdom returns for steam tonnage shown for 1870, 1880, 1890, and 1898. It is Mr. Douglas Owen's table. You will find that in the case of Germany, with its subsidies, there has been an increase. But I find that the increase of the United Kingdom as against Germany, Holland, and Belgium put together has been 5,501,000, as against 1,230,000. We have increased over four and a-half times as much as Germany, Holland, and Belgium. Therefore, apparently, this does not do. I do not say that it is entirely due to that. I have no doubt it is

because this is a far greater trading country, and even a subsidy will not divert the trade entirely from it.

11832. (*Chairman.*) Is that all you have to say on the Chamber of Commerce scheme?

(*Mr. Balfour Browne.*) I think so, my Lord. Then there is the London County Council's scheme to be considered. On this, again, I pass over all the statistics as to the 30 members and the 10 members from the London County Council. Behind this body you find would be the London County Council, who would have the absolute control of the purse-strings as regards the capital and the guarantee of interest. Now they said, "Oh, but we would not control, we would be there, but we would not control." If this was so, it was entirely wrong, because, as I understand, the man who pays the piper ought to call the tune; and it seems to me that the County Council finding the money from the people of London, ought to be the managers of the London port, if that is so. Therefore, I think it is wrong in principle. The Committee are to have the management they say, but no borrowing power or power to pledge the credit of London. Now, what is the good of handing over the management to a body that has no power to say, "This work is necessary, and should be done." Whenever they do say a new dock is necessary, or a new lock-gate is necessary, they have then to go to the County Council and ask their leave, because the money has all to be found by that body. So that, virtually, you are handing it over to the person who holds the purse strings, and this Trust that they pretend to put forward is not a Trust but a catapaw in the hands of the County Council. One of the objections to this scheme is that it is not a scheme in any practical sense at all. There is no attempt whatever to indicate the sources of revenue or the amount. Apparently, it is to be constituted with unlimited charging powers, so far as I understand it, and to exercise any power it pleases at its own pleasure, and when it thinks further revenue desirable. It is not in any sense an alternative to the dock companies' proposal since there is no guarantee that all the charges the dock companies work for would not be put in by this new body. Therefore, in each case where they propose to ask you to recommend the Trust they have not really dealt with the real problem that is before you. Is there a possibility of anybody carrying on these docks without any further charges, and upon whom should these further charges fall? I venture to go back to my former proposition, and say the right person who should pay the charge is the man who gets the benefit of the services. The benefits of the services are got by the lighters and the goods in them. I do not think this Commission can adopt a scheme that gives no indication as to the guarantee, or the source or limits of revenue. I find this at Question 7160. Mr. McKinnon Wood was being examined on the subject of charges, and the question was put to him, "Can you not give us any leading on that point?"—(A) No, there might be other ways of course, of raising revenue besides a charge on barges. The whole thing is so complicated that these changes, it seems to me, must be left to the new authority to propose. Therefore, they are asking this Commission to abdicate its duty, and to hand it over to this new authority, of which Mr. McKinnon Wood will be a light and leading member I have no doubt. There is nothing at all to indicate in his mind where the revenue is to come from, and what the rates are to be, and he asks you to hand it over to this new body when it is formed to determine this very matter which is submitted to this Commission. The total income of the Thames Conservancy and the dock companies on the figure for 1899 was £2,411,000, while the expenses were £1,735,000. Putting the capital of the new trust at the least at £25,000,000 (that was put by some of the witnesses), and granting that the whole of that amount is raised at three per cent., there would, upon these figures, be a deficit of £74,000. Of course, if the present dock charges were lowered this would be still larger. Therefore, in order to meet that, they would have to increase the present dock charges. Mr. McKinnon Wood sees no difficulty in a competition between a rate-aided body and a private firm. He merely disregards it on the ground that the scheme would be good for trade all round, and would involve the wharfingers like anyone else. Mr. Gomme, who does not appear to share his views as to private bodies and the competition of a municipal body, put in a large number of tables, but I do not think he explained the matter any more fully. That is all I want to say about that scheme. There is no scheme I think before this Commission which you can act upon at all. First, each of them proposes to sweep away private en-

*Mr. Balfour Browne, K.C.*

2 July 1901.

*Mr. Balfour Browne, K.C.*

2 July 1901.

terprise in these docks, and hand it over to some public body, which is not to be self-supporting, but which is to be guaranteed by someone. But even that public body could not carry on without the rates that we are asking. You have it distinctly in evidence that if you took away to-day from Liverpool and from Glasgow the charges that we want to put on all barges and goods, both of those great trusts would be bankrupt. That is distinctly proved by Mr. Scott, and I can give the reference to it.

(*Mr. Harper.*) I understand there are no barge charges.

(*Mr. Balfour Browne.*) I beg your pardon; I think that is not so. There are barge charges.

(*Mr. Harper.*) Not charges on barges.

(*Mr. Balfour Browne.*) There are charges of an equivalent nature. I do not care how I get it. I have Mr. Scott's evidence that if you took away these amounts from the Liverpool charges and from the Glasgow charges both of those great Trusts would be bankrupt. There is no secret about a Trust. A Trust, like a company, must get money in order to go on. Now under these circumstances where does the public come in? I cannot see any benefit to the public that is to be got by merely transferring this to a trust. I think there would be serious damage to the public by putting in public hands what public hands are not qualified to deal with, namely, a trade concern. But what is the benefit? We would have to be purchased at a large sum of money. If the trade left, what would be the result? The Trust would become bankrupt, but London would have to go on paying. Nobody is able to guarantee for the future that London is to remain the centre of the mercantile world. I gave one illustration in the way that the sugar trade had shifted, but there are enormous shiftings of trade going on all over the country to-day. Take the case of Charles Camel and Company at Darnfield; they had a town round them near Sheffield. What took place? They found they were too far from the sea, and they went to Workington, and Darnfield is a town without any manufacture now. The people have left it. That is only a small illustration, but it shows you cannot fix a trade in any one place. At Sheffield Messrs. Vickers, Maxim and Co. have enormous works covering 44 acres. But what have they done? They have bought 78 acres at Barrow-in-Furness so as to be near the sea. Some day it may be thought that London is too far from the sea. At any rate, there is the risk that London will not be the entrepôt for the world in future as it is to-day, and what would be the result? If you put this huge burden upon the people of London you will do them a serious injury. If, on the other hand, you leave it to private enterprise, private enterprise must look out for itself. But I think and believe that the London Docks have a future before them if this great company that has managed them has only the means of carrying on the docks. You have before you all that we propose to do. You have before you the scheme that we propose to carry out, and all that we require is the money to do it. I do not think really either there is any word to be said against the London companies except that they have not the money. That you can cure by making your representation to the Government who appointed you—that we should have the power of making certain charges. That they are reasonable I do not think anybody can deny, because even putting them on, our charges will then compare favourably with any other ports' of this country. I may say that it is our object of course to compete with other ports. Our whole desire is to get trade into London, and our pockets depend upon it. Somebody said, what will a man not do to save his pocket? I think you will find that these Dock Companies will do a great deal to save their pocket, but they cannot raise capital at the present time in the present state of their finances; and if it is to be raised, how is it to be done? Well, my Lord, I have given our view. Again I repeat that there is no fault found with us except that we have not supplied what we cannot supply for want of money, that is to say our poverty is our fault. It

has arisen from the fact of those old Acts of Parliament. You are here to consider the matter, to find out and if you can, advise what is fair in the interests of the public. I say it is fair that people should use our docks and pay some portion of the expenses which we undertook for them. The amount you have had before you, you have had it explained to you how much the burdens are that are put upon us. No Trust is proposed that is not full of inconsistencies and difficulties, and I think the proposal is a very serious new departure in the wrong direction. I think you will find in every case municipalities have been if possible ousted from Trusts connected with docks. At one time the Liverpool Corporation carried on the Liverpool Docks, and it has ceased to do so now. It is an entirely independent trust. But even the Liverpool Trust is in a serious position unless it can keep its trade going. You must remember it is not like a Company with shareholders and debenture holders. It has nothing but debentures, and if their trade might fall off, as it might do (they are doing their best to keep it, and they are spending something like £4,000,000 to-day on the improvement of their docks) they would have the greatest difficulty in raising money; then what would be the result? It would be just the same as you have in the case of the Manchester Ship Canal, which I venture to say was a wrong thing altogether, £5,000,000 of money has to be guaranteed by the ratepayer of Manchester to-day, and Liverpool would very likely have to subsidise that undertaking. Again, I say that the wrong thing was done in taking it out of the hands of private enterprise in the first instance. You have it in the hands of the Company. Give them money to carry on the work, otherwise if you once create a Trust just as these people proposed, that when they fail to pay their interest it should go into the hands of the London County Council, or as in the case of the Manchester Ship Canal—it has passed practically under the control of the Manchester Corporation, because Manchester had begun by putting its hands to the plough by means of a Company which could not carry on the work. Again, I say the Trust in Liverpool may fail, and in that case the Liverpool rates would have to be called upon. It is because it has been taken out of the hands of private enterprise and put into the hands of public bodies. If you do that I think you will have made a step in the wrong direction. I ask this Commission not to recommend it in this particular case.

(*Mr. Porter.*) My Lord, I thought it better not to interrupt my friend, Mr. Balfour Browne, before, but one statement made contained made a mistake. He said that all the schemes proposed a rate guarantee, and that none were self supporting. He was wrong as regards the scheme of the Corporation of the City of London. The Corporation scheme does not propose a rate guarantee, and it does put forward a scheme which we believe to be self-supporting. I thought I ought to correct that mistake which was no doubt unintentionally made.

(*Mr. Balfour Browne.*) I hardly think it is worth while to go into a discussion on that point. There is only one question that I want to say one word upon before I sit down. I do not want, if I possibly can, to have your report mix the Dock question with the other question of the Thames Conservancy, if you can keep that separate. I do not know the Thames Conservancy case, although I heard what my learned friend said about it. I can quite understand we are entirely on a separate basis. I have not charge of the river; somebody else has. I can improve my docks very greatly even with the existing state of the river. Of course we desire to see the river improved very much, but I will ask your Lordship to report, if you will, separately upon my case. This matter is urgent. The trade wants the improvements that I desire to carry out for their benefit, and as you know we have a Bill pending in Parliament for new works, and we want to carry out the new works as soon as we possibly can, and I believe that some such relief as we are seeking by the other Bill is essential before we can carry out the great improvements in the Port which the people in London and the people trading with that Port desire.

*Mr. Lewis Coward, K.C., called to address the Commission.*

*Mr. L. Coward, K.C.*

11833. (*Chairman.*) You desire to address us on behalf of the Millwall Dock Company?

(*Mr. Lewis Coward.*) Yes, my Lord. I rise on behalf of the Millwall Docks, not for the purpose of making a

speech, but simply for the purpose of saying, as I believe my learned friend, Mr. Loehnis, will say also, on behalf of the Surrey Commercial Docks, that I entirely concur in the arguments and the observations that have been made by my learned

friend, Mr. Balfour Browne. I should not have said very much more, but for this fact, that my learned friend, Mr. Scrutton, when he was addressing you suggested that there had been some divergence or conflict of opinion at some time or other between the Dock Company that I represent and the Dock Company that my learned friend, Mr. Balfour Browne, represents, and he suggested that Mr. Trotter was recalled, and that in the interval (that is to say between the time when he had first given his evidence and the time when he was recalled) something underhand went on. I do not understand the observation; nothing underhand has gone on at all. Now let me make it quite clear what the attitude of Mr. Trotter is. At Question 8463 he said, "It has been represented to me that my answer to Question 7109"—

(Chairman.) That has already been read to us once to-day.

(Mr. Lewis Coward.) If the Commissioners have had it, and it is present to their minds, I am sure I do not want to take up unnecessary time in reading any further in reference to it. I pass on, therefore, to one other matter. There has been, from beginning to end of the evidence that has been given before you, no suggestion whatever against the Millwall Docks, or any charge of mismanagement of any sort or description. In Appendix No. 10 of the 23rd Day a column was put in in which charges were made of delays against two vessels in the Millwall Dock, the "Ernest Albert," where it was alleged it was detained six days, and the "Bethel," detained six days also. Now from beginning to end of the evidence that is the only charge that has been brought against the Millwall Docks. It was met on the next occasion that the Commission sat by this statement which you will find at Question 8921; it is a statement by myself: "Before you begin will your

Lordship allow me to correct two statements of fact that were given in evidence at the last sitting of the Commission." Then the details are given. Then Mr. Ellis said, "I was going to say that if evidence is contradicted it must be contradicted by evidence; but I understand the counsel to say he is prepared to prove it," and the matter was never challenged. There is only one other matter that I want to deal with with regard to the Millwall Docks, and that is a statement that was made by Mr. Dunn at Question 11570. That is a statement that I cannot allow to pass unchallenged, though if your Lordship thinks it unnecessary that I should go into the details of the reason that I give for disputing it I will not do so. He is correcting the statement made by Mr. Duckham in reply to Question 1076. He says he "stated that the railway companies have no running powers over the Millwall Extension Railway. This may be the case so far as other companies are concerned, but the North London Company have statutory running powers over that line, and have from time to time suggested putting those powers into force when difficulties have arisen in getting traffic expeditiously carried to or from the Millwall Docks. The powers in question are conferred by the London and Blackwall Railway Lease Act, 28 Victoria, chapter 100, Section 11." Mr. Dunn is in error. There is a later Act of Parliament of 1868, under which, with regard to the line to which he refers, it was enacted that it was to be worked at the cost of the Millwall Canal Company, and that the parts so to be constructed (that was the portion constructed under that Act of 1865, under which they had their running powers) by the Blackwall Company shall be deemed part of their undertaking. I do not think it is necessary for me to go into any detail. I challenge the statement of Mr. Dunn. That is all I have to say on the matter.

Mr. L.  
Coward, K.C.  
2 July 1901.

Mr. H. W. LOEHNIS called to address the Commission.

11834. (Chairman.) You appear before us on behalf of the Surrey Commercial Dock Company?

(Mr. H. W. Loehnis.) On behalf of the Surrey Commercial Docks I accept entirely the argument on the general question which has been advanced by my learned friend Mr. Balfour Browne, but there are certain matters arising out of the peculiar position of the Surrey Commercial Docks which are not unworthy of consideration, and which tend to accentuate, I think, the impracticability of the schemes which have been brought before you. Having regard to the late hour, I do not intend to elaborate these, and I am sure that I shall be doing what you desire if I only mention shortly, without going into detail, the points which I ask you to take into your consideration. The Surrey Commercial Docks are in a peculiar position, and their position I submit throws light on two questions. In the first place, it throws light upon the warehousing—as to the possibility of the trust getting on with or without warehouses. Secondly, it throws light upon this; that a private corporation, provided that it has the financial means requisite, can and does serve the port well. Now, in the first place, we are a successful concern. We have spent since 1865 nearly half a million, quite apart from the £600,000 which is now being spent on the Greenland Dock, and the £250,000 which will be spent before the works are completed. What the Surrey Commercial Docks have always attempted to do is to keep in touch with the trade, and to be in advance of the legitimate requirements of the trade. In the second place, the Surrey Commercial Docks are not only docks; they have running through them the Surrey Canal, which runs from the river through the docks down to Peckham. The Surrey Canal brings in a nett revenue of £12,000 a year. It depends for its prosperity entirely on its connection with the river, with the docks, and with the warehouses. If I am to be absorbed into a public Trust, this public Trust, I submit, must also absorb the Surrey Canal. In the third place, the Surrey Commercial Docks have not been, during the twenty-eight or twenty-nine days that evidence has been given before you, seriously attacked by anybody except perhaps by Mr. Farquharson. I will say a few words on that presently if I may. The Surrey Commercial Docks are devoted to two trades, the grain trade and the timber trade. They are managed by a board of directors who are gentlemen experienced in the business, who devote themselves to equipping and maintaining the docks for the benefit of the business. What

does the grain trade want? The grain trade says they must have some independent authority between the ship and the receiver. I refer to the evidence of Mr. Coombe at Question 2852, and the evidence of Mr. Roffey at Questions 10019, 10020, and 10037. The Surrey Commercial Docks do that. What does the timber trade want? Mr. Farquharson stated that vessels now arrive in London carrying between 200,000 and 300,000 pieces on between 30 and 40 different bills of lading. The trade must have somebody constituted to disentangle the various cargoes, to sort them, to draw up specifications, to stack them either in shed or in the open air, to warehouse them, and to form a sort of central timber market for London and the surrounding district. That is what the Surrey Commercial Docks do. In all these matters I submit it gives satisfaction. Those being the requirements of the trade, may I ask you to carry your memory back to the time when you visited these docks, and then see what the physical condition of the Surrey Commercial Docks is. It is impossible when you look at it to separate the better part of the warehousing business of the Surrey Commercial Docks from that which has been called the dock business. What the Chamber of Commerce said was they wanted to have the water space up to the quay. I am assuming for the purposes of my argument that you are going to suggest that a port trust of some sort or kind ought to be constituted. Is it desirable that this Port Trust should have control of the warehousing? Practically nobody engaged in the trade has said so. The Chamber of Commerce as a body has come to the conclusion (and their scheme is based upon this) that it is undesirable in their opinion that this Port Trust should do any warehousing at all. They will not touch it. I ask you to say that that is an opinion brought forward by a responsible authority, to which you will attach attention, and attach more attention to it than you will to that which has been suggested by the Corporation, and by the County Council, both of whom are willing to take over the warehousing, not because they desire to do so, but because they find it impossible to make the separation either physically or commercially. Therefore, when you have to consider this case, I submit you are face to face with this; you must either do that which the trade (by the "trade" I mean the Chamber of Commerce as the mouth-piece of the trade) thinks wrong, namely, suggest that the warehousing should be taken over by the trust, or you must do that which I, on behalf of the Surrey Commercial Dock, submit is the right

Mr. H. W.  
Loehnis

Mr. H. W.  
Lochnis.  
2 July 1901.

course, constitute your public trust for the purpose of having control of the river, and amalgamate within its powers all the various privileges and rights exercised at the present moment by the Thames Conservancy, and those who police the river, and deal with the control of lighters, and such things, but stop short of taking away their property from the various bodies who are carrying on the business of Dock Companies. The opinion of the traders is that the trust should not warehouse; that is an authoritative opinion. I submit that you must come to the conclusion that physically it is impossible to take away the water approaches from the docks, and leave them the warehousing. It is not business. The grain trade and the timber trade (the two trades with which I am concerned) have stated in so many words that it cannot be done. Then the only other alternative is—unless you come to the conclusion that all the Dock Companies have neglected their business in the past in such a way that they ought to be swept away—whether you cannot do that which everybody is agreed is necessary for the Port of London, namely, the deepening of the river and the improving of the approaches without infringing upon our property. There are only two further observations which I hope you will allow me to make. Mr. Scrutton has said: "Why is the Surrey Dock Company here?" Fortunately, I have been able to pay my shareholders a fair return on their money, and at the same time given, as I hope I shall satisfy you in a moment, satisfaction to the trade. But I am here because I take the view of those whose funds have not been so fortunately managed as mine. I think that it is inequitable that the barges and the goods should use property, buildings which I have erected and facilities which I afford at great expense without any payment for them. If I were not here—if the time unfortunately should ever come when I should have to apply for powers—it might be said against me that I had not taken the view in my prosperous days which I had taken in my unfortunate days, that this was a charge which ought not to be allowed.

One word about the evidence which has been given attacking me. The only person who has declaimed against the Surrey Commercial Docks, apart from the congestion, which I am not going to deal with, because that has been explained over and over again, has been Mr. Farquharson; I do make a grievance of it that there has been evidence given by merchants before this Commission which, till it was tested on cross-examination, made a strong case. I am only going to give you

as an instance the shortages which were complained of by Mr. Farquharson. He came here and complained of the invariable shortages which occurred in the Surrey Commercial Docks. I do not know whether the Commission is aware that these so-called shortages are mere paper shortages occasioned by the mis-delivery by the ship into barges of goods which ought to have been landed—that the goods which ought to have been delivered into barges were landed, and that in every case where there was that which was called a shortage there was a quantity of goods on the quay landed "for the account of whom it might concern." It was a strong case till those facts were ascertained. Then Mr. Farquharson had to admit that in all these cases there had been large quantities of goods landed "for the account of whom it might concern," which were distributed by the broker amongst the merchants. The shortages were due, if there were any shortages, not to any default of the dock company, but to a default of the ship. That is the class of evidence that has been accumulated here by gentlemen who were acquainted with the facts, and who ought to have come forward and given their evidence in a way so as to lay the whole of the matter before you. Mr. Roffey stated in quite the early part of his evidence that which, I think, applies to the whole of the evidence given by the individual members of the Chamber of Commerce. When he was asked, I think by Lord Revelstoke, "Is this statement of evidence which we have before us written by yourself?" he said, "Yes, and if I had known I was to be cross-examined upon it I should have been more careful." That is a thing which applies to every witness, I think, who has given evidence on behalf of the Chamber of Commerce.

(*Chairman.*) This concludes the evidence which the Commission will take. Before we part we wish to express our thanks for the valuable help which has been rendered to us by the Dock Companies, by the Corporation of the City of London, by the London County Council, by the Thames Conservancy, the London Chamber of Commerce, and others interested in the Inquiry, and also to the counsel representing the several interests in what, we fear, has been a very lengthy Inquiry.

(*Mr. Porter.*) My Lord, as I am the senior member of the Bar present, my brethren desire me to say that they feel under great obligation to your Lordship for the great patience you have extended to us, and the invariable courtesy with which we have been treated and assisted in every possible way.

# ROYAL COMMISSION ON THE PORT OF LONDON.

## INDEX TO MINUTES OF EVIDENCE.

### PART I.

#### ANALYSES OF WITNESSES' EVIDENCE.

**ANDERSON, JAMES GEORGE SKELTON**, Manager of the Orient Steam Navigation Company. (See Questions 2077-2161.)

Australian Trade of Company; 2078; 2083.

Bills of Lading, alteration of, difficulty of, 2128-34.

Carts, delivery of goods by, 2160.

Chairman, election of, 2080.

Channel of River:

Deepening and Widening, necessity for, 2087-90; 2139-42.

Depth of, statements by Thames Conservancy as to, 2085-6; 2154-7.

Charges of Port of London, Comparison with Antwerp and other Ports, 2092-103.

Discharge of Cargoes:

Barges, discharge into, 2115-24.

Charge proposed, 2116; 2146.

Cost of landing and sorting goods on docks, 2125-34; 2143.

Dock Company, discharge by, 2112-4.

Docks, discharge in compared with discharge in river, 2146-50.

Docks used by the Company, 2084.

General Shipowners' Society represented by Witness, 2081-2; 2090; 2107-8; 2111.

Labour Question, effect on Port, 2093; 2095; 2103.

Light Dues, payment of, 2101.

Pilotage, charges for, 2093; 2100.

Thames Conservancy, information received from, 2085-6; 2154-7.

Tilbury Dock:

Extension and construction of new entrance proposed, 2091; 2138-42.

Lighterage, necessity for, 2115; 2117-24.

Railway communication with, 2091; 2118; 2123; 2158-61.

Working of, 2090-1.

Trust, formation of, views as to:

Charges, levy of, 2127-34; 2137.

Constitution and revenue of, 2104-11.

Warehouses and Wharves, inclusion of in scheme, 2135-6.

Vessels:

Delay to, 2093; 2095-7; 2103.

Draught of Water, 2086-7.

Number of Orient Fleet, 2151-2.

Tonnage of, 2153.

Wages in the Port of London, 2093; 2097-8.

Wharves, Extension of system, views as to, 2144-5.

**ARDLEY, GEORGE HENRY**, Member of the Amalgamated Society of Foremen Lightermen of the Thames, and Foremen Lightermen to Messrs. Hinton and Horne, Coal Merchants. (See Questions 10956-11123.)

Amalgamated Society of Foremen Lightermen of River Thames:

Balance-sheet, 11005-6.

Formation and registration, 10998-11001.

Membership, numbers, etc., 11007-13.

Rules, 11036-8; 11082-6.

Witness a member of, 10957; 10997; 11014-8.

Apprentices, Watermen's Company:

Advantages of system, 10959; 11035.

Barges, sole charge of, age at which qualified for, 10959; 11087-91.

Bye-laws of Watermen's Company as to, 11088-91.

Number of, 11036-8; 11082-6.

Barges:

Medway barges, navigation on Thames, 10975-96; 11029-31; 11067-71.

**ARDLEY, George Henry**—continued.

Barges—continued.

Navigation of barges under oars:

Continuation of practice, 11118-9.

Cost of, comparison with cost of towing, 10959-61; 11118.

Firms practising, 11020-5.

List of, 11109-16.

Number of, compared with number towed, 11020-8; 11057-66; 11115-7.

Size of barges in relation to, 10967-72; 11092-108.

Thames, navigation of barges on, difficulty of, 10959.

Chief difficulty, 10962; 11073-81.

Towing of Barges:

Cost of, compared with navigation under oars, 10959-61; 11118.

Extent to which practised, 10959; 10963.

Length of journey for which preferable, 10964-7.

Number of barges navigated under oars, comparison with, 11020-8; 11057-66; 11115-7.

Western barges, navigation of on Thames, 11072-82; 11120.

Business carried on by Messrs. Hinton and Horne, 10959.

Documents handed in by Witness:

Amalgamated Society of Foremen Lightermen of River Thames:

Balance-sheet, 11006.

Rules of, 11004.

Barge owners who navigate under oars, list of, 11110.

Engagement of lightermen, private judgment exercised in, 11039-49.

Evidence of witness, interests represented, 10957-8; 10997; 11016-8.

Licences for lightermen, advantages of system, 10959.

Number of Lightermen:

Supply available, 10973-4.

Thames Conservancy regulations as to, 11050-6.

Strikes of Lightermen:

Compulsion as to work, impossibility of, 11034-5.

Settlement of strike of 1900, 11121-3.

Thames Conservancy, regulations as to lightermen, 11050-6.

**AVORY, HORACE EDMUND, K.C.** Address on behalf of Watermen and Lightermen's Company. (See pages 576-580.) (The references given are to pages.)

Acts of Parliament:

Thames Conservancy Act 1894, 578; 580.

Thames Watermen and Lightermen's Act 1893, 580.

Watermen's Company. Acts relating to, 577-80.

Barges:

Insurance of, 578-9.

Medway and Western barges, navigation upon Thames, employment of "Hovellers," 578-9.

Navigation under oars, 578.

Registration and measurement, 580.

Tugs for, licensed men employed on, 578.

Bills:

Thames Lightermen's Bill 1901, petitions to Board of Trade as to, 578.

Watermen's Company, Bills referring to, 577-80.

**AVORY, Horace Edmund, K.C.—continued.**

- Committee on Thames Watermen and Lightermen Bill 1890 :
- Deputation to Board of Trade as to report of, 580.
  - Evidence before and recommendation of as to lighterage, 578-9.
  - Licences for Lightermen :
    - Abolition of :
      - Individual character of grievance as to licences, 577.
      - Legislation recognising advantages of existing system, 577-8.
      - Master lightermen, views as to, 579.
      - Representative bodies, no recommendation received from as to, 577.
      - Strikes, necessity for abolition not proved by, 577.
      - Termination of Watermen's Company in event of, 575-6.
    - Application to whole of jurisdiction of Watermen's Company, 580.
  - Number of lightermen and watermen available, 579-80.
  - Strikes of Lightermen :
    - Abolition of licences, necessity for not proved by, 577.
    - Committee on Thames Watermen and Lightermen Bill 1890, evidence as to before, 578.
  - Trust, London Chamber of Commerce scheme, references to Watermen's Company in, 577.
  - Tugs for barges, licensed men employed on, 578
  - Watermen, number of, 580.
  - Watermen and Lightermen's Company :
    - Funds of, 580.
    - Transfer of powers of, 580.
    - Vested interests, 582.

**AYERS, GEORGE, Commodore Captain of the Thames Steamboat Company. (See Questions 11479-11497.)**

- Apprentices to Watermen's Company, advantages of system, 11496-7.
- Evidence of witness, preparation of, 11488-9.
- Experience of witness on Thames, 11482.
- Licences for lightermen :
  - Advantages of system, 11482-3.
  - Meeting of deck hands of Thames steamers, resolution passed at, 11482, 11484-7.
  - Witness holding, 11490-5.

**BAGGALLAY, CLAUDE, K.C. Addresses on behalf of the Promoters of the Thames Lightermen's Bill 1901, and the Thames Conservancy. (See pages 574-576 ; 613-618.) (The references given are to pages.)****Address on behalf of Promoters of the Thames Lightermen's Bill 1901, 574-576.**

- Acts of Parliament :
  - Private Acts regulating lighterage, 576.
  - Thames Watermen and Lightermen's Act 1893, 575.
- Almshouses and charitable institutions of Watermen's Company, 576.
- Barges :
  - Accidents, liability in cases of, 575.
  - Measurement and registration :
    - Act of Parliament as to, 575.
    - Transfer of powers, 576.
  - Towing, increase in, 575.
- Bills :
  - Private legislation as to lighterage advocated, 576.
  - Thames Watermen and Lightermen's Bill 1890, 575.
- Committees :
  - Navigation of River Thames, Committee of 1879 on, report as to Watermen's Company, 574-5-6.
  - Thames Watermen and Lightermen Bill 1890, report of as to lighterage, 575.
- Licensing and examination of lightermen, abolition advocated, 575-6.
- Number of lightermen to each barge, 575.
- Strikes of lightermen, 576.
- Towing of barges, increase in practice of, 575.
- Watermen, transfer of powers, 576.
- Address on behalf of Thames Conservancy, 613-618.**
  - Acts of Parliament :
    - Loans to harbour authorities by Public Works Loans Commissioners, Act authorising, 617.

**BAGGALLAY, Claude, K.C.—continued.****Address on behalf of Thames Conservancy—continued.****Acts of Parliament—continued.****Thames Conservancy Acts :**

- Act of 1864, 614.
- Act of 1866, 614.
- Act of 1894, 614 ; 618.

**Bills—Thames Conservancy Bills :**

- Bill of 1857, creation of Conservancy by, 614.

**Bill of 1894 :**

- Channel of river, deepening, clause as to, 614-5.
- Cost of promoting, 615.
- London County Council Report and proposals as to taxation of Thames Valley, 615.
- Statutory Committees, discussion as to, 617.

**Channel of river, deepening :**

- Financial position of Thames Conservancy in relation to, 615.

**Funds for :**

- Application to Parliament for, none made by Conservancy, 614-6.
- Sum required, 616.

- Lower Thames Navigation Commission, 1896, recommendations as to, and action of Conservancy thereupon, 614-8.

**Position of Conservancy as to, 613.**

- Powers of Conservancy, Clause as to Sewers Commissioners in Act of 1894, 618.

- Proposals of Conservancy, as to future deepening, and raising of funds for, 616-7.

**Commissions :**

- Harbours of Refuge, Royal Commission of 1858 on, 617.

- Lower Thames Navigation Commission, 1896 :

- Recommendations as to deepening of Channel, 614-8

- Resolution on Report of, action of London County Council Members on Conservancy Board, 617.

- Unanimous character of Report, 615.

**Committees :****House of Commons :**

- Authority of Upper and Lower River. Committee of 1865 on, 614

- Thames Conservancy Bill 1894, Committee on, 615

**Thames Conservancy :**

- Statutory Committees, proposals as to, 617.

- Upper and Lower River, administration of, 616.

- Docks, control of, not desired by Thames Conservancy, 616.

**Document handed in by Witness :**

- Minutes of Proceedings at Meeting of Conservators, 11814.

**History of Thames Conservancy, 613.****Moorings, complaints as to, 613.****Number of members of Board, 616.****Report, annual, attention not called to deficiencies of River, 618.****Teddington Lock, point for division of river in event of dual control, 617.****Trust :**

- Government aid, improbability of, 617.

- Schemes advocated by London County Council, City Corporation, and Chamber of Commerce, 616-7.

**Upper and Lower River :**

- Control of, 614 ; 616.

- Members of Upper River Committee, approval of existing arrangements and proposals of Thames Conservancy, 617.

**Vessels entering Port, increase in tonnage of, 616.****BAGGALLAY, HENRY CHARLES, late Engineer to the London and India Docks Company. (See Questions 771-975 ; 6696-6897 ; 7481.)****Barge ponds, definition, 6793-4.****Barge searchers :**

- Duties, 6795-9.

- Wages, 6701 ; 6703.

**Barges :**

- Assistance rendered by Dock Company's staff to, 6700 ; 6844.

**BAGGALLA Y** Henry Charles—*continued.***Barges—continued.**

Assistance rendered by Dock Company's staff to—*continued.*

Charge on barges, proposed, effect of, 6856-9.

Royal Albert Dock, custom as to, 6836-43; 6845.

Cost incurred by Dock Company in respect of, 6701-3; 6774-8; 6787-8; 6795-826.

Increase estimated in event of increased privileges to barges, 6744-6.

Damage done by, 6703; 6801-13; 6820-3.

Loss of water caused by, 6724-9.

Number locked, comparison with number of ships, 6703; 6709-23; 6733-9; 6787-92; 6814-9; 7481.

Period of undocking, 6740-4.

System of dealing with, 6699-700.

Water area occupied by, 6703.

Width of docks, influence on, 6766-9.

Blackwall Tunnel, dredging over, 920-1.

Channel of river, deepening, views as to, 843-8; 878-96.

Cranes, expenditure on, 6704.

**Docks:**

Barges using. *See sub-heading Barges.*

Deepening, confined to entrances and locks, 6860.

Dredging in. *See that sub-heading.*

Gates, opening, time of tide for, 782-5.

Electricity, use of, 936-40.

Existing system, soundness of, 6771.

Expenditure on improvement and equipment of docks 1893-1900, 6704; 6779-86.

Length of quay per acre, 6703.

Maintenance of and expenditure on, per annum, 6704.

Schemes suggested for dock construction, views as to, 6705-8; 6771-3.

**Sills of:**

Depth of water required under keel when coming over sill, 858-61.

Outer deeper than inner, 779.

(*See also names of docks.*)

**Document handed in by witness:**

Docking and undocking in London and India

Dock Company's Docks, particulars of, 6703.

**Dredging in docks, 6860-70.**

Amount of material dredged, 6701; 6703; 6747-8; 6860-70.

Cost incurred by Dock Company, 6701; 6703.

Allocation—dredging of siltage distinguished from deepening of docks, 6761-5.

Charge on barges, increase in event of, 6744-6.

Deposit of material dredged, 6702.

Vessels entering docks, effect of on, 6860-8.

**East India Dock:****Barges in:**

Number entering, 6703; 6738-9.

System of dealing with, 6700; 6703.

Construction, date of, 6771.

Description of, 897-903.

Dredging in, 897.

Enlargement of, 908-9; 915.

Improvements in, effected and possible, 904-9; 915.

Expenditure on, 6704.

Quay, length of, per acre, 6703.

**Vessels entering:**

Accommodation for, 898; 900-2.

Wines and spirits, vessels carrying, 900-2.

Water in, lowered to depth of river, 910-4.

Evidence of witness, preparation of, 6827-30.

Grain elevators, erection of, 6831-2.

**High water:**

Ordnance datum, 773-5.

Pumped docks, maintained at Trinity level, 779-81.

Spring and neap tides, 772-9.

Trinity high water, standard accepted by Joint Committee, 772.

**London Docks:****Barges in:**

Number entering, 6703; 6738-9.

System of dealing with, 6700; 6703.

Battering of walls, 952-8.

**BAGGALLAY** Henry Charles—*continued.***London Docks—continued.**

Construction, date of, 6771.

Description of, 948-71.

Electrical installation, increase in, 6704.

Flooding, prevention, 6772.

Improvements not contemplated, 950; 959-67.

**Pumping in:**

Cost of, 6703.

Dredging, necessity for, not affected by, 6871-8.

Necessity for, 6701.

System adopted, 948.

Water taken from Shadwell Basin, 6871-8.

Quay, length of, 6703.

Vessels, accommodation for, 955-7; 961-3; 968-71.

Low water, spring and neap tides, 778-9.

Millwall Dock, length of quay per acre, 6703.

**Pumping:**

Cost of, 6701; 6703; 6740-4.

Allocation of, to ships and barges, 6743-60.

**London Docks:**

Necessity for dredging not affected by pumping, 6878-85.

Water taken from Shadwell Basin, 6871-8.

Mud contained in pumped water, 6846-55.

Royal Albert Dock. *See that sub-heading.*

Poplar Docks, lease of, granted to Railway Company, 941-7.

**Royal Albert Dock:****Barges in:**

Assistance not rendered to, 6836-43; 6845.

Number of, 6703; 6733; 6738-9.

System of dealing with, 6700.

Width of dock, influence on, 5767; 6703.

**Channel of river:**

Deepening, effect of on docks, 843-8; 878-96.

Levels of water at dock entrance, 6703.

Concreting of quays and sheds, 6704.

Construction, date of, 6771.

Cranes, employment at, 841; 6704.

Description of, 818-24; 839-42; 862-77.

Dredging in, 842; 874-7.

Expenditure on improvements, 6704.

Extension and deepening proposed, 811; 824-39; 842; 849-56; 893-6.

**Pumping in:**

Cost of, 6703.

Engine, new, 6704.

Necessity for, 6701; 6750.

Period of, 6892-4.

Position of engines, 820.

Water, point from which taken, 6885-91.

Quay, length of, per acre, 6703.

Vessels, accommodation for, 820-4; 841-2; 862-8.

**Royal Victoria Dock:****Barges in:**

Number entering, 6703; 6733; 6738-9.

Special level made for, 6732; 6787.

System of dealing with, 6700; 6703.

Canal at East end, 6703.

Channel of river deepening, effect of on, 843-8; 878-96.

Construction, date of, 6771.

Description of, 818-24; 839-42.

Dredging in, 842.

Expenditure on improvements, 6704.

Grain elevators, erection of, 6704; 6831-2.

**Pumping:**

Cost of, 6703.

Engine, new, 6704.

Necessity for, 6701; 6750.

Quay, length of per acre, 6703.

**St. Katharine Docks:****Barges in:**

Number entering, 6703; 6738-9.

System of dealing with, 6700; 6703.

Construction, date of, 6771.

Description of, 972.

Dredging in, 972.

Improvements not contemplated, 973.

Quay, length of per acre, 6703.

**South West India Dock:****Barges in:**

Number entering, 6703.

System of dealing with, 6700.

Battering of walls, 952-3; 957.

**BAGGALLAY, Henry Charles—continued.****South West India Dock—continued.**

Construction, date of, 6771.  
 Dam, temporary, silting up of mud at, 6771.  
 Description of, 916-7.  
 Improvements at, 922-4 ; 932-3.  
 Expenditure on, 6704.  
 Surrey Commercial Docks, length of quay per acre, 6703.

**Advantages of Port of London, 3045.****Authority for the River :**

Extension of jurisdiction proposed, 3130-1 ; 3153-4 ; 3160.  
 Separate, for tidal and non-tidal River, proposed, 3132.

Bar at mouth of river, non-existent, 3045-6.

**BINNIE, Sir Alexander Richardson—continued.****Barrow Deep :**

Dredging spoil, deposit in, 2999 ; 3019-30.  
 Sludge, deposit in by London County Council, 2999.  
 Complaints as to, 3000-1.  
 Cost of working sludge, 2999.  
 Limit of channel for deposit, 3012-5.  
 Quantity deposited, 3016.

Solids and liquids, proportion of, 3017-8.

Trinity House, powers of in regard to, 2999 ; 3002-11.

Vessels employed, 2999.

Surveys of, 3031-3.

**Blackwall Tunnel :**

Expenditure on by London County Council, 7752.

Top of, depth of, 3063 ; 3071-3.

Bridges under control of London County Council, 3035.

Chalk, dredging in, 3084 ; 3124.

**Channel of River :****Deepening :**

Ability of River to maintain 30 ft. channel, 3119-23.

Above Albert Docks, 3064-80.

Below Albert Docks, 3060-3 ; 3113-8.

Cost of, estimate of, 3086-103 ; 3113-8.

Section of River and plans prepared, 3064-8 ; 3082-5 ; 3125.

Shoals below Gravesend excluded, 3094-5 ; 3104-12.

Depth advocated, 3045.

Embankments, effect of dredging on, 3084.

Above Albert Docks, 3064-70.

Below Albert Docks, 3060-3.

Necessity and practicability, 3055-63.

Tidal action and scour of river, effect on, 3130.

Width of 30 ft. Channel, 3051-4.

Flood, liability to, 3039-43.

**Commissions :**

London Water Supply 1899, 3155-8.

Lower Thames Navigation Commission 1896, 2999 ; 3019 ; 3057 ; 3095 ; 3105-9 ; 3131.

**Docks :****Access to :**

Plan of, 7751-2 ; 7760.

Roadways, improvements effected and contemplated, by London County Council 7752-68.

Sites available for, 3155-6.

**Documents handed in by Witness :**

Population, increase of in County of London, 2999.

Thames, flow of, tables as to, 3155.

Drainage of London—main drainage works, 2999.

Dredging power of London County Council, limit of, 3034.

**Embankments :**

Dredging 30 ft. channel, effect on, 3060-70 ; 3084.

London County Council, authority over, 3035.

Fire Brigade work, 3035.

Flood, areas liable to, 3035-43.

**Flow of River :****Tidal flow :**

Deepening of Channel, effect on, 3130.

Records of, improvement in flow, &c. 3131-4 ; 3147-52.

Richmond half-tide lock, effect on, 3136-46.

Upland flow, natural and actual, 3155-64.

Gravel dredged from River, sale of, 3126-9.

**Greenwich Footway Tunnel :**

Expenditure on proposed by London County Council, 7752.

Top of, depth of, 3063.

**London County Council :**

Duties of, 2999 ; 3035.

Roadways leading to docks, improvements, 7752-68.

Plan showing railway and road communication with docks, 7751-2 ; 7760.

Population of County of London, 3043.

Increase in, 2999.

Railway communication with docks, 7751-2.

Rateable value of area under London County Council, 3043-4.

Rates, proportion contributed by City Corporation, 7764.

**BINNIE, Sir Alexander Richardson—continued.**

Rotherhithe Tunnel :

Expenditure on proposed by London County Council, 7752 ; 7760.

Top of, depth of, 3063.

Sewage, disposal of, 2999.

Customs Bill of Entry, sample of Bill A, 3407-11.

General Steam Navigation Company, issue of, 3407.

Short Sea Traders' Association, Bill authorised by, 3400-1; 3464.

Bridges, construction of, 3400.

**Channel of River:****Deepening:**

Cost of, provision from Imperial sources advocated, 3443; 3513-6.

Necessity for, 3403-7; 3443.

Depth of at certain points, 3403-4.

**Charges, Port of London:**

Comparison with Foreign Ports, 3423-33; 3470-1; 3500-12.

Compulsory pilotage in relation to, 3412-23; 3470-1.

Goods, charge on, 3448; 3456-60; 3464-9; 3473.

Small ships in Upper Docks, comparison with large ships in Lower Docks, 3430.

Commission—Lower Thames Navigation Commission 1896, 3401.

Cranes, public, provision advocated, 3412.

**Customs House:**

Bill of Entry, sample of Bill A, 3407-11.

Officers, charges for overtime, 3412.

Vessels, returns as to, 3411.

Disadvantages of Port of London, 3411.

**Discharge of Cargoes:**

Barges, discharge into, or landing on quay, optional, 3464-9.

River and Docks, discharge in:

Cost of, comparison, 3412.

Number of vessels so discharging, proportion, 3411.

Shipowners' responsibility in continental ports, 3467.

Docks, improvements advocated, 3411.

**Documents handed in by witness:**

Bill of lading adopted by Short Sea Traders' Association, 3400.

Charges incurred by steamers in London and continental ports, tables comparing, 3423; 3429.

Members of Short Sea Traders' Association, list of, 3400.

Resolution passed by Short Sea Traders' Association, 3527.

Dredging, necessity for, 3443; 3445.

Fog, difficulties arising from, 3486-99.

Fresh Wharf, use of, by General Steam Navigation Company, 3407; 3411.

**General Steam Navigation Company:**

Crane power used by, 3412.

History of Company, etc., 3397-400.

Profit earned in 1899, 3411.

Vessels belonging to, tonnage of, 3407.

Returns as to, entering and clearing Port of London, 3411-2.

Hamburg, charges at, comparison with London, 3423-9; 3470-1.

Havre, charges at, comparison with London, 3429.

**CATTARNS, Richard—continued.**

Labour questions, 3449.

Merchandise Marks Act, effect of, 3400; 3407; 3411.

Moorings:

Private, abolition advocated, 3434-42.

Supervision of, 3476-7.

Pilotage, compulsory, 3412-23.

River steamers, avoidance of, by registration in London, 3423; 3470-1.

Resolution passed by Short Sea Traders' Association, 3527.

Rotterdam, charges at, comparison with London, 3423-9; 3470-1.

Salvage, authority for, 3399-400.

Short Sea Traders' Association:

Formation and objects of, 3400.

Resolution passed by, 3527.

Trade Mark and Bill of Lading, 3400-1.

Wharves, 3401.

Thames Conservancy:

Salvage powers, extension advocated, 3399-400.

Short Sea Traders not represented on, 3401.

Trade of Port, competitive character, 3449-50.

Transhipment trade, 3407-11; 3447-8.

Trust, formation of, views as to, 3446; 3484; 3518.

Upper Docks, definition of term, 3474.

Tide gauge, additional, advocated, 4259-62.

Vessels, detention of, 4263-9; 4295-6.

**DAWES, SIR EDWYN SANDYS, Senior Partner of Gray, Dawes and Company, Shipowners, and Chairman of the New Zealand Shipping Company. (See Questions 10564-10642.)**

Accommodation and facilities, Port of London, improvements advocated, 10568-71; 10574-5.

Antwerp, vessels trading with part cargoes for, 10611-4.

Captains and Mates of vessels, examinations for, 10622-5; 10629-30; 10633-4.

Channel of River, deepening:

Letter to Thames Conservancy, from ship-owners, 10591-2; 10603.

Views as to, 10571; 10576-7; 10584-94; 10599-601.

Charges on goods and shipping, views as to, 10604-10; 10637-9.

Commission—Lower Thames Navigation Commission 1894-6, 10576-7; 10584-94.

Discharge of cargoes, rapidity of, importance of, 10574-5.

Documents handed in by witness:

New Zealand Exports, tables as to, 10571.

Evidence of witness, interests represented, 10568.

Frozen meat trade, accommodation and facilities for, 10571-3.

Licences and examinations for lighterman:

Abolition advocated, 10566-7; 10562-3; 10615-28; 10632-6; 10640-2.

Strikes, inconvenience caused by, under present system, 10567; 10615-21.

Middlesbrough, foreign vessels trading at, 10611.

Quartermasters and seamen, examinations not held for, 10640-2.

North American Bill of Lading, discharge of cargoes under, 10578-81.

Positions held by witness, 10564-5; 10568.

Royal Albert Dock, barge canal construction advocated, 10568.

Trust, formation, views as to, 10602.

Vessels entering Port of London, tonnage of, 10568; 10571; 10595-8; 10603.

Warehouses and sheds, accommodation and equipment, 10571.

**DEERING, RICHARD, Managing Director of Messrs. J. W. Cook and Company, Limited, Wharfingers and Barge-owners. (See Questions 3953-4010; 10864-10919.)**

Act of Parliament—Merchant Shipping Act, 3959. Apprentices, Watermen's Company, advantages of system of, 10866.

Association of Master Lightermen, witness representative of, 3954.

Barges:

Accidents:

Liability of lightermen, 3959; 10866-7.

Screw steamers, accidents from, 10866.

Charges on, proposed, effect of on transshipment trade, 3959.

Delivery of goods to, delay in, 3962-73.

Docking and undocking, facilities inadequate, 3959.

Humber, navigation on, comparison with Thames, 10910-3.

Insurance of barges and of goods contained therein, 10867.

Lee barges, navigation of, 10893-7.

Medway barges, navigation of, 10897-92.

Navigation under oars, 10869-70.

Passes for, in cases of dispute, 3959; 4009-10.

Steam barges, use of, 3979.

Thames, navigation on, not comparable with other rivers, 10866, 10910-3.

Western barges, navigation on Thames, 10898-93.

Charges proposed on goods and barges, 3959; 4000-2.

Committees:

Navigation of River Thames, Committee of 1879 on, 10868.

Thames Watermen and Lightermen Bill 1890, Committee on, 10878.

Convictions of Lightermen, rarity of, 10867.

Cook, J. W., and Co.:

Accounts, publication of, 3983.

Business carried on by, 3955-9.

Dividend paid by, 3980-4.

Court of Watermen's Company, position of witness on, 10916.

Customs, Board of:

Lighterage of dutiable goods, 10866-7; 10872-4.

Reforms advocated, 3962.

Docks:

Facilities for barges, inadequacy of, 3959.

Financial position of Dock Companies, aid advocated, 3973, 3997-4002, 4006.

Improvements advocated, 3962, 4006-7.

Machinery at, 3962, 3969.

Management of, 4002-4.

Pumping into locks from stream, 3959, 3972-3, 3998-9.

Experience of witness as lighterman, 10866.

Goods:

Charge on advocated, 4000-2.

Transshipment trade, effect on, 3959.

Dutiable goods, lighterage of, 10866.

Accidents, claim by Customs in cases of, 10867.

Bond of Messrs. Cook to Customs Department, 10872-4.

Gray, Mr. R., member of Court of Watermen's Company, 10916.

Licences for Lightermen:

Advantages of system of, 10866-7; 10871.

Authority for, transfer of, views as to, 10879-86.

Cancelling and renewal of, 10866.

Two years licences, 10866.

Strike of Lightermen in 1900:

Labour carried on by Messrs. Cook during, 10875-7.

Origin of, number of men out, etc., 10904-9.

Tilbury Dock, Customs regulations, reform advocated, 3962.

Transshipment trade, state of, 3759; 3985-91.

Trust, formation of, views as to, 4008.

Tugs:

Docks, employment in, for use of barges, 3959-61; 3974; 4005.

Men employed on, 3979; 10917-9.

Vessels:

Laid up for winter months, inconvenience caused by, 3962; 3975-7.

Speed of, regulation advocated, 3959; 3992-6.

**DIXON, JOHN**, Docks and Marine Superintendent at Southampton. (*See Questions 5417-5458.*)

## Acts of Parliament:

Harbour Docks and Piers Act 1847, 5420.  
Southampton Docks Act 1871, 5420.

## Administration of Docks:

Railway ownership, advantages of, 5422-3.  
Warehouses, inclusion of, 5424-5.  
(*See also sub-headings London and South-Western Railway Company and Southampton Harbour Board.*)

Buoying, authority for, 5420.

## Cargoes:

Distribution, method of, 5420.  
Weighing and measuring, 5420.

Charges levied, 5420.

Customs House, hours for discharge, 5421.

Dock regulations and Harbour Board bye-laws, 5420.

## Docks:

Description of, 5420.  
Gates, 5428.

## Dredging:

Authority for, 5447-8.  
Cost of, 5447-8; 5457-8.

Engineering and shipbuilding firms, factories belonging to, 5420.

Fruit trade, accommodation for, 5420.

Grain trade, accommodation for, 5420.

Labour in docks and on board ship, 5420-1.

London and South-Western Railway Company:

Accounts, income and expenditure, 5434-8; 5445.

Advantages of ownership of docks, 5441-2.

Authority for docks, 5420.

Transfer of docks to, 5420; 5439-45.

Machinery at docks, 5420.

Meat trade, accommodation for, 5420.

Pilotage, authority for, and rates levied, 5420.

Positions held by witness, 5417-9.

Railway communication with docks, 5420.

Southampton Harbour Board:

Accounts, 5430.

Authority for port, 5420.

Constitution and powers of, 5420.

Interest paid on bonds, 5431-3.

Quays belonging to, 5420.

Surveys of channels, authority for, 5420.

Tides at Southampton, 5426-7.

Timber trade, accommodation, 5420.

Tugs, private ownership, 5420.

Vessels entering port:

Coal, consumption of, increase in, 5448-9.

Tonnage of:

In 1900, 5420.

Increase since 1892, 5443-6.

Over 2,000 tons burden, statement as to, 5421.

Warehouses and sheds:

Accommodation provided, 5420.

Expenditure on, 5445-6.

Private firms, no competition with Dock authority, 5450-6.

**DIXON-HARTLAND, SIR FREDERICK DIXON**, Chairman of the Thames Conservancy. (*See Questions 1384-1682; 5566-5569; 7482-7541.*)

## Acts of Parliament:

Thames Act 1883, 1384.

Thames Conservancy Act 1894, 1384; 1503; 1554-8; 1570; 7484; 7537.

Antwerp, transfer of trade to, 1424-5; 1658-60.

Authorities for the River:

Plurality of, 1395-403; 7524-5.

Sanitary Authority, 1421-3; 5568.

Trinity House, *see that sub-heading.*

Views as to, 7520-2.

Barges, bye-laws as to lights and navigation, 1384.

Barrow Deep, dredging spoil, deposit in, 1419-21; 1458-61; 1642-7.

## Bills:

Compulsory Pilotage and Watermen's Company

—Bills of 1883, referring to, introduction proposed by Board of Trade, 1384; 1405-7.

Thames Conservancy, bills introduced by:

Sessions 1881-2, 1384.

Session 1894, 1384; 1491-4; 7525.

Procedure on, 1529-65; 1581-6.

Borrowing powers, 1510; 7537.

Bye-laws, revision of, 1384.

Chairman of Board in 1894, 1563-5.

**DIXON-HARTLAND, Sir Fredk. Dixon**—*continue*.

Channel of River, deepening of:

Cost of 30 ft. channel, estimate of, 1438-48; 1466-80; 7483-4.

Funds for:

Bill for raising:

Application to Parliament, none made by Conservancy, 1489-94; 1504-7; 1511-3; 1560-2; 1567; 1594.

Public Bill, introduction of, proposed, 1612-24; 7485-91; 7539-41.

Scheme for raising, considered by Conservators, 1427-37; 1448-9; 1520-8.

Capital funds, raising, 7505-7; 7526-38.

Detailed account of scheme, 7482-4; 7495-504; 7510; 7516-9; 7523.

Income, additional, to be provided by, 1527-8; 7483-4; 7493-5.

Interest and sinking fund, 7484; 7495.

Tees, Glasgow and Tyne policy followed, 1484-9.

Gravesend, 30 ft. channel up to, 1462-4; 1496-9.

Resolution as to passed by Conservators Nov. 12, 1900, 1601-2; 1607-12.

Royal Albert Dock, 30 ft. channel at, proposed, 1465.

Maintenance of channel, 7493-5.

Period to be occupied by work, 7508.

Plan for, preparation of, 5567.

Shipowners, attitude towards, 1388-90; 1450-6.

Views as to, 1410-8; 1426; 1569; 1582-3.

Work undertaken by Conservators, 1384; 1389-94; 1499-500; 1559; 1582; 1567; 1603-5.

Expenditure on, 1509; 1626-40; 1661-74.

Resolution of June 22nd, 1896, as to, 1606.

## Charges:

Collection of dues, 7509; 7516-9.

Goods, levy on, proposed, 7484; 7499-504; 7510; 7516-9; 7523.

Moorings, charge for proposed, 7484; 7498-9.

Tonnage dues, 1514-20.

Increase advocated, 7484; 7496-8.

Commission—Lower Thames Navigation Commission 1896, recommendations of, 1384; 1388; 1460; 1462-5; 1481-3; 1495-504; 1547-60; 1566-7; 1593-4; 1602; 1641-2.

Shipowners, representation before, 1450-6.

Committee on Navigation of the Thames 1879, recommendations of, 1384; 1404.

Committees of Conservancy, separate for Upper and Lower River, 1384; 1403-9.

Constitution of Board, 1584-6.

Shipowners, representation of, 1385-7; 5568.

Increase in event of increase of charges, 7484; 7502; 7514-5.

## Docks:

Improvements in, not considered by Conservancy, 7510-3.

Sills, depth of, 1384; 1390; 1578-82; 1675-82.

Dredging, *see sub-heading* Channel of River.

Expenditure on dredging, 1509; 1626-40; 1661-74.

Flooding of Essex in 1708, 1465; 7508.

## Income:

Allocation of funds, 1570-1.

Sources of, 1514.

Licences for river frontages—method of assessment, 1573-7.

Loans, rate of raising, 7506-7; 7526-38.

## Moorings:

Charge for, proposed, 7484; 7498-9.

New, provision advocated, 7483-4.

Nore, The, extension of dredging powers to, 1501-4.

Pilotage, compulsory, abolition of proposed, 1384, 1405-7.

## Policy of Conservancy:

Future policy, introduction of public bill proposed, 1612-24; 7485-9; 7539-41.

Royal Commission of 1900, policy with regard to, 1587-605.

Sanitary Authority for the Port, 1421-3; 5568.

Slop and spoil from dredging, deposit of in river, 1419-21; 1458-61; 1642-7.

Surplus in Lower River funds, 1626-8.

Surveys taken by Conservancy, 5569.

Trinity House independent of Conservancy, 1384; 1395-400; 1648-53.

## Tyne:

Charges, 7484; 7499.

Funds, raising, policy adopted 7484; 7499.

**DIXON-HARTLAND, Sir Fredk. Dixon—continued.**

Vessels entering Port of London, Tonnage of, 7484.  
 Depth of channel requisite for steamer traffic, 1410-8.  
 Watermen's Company, abolition of privileges, 1384 ; 1405-7.

**FALCONER, DAVID, Partner in the Firm of Falconer and Company, Jute Merchants. (See Questions 9376-9409.)**

Charges:

Dock Companies, charges levied by:

Effect of on jute trade, 9378; 9386; 9393-4; 9403-9.

Transshipment trade, 9400-3.

**FALCONER, David—continued.**

Charges—continued.

Goods and barges, charge on proposed, effect of on jute trade, 9378; 9409.

Competition with Port of London, 9378; 9380-3; 9392-4; 9404-9.

Imports of jute:

Europe, increase in, 9387.

London, 9378.

India, jute trade in, 9384-9.

Manufacture of jute in London, 9397-8.

Price of jute, 9395-6.

Steamers, substitution for sailing ships, effect of on jute trade, 9404; 9407.

**FARQUHARSON, ALEXANDER, partner in the firm of Farquharson Brothers and Company, Timber Merchants. (See Questions 9688-9694.)**

Administration of Port, views as to, 9697.

Barges:

Charge on, proposed, views as to, 9697; 9752-8.

Incidence of charge, 9694-8.

Discharge of timber cargoes into:

Increase in number of, 9697; 9750-1.

Regulations as to Bill of Lading, tallying, etc., 9764-9; 9780.

Ownership of, 9773.

Consumption of timber in London district, 9737-8; 9843.

Creeks or tidal rivers in Essex, use of as transshipment stations, 2326; 9791-3.

Docks, accommodation and facilities, inadequacy of, 9690; 9697-8.

Documents handed in by witness:

Charges, new for handling, storing, etc., of timber, negotiations as to, 9695.

Discharge of timber, average number of standards per day, 9691.

Shortages, loss through, and charge for rent on timber cargoes, 9695.

Sorting and piling timber, time occupied in, 9691.

Evidence of witness:

Interests represented, 9689-90.

Preparation of, 9690.

Imports of timber, United Kingdom and London, 1899, 9690.

Millwall Dock, machinery for transport of timber, 9692; 9708-10.

Purfleet Wharf, machinery for transport of timber, 9849-52.

Standard of timber, measurement of, 9789-90.

Steamers, introduction of, effect of upon timber trade, 9714-23; 9807-16.

Surrey Commercial Docks:

Accommodation and facilities for timber trade: Inadequacy of, 9691; 9697.

Increase in, 9724-6.

Charges for use of quay, change in system, 9695; 9836-8.

Congestion at in 1899-1900, 9691; 9824-35.

Discharge of timber, average number of standards per day, 9691-2.

Labour, engagement of, system of, 9692-5; 9853-4.

Machinery for transport of timber, employment advocated, 9691; 9699-713; 9817-24.

Monopoly of deal, batten and board trade, 9690-1.

Railway communication with, 9695; 9727-39.

Shortages on timber cargoes, 9695-7; 9740-9; 9759-70; 9776-88; 9794-806; 9839-42.

Situation of docks, convenience for timber trade, 9771-2.

Sorting and piling:

Necessity for, 9776-84.

Time occupied in, 9691-2.

Watermen's Company, privileges of, abolition advocated, 9774-5.

**FIELDER, CHARLES JAMES, member of the firm of Fielder, Hickman and Company, lightermen and barge owners. (See Questions 4011-4065; 10920-10955.)**

Amalgamated Society of Foremen Lightermen:

Apprentices, number of, rules as to, 10949-55.

Witness, member of, 10947-8.

Apprentices:

Licences, granting without apprenticeship, views as to, 10954-5a.

**FIELDER, Charles James—continued.****Apprentices—continued.**

Number of, rule as to, 10949-55.

Regulations, general, as to, 10936.

**Barges:**

Accidents, liability in cases of, 4014; 4044-9.

Delay to, 4014; 4057-61.

Docking and undocking:

Facilities inadequate, 4014.

Time for locking operations, 4050-6.

Increase in barge traffic, 4032-4.

Navigation under oars, 10922; 10925-6.

Committee on Thames Watermen and Lightermen Bill 1890, recommendation as to Lightermen's licences, 10934-5a.

Custom House officials, number of, 4021-8; 4035-43.

**Docks:**

Financial position of dock companies, 4051-2.

Jetty system advocated, 4014.

Machinery in, 4014; 4029-31; 4062-5.

Tugs in provision, 4014.

Document handed in by witness:

Bye-laws of Watermen's Company, 10936.

Earnings of lightermen, 10937-41.

Experience of witness as lighterman, 10922.

Licences for lightermen:

Advantages of system, 10922; 10935-5a.

Granting without apprenticeship, views as to, 10934-5a.

Two years licences, 10931.

Moorings for barges, additional, 4021.

Number of lightermen available, 10922-4; 10929-31; 10942-6.

Passes from docks, in cases of dispute, 4014-21.

Pilotage, compulsory reform advocated, 4014; 4044-9.

Tugs, provision in docks for use of barges, 4014.

Vessels—Pleasure steamers:

Barge traffic, danger to from, 10922.

Licensed by Trinity House, 10927-8.

Watermen's Company:

Bye-laws of, 10936.

Powers of, 10932-3.

**FITZGERALD, the Hon. JOHN DONOHUE, K.O.**

Address on behalf of the Commissioners of Sewers in Essex and Kent. (See pages 573-574.) (The references given are to pages.)

**Acts of Parliament:**

Commissioners of Sewers, Acts conferring powers on, 574.

Thames Conservancy Act 1894, Protection clauses in, 574.

Channel of River, deepening, protection of walls in event of, 573-574.

Jurisdiction of Commissioners of Sewers, extent of, 573.

Thames Conservancy, powers of, 574.

**FLEMING, JAMES, Surveyor-General, His Majesty's Customs. (See Questions 362-446.)**

Barges, conveyance of goods in:

Shortages, responsibility for duty on, 386.

Spirits, proportion of, 437-40.

Tea, proportion of, 425-6.

Unexamined goods, 368; 380; 382-6; 416-21.

Watchers, employment of, 421.

Carts, conveyance of unexamined goods in, 379-81.

Chairman of Board of Customs, evidence before Commission, 443-4.

Channel of Thames, depth of, adequacy of, 376-9.

Chicory, discharge and distribution of, 429-31.

Chocolate, discharge and distribution of, 431.

Cigars, discharge and distribution of, 440-441.

Classification of goods, 366.

Cocoa:

Discharge and distribution of, 431-5.

Weighing and taring, 367.

Coffee:

Discharge and distribution of, 431-5.

Husking, cleaning and polishing in warehouses, 422-4.

Weighing and taring, 367-368.

Committee, joint, of Customs and Excise Departments on warehouse hours, 412.

Confectionery, discharge and distribution of, 431.

Disadvantages of Port of London, 368; 376-9; 444, 446.

Drawbacks, allowance for, 366.

Dutiable articles, list of, 366.

**FLEMING, James—continued.**

Free goods, valuable, discharge and clearance of in warehouses, 386-7.

Fruits, dried:

Discharge and distribution of, 435.

Weighing, 367.

Hours for discharge and clearance of goods, overtime payments, &c., 387-421.

Incidence of charge, 390-3; 398-403; 413-5.

Rate of charge, 419.

Liverpool, tobacco sent to London a Liverpool Import, 440-1.

Officers of Customs Department:

Classification of, 419-21.

Hours for discharge and clearance of goods. See that sub-heading.

Wharves, officers stationed at, 373-5.

Pilfering, precautions against, 368, 383-6.

Prime entry, charges on goods cleared at, 366.

Railway Trucks, conveyance of unexamined goods by, 379-80.

Relations of department with business of the Port, 366.

Royal Albert Dock warehouse accommodation, 428-9.

Royal Victoria Docks, warehouses at, 368; 446.

Snuff, refuse, removal from warehouses, 425.

Southampton and Newhaven, cargoes from by rail considered as London imports, 432-5.

Spirits:

Discharge and distribution of, 435-9.

Substitutes for, duty on, 441.

Tea:

Blending and mixing in warehouses, 421-2; 429.

Damaged, removal from warehouses, 425.

Discharge and distribution of, 425-9.

Tilbury Dock, proportion delivered at, 427.

Weighing and taring, 367-8.

Tilbury Dock, warehouse accommodation at, 428.

Tobacco:

Discharge and distribution of, 440-1.

Duty on, 366.

Refuse, removal from warehouses, 425.

Weighing and taring, 368.

Warehouses:

Crown charge on warehoused goods, 366.

Distance from deep water and places of discharge, 368; 376; 446.

Dutiable articles lodged in bonded warehouses, 366.

Free goods, discharge and clearance in, 386-7.

Responsibility of warehouse-keeper, 368.

Spirits, list of warehouses receiving, 435.

Tea, list of warehouses receiving, 425.

Wine, list of warehouses and vaults receiving, 441.

Weighing and taring, method of, 367; 368.

Wharves, approved and sufferance:

Classification, position and number, 369-373.

Customs officers stationed at, 373-5.

Highest and lowest, position on River, 369.

Tea, wharves for reception of, list of, 425.

Wines:

Discharge and distribution of, 441.

Light wines, duty usually paid on prime entry, 366-7.

**GARRATT, FREDERICK STONE, Member of the firm of Robert Procter and Sons, Corn Merchants. (See Questions 10049-10069.)**

Business carried on by R. Procter and Sons, 10050-1.

Charges, 10053; 10055-7; 10062.

Docks, accommodation and facilities at, 10055; 10061-4.

Document handed in by witness:

Charge, delivery of wheat to barge, copies of London and India Docks Company's account, ss. "Loango," 10055.

Evidence of witness, reception of, 10053-5.

Hull, competition with London, 10055; 10061.

Liverpool, charges levied and system of discharge, 10065.

Measurement of grain cargoes, 10069.

Positions held by witness, 10051, 10066-7.

Surrey Commercial Dock:

Accommodation and machinery at, 10055; 10061.

Charges, 10056-7.

North American Bill of Lading not used in, 10058-60.

**GASKELL, JAMES STRANACK, M.I.C.E.,** Engineer to the Surrey Commercial Dock Company. (*See* Questions 1867-1931.)

Barges, discharge of cargoes into :  
Dredging in docks, necessity for owing to, 1870 ; 1888-91.

Loss entailed by, 1892-3.

Channel of River :

Deepening and widening :

Necessity for, 1870 ; 1899-1902.

Thames Conservancy proposals, 1903-20 ; 1930-1.

Depth of, opposite locks, 1871-86.

Width of, opposite docks, 1921-2.

Docks :

Description of, 1870.

Dredging in :

Cost of, 1890-1.

Necessity for, 1870 ; 1888-91.

Documents handed in by witness :

Docks belonging to Surrey Commercial Dock Company, particulars as to, 1870.

Vessels entering Surrey Commercial Dock, 1895, 1899, 1928.

Locks :

Description of and method of working, 1870.

New Lock :

Completion, date of, 1887.

Depth of channel opposite, 1886.

Depth of water on sills, 1924-5.

Length of, 1923.

Site of, 1870.

Timber trade, transfer to other Ports, 1869

Vessels entering Docks :

Delay to, 1867-70.

Draught of, 1912 ; 1926-9.

Length of, 1894-5.

Method of entering Docks, 1870 ; 1899-1901.

**GIRDLESTONE, FRANCIS BROOKE,** General Manager and Secretary of the Dock Estate of the Corporation of the City of Bristol. (*See* Questions 4680-4699 ; 4704-4822.)

Accounts :

Analysis of, 4722-32.

System of, 4697.

Acts of Parliament :

Avon River, new course, construction, Act of 1802 as to, 4686.

Borough Funds Act, 4691 ; 4704 ; 4796-7.

Bristol Docks Act 1884 (Avonmouth and Portishead Dock Purchase Act), 4688, 4697.

City Corporation, possessors of floating dock under Act of 1847, 4686-7.

Works constructed by Corporation under Act of 1865, 4686.

Advantages of Port of Bristol, 4689-90.

Assessment, separate, of dock property, 4696.

Avon River, new course, construction and diversion of old course, 4686.

Avonmouth Dock :

City dues, not levied on vessels entering, 4696.

Expenditure on, subsequent to purchase, 4721.

Map of, 4686.

New dock, construction contemplated, 4689.

Purchase by Corporation, 4686 ; 4688.

Stimulus to traffic resulting, 4714-20.

Railway rates, 4697 ; 4806-12.

Trade of, 4689-90.

Vessels entering, draught of, 4689.

Barges :

Charge on goods in, not levied, 4708-9.

Licence fee, 4708-9.

System of lighterage, 4697.

Canal communication with docks, 4689-90.

Capital account, 4723-37.

Capital liabilities of docks, 4691.

Carted goods, charge on, 4709.

Charges :

Anchorage, carriage and plankage rates, lease to Society of Merchant Adventurers, 4697.

Barges, licence fee, 4708.

City dues and dock charges, 4697.

Abolition of city dues on certain articles in 1849, 4686.

Increase in city dues 1849-1900, 4697.

Treatment of for purposes of Borough Fund, 4692-6.

Goods, charge on, 4693-4 ; 4697 ; 4708-9.

London Chamber of Commerce, statements as to, 4689-90.

Reduction in, 4686 ; 4713.

Tariff of dues and labourage charges, 4689.

**GIRDLESTONE, Francis Brooke—continued.**

City Corporation, ownership of docks, 4686-7.

City dues. *See* sub-heading Charges.

City Docks or floating harbour, 4686-7.

Committees and sub-committees, 4696.

Competition, 4710-2 ; 4720.

Debiture Stock, 4725-7 ; 4750 ; 4781.

Issue of, 4768-76.

Deficit, 4691 ; 4696.

Discharge and manipulation of cargoes, system of, 4813-5.

Dockisation scheme, 4803-4.

Document handed in by witness :

Rates for discharging grain in the Bristol Docks, 4697.

Expenditure :

Account, 4734-68 ; 4777-81.

Statement as to, 4697.

Financial position of undertaking, 4691-2 ; 4696-7.

Frome, river, enlargement of course of, 4686.

Gasworks, waterworks and tramways, not acquired by Corporation, 4798-9.

Historical account of port, 4686.

Income :

Account, 4734-68 ; 4777-81.

Sources of, 4697.

Statement as to, 4697.

Interest :

Annual, 4691.

Statement as to, 4697.

Jessop, Mr. C. E., construction of dock proposed by in 1792, 4686.

Labour, rate of payment, and system adopted, 4697.

Landing place constructed in eighteenth century, 4686.

Loans, rate of interest paid for, by Corporation, 4776 ; 4783.

Management by Municipalities, Trusts, and Private ownership :

Comparison of systems, 4691 ; 4696 ; 4704-7 ;

4793-5 ; 4802-5.

Instances of, 4690.

Maps handed in, 4686.

Politics, influence of, 4801.

Portishead Docks :

City dues not levied on vessels entering, 4696.

Map of, 4686.

Politics, influence of, on construction of, 4801.

Purchase by Corporation, 4686 ; 4688.

Stimulus to traffic resulting, 4714-20.

Railway companies, rate charged by, 4697 ; 4806-12.

Trade of, 4689 ; 4690.

Vessels entering, draught of, 4689.

Positions held by witness, 4680-3.

Profits of undertaking, 4688 ; 4697.

Railway communication with docks, 4686 ; 4689 ; 4690 ; 4697.

Hauling and shunting in docks, 4697.

Rates charged, 4697 ; 4806-12.

Rate-in-aid :

Amount of, 4697 ; 4759-67.

Borough Fund, rate drawn against, 4692.

Dock Estate revenue supplemented by, 4816-22.

Power to levy granted to Corporation, 4686.

St. Augustine's Bridge, removal, compensation paid, Sinking fund, 4696-7 ; 4753 ; 4758 ; 4781-95.

4728-33.

Trade of Port :

Character of, 4689-90.

Export trade, value of, 4690.

Vessels entering port :

Draught of, 4689.

Tonnage of, 4686 ; 4697.

Increase, 4713-20.

Measurement, system of, 4697-9.

Working of the port, system of, 4697.

Works :

Construction of, 4686.

Expenditure on, 4697.

**GLASS, JOHN,** Manager of the Regent's Canal and Dock Company. (*See* Questions 3588-3642.)

Acts of Parliament :

Regent's Canal and Dock Company's Acts, 3590-1 ; 3638-42.

Administration of Port of London, inclusion of Regent's Canal in scheme for, 3590.

Brent Reservoir at Hendon, 3592-7.

Capital, 3592.

Charges, levy of, further powers not demanded, 3630-1 ; 3640.

**GLASS, John—continued.**

- Coal traffic of Regent's Canal, importance to London, 3598-601.
- Close connection of Dock and Canal, 3612-3.
- Debenture stock, consolidation, 3639.
- Dividend paid by Company, 3632-3.

Distribution of goods in London area, 7592-9;  
7611-4.

Increase in, 1739-40; 1780-2; 7633-5.

Percentage taken by Dock Company,  
1739-40; 1755-6; 1780-2; 7634; 7640-1.

Labour charges, system of, 7704-13; 7737-8.

Privileges of Dock Company before repeal of  
duties on timber, 7581; 7667-74.

Returns as to, 1739; 1778-82.

Transfer of vessels to other ports, 1753;  
7578.

Weight of goods compared with tonnage of  
ships, 1782.

**Vessels entering docks:**

Delay to, 1748-51; 7747.  
(See also sub-heading Docks, congestion.)

Draught of, 1833-6; 1866; 7749.

Sailing vessels, decrease in, 1742; 1809.

Tonnage and number of, 1739-42; 1778-82;  
1809-13; 7581; 7588-9.

Coasting vessels and foreign vessels, pro-  
portion of, 1770-7.

**Warehouses and sheds:**

Accommodation at, 1739; 1742; 7715-7.

Expenditure on, 7686-90; 7722-6.

Rents, income derived from, 7713-4; 7733-6.

Works, expenditure on, 1742-3; 7678.

Accommodation provided by recent works,  
1742; 7686; 7701-3.

Charge to capital or revenue, 7686-90; 7722-6.

**MATTHEWS, JOHN ERNEST, L.C.C.**, Member of the firm of Matthews and Luff, Shipbrokers. (See Questions 2325-444.)  
 Administration of Port of London, 2326; 2361.  
 Antwerp, Port of:  
   Municipal and government aid to, 2336-9; 2438; 2442.  
   Railway communication with, 2400-2.  
 Blackwater, River, transshipping station on, proposed, 2326.  
 Brokerage business carried on by witness, 2412-3.  
 Buoying of river, 2329.  
 Cardiff, Port of, working of, 2396-9.  
 Charges, Port of London, 2350; 2432-7.  
   Increase in, views as to, 2351.  
   Levy by single Authority advocated, 2348.  
 Coal derricks, floating, action of Thames Conservancy in respect of, 2332-3.  
 Coasting Trade, decrease in, 2351.  
 Colne River, transshipping station on, proposed, 2326.  
 Commission—Lower Thames Navigation Commission 1896, report of, 2350.  
 Crouch River, transshipping station on, proposed, 2326.  
 Discharge of cargoes, London system, 2351.  
 Document handed in by witness:  
   Coasting clearances and entrance of tonnage in Port of London, 1897-8-9, 2358.  
 Evidence of witness unrepresentative, 2416; 2438-9.  
 Hamburg, Port of, municipal aid to, 2335-8.  
 Imports and exports, statistics of, 2362-6.  
 Licensing of boats, barges and watermen, views as to, 2346.  
 Loans, raising of, 2349.  
 London and St. Katharine Docks, working of, 2343-4.  
 Moorings, system of working, 2334; 2369-81.  
 Municipal aid and control, 2335-9.  
 Orwell, River, transshipping station on, 2326.  
 Passenger steam-boat service, views as to, 2347; 2350.  
 Pilotage:  
   Authority and charges for, 2330-1; 2422-7.  
   Liability for accidents, 2330-1; 2367-8.  
 Police, control of, views as to, 2345.  
 Southampton, competition with, 2352; 2359-60.  
 Surrey Commercial dock, accommodation at, 2326; 2418-20.  
 Thames Conservancy, overlapping authority, 2331.  
 Tilbury Dock:  
   Condition of dock, 2428-9.  
   Railway communication with, 2428-32.  
 Transshipment Trade:  
   Dock dues, increase in, effect on, 2351.  
   Large vessels, effect on, 2406-10.  
 Trust:  
   Coal derricks, control of, 2332.  
   Funds, raising of, for, 2438-44.  
   Moorings, control of, 2334.  
   Powers of, 2326; 2345-9.  
   Purchase scheme, 2339-42.  
 Vessels:  
   Delay to, 2418-20.  
   Entrances and clearances at various ports, Return as to, 2353-61.  
   Value of imports and exports, statistics of, 2362-6.  
   Number of vessels owned by M. H. and J. E. Matthews & Co., 2415.  
 Tonnage of:  
   Increase in, large ships, 2404-10.  
   Relative proportion of large and small ships, 2350; 2403.  
   Vessels owned by M. H. and J. E. Matthews & Co., 2406; 2414.  
 Wharf System, extension of, 2339.  
 Deepening of Channel, bearing of, on, 2382-91.  
 Lighterage system, effect on, 2392-6.

**MESSEL, DR. RUDOLPH**, Managing Director of the firm of Spencer, Chapman and Messel, Limited, Chemical Merchants. (See Questions 9655-9674.)  
 Barges:  
   Detention in docks, 9659-60.  
   Importance of lighterage in chemical trade, 9659; 9671.  
   Injury to, liability repudiated by authorities, 9660-3; 9671-4.  
   Business carried on by Spencer, Chapman and Messel, 9659; 9666-71.  
 Competition with London, as to chemical trade, 9659.

**MESSEL, DR. RUDOLPH**—continued.  
 Discharge and loading of cargoes, delay in, 9659.  
 Docks used by chemical trade, 9664; 9668-71.  
 Evidence of witness:  
   Interests represented, 9656.  
   Preparation of, 9657-8.  
 Positions held by witness, 9659.  
 Trust, formation advocated, 9664.  
 Watermen's Company, privileges of, abolition advocated, 9664.

**MILLS, EDWARD**, Pilot. (See Questions 11342-11384.)  
 Act of Parliament:  
   Thames Watermen and Lightermen Act 1859, 11350.  
 Apprentices, sole charge of barges, 11353-6; 11379.  
 Barges:  
   Accidents, 11351-3.  
   Size of, increase in, 11350.  
   Towing, advantages of compared with navigation under oars, 11357-70.  
 Docks used by German Hamburg boats, 11384.  
 Evidence of witness, preparation of, 11347-9.  
 Licences for lightermen, advantages of system, 11350.  
 Night work as pilot, 11381-3.  
 Positions held by witness, and experience on river, 11346; 11350-1; 11371-8; 11380.  
 Vessels of "Belle" Line, tonnage, dimensions, etc., 11350.  
 Watermen's Company, witness a member of, 11351.

**MOORE, HENRY TAIT**, Managing Director of Brooks Wharf, and one of the Proprietors of Bull Wharf (See Questions 2726-805.)  
 Assessment of wharves, 2736; 2740.  
 Barges. See sub-heading Discharge of cargoes.  
 Channel of River, deepening, views as to, 2740; 2768.  
 Charges:  
   Comparison with other ports, 2735-6.  
   Reduction in wharfingers' charges, 2736-40; 2743; 2750-2.  
 Disadvantages of Port of London, 2735; 2767.  
 Discharge of cargoes:  
   Barges, discharge into:  
     Charges on barges, views as to, 2772; 2781-90.  
     Lighterage charge, 2736; 2754-6.  
     Rapidly of, compared with discharge on Quay, 2734-5; 2740-2; 2753-7.  
   Dock Companies, discharge by, 2740; 2772; 2797-805.  
   Royal Albert Docks, delay at, 2740; 2767.  
   Tables referring to, 2734; 2740; 2742.  
   Wharves in river, discharge at, 2756-7; 2791-3.  
 Documents handed in by witness:  
   Royal Albert Docks, discharge of cargoes at:  
     Periods of, 2734.  
     Tea ships with other cargo, date of report and arrival of teas by barge at Brook's Wharf, 2740.  
   Royal Victoria Dock, discharge of cargoes at, periods of, 2734.  
   Tilbury Docks, discharge of cargoes at:  
     Periods of, 2734.  
     Tea ships with other cargo, date of report and arrival of teas by barge at Brook's Wharf, 2742.  
 German Steamers, competition with, 2734; 2753-4.  
 Trust:  
   Charges, levy of, 2769-96.  
   Discharge of vessels, control of, 2772; 2797-805.  
   Duties of, 2768; 2772; 2797-805.  
   Views as to, 2740.  
   Warehouses, exclusion from scheme, 2768.  
 Weighing and taring, reform in, proposed, 2736; 2744-9; 2768-66.  
 Wharves—Bull Wharf and Brook's Wharf, description of, 2728-34.

**MORE, CHARLES JAMES**, Engineer to the Thames Conservancy. (See Questions 232-361; 1682-1736; 5459-5490.)  
 Act of Parliament:  
   Thames Conservancy Act 1894, 234; 242; 249; 253-4.  
 Barrow Deep, dredging spoil, deposit in, 237; 250; 1712-25.  
 Borrowing powers, 252.

**MOORE, Henry Tait—continued.**

Channel of River, deepening :  
 Ability of Thames to maintain Channel, 297-304 ; 346.  
 Cost of, estimates of, 5459-62 ; 5470 ; 5478-81.  
 Maintenance of channel, cost of, 5475.  
 Quantity of material dredged, 5460 ; 5474.  
 Surveys or estimates with reference to, 286-96.  
 Time occupied in dredging, estimate of, 5471-3 5476-7.  
 Views as to, 337-49.  
 (See also sub-heading Dredging.)  
 Chartings and soundings, 305 ; 311-2.  
 Charts handed in, 285 ; 1687-9.  
 Commission—Lower Thames Navigation Commission, 1896 :  
 Reference to, 234 ; 264-5.  
 Report of, 235 ; 240-5 ; 250 ; 263-70 ; 305-9 ; 311 ; 313 ; 314 ; 329-32 ; 345 ; 1712-25 ; 5460.  
 Commissioners of Woods and Forests, payments to, Return as to, 1683.  
 Docks, sills of, depth of water on, return as to, 1693-4.  
 Documents handed in by witness :  
 Docks, sills at entrances of, levels of, 1693.  
 Thames Conservancy :  
 Accommodations :  
 Licences, number below Teddington, 1895-1899, 1683.  
 Rents on, and sales of foreshore for purposes of, amount received by Conservators ; and account of moneys paid to H. M. Commissioners of Woods, 1683.  
 Attendances at Board and Committee meetings, 1683.  
 Dredging :  
 Licence, form of, 5490.  
 Plant employed below London Bridge, 1683.  
 Quantity of material dredged below London Bridge, 5464.  
 Receipts and expenditure :  
 Below London Bridge : London Bridge to Staines, 1683.  
 Below Teddington Lock : Teddington Lock to Staines, 1686.  
 Vessels, delay to, off Southend, 1683.  
 Dredging :  
 Act of Parliament—Thames Conservancy Acts, 1894, 234 ; 242 ; 249 ; 253-4.  
 Expenditure on, 315-24 ; 1683 ; 1686 ; 1696-703.  
 Leigh Middle Sands, no work undertaken on, 280-5.  
 Licence for, granted by Conservancy, 5490.  
 Pilots complaints as to dredgers, 5486-90.  
 Private dredging, 1704-9 ; 5486-90.  
 Quantity dredged, 1703 ; 5464.  
 Spoil, deposit of, 237 ; 250.  
 Dead Man's Hole, effect on, 1712-25.  
 Statement as to powers, 234.  
 Works undertaken in carrying out recommendations of Lower Thames Navigation Commission 1896, 237-45 ; 250-62 ; 277-83 ; 305-14 ; 1693-4.  
 Dredging-plant, 250-8 ; 325 ; 350 ; 351.  
 Return as to, 1683.  
 Expenditure, 315-24.  
 Return as to, 1894-1899, 1683 ; 1686 ; 1696-1703.  
 Financial considerations, influence of, 352-6.  
 Income, sources of, 357-8.  
 Licences for accommodation granted 1895-1899 ; return as to, 1683-6.  
 Meetings of Board, attendances 1899-1900, return as to, 1683.  
 Moorings :  
 Additional from Barking Reach to Northfleet Hope, cost of, estimate of, 5460.  
 Spaces available for, in Lower River, 5460.  
 Receipts, 1894-1899, return as to, 1683 ; 1686.  
 Rents for accommodation, 1894-1899, return as to, 1683.  
 Sales of foreshore for accommodations 1894-1899, return as to, 1683.  
 Shoals :  
 Delay to navigation caused by, 269-76 ; 329-32 ; 1683.  
 Lower Thames Navigation Commission, report as to, 240.  
 Removal of, 277-85 ; 300-2 ; 306.

**MOORE, Henry Tait—continued.**

Surveys of river, 286-96 ; 1710-11.  
 Tides, gauging, 311-4.  
 Training Banks, construction of :  
 Cost of, estimate of, 5460.  
 Dredging in Leigh Middle Shoals, effect on necessity for, 5478-87.  
 Trinity House, authority of, distinct as to buoying, 1726-36.  
 Vessels, tonnage of, increase in, 246-8 ; 333-5.  
 Visits to other Ports, no instructions as to, 361.  
 Yantlet Channel :  
 Buoying :  
 Conservators no Authority as to, 306-10.  
 Trinity House, no official communication made to, by Conservators, 1730-4.  
 Shoals. (See that sub-heading.)  
**MUNDY, Eli, Pilot.** (See Questions 4360-4380.)  
 Channel of River :  
 Condition of, 4373-5.  
 Deepening, views as to, 4364-6.  
 Trinity House, information received from as to, 4379-84.  
 Experience of witness as pilot, 4360-3 ; 4384.  
 Leigh Middle Shoal :  
 Buoying of, 4376-8.  
 Dredging, extent advocated, 4367.  
 Mucking flat, dredging advocated, 4369.  
 Ovens Point, dredging advocated, 4369.  
 Peninsular and Oriental Company, employment of witness by, 4362.  
 Sludge, deposit in river, 4370-2.

**OWEN, Douglas, Secretary of the Alliance, Marine and General Assurance Company, Limited.** (See Questions 5129-5342.)

Act of Parliament :  
 First Dock Act, free water assured to barges by, 5188-9 ; 5199 ; 5205.  
 Administration of Port :  
 Consolidated authority, views as to, 5222-3 ; 5274-88.  
 Representation, in event of charge on rates or Imperial Exchequer, 5334-6.  
 Amalgamation of Dock Companies advocated, 5213-24 ; 5259-60.  
 Antwerp, Port of :  
 Competition with London, and continental ports, 5137 ; 5140 ; 5153-4 ; 5157-63.  
 Expenditure on quay frontage proposed, 5181a-2.  
 Visited by witness, 5133.  
 Barges :  
 Act of Parliament, assuring free water to, 5188-9 ; 5199 ; 5205.  
 Charge on, proposed, 5208.  
 Discharge of cargoes into :  
 Custom of Port of London, as to, 5192-3 ; 5198-9.  
 Delay caused by, 5180-1.  
 Liability of lightermen, 5248.  
 Lighterage charges, 5234.  
 Bills of lading :  
 General Steam Navigation Company's Bill, 5195-7 ; 5201-2.  
 Liverpool Bill, 5178-80 ; 5191-4 ; 5197 ; 5203 ; 5206-7.  
 Bremen, Port of :  
 Tidal docks at, 5230.  
 Visited by witness, 5133.  
 Bremerhaven, Port of, visited by witness, 5133.  
 Bristol, visited by witness, 5133.  
 Canals at back of docks, scheme for construction of, 5239-41 ; 5304-29.  
 Channel of river, deepening, necessity for, 5144-6 ; 5175.  
 Charges :  
 Comparison of London and Liverpool, 5237.  
 Goods, charges on, advocated :  
 Barges, goods in, 5208-10.  
 Octroi, levy of, 5217-8 ; 5297 ; 5339-42.  
 Quay dues charged by dock companies, 5236.  
 Coastal or inland trade, transfer from London to other ports, 5158.  
 Commission—Lower Thames Navigation Commission 1896, 5146.  
 Copenhagen, visited by witness, 5133.  
 Discharge and loading of vessels :  
 Custom of Port of London, delay caused by, 5172-81.  
 Rapid despatch, importance of, 5169-70.

**OWEN, Douglas—continued.**

Dock companies, management of, not responsible for present condition of port, 5162-3; 5213; 5216; 5256-8.

**Docks:**

Improvement advocated, 5144-5; 5238-9.  
Small ships filling, fallacy of conclusions drawn from, 5183.

**Documents handed in by witness:**

Tonnage entering and clearing ports of United Kingdom and Continental ports, tables of, 5163; 5165.

Foreign ports and British outports visited by witness, 5132-3.

Funds for improvement of port, raising, method proposed, 5147; 5217-8; 5227; 5243-6; 5330-38.

Genoa, competition with Port of London, 5161.

**Hamburg, Port of:**

Competition with London and continental ports, 5137; 5157; 5160-1.

Disadvantages of, 5154-5.

Expenditure on docks, dredging, etc., 5137-8.

Tidal docks at, 5230.

Visited by witness, 5133.

Improvements necessary in Port of London, 5137; 5144-5; 5238-9; 5247.

Liability in cases of accident, 5248.

**Liverpool:**

Competition with London, 5142; 5158; 5160.  
Shipowners' preference for, 5154.

Visited by witness, 5133.

**Marseilles:**

Competition with Port of London, 5161.

Discharge and sorting of cargoes, system adopted, 5317-21.

National importance of Port of London, 5148; 5243; 5337-8.

Plan of dock, showing canal, 5239.

Population of London and surrounding belt, increase compared with residential cities fed by London, 1801-1891; 5184-7a.

Railway communication with docks, 5184.

Roadways leading to docks, improvement advocated, 5183-4; 5252-5.

Royal Albert Dock, improvement advocated, 5239-40.

Royal Victoria Dock, improvement advocated, 5239-40.

Sketch of proposed dock, 5239.

Southampton, competition with London, 5143; 5247.

**Trade of Port of London:**

Classification of different sorts of trade, 5156-60.

Local consumption trade, security of, 5157; 5163.

Transshipment trade, transfer from London, 5157; 5159-61.

Trieste, competition with Port of London, 5161.

Trust, formation, views as to, 5213-24; 5259-60.

Warehouses, inclusion in scheme, 5262-73.

**Vessels:**

Delay to, in Port of London, 5160-81; 5183.

Size of, increase in, 5141-5; 5149-53; 5160-1; 5211-2.

Tonnage of vessels entering and clearing ports of United Kingdom and continental ports, table showing, 5163-8.

Watermen's Company, abolition of privileges advocated, 5209; 5234-5; 5249-51.

**Wharves:**

Competition with docks, 5162-3.

Extension of system:

Depth of quay wall, 5289-96.

Disadvantages of scheme, 5228-32.

Length of quay space, 5297-303.

Wheat, flour, sugar and tea, consumption, increase in London, 5187a.

Works by witness, on shipping, dock and port facilities, 5130.

**PEMBROKE, EDWARD, Senior partner of Messrs. Galbraith, Pembroke and Company, Shipowners, and Chairman of the Shaw, Savill, and Albion Shipping Company. (See Questions 8325-8462.)****Barges, See sub-heading Royal Albert Dock.****Charges:**

Goods, charge on, levy advocated, 8357-72.

Liverpool and London, compared, 8331-5; 8336-44; 8348-50; 8353; 8373-87; 8386-403; 8407-16; 8457-8.

**PEMBROKE, Edward—continued.**

Discharge of cargoes, time occupied in Liverpool and London, 8331-5; 8339-44.

**Docks:**

Accommodation at, 8331; 8404-6.

Shaw, Savill, and Albion Company and Galbraith, Pembroke and Company, docks used by, 8332; 8388; 8428.

**Document handed in by witness:**

Statement as to expenses and time occupied by steamers from Rangoon in London and Liverpool, 8331.

Evidence of witness, interests represented, 8327-30; 8459-62.

Positions held by witness, 8459-62.

**Royal Albert Dock:**

Accommodation at, 8332.

Dimensions of vessels limited by length of dock, 8332; 8361.

**Barges in:**

Adrift and unattended, 8332; 8336-8; 8429-37.

Detention of, 8438-45; 8451-6.

Number taking delivery from one ship, 8446-50.

Crane equipment, 8332, 8345.

Railway facilities, 8332; 8352.

Tugs, provision of, 8332.

Use of by Shaw Savill and Albion Company, 8332.

Surrey Commercial Dock, delay to vessels in, 8405-6.

Tilbury Dock, inconvenience of, for frozen meat trade, 8332; 8388-94.

**Trust:**

Formation advocated, 8331; 8354-6.

Funds for, raising, 8357-72.

Warehouses, inclusion in scheme, 8418-27.

**PENNEY, STEPHEN, Pilot. (See Questions 4131-4306a.)**

Alexandra Channel, vessels passing through, 4196-202.

Appointment, examination and certification of pilots, 4155-7.

**Channel of river:**

Deepening, 4178-87.

Improvement in between Gravesend and the Nore, 4134; 4168-75.

Shoals in estuary, increase in, 4136-44; 4213-25.

**Commission:**

Lower Thames Navigation Commission 1896, 4176-80; 4187-91.

Dredgers employed in river, 4170-1.

**Duke of Edinburgh Channel:**

Construction of, 4193-4.

Shoaling of, 4136-7; 4141-3; 4203-14.

Experience of witness as pilot, 4131-4; 4153-4; 4158; 4165-6.

Fog and smoke, difficulties caused by, 4192.

Girdler Channel, vessels passing through, 4197-202.

Number of ships piloted yearly by witness, 4159.

Peninsular and Oriental Company, witness employed by, 4133; 4160-4.

Sewage and mud, deposit in river, 4136-44; 4213-25.

**Surveys of river:**

Annual, advocated, 4188-91.

Permanent surveyor, employment advocated, 4136; 4145.

Trinity House, and Thames Conservancy, surveys by, 4226-9.

Tide signals, establishment near Southend advocated, 4146-8; 4150-2; 4182; 4233.

**Trinity House:**

Authority of, extent of, 4226-9.

Witness formerly in service of, 4134; 4164.

**Vessels:**

Detention of, 4230-2.

Draught of, 4180.

Tonnage of, increase, 4167.

**PHILIPSON, ROBERT, Secretary to the Thames Conservancy. (See Questions 1-158; 7542-7572.)****Accounts:**

Annual, 64.

Separate for upper and lower river, 74.

**Acts of Parliament:**

Thames Conservancy Acts, 7545; 7549; 7551.

Authority for the river, views as to, 75-2.

**PHILIPSON, Robert—continued.****Barges:**

Moorings. *See that sub-heading.*

Registration, transfer of powers advocated, 77-9.

Towing regulations, 105-10.

Barrow Deep, deposit of sludge and dredged material in, 7552; 7557-8.

Bell wharf tier, depth of channel at, 7547.

Borrowing powers, 65.

Bye-laws, 3; 105-10.

Chairman of Board, evidence of, 102-4.

Channel of river, condition of, information as to supplied to pilots, 7545.

Charges. *See sub-heading Mooring and Tonnage Dues.*

Commission—Lower Thames Navigation Commission 1896, 65, 122-4.

Committee on the Navigation of the River Thames 1879, 75-9; 105-10; 114; 155.

Committees of Thames Conservancy, separate, for

Upper and Lower River, 70-3.

Constitution of Board, 3; 152-4.

Debenture stock, issue of, 65.

Debts, 125-8.

Docks in Port of London, ownership of, 3.

Documents handed in by witness:

Moorings provided by Thames Conservancy:

List of, 6.

Sites for additional moorings, 19.

Vessels loading and unloading at, number and tonnage of, 11.

Receipts and expenditure of Thames Conservancy, on revenue account, 41.

Vessels:

Cases of improper navigation reported to Thames Conservators, 1895-1900, list of, 7560.

Number of foreign-going and coastwise vessels paying tonnage dues, 1894-1899, 25.

Wharves, sufferance, and legal quays, list of, 3.

Dredging under Thames Conservancy Act 1894, 122-4.

Expenditure:

Capital works 1894-1899, 59-63.

Increase of 1898-1899, 111-12.

Revenue account:

Lower river, 41-7; 51-8.

Upper river, 47-50.

Separate account for lower and upper river, 40.

Harbour masters, appointment and duties of, 3; 80-3.

Income:

Increase, rate of, 120.

Reserve income account, 48-9; 59.

Sources of, 41.

Incorporation of Board, 3.

Jurisdiction of Board, extent of, 3.

Lights on river, screening, 7551.

Meetings of Board:

Attendance at, 68-70.

Weekly, 66.

Witness present at, 118-9.

Moorings provided by Board, 6-19.

Accidents to, responsibility in cases of, 7556.

Barges using, 19-21; 149-51.

Bridle chain:

Ownership of, 7554-6.

Sketch of, 7545.

Charges:

Powers not exercised by Conservancy, 6;

19-21; 129-31; 7545; 7553; 7559-71.

Change advocated, 7545; 7571.

Services to vessels, charges levied by men not in employment of Conservancy, 7544-5; 7572.

Chart and statement as to, 16-9.

List of, 6; 7545.

Vessels using:

Laid up for winter months, 7550.

Number and tonnage of, 11-16; 132; 7545.

Number of members of Board, 67.

Policing of river, 84; 113-4.

Policy with reference to Royal Commission, 95-101.

Port of London, definition of, 55-8.

Powers and duties of Board, 3.

**PHILIPSON, Robert—continued.**

Receipts, returns as to:

Lower river, 41-7; 51-8.

Upper river, 47-50.

Sketch of mooring, ground chain, and bridle chain, 7545.

Stairs and approaches to river, authorities for, 7547.

Tonnage dues:

Exaction of, 22-4.

Exemption of certain classes of vessels, 24; 147-8.

Increase of, policy not considered by Board, 145-6.

Towing, compulsory, recommendations as to, 105-10.

Tyne Improvement Commission:

Income, sources of, 89-9.

Moorings, charges for, 143-4.

Barges, exemption of, 149-51.

Powers of, 90-4.

Tonnage dues, 91-3; 140-1; 157-8.

Witness formerly assistant secretary to, 2.

Working of Board, 85-8.

Upper and Lower River, definition of, 53.

Vessels:

Entering and leaving Port of London 1894-1899, returns as to, 25-37.

Moorings, number and tonnage of vessels using, 11-6; 132.

Speed of, enforcement of regulations as to, 7549; 7559-68.

List of convictions, 7560.

Tonnage dues. *See that sub-heading.*

Watermen's Company, transfer of powers advocated, 75-9.

Wharves:

Private, control over, limit of, 137.

Public, ownership of, 3.

Sufferance wharves:

Definition of, 138-9.

List of, 3; 134.

Woods and Forests, Commissioners of:

Agreement with City Corporation as to Crown rights to bed and foreshores of river, 3.

Sales or licences for works below Staines, returns and payments in respect of, 38-40.

**POGSON, GEORGE AMBROSE, British Vice-Consul at Hamburg. (See Questions 5491-5565.)**

Act of Parliament:

Merchandise Marks Act, 5522-4.

Administration of Port, 5545.

Barge system, 5499; 5501-2.

Canals, distribution of goods by, 5539-42.

Charges:

Barges, cargoes discharged into, 5499.

Cost of sending goods direct from New York to London, comparison with cost of transshipping from Hamburg, 5508-21; 5525-9.

Quay dues, 5499-500; 5507.

Regulations as to quay traffic and dues, translation of, 5499.

Discharge of cargoes, night work, 5543-4.

Docks, description of, 5493.

Document handed in by witness—regulations as to quay traffic and dues, 5499.

Dredging:

Amount of material dredged; 5506.

Continuous, 5537; 5559-60.

Cost of, 5503-5; 5538.

Elbe River:

Channel of:

Deepening, 5559-60.

Depth of, 5493; 5532-7; 5546-60.

Current, speed of, 5530-1.

Shoals in, 5547-9.

(*See also sub-heading Dredging.*)

Expenditure on harbour accommodation, by Imperial Government and Hamburg State, 5497-8.

Financial result of harbour administration, 5495-7.

German Government, assistance from, 5497-8; 5561-5.

Lager-haus Gesellschaft, 5542.

Plan of harbour at Hamburg, showing different tidal basins, 5565.

Population of Hamburg Republic, 5493.

Railways and quay sheds, 5542.

Vessels entering harbour, 5551-5.

**POWELL, JAMES**, partner in the firm of T. J. and T. Powell, Hide and Leather Merchants. (See Questions 9523-9587.)

Antwerp, trade in South American hides, transfer to, 9526; 9531-6; 9539-54.

Charges:

Comparison of wharf and dock charges, 9562-8.

Effect of, on leather trade, 9526-58.

Competition with Port of London, transfer of trade to foreign ports, 9526-58.

Evidence of witness, preparation of, 9559-61; 9569-87.

London Chamber of Commerce, representations to Docks Joint Committee as to facilities for leather trade, 9527-30; 9571; 9583-7.

Positions held by witness, 9524-6.

Vessels, subsidised, effect of, on foreign competition, 9556-7.

Wharves, charges at, 9562-8.

**RIGDEN, EDWIN**, Pilot. (See Questions 4306-4359.)

Channel of River:

Deepening, views as to, 4339-41.

Shoaling of, 4310-9; 4331-6, 4353-8.

Representations as to, made by pilots to shipowners, 4317-9.

Trinity House, information received from as to, 4320-30.

Duke of Edinburgh Channel, shoaling of, 4310-4; 4334-6.

Experience of witness as pilot, 4306-7; 4333; 4349.

Mucking Flat, shoaling of, 4331-2; 4354.

Number of ships piloted by witness yearly, 4351-2.

Orient Company:

Vessels of, draught of, 4337-8.

Witness employed by, 4308.

Ovens Point, Gravesend Reach, dredging advocated, 4315-6.

Shrimping vessels and sailing barges, difficulties caused by, 4342-50; 4359.

Sludge, deposit in river, 4334-6; 4356-9.

**ROBINSON, JOHN HENRY**, Partner in the firm of J and H. Robinson, Flour Millers. (See Questions 8719-8835; 9904-9908.)

Bill:

London and India Docks Company's Bill 1901, 8738.

Charges:

Barges and Goods, charge on proposed:

Grain trade, effect on, 8724; 8727; 8768-80; 8832-3.

Milling industry, effect on, 8738-9; 8761-7; 8768-70; 8832-3.

Discharge of grain cargoes, charges levied, 8725-37; 8740-60; 8768-73; 8781-816; 8821-31; 8834-5.

Accounts for s.s. "Polymitis," 9904-8.

Docks used by grain vessels, 8804-5; 8822-4.

Document handed in by witness:

Charge for delivery of grain to barge, copies of accounts, ss. "Polymitis," 9905.

Evidence of witness, interests represented, 8719; 8723; 8739.

Import of foreign wheat by London Flour Millers' Association, 8723.

Millwall Dock Company, charges, 8804-18; 8821; 8834-5.

Trust, formation of, views as to, 8739; 8819.

Watermen's Company, privileges of, abolition advocated, 8739.

**ROFFEY, GEORGE**, Partner in the firm of George Roffey and Sons, Corn Merchants. (See Questions 10014-10048.)

Business carried on by witness, 10015; 10019.

Charges, 10019-20; 10026-8.

Discharge of grain cargoes:

American Bill of Lading, delay caused by, 10019; 10022-6.

Undertaking by Dock Companies advocated, 10019-21; 10037-9.

Docks:

Accommodation and facilities at, 10019.

Surrey Commercial Dock. See that sub-heading.

**ROFFEY, George**—continued.

Evidence of witness:

Interests represented, 10019; 10038.

Preparation of, 10017-8.

Measurement of cargoes, 10029-34.

Surrey Commercial Docks:

Discharge of cargoes by Dock Company, 10037; 10043-6.

Machinery, 10035-6; 10040-2.

Trust, formation advocated, 10019.

Watermen's Company, privileges of, abolition advocated, 10019.

Wood, Mr. W. P., proposed evidence of, 10047-8.

North American Bill of Lading:

Discharge of cargoes under, delay in, 10019, 10022-6.

Measurement of cargoes, 10029-34.

**ROGERS, JOHN INNES**, Chairman of the Council of the London Chamber of Commerce. (See Questions 1158-1271; 8681-8718; 10129-10368.)

Acts of Parliament:

Canal Boats Acts 1877-1884, 10133.

Merchant Shipping Act, 8703; 10133.

Mersey Dock Consolidation Act 1858, 10133.

Public Health Act, 10133.

Steam power in relation to Acts dealing with River, 1229-31.

Thames Conservancy Act 1894, 10133.

Thames Watermen and Lightermen's Acts 1859 and 1893, 1231; 10133.

Administration of port, 1207; 10135.

(See also sub-heading Trust.)

Admiralty, representation on Trust, 10133.

Antwerp, port of:

Machinery at, 1244.

Return as to, issued by Foreign Office, 1213-4, 1213-4.

Transfer of trade to, 8685-7.

Barges:

Charges on. See sub-heading Charges.

Disadvantages of lighterage system, 1207; 1228-31.

Licensing fee, 10243-4.

Lighterage charges, 8684-5; 8704-11.

Steam barges, employment of, 1231; 1268-71.

System of collecting and delivery barges advocated, 8693-4.

Trust, representation of lightermen on, 10133.

Bill promoted by London and India Docks Joint Committee in 1900, 1187-200; 1252.

Board of Trade, representation on Trust, 10133; 10141.

Burham Brick, Lime and Cement Company v. London and India Docks Joint Committee, case of, 1197-8.

Chancellor of the Exchequer, representation on Trust, 10133; 10141.

Charges:

Barges and goods, charges on, 1195-206; 1252; 10135; 10242-6.

Colonial produce trade, effect of on, 8684-5; 8717.

Riverside property, depreciation in event of, 8693.

British outports and Continental ports, 1234.

Consolidated rate, 8700-1.

Discount system, 1236-40.

Excessive, alleged, 1179; 1207; 1234.

Income derived from, 1240-2.

Inequality of, 1242-4.

Liverpool and London compared, 1187; 1235; 1242; 8701.

Tables of comparison, source of, and method of compilation, 1158-61; 1166; 1179.

Tea, charges on, 8712.

Travers and Sons, payments by, 8684.

Trust, levy by. See sub-heading Trust.

Warehouses and wharves, 1234-5; 8684-5; 8704-11; 8716.

Committee on the Navigation of the River Thames 1879; 1271.

Cotton trade, decline in, 1176-9.

Customs, Board of:

Trust, representation on, 10133; 10141.

Working of, 8701-2.

Delivery of goods, delay in, 1207; 1244; 8699-700.

Disadvantages of Port of London, 1179-81; 1207.

Discharge of Cargoes:

Delay in, 1207; 1217-29; 1244.

Liverpool, comparison with London, 1183-7; 8694-8; 8717.

**ROGERS, John Innes—continued.**

- Docks:**  
 Accommodation at, 1207; 1217-28.  
 Depth of water in, 1209-16.  
 Expenditure of dock companies, 10232-6.  
 Valuation of, 10135-8; 10250-5; 10371-2; 10378-80.

4090-3 ; 4096.

Association of Master Lightermen, witness not a  
member of, 4094.

Bill for charges on goods and barges, proposed,  
4079-80.

Bridges :

Construction, facilities for navigation during,  
4089.

Lights on, uniform system advocated, 4086-9.

Business carried on by Messrs. Tough and Hender-  
son, 4079.

Bye-laws, River and docks, 4084 ; 4099-102 ; 4118-  
30.

Channel of River, deepening, 4085-6.

Charges :

Goods and barges, charges on proposed, 4079-  
80.

Lighterage charges, 4084.

Quay charges, 4079-82.

Derricks, floating, provision of advocated, 4079.

Docking and undocking barges, delay in, 4079.

Documents handed in by witness :

Millwall Dock Company, time occupied in dis-  
charging barges by, 4080 ; 4115-7.

Surrey Commercial Dock, steamers with tim-  
ber discharged in, return as to, 4080 ;  
4115-7.

**TOUGH, Robert Neal—continued.**

Millwall Dock Company, time occupied in dis-  
charging barges of Messrs. Tough and Hender-  
son by, 4080 ; 4115-7.

Mooring buoys, provision of, 4089.

Sludge and snow, deposit in river, 4089 ; 4118-9.

Stairs leading to river, additional advocated, 4089.

Surrey Commercial Dock, steamers with timber  
discharged in, return as to, 4080 ; 4115-7.

Thames Conservancy, extension of powers advo-  
cated, 4090 ; 4103-7.

Tugs in docks for use of barges, 4082-3.

Waterways to be included in Port of London, extent  
of, 4090.

Wharves in River, extension of system advocated,  
4079-80 ; 4091 ; 4095 ; 4108-14.

Wrecks, removal of, legislation as to, advocated,  
4089-90.

**TROTTER, JOHN, Chairman of the Millwall Dock Company. (See Questions 1120-1157 ; 7036-7115 ; 8463.)**

Acts of Parliament :

Millwall Dock Company's Acts :

Act of 1864, 7075.

Act of 1899, 1122-5 ; 1132.

Balance sheets, 1144-5.

Barges :

Charge on, proposed, views as to, 8463.

Disadvantages of lighterage system, 1134 ;  
7106.

Number entering the Millwall Dock, 7090-2.

Proportion belonging to dock company,  
7077-8 ; 7093-101.

Size of, 7099.

Borrowing powers, 1126.

Capital :

Authorised and paid up, 1127-31.

Market value of stock, 1140-3.

Unexpended, 1126.

Channel of River, deepening, views as to, 1153-7.

Charges :

Grain, loose, weighing out and working, 7063-  
71.

Increased powers not demanded, 7053-4 ; 7086-  
8 ; 7109 ; 8463.

Labour on quay, 7041-3.

Dividends, sum distributed, 1132.

Dock, sills of, alteration proposed, 1153.

Documents handed in by witness :

Revenue account of Millwall Dock Company,  
1899, 7037.

Vessels entering Millwall Docks, tonnage of,  
7037.

Dredging :

Docks, dredging in, expenditure on, 7044-7.  
River, 7072.

Expenditure, 1132-3 ; 1143 ; 7044-7 ; 7058.

Statement as to, 1144-7 ; 7037.

Financial condition of company, 7073-6 ; 7093-4.

Grain trade :

Charge for weighing out and working loose  
grain, 7063-71.

Pneumatic elevators for, 7038 ; 7067-71.

Granary, additional, provision of, 7038 ; 7088.

Income, statements as to, 1144-52 ; 7037.

Lifts, electric, proposed, 7040.

Machinery at Docks :

Cranes, 7040.

Grain elevators, pneumatic, 7038 ; 7067-71.

New machinery to be provided, 7038-40 ; 7050.  
7056 ; 7086.

Timber transporters, electric, 7038 ; 7110-5.

Railway and road communication with docks, 7079.

Subsidiary Company :

Date of inauguration, 7087.

Expenditure contemplated, 7038-40 ; 7050 ;  
7056-7 ; 7086.

Formation of, 1126.

Interest on money advanced, arrangement as  
to, 7049 ; 7051-2 ; 7059-62.

Surrey Commercial Dock Company :

Agreement with, 7104-7.

Prosperity owing to timber trade, 7081 ; 7103.

Timber trade :

Transporters, electric, provision of, 7038 ;  
7110-5.

Yard, new, construction of, 7038.

Trust, formation of, views as to, 1138-9.

Vessels entering Millwall Dock, tonnage of, 7037-8.

Warehouses, sheds and yards, additional, proposed,  
1135-9 ; 7038.

**URWIN, ROBERT**, Secretary to the Tyne Improvement Commissioners. (See Questions 5343-5416.)

**Acts of Parliament:**

Commissioners' Clauses Act 1847, 5346.  
Companies' Clauses Consolidation Act 1845, 5346.  
Harbour Docks and Piers Clauses Act 1847, 5346.  
Newcastle-upon-Tyne Port Act 1845, 5374.  
Tyne Improvement Commission, Acts referring to:  
Charges levied under, 5374-5; 5384.  
Constitution under, 5346-7; 5357-8; 5370.  
Docks, construction under, 5349.  
Tyne Pilotage Order Confirmation Act 1865, 5393.  
Barges, charge on, and on goods conveyed in, 5360-1.  
Cargoes, working of, system adopted, 5354-6.  
Charges levied, 5360-2; 5374-80; 5384; 5402-3.  
Statement showing percentage of dues received from shipping, coal, goods, and miscellaneous, 5410.

**Coal and Coke:**

Export due levied, 5408.  
Exports in 1900, 5351-3.  
Loading of vessels, method of, 5354-5.  
Proportion shipped at North-Eastern Railway Company's Docks, Tyne Commissioners' Docks, and private coal staiths, 5408.  
Companies' Clauses Consolidation Act 1845, 5346.

**Docks:**

Description of, 5349.  
Plan of Dock Estate, 5350.  
Staff employed at, 5349.  
Documents handed in by witness:  
Revenue receipts showing percentage of dues received from shipping, coal, goods, and miscellaneous, 5410.  
Tariff of Tyne Commissioners' river tonnage and other dues, 5374.

**Dredging:**

Authority for, 5381.  
Expenditure on, 5373; 5412.  
Expenditure, 5373.  
Items of, 5412-6.  
Ferries, authority for, 5348; 5391.  
Funds for internal purposes, 5346; 5412.  
Harbours, Docks, and Piers Clauses Act 1847, 5346.  
Imports and Exports, 5351-3.  
Income:  
Items making up gross revenue, 5405-10.  
Receipts, increase in, 5350.  
Surplus, application of, 5414-6.  
Lighting, authority for, 5348; 5383-90; 5396.  
Limits of port, 5346.  
Machinery in docks, 5351; 5354.  
Moorings in river, charges for, 5402.  
Newcastle, Corporation of:  
Docks, none owned by, 5366.  
Quay, owned by, 5367-8.  
Transfer of powers to Tyne Commissioners, 5346; 5357-8; 5370.

Pilotage Board, 5393-5.  
Plan of Dock Estate, 5350.  
Positions held by witness, 5343-4.  
Railway communication with Docks, 5349; 5351; 5354-6; 5362-3; 5400.

**Tyne:**

Dredging, deepening and widening, expenditure on, 5373; 5412.  
Limits of port and river, 5346.  
Tyne Improvement Commission:  
Committees of, 5348.  
Constitution of, 5346-7; 5357-9; 5370-2.  
Corporations not contributory as such, 5364-5.  
Electors, qualification of, 5347.  
Powers and privileges not entirely vested in, 5392-3.  
Quays owned by Corporations represented on, 5367-9.  
Remuneration not received, 5404.

**Warehouses and Sheds:**

Accommodation at, 5349.  
Increase in amount of goods warehoused, 5398-9.

**VYVYAN, CAPTAIN GEORGE RAWLINSON**, Deputy Master of the Trinity House. (See Questions 8466-8652.)

**VYVYAN, Captain George Rawlinson**—continued

**Acts of Parliament:**

Bristol Channel Act 1861, 8556.  
Liverpool Pilotage Authority under Act, 8552.  
Merchant Shipping Acts:  
Act of 1894, 8561-3.  
Act of 1898, 8474-5; 8587.

Administration of Port, views as to, 8472-5.  
Bills introduced in 1881 and 1884, clauses as to compulsory pilotage, 8484.

**Buoying and Lighting:**

Authority for, retention of Trinity House as, 8469; 8472; 8475.  
Channel of River, deepening, effect on necessity for, 8472; 8543-6.  
Funds for, 8472-5; 8547-50; 8587-91; 8613-7.  
8472; 8524-6.  
London County Council, buoys maintained for, Solent and Tees work undertaken by Trinity House on, 8610-2.

**Channel of River, deepening:**

Additional work devolving on Trinity House, 8604-7.

Depth required, 8472; 8532-42.  
Commission—Lower Thames Navigation Commission 1896, 8509; 8511; 8534-5; 8545.

**Committees:**

Merchant Shipping 1860, 8484.  
Navigation of River Thames 1879, 8484.  
Pilotage 1888, 8484.

**Documents handed in by witness:**

Earnings of pilots for 1900, 8471.  
Rates of pilotage in the Port of London, 8652.  
Rates of pilotage per mile at certain British and Foreign Ports, 8470.  
Reports used by pilots, 8573.  
Rules of Trinity House as to pilotage, 8563.  
Vessels piloted between Gravesend and London Bridge in 1900, 8497.

Evidence of witness, representative of Trinity House, 8496; 8590-1.

**Liverpool Pilotage:**

Authority for, 8551-4.  
Charges, comparison with London, 8470-1.  
Earnings of pilots, 8471.

"Minneapolis," grounding of, 8471; 8528-32; 8572-3.

**Pilotage:**

Accidents:  
Liability of pilots, 8483; 8635-51.  
Reports and inquiries as to, 8564-86; 8572-3; 8618-42.

**Authority for, Trinity House as:**

Committee, 8554.  
Shipowners and pilots, representation on, 8592-601.

**Outports:**

Number controlled, 8554.  
Relinquishment of authority in certain Ports, 8556.

**Character of pilots, 8557-8.**

**Charges for in the Port of London:**

Additional services, charges for, 8470; 8481-2; 8484a-6.

Amount received by Trinity House in respect of, 8497-8.

Comparison with Liverpool and other ports, 8470-1.

Table of, 8652.

**Compulsory Pilotage:**

Abolition, proposals as to, 8484.  
Trinity House, attitude towards, 8602-3.

**Delay to vessels, 8471; 8528-32.**

**Earnings of pilots:**

Maximum amounts, 8490-5.  
Returns in excess of amounts received, 8486-9.

Table of, 8471; 8477-82; 8486-9.

Examination of pilots, 8558-60.

Outward and Inward pilots, 8499-509.

Rules and copy of Merchant Shipping Act, 1894, supplied to Pilots, 8561-3.

Two pilots, custom of Port as to employment of, 8470; 8499.

**Thames Conservancy:**

Buoying, powers as to, 8512-20.  
Dredging of channels by, procedure with regard to buoying by Trinity House, 8512-20.  
Extension of powers advocated, 8475-6.

**VYVYAN**, Captain George Rawlinson—*continued*.

## Trinity House :

Authority for lighting, buoying, and pilotage, retention advocated, 8469 ; 8472 ; 8475.  
Economic working of, 8475.

Solent and Tees, work undertaken on, 8610-2.

Wrecks, removal of, provision of funds for, 8472.

Yantlet Channel, buoying of, 8509-28.

**WEBER**, EDWARD, member of the firm of Anderson, Weber and Smith, Wharfingers. (See Questions 2940-2953).

Discharge of cargoes, delay in, 2941-3.

## Trust :

Charges, levy of, 2941 ; 2944-51.

Views as to, 2941 ; 2952-3.

Warehouse accommodation, 2941.

Watermen's Company, privileges of, abolition advocated, 2941.

**WELLS**, REV. HARRY MORLAND, Thames Embankment Owner. (See Questions 11507-8.)

Administration of river, views as to, 11508.

Dredging, maintenance of walls disturbed by, 11508.

Property owned by, 11507.

**WHELAN**, CHARLES, Partner in the firm of George Simon and Whelan, Wine and Spirit Merchants. (See Questions 10399-10407.)

Accommodation and facilities for wine trade 10403 ; 10406-7.

Charges levied by Dock Companies, 10403.

Decline in amount of wines and spirits warehoused at Docks, 10403-5.

Evidence of witness, preparation of, and interests represented, 10401-2.

Table showing relative stocks of wines and spirits in 1870 and 1900, in various docks, 10403-5.

**WHITEHEAD**, ROWLAND. Address on behalf of the London Chamber of Commerce. (See pages 587-592.) (The references given are to pages.)  
Act of Parliament—Thames Conservancy Act 1894, 588.

## Administration of Port :

Single authority advocated, 589-90.

Trust. See that sub-heading.

Antwerp, transfer of trade to, 589.

## Barges :

Charge on, proposed, 588-90.

Delay to, 589.

Bills—London and India Docks Company's Bills, 1900 and 1901, 588.

Channel of river, deepening :

Necessity for, 587.

Thames Conservancy, action of, in relation to, 588.

Charges, Dock Companies' :

Levy of, complaints as to, 588-9.

Proposals as to goods and barges, 588-90.

Commission—Lower Thames Navigation Commission 1896, 588.

Discharge of cargoes, relinquishment of right as to by dock companies, 588.

## Dock Companies :

Agreements with wharfingers, 588.

Barges and goods, charge on, proposed, 588-90.

Charges levied by, 588-9.

Discharge of cargoes, relinquishment of right as to, 588.

Powers of, increase inadvisable, 589.

Scheme proposed by, 589.

Transfer of business from, owing to delays and charges, 589.

Docks, improvement in, necessity for, 587.

Funds for improvement of port, contributions to, 591.

Goods, charge on proposed, 590.

## Liverpool :

Conditions at, comparison with London, 590.

Trust, formation on model of advocated, 590-1.

Millwall Dock Company, financial position of, 588.

## Thames Conservancy :

Channel of river, deepening, action as to, 587-8.

Powers of, increase inadvisable, 589.

Traders of Port of London represented by London Chamber of Commerce, 591.

## Trust :

London Chamber of Commerce Scheme, 591-2.

Mersey Dock and Harbour Board, formation on model of, 590-1.

Warehouses, severance from docks, 591.

Yantlet Channel, buoying of, not undertaken by Trinity House, 589.

**WIGHT**, EDGAR, Senior Partner in the firm of Messrs. John Knill and Company, Wharfingers. (See Questions 11509-11545.)

Business carried on and wharves owned by Messrs. John Knill and Company, 11510-3 ; 11517 ; 11521 ; 11539-40.

Compensation to wharfingers in event of transfer of docks to public management, 11516.

Competition between Dock Companies and wharfingers, 11517 ; 11520 ; 11544.

Trust, formation of, effect of on, 11519-21.

## Discharge and delivery of cargoes :

Agreement as to fruit cargoes, withdrawal of Messrs. Knill and Company, 11517.

Method of, 11541-3.

## Documents handed in by witness :

Agreements as to discharge of fruit, letter from Messrs. Knill withdrawing from, 11517.

Legal Quays in the Port of London, history of, 11513.

Dredging, undertaking by Trust advocated, 11517 ; 11523-9.

Evidence of witness, interests represented, 11514-6.

History of legal quays, Port of London, 11513.

Machinery, wharves and docks, comparison of, 11530-8.

## Moorings :

Additional advocated, 11517.

Private, abolition of, 11517.

## Trust, formation :

Compensation to wharfingers, 11516.

Competition with wharfingers, 11519-20 ; 11544.

Separation of quays from warehouses, difficulties of, 11545.

Views as to generally, 11517-29.

**WILLIAMS**, ALFRED STROVER, Director of the Atlantic Transport and National Steamship Companies. (See Questions 2162-2205.)

Barges. See sub-heading, Discharge of cargoes.

Channel of River, deepening and widening, views as to, 2170 ; 2191-5.

Chesapeake and Ohio Steamship Company, letter from, 2170.

Deptford Cattle Market, removal proposed, 2170 ; 2203-5.

## Discharge of cargoes :

American system, 2196-8.

Barges, discharge into :

Charge on barges proposed, views as to, 2170 ; 2190.

Disadvantages of, 2175-81.

River, discharge in, 2174.

Wharf system, 2187.

Docks used by Companies, 2173.

## Documents handed in by witness :

Vessels of Atlantic Transport Company and National Steamship Company :

Anchored in neighbourhood of Nore in 1900, owing to deficient draught of water, 2165.

Table of Steamers, 2170.

General Shipowners' Society, represented by witness, 2163 ; 2182-3.

Grain cargoes, lighterage of, 2199-202.

North American Bill of Lading, introduction of London Clause, 2175-9.

Ports traded to by Companies, 2171.

Royal Albert Dock, extension of proposed, 2188-9.

Sludge, deposit of by London County Council, 2170 ; 2185-6.

Thames Conservancy, letter as to grounding of "Minneapolis," 2165-70.

## Tilbury Dock :

Deepening and widening of approach to, proposed, 2191-5.

Extension of proposed, 2188-9.

Railway communication with, 2199-202.

Trust, views as to, 2165 ; 2170 ; 2182-4.

## Vessels :

Delay to, 2165 ; 2170.

Draught of, 2192-5.

Tonnage, length, and breadth of, 2170.

Watermen's Society, privileges of, abolition proposed, 2170.

**WILLIAMS**, WILLIAM VARCO, Chairman of Samuel Williams and Sons, Limited, Lightermen and Bargeowners. (See Questions 3826-3895 ; 5578-5579.)

Accidents, liability in cases of, 3835.

**WILLIAMS, William Varco—continued.**

- Barges:**  
 Docking and undocking, delay in, 3835-6; 3886.  
 Owned by Williams and Sons:  
 Men employed on, number of, 3890-2.  
 Number of, 3828.  
 Business carried on by Williams and Sons, 3828.  
 Capital of firm, 3826.  
 Channel of River, deepening and widening, 3833-5; 3850-64; 3872-5; 3885.  
 Document handed in by witness—payments received in settlement of claims for damages caused by excessive speed of steamers, 5578.  
**Dredging:**  
 Extent of operations, 3850-60; 5578-9.  
 Steam Dredgers, 3828; 3876-84.  
 Financial position of Dock Companies, difficulties arising from, 3835-44.  
 Pilotage, compulsory, views as to, 3835.  
 River frontage, length of, owned by Williams and Sons, 3828; 3846.  
 Thames Conservancy, regulations as to lighterage, 3835.  
 Tugs, steam, owned by Williams and Sons, 3828.  
**Vessels, speed of:**  
 Claims for damage caused by excessive speed, 3870; 5578-9.  
 Regulation advocated, 3835; 3869-72; 3887-9.  
 Watermen's Company, privileges of, modification advocated, 3835; 3865-8; 3894-5.  
 Wharves in River, extension of system, views as to, 3828-33; 3846-9.

**WINGENT, FREDERICK, Managing Director of Wingent and Kimmins, Limited, Flour Millers. (See Questions 8850-8879.)**

- Barges, detention in docks, 8851a-79.**  
 Causes and results of, 8855-60.  
 Complaints as to, 8877-9.  
 Notice as to readiness of ship to give delivery, advantage of, 8873-6.  
 Table illustrating, 8852; 8854-5; 8861; 8921.  
 Competition with Kentish millers, 8853.  
 Delivery order, issue of, 8861-6; 8872.  
 Document handed in by witness—Detention of barges in London Docks in 1900, 8852.  
 North American bill of lading, 8867-71.

**WOOD, THOMAS MCKINNON, Member of the Rivers Committee of the London County Council. (See Questions 7116-7480a.)**

- Acts of Parliament:**  
 Lands Clauses Acts, 7285; 7287.  
 Thames Conservancy Act 1894, 7120; 7266.  
**Administration of Port of London:**  
 Area of jurisdiction, 7120.  
 London, City Corporation, trust scheme, views as to, 7222-4.  
 London County Council, trust scheme. *See sub-heading Trust.*  
**Antwerp, vessels entered and cleared in 1899, tonnage of, 7120.**  
**Bill—London and India Docks Company's Bill 1901, 7120; 7364; 7371-2.**  
 Business carried on by witness, 7312-6.  
**Charges:**  
 Goods, charges on, position of Port of London as to, 7421.  
 (See also sub-heading Trust.)

*See* title Dock Companies.

**Fire Brigade Service** for Protection of Riverside Property, 3035.

**Fish Trade**, congestion at wharves caused by, 9411; 9422-4.

**Fisheries**, fishing-smacks, etc., Conservancy regulations as to, 3; 24.

**Floats** construction, objection to, 6771.

## Floods:

Act of Parliament—Thames River Prevention of Floods Act 1879, 3035-8.  
Areas subject to, 3035-43.  
Plan showing, 3035.  
Date of last serious flood, 3042.  
Essex, flooding of, in 1708, 1465; 7508.  
Liability of Thames to, 3039-43.  
London County Council, authority in relation to, 3035-8.  
Serious floods not apprehended, 3043.

## Flour:

Charges on, 8837-49; 10075-7; 10100.  
Agreement as to, between wharfingers and London and India Docks Joint Committee, 10081.  
Comparison of dock companies' and wharfingers' charges, 10108-16; 11736-42.  
Glasgow, comparison with London, 5608.  
Liverpool, comparison with London, 10108-9.  
North American Bill of Lading, effect of on, 10071-81.  
Consumption of flour in London, increase in, 5187a.  
Discharge and delivery of cargoes:  
Barges, delay to in docks, 8851a-79.  
Liverpool and London, comparison as to time occupied and method of handling, 10108-23.  
Method of, 10125-8.  
North American bill of lading. *See* that sub-heading.  
Kingsford, W., and Son, business carried on by, 10073-4; 10079.  
London Flour Trade Association, witness representing, 10070-2.  
North American bill of lading:  
Charges, effect of on, 10071-81.  
Landing of flour at up-town warehouses from vessels discharging in London Docks, time occupied, 10081.  
Legal action respecting, 10103-6:  
Copies of case and judgment in, 10863.  
Legality of, 10098-102.  
Weighing and measuring, 10117-20.

**Fog and Smoke**, difficulties to navigation arising from, 3486-99; 4192; 4392; 4426; 4439-41; 4466-8.

**Folkestone**, imports and exports, 670.

## Food Inspectors:

Appointment, 3681-4.  
Examination and certification, 3651.  
Number of, 3665.  
Seizures by, return as to, 3695; 3700-1.

## Foreign Ports:

Accommodation and facilities, 4889; 4897-9; 7016-7.  
Table showing, 7017.  
Administration of:  
Memorandum on based on Consular reports, 7770-84.  
Summary of important points in, 7784.  
Reports on, by Mr. Broodbank, 7017.  
Analogies drawn from, fallacious, *page* 604.  
Charges, 1234; 3246-7; 3388-94; 3423-30; 4831-7; 7788-808.  
Chemical trade, 9501; 9859.  
Depth of water in docks and approaches, 7016.  
Discharge of cargoes, rapidity of despatch, 4909-14; 4933-8.  
Dock system, ports using, 7017.  
Dried fruit trade, 9880; 9885-93.  
Earnings on dock undertakings, 7017.  
Expenditure on extension, contemplated, 7016; 7786-7.  
Government and municipal aid, 3360-94; 7772; 7830-2; *page* 628.  
Importance, relative of various ports, according to shipping-entering, 7012-6.  
Imports and exports 1890-1899, 11563.  
Jute trade, 9380-6.  
Leather trade, 9526-58.  
Memorandum on, 7772.  
Metal trade, 9136-7; 9139-40; 9149-57; 9176-7; 9183; 9186-8.  
Naval considerations, no influence on expenditure, 7786-7.  
Paper trade, 9301-7; 9330; 9344-5.  
Position of certain ports, advantageous to transshipment trade, 5597.

**Foreign Ports—continued.**

Railway and steamer rates to English ports and inland towns, effect of on, 8995; 9010-9; 9034-50; 9066-72.

 Population, increase of, 3362.  
 Report on by Mr. Broodbank, 7017-7a.  
 Steamer and railway rates to British towns, 9010-9; 9034-50; 9066-72.  
 Vessels entering, tonnage of, 3362; 4837; 7012-6; 7120.  
   Increase, comparison with London, Hamburg, and Antwerp, 7828; 7833-5.  
   Trade, effect on, of port improvements, table showing, 7781.  
 Wharf system, 7017.

**Reuen, Port of:**

- Administration of, 7784.
- Charges, comparison with London, 7788-8008.
- Expenditure on improvements, 7784.
- Vessels entering, 7784.

**Royal Albert Dock:**

- Accommodation, 839.
- Dimensions of vessels curtailed owing to limits of, 8332; 8361.
- Frozen meat trade, facilities for, 9353.
- Large vessels, 842; 862-7; 2257; 2767; 5606.
- Length of ships, limit of, 1994.
- Pressure at docks, difficulty in finding berths, etc., 1220; 2249-50; 2256-7; 2259; 6017.
- Elder, Dempster and Company, inability to obtain berths, 4828; 4862-9.
- Warehouses and Sheds. *See that sub-heading.*
- Barge ponds, construction of, proposed, 5662.
- Barges using docks:
  - Accommodation provided for, 2486-9; 2594; 2897; 5767; 6703.
  - Adrift and unattended, 8332; 8346-7.
  - Detention by shipowners, 8438-56.
  - Docking and undocking, 4014; 6700.
  - Assistance not rendered by company's servants, 6836-43; 6845.
  - Control required during, 2956.
  - Number of, 6703; 6733; 6738-9.
  - Taking delivery from one ship, 8446-50.
  - Tilbury Lighterage Company, contract with Royal Albert Dock Company, 8437; 8465.
  - Tugs for use of, 3754; 3842; 4005.
  - Vessels delayed by, 2249-50; 2256; 2259.
  - Width of dock, necessary for, 6703; 5767.
- Berths, appropriated, 2257-8; 2292; 5628.
- Number of berths unlet, 6009.
- Cartage system:
  - Passes for carmen, regulations as to, 9413-7; 9432-8.
  - Preference of merchants for, 2160.
- Channel of River:
  - Deepening, importance of, in relation to dock, 843-8; 878-96; 1209-12; 2269-76; 3045; 3051-4; 3113; 3118; 5852; 6151-5.
  - Depth of at dock entrance, 818; 1992-3; 5580; 6703; 7016.
  - Width of, at dock entrance, proposed, 3051-4.
- Charges:
  - Grain cargoes, 2814.
  - Royalty on cargoes, levy proposed in 1896, 1965-9.
- Concreting of quays and sheds, 6704.
- Construction, date of, 5887; 6771.
- Crane equipment, 841; 2259; 4014; 4029-31; 4062-5; 6704; 8332; 8345.
- Depth of water on sills and in dock, 818-24; 2059; 7016.
- Description of, 818-24; 839-42; 862-77.
- Discharge of cargoes:
  - Allan line, arrangement as to discharge and sorting on quays, 2251-6; 2309-11.
  - Atlantic Transport Company and Peninsular and Oriental Company, amount discharged and quay and shed space provided for, 6905.
  - shed space provided for, 6905.
  - Coffee cargoes, 2954.
  - Quay space inadequate for simultaneous loading in craft and discharge of ship, 2486-9.
  - Time occupied in, returns as to, 2734; 2740-2.
  - 6905; 6909-10.
  - Transfer of responsibility to shipowners, 1951-7; 6905.
  - Cost of discharge, effect on, 1975-9.
- Dredging in docks, 842; 874-7.
- Entrance:
  - Construction of, 1884.
  - Description of, 818-24; 842.
  - Lay-by, construction at advocated, 2269; 2276; 3054.
  - New entrance, necessity for, 1994.
  - Satisfactory character of, 2269.
- Expenditure on, 519; 6704.
- Extension and improvements, proposed:
  - Canal in docks, construction of advocated, 2595; 5239-40; 5304-29.

**Royal Albert Dock—continued.**

- Extension and improvements, proposed—continued.
- Dock Company's proposals, 651-2; 811; 824-39; 842; 849-56; 893-6; 2138-42; 2188-9; 2306; 5626; 6046; 6604-5; 6608-9; 6611.
- Bill—Royal Albert Dock Extension Bill 1901, 7120; 7364; 7371-2.

- Thames Conservancy, survey by, 4228; 5569.
- Pilots, information to, 2085; 2154-7; 7546.
- Trinity House, supply of copies of surveys to, 453; 466-9.

**Surveys of Channel of River—continued.**

Trinity House, surveys by and information to Pilots, 4227-9; 4302-5a; 4321-30; 4379-84; 8469; 8472; 8475.

**Swansea, Port of**, competition with London, 9859.

**Swin Channel**, silting up of, 493.

**Swire, J., and Company**, discharge of tea cargoes, 2956.

**Sydney**, charges on tea cargoes, 8666.

**T.**

**Tapioca**, wharfingers' charges on, reduction of, 2737-8.

**"Tantallon Castle,"** arrival and discharge at Southampton, 5421.

**Tate, Messrs.**, business carried on by, 9099-103; 9107-12; 9117-8.

**Taylor, Mr. J. L. Du Plat**, director of London and India Docks Company, 5616.

**Taylor, Mr. Seth**, director of London and India Docks Company, 5616.

**Tea:**

Barges, discharge and conveyance in, 8669; 10866.  
Customs Officers, claims in cases of accident, 10867.

Proportion conveyed, 425-6.

Charges on, 1242; 8712.

Clearing House, effect of on, 1242; 2528; 5675-6.

Dock Companies, proposed charge on barges and goods, effect of on tea trade, 8661; 8665; 8673.

Warehousing charges, 2739-40; 8662-7; 8673.

Clearing House, 1242; 2528; 5675-6; 8713-5.

Consumption of, in London, increase of, 5187a.

Damaged tea, removal from warehouses, 425.

Discharge and distribution of, 425-9; 2956; 8662-4; 8666-7; 8669; 10866.

Time occupied in, tables showing, 2734; 2740-2; 2954.

**Docks:**

Accommodation at for tea, 8660.

Used by tea vessels, 427; 8668; 8680.

Pooling agreement, negotiations as to, 6559.

Re-export trade, decline in, 1176.

Season trade, change to continuous trade, 5584.

**Transshipment trade:**

Advantages of Port of London for, 8661.

Increase and subsequent decline, 8661; 8670.

Table showing trade of London and of United Kingdom, 3225.

Value of tea transhipped, 8661; 8671-3.

**Value of:**

Ascertainment of, 8671.

Decline in average value in London, 8667.

**Warehouses:**

Blending and mixing in, 421-2; 429.

Charges, 2739-40; 8662-7; 8673.

Customs, Board of, correspondence with London and India Dock Company, as to removal of Crown locks, 11548.

Number of bonded warehouses, Port of London, 8677.

Proportion of tea taken by Dock Companies' warehouses, 8680.

Trust, management by, advocated, 8667.

Weighing and taring, 367-8.

**Teddington Weir:****Authority for Port:**

Extension of jurisdiction to, proposed, 3160.

Point for division of River in event of dual control, 3132; page 617.

Sanitary Authority for Port, limit of jurisdiction, 3647; 3656.

Tidal action, limit of, 3342-3.

Water companies, abstraction from River above, 3131; 3155-64.

**Tees:**

Buoys and lighting, authority for, 8610-2.

Funds for Port improvements, policy as to, 1484-9.

Quays in River, 2337.

**Tees Union Shipping Company:**

Discharge of cargoes during Lightermen's Strike, 3533.

Free Trade Wharf, accommodation at, 3529.

Vessels of, draught of, 3534.

**Temple Pier**, Harbour Master's office at, 83.

**Test, River**, authority for, 5420.

**Thames Act, 1883:**

Points dealt with, 1384.

Speed of steamers, regulation under, 7549.

**Thames Conservancy:****Accommodations:**

Assessment of, method of, 1573-7.

Licences and rents and sales of foreshore, returns as to, 1683-6.

Structural alterations to riverside premises, regulations as to, 9296.

**Accounts:**

Annual, 64.

Separate for Upper and Lower River, 40; 74; 161.

Acts of Parliament. *See that title.*

Allan Line, negotiations with, as to wharf in river, 2319.

Anchorage Dues, 6434-5.

Attendances at Board and Committee meetings, 68-70.

Return as to, 1683.

Barges, powers as to, 3705; 3835; page 575.

Number of men employed, regulations as to, 1384; 11050-6; page 575.

Registration, transfer of power to Conservancy advocated, 77-9.

Towing regulations, 105-110; 201-5; 217-24.

Bell Wharf Tier, depth of Channel at, correspondence as to, 7547.

Berthing of steamers during winter months, control of, 3975-7.

Bills. *See that title.*

Borrowing powers, 65; 225; 252; 1510; 7537.

Buoys, powers as to, 306-10; 1726-36; 8520-7.

**Bye-laws**

Amendment of in 1880, 1384.

**Barges:**

Number of men employed on, 1384; 11050-6; page 575.

Towing, 105-110; 201-5; 217-24.

Committee on Navigation of Thames 1879, recommendations of, covered by, 204-5.

Enforcement of, method of, 185-93.

New code 1898, 185.

Points dealt with, 3.

Powers as to, 4118-30.

Procedure on making of new bye-laws, 217-21.

Speed of steamers, 7549.

Chairman in 1894, 1563-5.

Channel of River, deepening. *See that title, sub-heading Thames Conservancy.*

**Charges:**

Additional charges, proposals as to, 7493-504; 7509-19; 7523; 7539-41.

Moorings. *See that title.*

Tolls on barge and pleasure traffic, 41.

Tonnage dues, 22-4; 1514-20; 2269; 3411; page 603.

Antwerp Conservancy charges, comparison with, 2009; 3423.

Exemption of certain vessels, 24; 147-8.

Increase of, proposals as to, 7484; 7496-8; 7921; page 620.

Policy not considered by Board previous to 1900, 145-6.

London lighterage and tonnage area, 3130-1.

Number, total of foreign-going and coast-wise vessels paying, 25.

Revenue derived from, 41-4.

Chartings and Soundings. *See sub-heading Surveys.*

Coal derricks, action in respect of, 2332-3.

Committee on Navigation of Thames 1879, recommendations of:

Action of Conservancy as to, 75-9; 155; 217-24; 1384; 1404.

Authority for river, 75-9; 114; 173-84.

Barges, navigation of, 105-10; 201-5; 217-24.

**Thames Conservancy—continued.**

Committees of Conservancy for Upper and Lower River, 70-3; 161-3; 614; 616; 1384; 1408-9; page 616.

   Deepening, buoying, etc., funds for, provision from Imperial source advocated, 3443; 3513-6.  
   Thames Conservancy, extension of powers as to, 3.  
   Waterways, unused, 2326.  
 Floods. *See that title.*  
 Flow of:  
   Improvement, in, records of, 3131-4; 3147-52.  
   Returns as to, 3155.  
   Richmond half-tide lock, effect on, 3136-46.

**Thames River—continued.**

## Flow of—continued.

## Tidal flow:

Deepening of river, effect on, 3130.

Experiments as to, 3131.

High and low water at spring and neap tides, 772-9.

Limit of, 3342-3.

Upland flow, natural and actual, 3155-64.

Water companies, abstraction by, effect of on, 3131; 3155-64.

Ice, difficulties from, rarity of, 3486.

Mud in, increase of, 6868-70.

Purification of, expenditure on in 1899, 3278.

Tributaries of, inclusion in Trust Scheme, 2607-9.

(See also Thames Conservancy.)

**Thames River Dock and Harbour Board,** formation advocated by City Corporation. See Trust, sub-heading London, City Corporation Scheme.

**Thames River Prevention of Floods Act** 1879, 3035-8.

**Thames Steam Tug and Lighterage Company:** accidents, liability in cases of, 3767-72; 3806-25; 4069-70.

Business and capital of, 3767.

Charge on goods and barges proposed, effect of on, page 613.

Men employed by, number of, 3788-94.

Railway companies, business with, 3767; 3798-802.

Tonnage conveyed by company's barges, average yearly, 3767.

Witness representing, 3703; 3766.

**Thames Steamboat Company:**

Commodore Captain of, 11479; 11482.

Vessels of, tonnage, carrying capacity, etc., 11482.

**Thames Tunnel,** precautions as to dredging over, necessity for, 3063; 3074-7.

**Thames Traffic Committee.** See title Committees, sub-heading Navigation of Thames 1879.

**Thames Watermen and Lightermen's Bill,** 1890, 10451.

Committee on. See Committees.

Copy of, 10646.

Petition opposing, 10459-64; 10646.

**Tidal Cuts,** scheme for, objections to, 6771.

**Tidal Flow of River:**

Deepening of Channel, effect of on, 3130.

Experiments as to, 3131.

High and low water at spring and neap tides, 772-9.

Limit of, 3342-3.

**Tidal Training Walls.** See Training Walls.

**Tide Gauges:**

Additional advocated, 4259-62.

## Automatic:

London County Council and Metropolitan Board of Works, provision of by, 3131.

Thames Conservancy, provision of by, 313.

Chapman Lighthouse, 4260-2.

**Tide Signals,** establishment near Southend advocated, 4146-8; 4150-2; 4233.

**Tiers,** discharge at, advantages of, 3533.

**Tilbury Dock:**

Accommodation at, 651-2; 786; 1219; 2199-202; 5605; 6017; 8332; 8388-94; 9352.

Improvements contemplated and discussed, 807-11; 2091; 2138-42; 2188-9; 5662-3; 6604; 6609.

Act of Parliament—Tilbury Dock Act 1882, 5897-909.

Atlantic Transport Company, dock occupied by, 2173.

Improvement discussed, 5662.

## Barges using:

Charges for lighterage, 2495-504; 2923-4; 6710-11.

Docking and undocking, 6700.

Major and Field, Messrs., experience as to lighterage, 2961.

Necessity for lighterage, 2115; 2117-24.

Number of, 6703; 6738-9.

**Tilbury Dock—continued.**

## Berths, appropriated:

Agreements as to, 5678; 5918-20.

Unlet, 6010.

## Channel of river:

Deepening and widening advisable, 2191-5.

Depth of at dock entrance, 786; 7016.

## Charges, 11657-67.

Concreting of quays and sheds, 786; 6704.

Construction of, 786; 6771.

Competition resulting from, 5587.

Financial result of, 2917-24.

Crane equipment, 786; 5179.

Customs, Board of, regulations, 3739; 3760-2; 3962.

Depth of water in dock and on sills, 786; 794-7; 7016.

Description of, 786-817.

Discharge and delivery of cargoes, 2466; 2767.

Amount discharged and quay space provided, 6905.

Rail and water, delivery by, respectively, table showing, 5580.

## Time occupied in:

Grain, 10022-6.

Green fruit, 9475.

Tables showing, 2734; 2740-2; 6905; 6909-10.

Undertaking of discharge by Dock Company, 6905.

Dredging in dock, 786.

Frozen meat trade, accommodation for, 8332; 8388-94; 9352.

Grain cargoes, railway accommodation, defects of, 2199-202.

Graving docks, 786; 1995-6.

Improvements contemplated and discussed, 807-11; 2091; 2138-42; 2188-9; 5662-3; 6604; 6609.

Jetty system, advantages of, 2997.

Labour, employment of, 6905.

"Knuckle," description of, 2735.

Machinery, 786.

Mud in River at, 786; 797-803; 6895-6.

New Dock, construction advocated, 3898-901; 3944.

Position of, distance from London, 786; 812-4; 1212; 2091; 2115; 2117-24; 2257; 2428-32; 2961-4; 3536; 4828; 4855; 4897-9.

## Quays:

Description of, 786.

Inside Basin, quay without locks, 5605; 5801; 5804-8.

Length of per acre, 6703.

Railway communication with Dock, 786; 2091; 2118; 2123; 2158-61; 2227-31; 2428-32.

Grain Cargoes, no facilities for, 2199-202.

Proportion of goods delivered by rail, table showing, 5580.

Roads leading to, 7938.

Sheds, 786; 428-9; 2091; 5179.

Concreting of, 786; 6704.

Separation of Warehousing from Dock business, difficulty of, 6680-3.

Structural repairs needed, 2428; 2430.

Tea cargoes discharged at, 427-8; 2742; 8668; 8680.

Towing charge, 2961.

Tugs in, 786; 4005.

Vessels entering Dock, 786.

Atlantic Transport Company, 2173; 5662.

National Steamship Company, 2173.

Orient Steam Navigation Company, 2084.

Tonnage of, 643-51.

Wool Vessels, 8915-6.

Width of Dock, 6767-9.

Working of Dock, 2090-1.

**Tilbury Lighterage Company,** contract with Royal Albert Dock Company, 8437; 8465.

**Timber Trade:**

Accommodation and facilities for, 1739; 1742; 1757-9; 2208; 2236-48; 4827; 9195-7; 9207; 9240; 9277-83; 9690-2; 9697-8; 9708-10; 9724-6; 9771-2; 9824-35.

American hard wood trade. See that title.

Charges, 2208; 2211; 2213-8; 2223; 4080-1; 9695.

Deals, dock accommodation for, 4828.

**Timber Trade—continued.**

- Discharge and delivery of cargoes :
  - Barges, discharge into, 2219-21.
  - Increase in custom of, 7581-4; 9695-7; 9740-9.
  - Regulations as to Bills of Lading, tallying, etc., 9764-9; 9780.
  - Electrical transporters, introduction of, 7038; 7110-5; 9692-3; 9849-52.
  - Liverpool, regulations as to, 4490.
  - Methods adopted, 1759-63; 2208.
  - Quays, discharge on :
    - Accommodation for, 2208; 2241-8.
    - Advantages of, 2219-21; 2236-40.
    - Shortages, 9695-7; 9740-9; 9759-70; 9776-88; 9794-806; 9839-42.
  - Steamers, introduction of, effect of upon discharge, 969; 9714-23.
